

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

### Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

### About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

OR  
LIFE IN LONDON,  
& THE  
COUNTRY.

No. 1.]

SATURDAY, MARCH 15, 1845.

[THREE  
HALFPENCE.]

## THE EDITOR'S SANCTUM.

A REVERIE.

**S**TRANGE are the freaks of fancy, yet not more strange than the diurnal occurrences of our every-day life on this most common-place of muddy planets. Else how comes it that this little fancy-sketch now lies before us, and, multiplied by thousands, shall meet the eyes of myriads when these scribbled sentences shall be transformed into impressed types!

'Twas but a few evenings since that a friend called in at our snuggerly, and fired the train of ideas that has exploded this little publication, and to-morrow will number it among the periodicals of the day:—

But words are things; and a small drop of ink  
Falling like dew upon a thought, produces  
That which makes hundreds, perhaps thousands, think:  
'Tis strange, the shortest letter which man uses  
Instead of speech, may form a lasting link.  
Alas! to what sad straits Old Time reduces  
Frail man, when paper—even a rag like this—

"Perhaps you will be so kind, Mr. Editor," some reader exclaims, "to just tell us what region of the clouds you've got into? We understood that you were about to tell us something about a reverie—which we take to be a dream, either sleeping or waking, as the case may be—and here you've mounted some metaphysical hippogriff, and started off above all common comprehension. Upon my soul, like the philosophers of Laputa, it strikes me forcibly you need to be kept awake by 'flappers.'"

Editor. "Thanks for the interruption. We will to our story, though, like Wordsworth's 'Knifegrinder,' the most appropriate answer would be—'Story! Lord bless you, I have none to tell.' Well, the other evening a friend looked in, and brought with him a well-stuffed poke of literary novelties—such as the untiring steam-press of this go-a-head time daily and weekly throws forth to awaken or stimulate the appetite for reading and information which, like the Moor's jealousy,

'Doth make the meat it feeds on.'

There they lay, scattered and tumbled, glanced over, criticised, approved, or condemned. Every taste seemed catered for, till you came to the inevitable conclusion that 'of making of books there is no end.' There were cuts, horribly cutting, of the Hampstead tragedy, with most unlikely likenesses of the suspected murderers,—there you had the murdered man too; and the morbid, brutal craving for the (ludicrously) horrible, gratified to the full by a libel on common sense and decency, purporting to be an accurate representation of the 'horrid act!' Faugh! such candidates for popular favour we threw aside, and turned to 'metal more attractive.' Here, too, there was no lack. From the wonder of 'quantity' presenting its thirty-two pages of closely printed quarto, of tales, essays, and topography, neatly printed for ONE PENNY, (*The Family Herald*), we passed to another publication, presenting a like amount, with the addition of numerous embellishments, of a style and character which twenty years ago our expensive book-printing scarcely paralleled (*The London Journal*); with these appeared four other weekly papers of the respective prices of one penny and twopence, each with its own peculiar claims to patronage and purchase. 'Truly,' said we to our friend, 'the market is overstocked.' 'There are, perhaps,' replied he, 'too many of one description (and we take him to be a fellow who knows a thing or two on these points), and that is, the *Miscellaneous*; when I say miscellaneous, I mean the literary, the topographical, the poetical, the 'amusing and instructive' class, as they delight to term themselves; sheets that can be made up at every corner from a cento of cuttings from 'All these at sixpence!' in the box at the door of a second-hand bookshop; but have you not observed that they are all 'of the city—smoky,' that they rush into rurality with a forced hilarity, and seem, even when poetically struck, to savour of the sempstress, and return the echo of the engine-room? See you not that they betake themselves to dry 'science,'

maudlin sentimentality, or rabid romance? Illustrated or unillustrated, there is a *hiatus maximè defendendus*, which, perchance, old boy, you yourself might fill up. For years your pen has been engaged in recording or describing, discussing or vindicating the sports—yes, the sports of *THE PEOPLE*: and where shall the *character* of a nation be so truly seen as in its sports and its RECREATIONS?"

"Then it is a sporting publication, handsome in its form and suited to the masses—a weekly visitor which shall carry its—"

"Hold, my good friend, I have a secret to communicate. For four years there has been one—*de mortuis nil nisi bonum*, which freely translated means, say as little as possible about the dead. Start your new one—effect an amicable arrangement if you can—and serve all those who desire to see sporting literature on a par with literature in its other branches, by making your cheap seventh-day novelty, a sample of a weekly sporting magazine."

"It shall be considered," replied we. Our friend departed, and forthwith we fell into a brown study, and had "a dream," which we would fain believe, "was not all a dream!"

#### THE REVERB.

Our third tumbler of "Kinahan's LL" had left its lemon stranded on the glassy bottom of the exhausted tumbler, and the "Palmer's patent" had thrust up its last instalment of "metallic wick" by the *vis continua* of its spiral spring, when we closed our eyes to cogitate upon—we know not what. Straightway arose the small seed of idea planted in our mind by the friend, with whom the reader is already half-acquainted, and grew greenly, freshly, vigorously, and toweringly, like the beanstalk by which he of the nursery tale scaled the *ground-floor* of the clouds. "And why?" said we, apostrophizing; "and why should not the—" and here, as Horace has told us Homer occasionally does, we took a *nod*.

"And why?" asked a sprite, who, advancing towards our chair, gave us that free, generous, and urbane salute which bespoken the man of the world and the gentleman, untinged with the vulgar alloy of *ambition*, or the yet more offensive effeminacy of dandyism—"And why, Mr. Editor, since these things are *in petto*, should we not have our publication, Believe me, *taste* is rapidly extending, and, despite of croakers and canters, every sport which strengthens the *body* is becoming daily more regarded by men of *mind*: who awoken to the truth—for as a little philosophy, my good fellow, leads us from truth, so does its pursuit round the circle bring us back again—that the *mens sana* is only to be found in the *corpore sano*. You see I have not yet quite forgot my *Esau*, however little I may say for my *alma* and her higher studies." We surveyed the sprite with that "eye and a half" with which we would scan a dealer's "thoroughbred warranted sound;"—he was unexceptionable. We saw that he was a gentleman—and of that irreproachable pattern—the English gentleman. "My name is Urbanicus,"\* continued he; "a sportsman by birth and education: 'time, and the change it brings to man,' have altered my fate, yet do I love to 'babble of green-fields,' 'to follow the hounds over brake and lea,' to salute the morn with 'Yoicks! hark away!'—but I weary you: there are others of humbler means, and it is for them I most speak, who are debarred by the high price of Sporting Works from the gratification of their natural tastes. For these, I ask you an organ of their pleasures, their hopes, their wishes—a fount whence they may draw information—a bank wherein they may deposit their various gleanings in the sporting field. You turn your eye, I perceive, towards the stamped sporting papers—all honour be to their labours; but they are not the *only* periodicals we want. Their columns are necessarily occupied with innumerable occurrences, of important magnitude at the *moment*, but evanescent in their individual interest. They record the passing events, we want a *cheap*, an oft-recurring, a recreative, and a *readable* miscellany. Allow me, to save waste of time, to introduce you to—"

Suddenly the misty haze which had enveloped two-thirds of our apartment moved off in departing clouds, like the rolling mist from a hill's southern side as the morning sun rises in its beauty and its brightness: and there stood, each with his appropriate emblems, the representatives of the numerous classes to which our labours were to be devoted:—"My friends," quoth the well dressed sprite, URBANICUS, presenting the rosy and athletic urchins in succession; "allow me to make you known:—"

"PUGIL (Boxer) the Editor of —, does the idea strike you?—ARRIAN (Coursier)—You must couple with him:—EQUIVO (Jockey), he will run before your wishes:—VENATOR (Huntsman), pray keep him in *view*:—ORNITHOR (Fowler)—Treat him not with *chaff*:—PISCATOR (Fisherman) Remember that he is a 'Brother Bob':—COLUMBARIUS (Pigeon-fancier) you must join his *flight*:—PILARIUS (Cricketer) prithee give him a good *inings*:—CANICEPS (Dog-fancier), you'll find him *carmin-bred*—and lastly, CELOX, my worthy Yachtsman, with pen and pencil—"

"Excuse me, my worthy suggestive *sprite*, it shall be done. I see before me "THE SPORTING WORLD," and if that *World* will support me, I will go-a-head, with the motto "*Vires acquirit Eundo*!"

"If you please, sir, it's half-past one—the fire's out—and the printer's boy says he shall call for copy the first thing in the morning."

FINIS.

\* Of, or belonging to, a city.

#### PENCILLINGS IN THE PROVINCES.

##### THE ROAD-SIDE PUBLIC.

WHERE four roads meet on the village-green stands "The White Horse." It may well be called the "Old White Horse," for it hath withstood the ravages of time, and hath been an heir-loom for many generations: it is the watering-house for coaches, fish vans, and carrier's carts; a night-house for road waggons carrying their burdens to the terminus; a resting-place for poachers, smugglers, and vagrants: the stalwart owner has been a waggoner in days long past, is up to every road move, and looks after his money with the eye of a great grizly cat. The last train-coach has just moved off towards Ipswich, and the glowing sun of evening has sunk in the wide horizon, flashing over wood and dale with its long misty thread of gold: the still air rests on the landscape, scarcely waved by the lazy breeze that creeps slowly through it: the young moon steals on the autumnal sky in its silvery robe; all above is beauty and peace—nature seems quenched for the day. It is a night of feasting and revelry: the little snug parlour beams with a blazing fire. It is the rendezvous of the farmers and butchers of the place. Old foxhunting stories are thrice told with renewed vigour, and an otter hunt in the Stour loses nothing of its wonted heroism.

"We was out a shooting on Stour Mere last March with only a couple of spaniels and an old sheep-dog, when we tracked an otter under an old withern pollard: so I looks into the old tree, and there sure enough was two otters asleep, curled up in each other for all the world like a pair of gloves: so I says to Jem that was with me, 'run home for a bag, and we shall have them before night.' So Jem brings the bag, and we puts it at the hole, and draws the water off at the mill. I holloas at the top of the tree: dash me but they jumps out of the pollard right into the water; I jumps in arter them in my fright, and was nearly drowned: one went up stream, and t'other down, under goes the sheep dog with one of them, ducking and diving along, until they came to a bed of rushes. I levelled at him with my gun, but was afraid of shooting the dog. Away they went again up stream, being hard bit, he tried every move to get away, reached the bank, and swam up an old ditch. The fight lasted I should say ten minutes, when the old dog caught him under the shoulder, and worried him to death. We got five shillings a-piece from the gentlemen round, and we did not make a very bad day of snipe-shooting, did us?"

Other sporting stories followed in quick succession, given in the undisguised patois of the country: ploughing matches, agricultural meetings, and treasurers' accounts, were all discussed with the hot roast or the cold boiled. Distance vanished before their pot-valiant eyes as they stepped into their taxed-carts to return home.

Village labourers assemble in the tap-room, having collected their largess from the neighbouring farmers, and proclaim the harvest home. The old house resounds with jocund song and merriment, and wives and daughters mingle for tea in the rent-room; and as we gazed on the motley group, we asked whether the scene was not imaginative? We remembered the days of our boyhood, and joined in the throng: dancing commenced, interspersed with cake and ale, pipes, and profusion: the old blind fiddler and the village fool were in acquisition until the crowd began to separate, and a profound silence soon took the place of uproarious and heartfelt merriment.

"Where is Joe Catchit?" said one, as he drew his pipe from his mouth and spat on the dusty ground.—"Perhaps he is at his old trade," said another: "can't let Squire Diggle's pheasants alone this fine night, or he is after turnips for his Sunday dinner."

Joe had a little pony-cart: under the cart ran a white lurcher, and in the cart were a brace of bull-terriers. Nobody knew how he lived: he had no credit, and far less honesty; still he managed to exist in his neat little cottage on the Common—most likely on other people's commodities—a pig in his sty, and six small children: he wore an old velvet shooting-coat, torn with thorns and brambles: his legs were encased with rough-ribbed cords—slouched hat, a red neckcloth hanging in strings, always in debt and danger. Before the lights glimmered in the cottage windows, and day broke over the yellow glades, a brace of long tails were in his capacious pockets, and wending his way through the long vista of woods, dropping along the last hedge-row, the cry of a squeezed hare hurried him to the meuse. "I want you, madam," quoth Joe, as he gathered her up wreaking from the wire. "And I want you," said a thick-set model of mankind, a match for Hercules in the field. It was Squire Diggle's head-man, who prided himself in the capture of a hundred poachers. "Blood for blood was your old story, Joe! but you know better now, my lad," said the keeper tauntingly. "Blood is no use," said the poacher sulkily; and he walked quietly down the ride. The information was laid with the nicety of a snare, and Joe stepped up to the Hall. "How many times have you been convicted, Joe?" said the Squire, eyeing him distrustfully.—"Why, Sir, it is hard to say," bowing respectfully: "I believe I have dined ten Christmas days in Colchester Gaol, and must do so again, I s'pose, as work is werry short hereabouts." The fiscal finances ran low enough.—"You have a pig, I hear," said the Squire.—"Yes, Sir, but I wants that when I comes out."—Joe jumped into the pony-cart with the head constable, and drank deep from the Stone Jug without a murmur.

WHIZ.

## THE FISHER'S CREEL.

THE SALMON.

**I**N future numbers I shall have scope and verge enough to enter on many moot points in the natural history and habits of this "prince of the scaly tribes," with the aid of "leal men and true," who, out of love for the "Contemplative Man's recreation," will help to cram our FISHER'S CREEL, I forbear, in this place, from more than a brief notice of the beautiful fish before us. Detail, in this, our initiatory number, would trench too seriously on the allotted space.

Towards the latter end of the year, and in November, salmon begin to press up the rivers as far as they can reach, in order to spawn; when they have accommodated themselves with a fit place, nature supplies the male with a bony excrescence, growing out of the end of the lower jaw, to the length of half an inch or more: this, it is said, aids him in the removal of the gravel, but both male and female assist in forming a proper receptacle for the spawn, in the sand or gravel, about eighteen inches deep. In this the ova and milt are deposited, and carefully covered by the parent fish, who afterwards hasten to cleanse and recover themselves (the male loses the gristle at the jaw); for, after spawning, they become very poor and lean, and then are called kipper. At their first entrance into the fresh water, salmon are observed to have abundance of insects adhering to them, especially above the gills: these animals denote the fish to be in high season, and die and drop off soon after the salmon's leaving the sea.

The spawn lies buried until spring, and without any other care, is nourished and brought to perfection, if not disturbed by violent floods, or by depredations from other fish, of which the eel, roach, dace, and graylings, are dangerous neighbours. About the latter end of March, the spawn begins to exclude the young, which gradually increase to four or five inches in length, and are then termed smelts, or smouts; about the beginning of May the river seems to be alive, and there is no framing an idea of the numbers without seeing them. A seasonable flood, however, hurries them to the sea, very few being left in the river. About the middle of June the earliest fry commence their return from the sea into the river (at that period from twelve to sixteen inches long), and progressively augment in number and size, until about the end of July, which is, at Berwick, the height of the grilse time (the name there given to the fish at that age). Early in August they lessen in number, but advance in bigness, some being from six to as high as nine pound's weight. This increase appears surprisingly quick; yet a gentleman of Warrington has given an instance of still more rapid growth: a kipper salmon, weighing seven pounds three quarters, taken on the 7th of February, was marked with scissors on the back fin and tail, and turned into the river; he was again taken on the 17th of the following March, and then weighed seventeen pounds and a half. In this case the remark of Walton seems to have been more than verified, "that the samlet becomes a salmon in as short a time as a gosling becomes a goose."

The salmon in Lough Erne increases in size wonderfully, and young ones which were caught and marked when going into the lake, have been caught on their return, and found so large, that they must have increased at the rate of one pound per week.

The migratory habits of the salmon, and the instinct with which it periodically revisits its native river, are curious circumstances in the natural history of this fish. As the swallow returns annually to its nest, as certainly the salmon repairs to the same spot in which to deposit its ova. Many interesting experiments have established this fact. M. De Lande fastened a copper ring round a salmon's tail, and found that for three successive seasons it returned to the same place. Dr. Bloch states,

that gold and silver rings have been attached by eastern princes to salmon, to prove that a communication existed between the Persian Gulf and the Caspian and Northern Seas, and that the experiment succeeded. Shaw, in his Zoology, mentions that a salmon of seven pounds and three quarters was marked with scissors on the back fin and tail, and turned out on the 7th of February, and that it was retaken in March of the succeeding year, and found to have increased to the amazing size of seventeen pounds and a half. This statement, by-the-by, is at variance with the theory of Dr. Bloch, who estimates the weight of a five or six year old salmon at but ten or twelve pounds.

That the salmon should lose condition rapidly on quitting the sea for the fresh water, may be inferred from a fact agreed upon by naturalists, that during the period of spawning the fish neglects feeding. In this peculiar habit the salmon is not, however, singular; animals of the Phocæ tribe, in breeding time, exercise a similar abstinence. On opening a salmon, at any season, no food will be discovered, and the contents of the stomach will be confined to a small quantity of yellowish fluid and tape-worms, which are generated there. Sir Humphrey Davy believes that occasionally food may be found. I have seen thousands opened preparatory to being salted, and I never observed anything but this fluid and tape-worms. Another circumstance may be stated as a curious proof of health, as well as of the period of time the salmon has been a resident in a river. When the fish leaves the sea, and of course is in its best condition, insects (the *Lernæ* *Salmonæ* of Linnæus) will be perceived firmly adhering to the skin. Immediately on entering the fresh water, these insects begin to detach themselves from the salmon, and after a short time they gradually drop off and disappear.

The following comparison is made by Sir Humphrey Davy, between trout and salmon:—The salmon is broader, has a tail rather more forked, and teeth in proportion are rather smaller. The trout, likewise, has larger, and rather more black-brown spots on the body; and the head of the trout is a little larger in proportion. The salmon has fourteen spines in the pectoral fins, ten in each of the ventral, thirteen in the anal, twenty-one in the caudal, and fifteen in the dorsal. The salmon measures thirty-eight inches and a half in length, and twenty-one inches in girth; and his weight, as you see, is twenty-two pounds and a quarter. The trout has one spine less in the pectoral, and two less in the anal fin, and measures thirty inches and a quarter in length, and sixteen inches in girth, and his weight is eleven pounds. When opened, the stomach of the salmon contains nothing but a little yellow fluid, and, though the salmon is twice as large, it does not exceed much in size that of the trout. The stomach of the trout, unlike that of the salmon, will be found full of food.

Thus far of the natural history of the salmon, and now of

## SALMON FISHING.

**The Rod.**—The Salmon Rod should consist of four parts or pieces: first, the butt of *solid* ash; the second and third (called "joints"), of hickory; and the fourth, or "top," of spliced cane with a whalebone tip. On this point I may hereafter give an opinion or two. Each part should be at least four feet six inches, forming in its whole length eighteen feet or upwards. Some persons use rods two or three feet longer, which enables them to command a greater breadth of water, though, for general fishing, I consider eighteen feet quite sufficient, especially as the greater

1. Natural Dragon Fly.—2. Artificial Fly.

length increases the labour materially. As the separate parts of a rod are those which mostly break, you cannot err if you have in addition three or four spare tops, and one extra joint next to the top; for a salmon rod by all means have the top and the joint next it made so as to splice or "scare" together. The rings of a salmon-rod should be large, very

well soldered, and firmly secured to it, rather decreasing in size upwards. That at the point should be of double stout wire, rather larger in circumference than the rest. I do not recommend the use of a spear at the butt of a salmon-rod, because, being weighty and double-handed, the butt often resting against the body, the spear may not only be in the way, but even dangerous; while, at the same time, it is useless, as the upper part is too heavy to be supported by a short spear stuck into the ground, more especially when the weather is gusty. Of the *balance* of a fly-rod I will speak when I come to the subject in another series of papers of rods in general, for in a first number, like the present, the writer can only hint at what he hopes hereafter to perform, and thus perpetrate a Chapter of Beginnings. Of the hook I shall speak hereafter, when treating of the trout and other fish. Besides, as I intend shortly, *fortuna juvante*, to pen at some length on the various *material* of the angler's craft (whereon I shall be happy to receive the "wrinkles," "notions," "suggestions," and "experiences" of all "honest anglers,") I here pass over both them, and the *line* and *gut*.

*Flies*.—And now a word about Salmon Flies:—We have been dunned, *usque ad nauseam*, with assurances of the "taking" character of this fly and of that, yet from all we have yet discovered to base an opinion upon, it would seem that salmon do not, and cannot, snap the most "taking" flies from any resemblance they bear, either in colour or shape, to any living or natural prey. This must at once prove the futility of elaborate directions for the employment of any particular feathers or materials in a fly, on account of their peculiar colours or quality. In fact, it appears that a salmon looking upward from his depths below, can distinguish nothing more than an opaque object passing over or near him, and provided he is disposed to stir, he will do so, whether the bait be clad in livery of red, blue, green, or yellow. With trout, however, and this is an anomaly we shall hereafter note, some attention must be paid to colour. In fact, as will appear from the engraving below, there is anything but resemblance between the natural and artificial object, and this position leads me to think that in making salmon-flies, everything depends on the *appearance of life* given by the mode of putting on the wings, and the *play of the rod* in the hands of the skilful flyfisher. We here give, from a clever article on Angling in the new edition of the *Encyclopædia Britannica*, an extract in confirmation of this position, having presented (*see preceding page*) the uninitiated reader with a picture to inform his eye:—

"It may be asked," says the writer above alluded to, "upon what principle of imitative art the different varieties of salmon-fly can be supposed to bear the most distant resemblance to any species of dragon-fly, to imitate which we are frequently told that they are intended? Certainly no perceptible similarity in form or aspect exists between them, all the species of dragon-fly, with the exception of one or two, being characterised by very clear, lacelike, pellucid wings, entirely unadorned by those fantastic and gaudy colours, borrowed from the peacock and other 'birds of gayest plume,' which are made to distinguish the supposed resemblance. Besides, the finest salmon-fishing is in mild weather during the colder seasons of the year, and in early spring, several months before any dragon-fly has become visible on the face of the waters, as it is a summer insect, and rarely makes its appearance in the perfect state till the month of June. If they bear no resemblance to each other in form or colour, how much more unlike must they be, when, instead of being swept down the current, as a real one would be, the artificial fly is seen crossing and re-crossing every stream and torrent, with the agility of an otter, and the strength of an alligator? Now, as it is demonstrable that the artificial fly generally used for salmon bears no resemblance, except in size, to any living one; that the only tribe which it may be supposed to represent does not exist in the winged state during the period when the imitation is most generally and most successfully practised; and if they did, that their *habits* and *natural powers* totally disenable them from being at any time seen under such circumstances as would give a colour to the supposition of the one being ever mistaken for the other; may we not fairly conclude that, in this instance at least, the fish proceed upon other grounds, and are deceived by an appearance of life and motion, rather than by a specific resemblance to any thing which they had previously been in the habit of capturing? What natural insect do the large flies, at which sea-trout rise so readily, resemble? These, as well as grilse and salmon, frequently take the lure far within the bounds of the salt-water mark; and yet naturalists know that no such thing as a saltwater fly exists, or at least has ever been discovered by their researches. Indeed, no true insect inhabits the sea. What species are imitated by the palmer, or by three-fourths of the dressed flies in common use? An artificial fly can, at the best, be considered only as the representation of a natural one that has been drowned, as it is impossible to imitate the dancing or hovering flight of the real insect over the surface of the stream; and, even with that restricted idea of its resemblance to nature, the likeness must be scarcely perceptible, owing to the difference of motion, and the great variety of directions in which the angler drags his flies, according to the nature and localities of the current, and the prevailing direction of the wind.

"The same observations apply, with almost equally few exceptions, to bait-fishing. The minnow is fastened upon swivels, which cause it to revolve upon its axis with such rapidity, that it loses every vestige

of its original appearance: and in angling with the par-tail, one of the most killing lures for large trout, the bait consists of the nether half of a small fish, mangled and mis-shapen, and in every point of view divested of its natural form. The accomplished angler does not condescend to imitate specifically, and in a servile manner, the detail of things; he attends, or ought to attend, only to the great and invariable ideas which are inherent in universal nature. He throws his fly lightly and with elegance on the surface of the glittering waters, because he knows that an insect, with outspread gauzy wings, would so fall; but he does not imitate (or if he does so, his practice proceeds upon an erroneous principle), either in the air or in his favourite element, the flight or the motion of a particular species, because he also knows that trout are not very conversant in the peculiarities of species, and that their omnivorous propensities induce them, when inclined for food, to rise with equal eagerness at every minute thing which creepeth upon the earth or swimmeth in the waters. On this fact he generalises—and this is the philosophy of fishing."

It would be easy to prove these sound scientific remarks by the actual practice of the best routine anglers, who will, no doubt, treat them as arrant heresy; for all their success must depend upon these very principles, even when they imagine they cannot angle without a great variety of flies—without flies adapted to each particular river, as well as to each season of the year, and to the morning, noon, and night of the same day. But our strictures and quotations have led us to an unconscionable length, and here we quit the subject for the present; leaving to a future number our manifold *pondering by pond* and stream.

#### THE DOCTOR.—A TRUE TALE.

[The following *jeu d'esprit*, too good to be left without a reprint, will be familiar to many Essex readers.—ED.]

IN Essex there lived—ah, wo worth the day  
That called him from all his companions away!—  
A Doctor well known, and of knowledge profound  
Of physic, of music, of horse, and of hound.  
As physician or sportsman, or sober or mellow,  
The Doctor was hailed as a right honest fellow.  
'Twas a southerly wind, and morning was fair,  
So the Doctor soon mounted his three-legged mare.\*  
Three legs I have said, but this is not true,  
She had gone to my knowledge four seasons on two:  
Though the others no doubt were by Nature intended  
To serve as two more: so they might, were they mended.  
No matter: the Doctor this cripple bestrode,  
Who came in her turn for the field and the road,  
And, resolved with the hounds to come in for a treat,  
He started for Musking, the name of the "meet:"  
But bethought him two birds with one stone he might slay,  
If he called on a medical friend on his way;  
For he knew a rich patient they both had been plucking  
Was breathing his last twixt B——y and Musking:  
And, could he contrive to alight at his door  
Before he was dead, there was "one guinea more."

So the Doctor continued his journey to urge on,  
Till he came in due time to the door of the surgeon.  
There loudly he halloo'd, which shews the condition  
Of surgeon is held as below the physician.  
The surgeon threw down both his potion and pill,  
To wait on the man "who had license to kill."  
"Dear sir, to what chance do I owe all the honour  
Of seeing your mare, and your ——— upon her?"  
He thus would have said, but he feared this position  
Of words, though a joke, might offend a physician.  
So bowing and smiling in his usual way,  
Thrice he hemmed, rubbed his hands, and at last thus did say:—  
"Dear sir, hem! hem! hem! Dear sir, I'm delighted  
To see you at O—t; but pray be alighted."  
The Doctor dismounted—for once, as a treat,  
The old mare was allowed a few minutes to eat;†  
Though he said this was useless, for such was her nature  
She could go night and day and do well on potato.  
The mare was put up her rare treat to enjoy,  
Which led to this pithy remark from the boy—  
"Though the Doctor maintains on potatoes she doats,  
She seems mightily pleased with a *quartern of oats*."

As soon as the doctors had canvassed together  
The nature of patients, of hounds, and the weather,  
The physician arose, first directed a potion,

\* Five sound legs among three horses was the maximum average in the Doctor's stud.

† The Doctor's horses had a more accurate idea of perpetual motion than most of our philosophers.

Then said it was time to be once more in motion:  
When the Surgeon requested, polite as before,  
He would wait till the horses were brought to the door.  
The horses were brought; mutual compliments past  
On the merits and beauty of both, till at last  
Our son of diploma thought fit to bestride  
A thing that he called (God forgive him!) a saddle.\*

Away then they trotted to visit this person,  
Less fit to be physicked than carried a hearse on.  
But they knew, as life's taper was burnt to the socket,  
'Twas the very last fee the physician would pocket.  
So they hurried along, most devoutly relying  
On reaching the patient while yet he was dying.  
But it happened he popped off an hour before;  
So his brother accosted them thus at the door:—  
"Why, hell and the devil! you cannot suppose  
A man will for ever be led by the nose!  
Why that doctor declared here, at five in the morning,  
He knew 'twould be useless again his returning:  
'Twould be picking my pocket he very well knew  
To bring in more medicine, but now he brings you!  
He might just as well, to have carried this farce on,  
Have long since brought in the grave-digger and parson!  
They were just as much wanted, themselves and their trade,  
For the living, ye scoundrels, as you for the dead!  
So be off at once while you can with whole coats,  
Or I'll ram your d—d vials down both of your throats!"

The doctors both stared at this sort of address—  
In sooth a physician could not well do less.  
They found of the fee that the brother would nick them,  
For he swore, if they did not be off, he would kick them:  
So they quickly departed, but vowed—if this brother,  
His uncle, aunt, cousin, wife, sister, or mother,  
Should ever by illness come under their thumbs—  
To avenge the indignity offered their—ms!

Here they parted, the one to continue his rounds,  
The other to make a short cut to the hounds.

*Sporting Magazine.*

H. H.

#### STATISTICS OF CARELESSNESS.

WE beg to offer the following analysis of the announcement just published by the Somerset-house authorities of the various articles left in cabs and hackney-coaches for the last twelvemonth. It is a most gratifying document, and occupies a closely-printed column of the morning papers:—

It appears that, while eleven persons have left their opera-glasses in cabs during the above term, one only has lost his Bible and Prayer-book. This strikingly displays the worldly advantage of attending to unworldly matters. Then we find that whereas eighty-seven umbrellas have been lost, only nineteen parasols have shared that fate. The ladies of London may proudly point to this proof of their superior carefulness. Six gentlemen, we observe, have left their watches, and we should think that the time of such persons can be of little value, so that the loss could hardly have been felt. Against another gentleman's skates we will set off another lady's music; and several macintoshes balance the account with several muffs. Of the sex of some rings found in cabs we are ignorant, but that of a variety of latch-keys leaves nothing to conjecture. We should like to know what the lady was thinking about when she left her shoes, and what excuse she made for their absence when she was asked to dance. The piece of money found on the 29th of August belongs to ourselves, but we do not intend to claim it, because it is a bad sixpence given us in change by a strangely civil previous cabman. And having had a most serious quarrel with one of our first and only idols, touching a certain bracelet alleged by her to have been lost on the 30th of May last, we hereby publicly apologize to her for suspecting that she had given the same to Lieutenant Ernest Theodore Higgs Wiggins, and do further retract the black looks we presented to the said Wiggins at Mrs. Mackintosh's polka party.

**WARNING TO TRAVELLERS.**—Lovers of single blessedness, beware! Bachelors who love your liberty, remain at home! The last census of France has just disclosed the awful fact that, in Paris alone, there are no less than 54,000 widows!!!

**TOO BAD TO BE CARRIED AWAY.**—Sir Robert Peel indignantly denies the charge brought against him by Ben-Levi D'Israeli, of having run away with the clothes of the Whig Ministers, while they were in the water. Sir Robert says the Whig habits had latterly become so bad that nobody would have anything to do with them, except, perhaps, a Jew dealer in "old clo'." D'Israeli now confesses that his simile was rather unlucky.

\* The Doctor's saddles, made after a plan of his own, and furnished by a village collar-maker, were perfectly unique.

#### GENERAL REGISTRY OF RACE HORSES.

BY RIGDUM FERNIDOS.

MR. EDITOR.—Amongst projects for the reformation of the turf, may be justly placed in the most prominent point of view that of "A General Registry of Race Horses." Its utility cannot be questioned. I, therefore, earnestly hope that all who are interested in the breed of horses and the prosperity of the turf will combine to bring it into immediate operation. I would suggest that, at the time of registering, every horse must and should be NAMED; for every year brings out its *Delightful* colts, *Monimia* colts, and *Emmas* out of number. I would further suggest that no two horses should be allowed to be registered by the same title. If the example of that excellent sportsman, Lord Exeter, in having an early christening of stock, were generally followed, what confusion and perplexity would be prevented.

Whilst looking over the nominations for the Derby, I was myself induced to affix a cognomen to each of the nameless animals, and in tendering the list to the perusal of your readers, I must express a hope that before the racing season commences the hint will be fully acted upon.

Pall Mall, 18th February.

**SEEING WITH THE FINGERS.**—The credulity of the public has sometimes been imposed upon by persons who pretended to see by means of their fingers; thus, at Liverpool, the notorious Miss M'Avoy contrived for a long time to persuade a great number of persons that she really possessed this miraculous power. Equally unworthy of credit are all the stories of persons, under the influence of animal magnetism, hearing sounds addressed to the pit of the stomach, and reading the pages of a book applied to the skin over that organ. These errors have, doubtless, gained credence from a belief that the functions of the nerves are interchangeable, as is the case with many other functions in the animal system. On the contrary, the function of each nerve of sense is determinate, and can be executed by no other part of the nervous system. No nerve but the optic nerve, and no part of that nerve except the retina, is capable, however impressed, of giving rise to the sensation of light, that is *seeing*. No part of the nervous system but the auditory nerve can convey that of sound, or *hearing*; and so of the rest.

## OUR WEEKLY CALENDAR.

AN EPHEMERIS IN JEST AND EARNEST.

SUNDAY, MARCH 16, 1845.—PALM SUNDAY.—Battle of Culloden, 1746.

*The Garden*.—As February was the awakening month, so this is the time to be up and doing: "a spirit is abroad, felt through all nature's veins," and the gardener has now to take advantage of each hour, that every seed and plant may be in a fitting state to be borne forward by that spirit's influence. This is the month of main sowings, both in the kitchen and flower gardens, and not one of them should be left out of the ground a single day longer than is absolutely compulsory, although the late and still continuing frosts and snow have impeded, nay, almost suspended garden operations.

MONDAY 17.—ST. PATRICK'S DAY.—The "broth of a boy" died at Ulster, A.D. 493.

"Och Nora, my darlint, take pity upon me—  
Ochhono! but t'is luv is a smart!"

By the powers, swate Nora! 'tis Mither O'Cupid  
Wid his little shilaly is breakin' my heart!"

'Twas Lent when Pat said so—but Nora said, "No, sir,"

She knew 'twas no use at that time to consent;  
But by "Mothering Sunday" Pat found her much softer,  
And before Lent was over, he saw her relent.

The day was soon fixed—Easter Monday, be sure,

The time seem'd to Pat a snail's gallop to go;

"By the hokey!" says he, "is it fast days they call 'em?"

For fast days I think they move murderous slow."

TUESDAY 18.—Cambridge Lent Term ends:—will all the "flat-caps" pay their bor' rowings?

*Botany for Ladies*.—This delightful science is generally devoted to the planting of flowers in blonde whiskers, cut into roses. Last year's wreaths of impossible flowers are freely transplanted to cleaned bonnets. Pretty little Dunstable cottages are covered with buds of muslin, and velvet evergreens are trained by ladies to creep over their straw thatch.

WEDNESDAY 19.—Day and night equal.—Oxford Lent Term ends.

*Natural Philosophy*.—*Boiling*.—The Boiling Point varies in different localities.—In Belgrave and Grosvenor Squares, May Fair, and Spring Gardens, the pot can hardly be boiled under £3000 a-year. Whereas up at Camden Town the pot will boil at £150 or £200; and about St. Giles's or Spitalfields, at 7s. or 8s. per week.—Louis XVIII. boiled from Paris, 1815. The French nation changed a *Louis*, and got a *Napoleon* by the swap.

THURSDAY 20.—MAUNDY THURSDAY. Spring commences—and the birds hold "harmonic meetings:" those of "Mine Host of the Castle," which take place of an evening in Holborn, forestall them quite; his "Spring meetings" being kept up all through the *Winter* quarters.

*Rural*.  
All nature seems at work: slugs leave their lair—

The bees are stirring—birds are on the wing;

And Winter, slumbering in the open air,  
Wears on his smiling face a dream of Spring!

Trout begin to rise in the rivers, the smelt spawns, and blood worms appear in the water. Moles in quest of food, throw up hillocks. Bees, black-ants, and the meise or oil-beetle, are seen in mild sunny days.

The vegetable world now puts forth fresh beauties every day; pile-wort, colts-foot, the daisy, and the primrose, are some of the principal wild plants in bloom; while in the gardens are to be seen in flower the daffodil, the sweet violet, crown imperial, polyanthus.

FRIDAY 21.—GOOD FRIDAY.

*The Opening of the Season*.—At the latter end of March, the earth puts on her livery. Nature has generally two suits of this livery in the year, with a great-coat of snow for the severe weather, which, up to the present moment of writing, (March 14th) she has declined to leave off.

*Duke of Enghien* shot by order of Napoleon, 1804: a barbarous assassination. *Cornedbeef* *Debat*.—The Cornedbeef makes its first appearance before a British public early in spring, and trusts to that indulgence which an English audience is never known to withhold from strange birds, who come in the character of foreign vocalists.

SATURDAY 22.—Strike of the Cigar Makers in the Minorities, 1844. Enough to tear the heart out of a summer cabbage.

*Monomania*.—There is a March hare in Windsor Park who is so mad that he fancies himself a Welsh rabbit.

## The Sporting World.

LONDON, SATURDAY, MARCH 15, 1845.

ALL right behind?—Ste-e-a-dy, there! Now, Shiny Will-i-yam, give them their heads! K-l-c-k! k-l-c-k! Such were the sounds which, "in the days of our hot youth, when the Fourth George was king," were wont to greet the ear, as the "light" four, with its spanking team, and bright embossed harness, swept gracefully and artistically out of the narrow gateway of the "Bull," the "Angel," the "Savage," or the "Cross" of gold or silver: and as "Shiny William" dropped the leader's head, in compliance with the command of the rotund Wellerian on the box's throne, the gaping passengers gazed with gratified admiration at the spicy turn-out. But we have changed all that—and now, save when some gentleman of spirit handles the ribbons, or tools the prads, we behold no more the fleet passing vision of the "fast coach." May we liken this little venture to the well-appointed team? At first starting, doubtless, they may not run so well together as we could wish, but when they warm to their work, settle down to the pace, and feel the collar, we flatter ourselves we shall give the go-by to any thing on the road. But though *fast*, we shall be *cheap*, and at the low price of threepence, promise to carry our patrons pleasantly through the whole extent of the domains of Sport. We ask, then, encouragement for our venture.

We will not here "burn daylight" and keep either passengers or "cattle" on the fret: but refer them to our prospectus and the article on our first page; merely observing, that as it is to the public favour and the support of the Sporting World that we must look for success and suc-

cess will stimulate us to improvement—we confidently "take the road," and trust to keep it. The "right side" shall be our maxim, and though

'Tis not in mortals to command success,  
We will do more,—still study to deserve it.

## A STRIKING REMEDY;

OR, MERCIFUL MAXIMS, A LA GRANTLEY BERKELEY.

OFF! guardian, commissioner, clerk,  
Your assistance no farther we need;  
Too long have you been in the dark,  
Or too nice have you been in your creed!  
Talk of poor laws, and acts of "the board,"  
As strong in dominion and dread!  
What service do these things afford  
When compared with—a punch on the head?

Do you think that the "vulgar, brute mind,"

Whose moodings to madness may press,

Can comfort or cheerfulness find

In hearts which can feel its distress?

Can words stay the hungry's desire,

Or crush down his clamour for bread?

O, no! Something more you require—

To be had in—a punch on the head.

Off! away with your warnings and cries,

Your powers of prison so chill;

All such bugbears the needy defies—

Small choice 'twixt "the union" or "mill."

Hand to hand let the injured him meet,

(The justice no sentence has said),

And the pampered the perishing greet,

With an "aply-plied"—punch on the head.

If the outcast your boundary should cross,

And, his misery making his claim,

Croak of hardship, and illness, and loss,

As a poor plea for seeking your game,

At once put to silence the wretch,

With a mandate that mercy hath sped:—

"Here, John, go directly and fetch

That poor fellow—a punch on the head."

When bumpers are crowning the board,

And chairmen are a "happy and proud,"

When Ciceros hit the right chord,

And soapings are lavish and loud,

Still firm to the labourer's cause,

Call in one to honour "the spread,"

And present him, "midst roars of applause,"

With an elegant—punch on the head.

So remember, henceforth, as a rule,

When paupers are publishing woe,

That to talk is to tamper and fool;

To act right—a word and a blow;

Striking measures alone are the plan

With rascals who want to be fed;

—Put 'em down, "like a practical man,"

With an Old English—punch on the head.

## THE GAME LAWS.

AS PROPOSED TO BE AMENDED BY MR. BRIGHT.

Clause I. That every man shall be allowed, if he can, to shoot any description of game out of the range of gunshot; but that the putting of salt upon a bird's tail, by which to catch it, be not lawful.

Clause II. That every justice of the peace before whom a complaint of poaching is lodged do take a "bird's eye" view of the case, and not "beat about the bush" in his capacity of judge, which is too often done.

Clause III. That the poaching of eggs be not considered an offence punishable under the game laws.

Clause IV. That no sportsman, if he see a hare, shall outrun it, but give the animal a fair chance of escape.

Clause V. That the description of game commonly called sky-larks be never indulged in by any member of the House of Commons.

[N.B. Barn-door cocks and hens not to be included in the bill, as it would be difficult to place these domestic birds on a footing with game-cocks.]

"I'll take the shine out of you," as the cat said when she licked her master's boot!

ANOTHER OF THE ANOMALIES OF LAW.—Several men, within a very brief time, have been fined for sending sweeps up chimneys, while other parties coolly advertise in the newspapers, and that with the greatest impunity, that certain "sweeps" will be actually "drawn," and others will be positively "divided," at the next Epsom races!

*Cure-all, winner of the "Grand National" Steeple-chase at Liverpool, 1845, crossing the Training Ground.*

CURE-ALL is an aged horse, unknown to fame, and was recently purchased by Mr. Loft, a Lincolnshire gentleman, who "crossed the pigskin" on this victorious occasion, for 50 sovereigns! He is a strong, short-legged, compact, rather coarse-looking animal; and from his peculiar roundness of barrel has an appearance of carrying "fat."

### THE STEEPLE-CHASE.

AWAY! away! though no horn is sounding!  
Ride on! ride on! though no prey is bounding!  
There's life in the field, there's sport in the wind,  
Though no hound doth speak, and no Courser find:—  
Away! away! ere the noon see the sun,  
A chase shall be tried and a race must be run!

Away! away! see yon fiery gray,  
Impatient to bear his load;  
Away! away! there's a mettlesome bay  
That is hot—without a goad:  
Gallant riders are on them, exceeded by none  
That a chase has e'er tried or a race has e'er run.

Away! away! o'er rut, furze, brake, and lawn,  
Horses and riders together are gone,  
They traverse the plain, and they mount the hill:  
O'er each there is rattle and rivalry still;  
They top the rough leap, they clear the broad dyke,  
And where danger lies they dare it alike:  
No slack'ning of rein, no halting of pace  
Are now, 'midst the heat of that Steeple-Chase.

Still on! still on! like rushing wind,  
They dash, and leave pursuit behind;  
Swifter than vessel on the seas,  
When she sails gaily with the breeze,  
And cleaves with prow the liquid way,  
As hawk the air, to pounce her prey:  
'Twas a stirring sight, that bright dawn to see  
Those gallant steeds stride o'er fence and lea.

See, see, they've conquer'd plough-land and wood,  
And now—what! will they tempt the flood  
That, at the base of yonder hill,  
Shows dull, and deep, and dark, and still?  
They will—they will—what fear have they  
Of weed or water, depth or spray?  
If Caesar cross'd the Rubicon,  
Ere fields were dar'd, and fights were won;  
If fond Leander swam the stream,  
When the moon lent not her gen'rous beam;  
Shall not the Hunter dangers court,  
To revel in his darling sport,  
And, in his pastimes, conquer more,  
Than king or lover did before?  
That flood is rode at, but not past,  
That bold dark steed to earth is cast;  
The false bank crumbled 'neath his tread,  
Or bonnier had the rider sped:  
Yet now, and though on damp earth lain,  
His wrist still wears the buckled rein;  
But never again on saddle-tree,  
Shall his rider mount for victory,  
For see the horse drags his weary length,  
And his pain-heaved loins are void of strength;

He has ta'en his last leap, his task is done,  
And Kelly slips off, for his course is run:  
Poor CLANSMAN sinks before myriad eyes,  
His spine is broken—no more he'll rise!  
Yet on and onward the leaders flew,  
Again they turn and the goal's in view!

See Exquisite leading the panting throng,  
As into the straight-run they steam it along;  
I'll bet you a poney—no, I'd rather not—  
For depend on't there's one that will *physic* the lot:  
See CURE-ALL, th' unknown, he shows a-head;  
Hurrah for "the Fielders," the favourite's sped—  
'Tis the "dark-un's" chance and the "knowing coves"  
Are out this time—and, as I'm alive!—  
The "outsider" 's the hero of forty-five!

Dismount, dismount, the gallop is ended,  
And cheers, blithe cheers, have the welkin rended;  
For "Cure-all" has carried the laurel away,  
May he Cure-all our woes at a future day,  
And a-Loft flies the banner, and well have all done  
Who joined that stiff chase, and that fast course run;  
And again with spirits and pluck "like bricks,"  
May they run the "Grand Steeple" of "Forty-six!"

THE SKYLARK.—(See article next page.)

## BRITISH SONG BIRDS.—No. I.

But what can unassisted vision do?  
 What, but recoil where most it would pursue?  
 His earnest gaze but closes with a sigh,  
 When *Musie waking* speaks the SKYLARK nigh!  
 Just starting from the sod, he cheerily sings,  
 And beats with conscious pride his downy wings;  
 Then louder trills, and in the face of day  
 Mounts up, and bids the rustic mark his way.  
 Close to his eyes, his hat he instant bends,  
 And forms a friendly telescope, that lends  
 Just aid enough to dull the glaring light,  
 And place the lessening bird before his sight,  
 That oft beneath a light cloud sweeps along  
 Lost for a while, yet pours his varied song.  
 The eye still follows, and the closed moves by,  
 Again the warbler stretches up the sky,  
 His form, his motion, undistinguished quite,  
 Save when he wheels direct from shade to light;  
 E'en then the songster a mere speck becomes,  
 Gliding like fancy's bubbles in a dream,  
 Yet still the gazer hears. BLOOMFIELD'S Farmer's Boy.

**B**LOOMFIELD the race of WARBLERS (in which division ornithologists rank the melodious minstrel whose faithful portrait heads this column), none has attracted more attention than the SKYLARK; nor is there one which has been more celebrated by poets and sentimental writers. It would be a pleasant task to cull from our choicest authors the flowers of poesy which derive their beauty from the gladdening influence of this "sweet songster of the middle air;" but in this series of articles it is my intention to be particularly *practical*, and, resisting all temptations to digression and discursiveness, confine myself to the communication of such information as a pretty lengthened experience as a Field Naturalist and a keeper of Cage-birds has furnished me.

In the beginning of March, or earlier, if the spring be fine, (which, in this present year of grace, 1845, it has by no means shown itself,) the skylarks separate and pair. That is, these pretty birds, which, since the end of autumn have been congregated in large straggling flocks, frequenting stubbles, and ploughed fields, break up their round parties, and, like members of St. Stephen's Chapel—*pair off*. It is a fact worthy of note, that during the winter season the flight of the lark resembles that of the fieldfare, being performed by slight undulations, and several successive flaps of the wings, with short pauses between them. How this differs from the action of the birds, when the genial season which awakes its song arrives, I need not tell the reader.

During this month (March) the males may often be seen engaged in spirited contests, generally carried on in the air; and it is now their song commences, which is continued until the middle of Autumn. I have however heard the lark in full song early in February in forward springs.

The song of the skylark is familiar to most persons, even to those in "populous city pent;" were it not, it would be as difficult to describe as for a musician to write it down. Sometimes the lark sings on the ground, perched on a clod, or even crouched down among the grass, but more generally at the moment of beginning its cheerful song it starts off rising perpendicularly or obliquely in the air, with a fluttering motion, and continues to pour forth the stream of melody until it has attained its highest elevation, which is so great as often to render the bird imperceptible. Even then, as described in the simple poetry of Bloomfield, which heads this article, if the weather be calm, you hear its warble coming faintly on the ear at intervals. Shakspeare has not left this unobserved:—

"Some say the lark makes sweet division,\*  
 Oh, say not so, since she divideth us!"

It has been often said that the lark ascends in a spiral manner; this is erroneous. Its rising is often directly upward, the body being kept in a horizontal position, it then moves in gentle curves, then rises again, then curves, and so on alternately, but never in a spiral direction. When the lark descends he does not interrupt his song, but continues it till it pears the ground, when it generally darts down headlong, and alights abruptly; yet I have often seen a lark hover a long time over a field at a small height, and keeping up its full song; which, however, ceases on reaching the ground.

The song of the lark, though not so musical, or so finely modulated as some of the birds, which we shall hereafter introduce, both by pen and pencil, to the readers of this *Miscellany*, is cheering and cheerful in the highest degree, and protected with a perseverance and seeming hilarity beyond comparison. In a sunny day in April or May, when the grass fields have begun to resume their verdure, it is pleasant to listen to the merry songster that makes the welkin ring with its sprightly notes; in the sultry month of July, still more pleasant is it to hear its matin hymn while the dew is yet on the corn; and in winter should you chance to hear the well-known voice on high, it reminds you of the bright days that have gone, and fills you with anticipation of those that are to come.

No doubt much of the pleasure derived from the lark's song depends upon association, and to him who finds delight in wandering over the

\* The term "division," in the time of Immortal Will, was applied to the pauses and changes in music. The quibble upon the word *divide* in the second line is too manifest to call for comment.

green fields, along the daisied margin of the clear stream that winds in the bottom of the pastoral glen, or upon the fenny brae, where the "lang yellow broom," and "blossomed furze unprofitably gay" shoot up amidst the wild thyme, yarrow, and blue bell; it is pleasant to listen even to the "skirl" of the corn-bunting, the see-saw song of the tit, the creaking cry of the partridge, or the singular creak of the land-rail; but, independently of circumstances and associations, the song of the lark imparts an elasticity to the mind, ~~excites the spirits~~, and suspends, for a time, the gnawing of corroding care. The mellow song of the merle, or mavis, is apt to inspire melancholy, especially if heard in a sequestered valley, towards the close of day, and the feelings which it excites have, perhaps, as much of a depressing, as of a soothing tendency; but the carol of the lark, like the lively ~~note~~, excites pure cheerfulness, and might, with propriety be prescribed as an antidote to dulness. It is not merely music that we look for in the song of birds; but variety, and the expression of passions, feelings, and wants. Were all our warblers to tune their throats according to rule, we should become sickly and sentimental, fill the valleys with sighs, and groan from the mountain tops, but the loud war-whoop of the eagle, the harsh scream of the heron, and the croak of the raven, are antidotes to the bewitching melody of the black-cap and nightingale. I have endeavoured to trace a repetition, at regular intervals, in the strains of the lark; but its modulations seem to have no rule. In confinement, this bird sings every whit as well as when at large; and when rapidly perambulating the square bit of faded turf in its cage, it enacts its part with apparently as much delight as when mounting "towards heaven's gate."

As I propose to append to each of these articles a minute and faithful series of directions for the TREATMENT, FEEDING, and BREEDING of the various feathered songsters included in these articles, I shall here pass over the nest, the pairing, the eggs, and breeding of these birds while free denizens of the fields, and reserve what I have to say for the sequel. I shall merely observe that, when sitting on its eggs, the lark will allow a person to walk quite close by its ground-built nest without rising, and that they have often been taken by the hand in corn-fields when thus occupied. When disturbed and forced to rise, the female flies off low, with a cowering, tremulous flight, and either alights a little distance off, or ascends and flutters round, uttering a faint twitter, which usually brings up the male-bird. Boys often discover larks' nests by watching their fluttering descent into them.

The lark always reposes on the ground at night, and often in the barest places, and its enemies, besides man, are weasels, polecats, and the various species of hawks and kestrels.

From the middle of spring to the end of June, larks may frequently be seen on the roads, and in warm dry weather, they will flutter in the dust, like the sparrows, appearing to derive great pleasure from the performance. In autumn they have no song, and fly about in a very quiet manner, a few together, apparently recruiting their energies by the abundant food obtainable in the stubble and grass fields.

Thus much of the lark in his state of nature; we now proceed to THE LARK AS A CAGE-BIRD.

## Mode of taking Larks.

It would take too long a time to describe all the modes of catching larks which are in use. It is enough to say that with day and night nets, known by the name of lark nets, so large a number of these birds are taken alive in the open country, that it is easy to have a choice of both males and females. This lark-snaring is accomplished by placing a considerable number of nets perpendicularly, like walls, which are called day-nets, towards which, in the dusk, the birds are forced by means of a long rope, which is drawn along the ground, and drives them forward; in the night, a square net called a night net is carried to a spot where it is known that many larks are collected in the stubble, and there they are covered just when they begin to flutter.

If, in the spring, it is wished to procure a good singing male, for some are better than others, a lark whose wings are tied, and with a little forked lime-twig fixed to its back, must be carried to the place where such a bird is to be found. As soon as it is let loose, and the desired male has perceived it from high in the air, he will fall upon it like an arrow and attack it; but soon, the dupe of his jealousy, he will find himself caught by the lime.

## THE CAGE.

Whatever form may be given to cages, they must be at least eighteen inches long, nine wide, and fifteen high; the bottom should have a drawer in which enough of river sand should be kept for this scratching bird to be able to roll and dust itself conveniently. It is also a good plan to have in a corner a little square of fresh turf, which is as beneficial as it is agreeable. The top of the cage must be of linen, since, from its tendency to rise for flight, it would run the risk of wounding its head against a covering of wood or iron wire, especially before it is well tamed. The vessels for food and drink must be outside, or, which I prefer, a drawer for the food may be introduced in the side of the cage: sticks are not necessary, as the lark does not perch. When it is allowed to hop free in a room, the latter must be very clean and neat, otherwise a thread or hair may entangle the feet, and if not removed it easily cuts the skin, maims the bird, and the entangled toes shrink and fall off.

## FOOD.

When wild, the food consists of insects, especially ants' eggs; also of all kinds of seeds, and in autumn of oats; which these birds skin by striking them against the ground, their beak being too weak to shell them alone. In the spring, the sprouting seeds and young buds, also the blades of young grass, are eaten, and grains of sand help their digestion.

In the house, if the lark is hopping about, nothing is better than the first universal paste (hereafter to be given), but if caged the second will suit it better. Poppy-seed, bruised hemp, crumb of bread, and plenty of greens, as lettuce, endive, cabbage, or water-cress, according to the season, must be added. A little lean meat and ants' eggs are favourite delicacies, which make it gay and more inclined to sing. When old larks are first made prisoners, they must be fed only with oats and poppy-seed to reconcile them to captivity.

## DISEASES AND DURATION OF LIFE.

These birds are very subject to a kind of scurf or yellow crust round the base of the beak. The best remedy is to take care that they have good food; the second universal paste agrees with them particularly well; but greens, ants' eggs, meal-worms, or other insects, must be added. With this food they may be preserved healthy for many years in the house. Instances have been known of larks which have lived in this way for thirty years.

## BREEDING.

The lark lays but once a year in cold countries, twice in the temperate, and three times in the warmer climates. Its nest, formed on the ground in a little hollow, is made, without much art, of straw, and the wool and hair of animals, and by preference in hollow ground or among the summer crops of grain. The eggs, in number from three to five, are of a whitish grey, spotted and dotted with dark grey; incubation lasts fourteen days. By the end of April the young are often hatched, and are at first only fed with insects, and leave the nest before they can fly; but they nevertheless continue to be fed by the mother till they can follow her in her excursions. Before the first moulting, all the upper part of the body is dotted with white; if it is wished to take nestlings, they must be removed from the nest when the tail is about three-quarters of an inch long. They are fed with crumb of white bread, and poppy-seed steeped in milk; some ants' eggs or a little minced lean meat will be a wholesome addition. The males are soon distinguished by their yellow colour. If it is intended to teach them to perform a tune, their instructor must commence before they are ready to fly, for by that time they already begin to record their natural song. They must also be completely separated from other singing birds, otherwise the great flexibility of their organs, joined to their memory, will infallibly cause them to adopt the song of such birds as they are near, and even old larks, brought into my bird-room, have learnt to imitate perfectly the nightingale and chaffinch. They vary, however, very much in this respect. Some females in confinement lay without the presence of a male, and others pair, but I have never yet succeeded in making them sit. One of my neighbours, notwithstanding the greatest care, has succeeded no better, though he had a female which laid from twenty to twenty-five eggs annually. There would undoubtedly be a better chance of success in a large garden aviary. Though, however, it is difficult to induce larks to sit, it seems very easy to get them to take care of a young brood.

The SONG THRUSH shall form my next article, and be followed by the WOODLARK, the LINNET, and the MERLE THRUSH, or BLACKBIRD.

## THE HORSE AND THE HOUND.

BY TRAMBY.

THERE'S a bliss, beyond all that the cockney can boast  
When two, that are linked in one sportsman-like tie,  
With wind never failing and scent never lost,  
Do their work, spite of brooks, walls, and hedges so high.  
One hour with this beautiful couple is worth  
Whole seasons of pleasure elsewhere to be found;  
And, oh! if there be an enjoyment on earth,  
'Tis afforded, I'm sure, in the horse and the hound.

A CLASSICAL CONSOLATION.—Poor Tom Stubbins hunted with the Pytchley hounds. He had a favourite mare called "Mary." He now and then called her Polly for shortness or out of an excess of affection. One day, as he rode her, it so chanced that poor Mary and her master had a purl in leaping over a gaping brook, and "the horse and its rider" came into the water together. They might both have been smothered for anything that anybody in the hunt cared about them, but they had powerful objections to doing *jelo de se*, so they struggled out together. As Tom lay on the ground trying to get rid of the water he had swallowed, a friend, a Cambridge man, pulled up to inquire the cause of his muddy and wretched appearance. Stubbins told him a doleful tale.

"Ah, ah! I see, as we say in the classics,

*'medio de fontis leap o'er' em*

*Surgit e mari a liquid;*"

and away the unfeeling wretch rode. Stubbins was disgusted, as well he might be.

## CONTINENTAL SPORTING.

HUNTING IN FRANCE.—The Princes' Stag-hounds meet every Monday, either at St. Germain's or at Marley. At Rambouillet, however, there are two meets twice a week, Tuesdays and Fridays, the hounds belonging to a society of noblemen. This season the sport has been better than ever. The most conspicuous and enterprising sportsmen are the Marquis Mac Mahon and Count Frederic de la Grange; there is a fine pack of fifty-five thorough-bred hounds, with eight whippers-in. The chase continues on an average about three hours; of eight days' hunting this year a stag was killed each day. On the 21st ult., a fine hind was captured after a chase of not less than twenty-seven miles; there was only one huntsman in at the take. In addition to the above-named two noblemen, there were in the hunt, Count St. Aldegonde, Marquis de la Ferté, Duc d'Uzès, Marshal Grouchy, Marquis Fracontal, Marquis de Perthuis, Count de la Briffe, Count de Bernis, Count de Plaisance, and Count Merinville.

LADY SEYMOUR, (whose title of the "Queen of Beauty" at the Eglinton tournament has followed her to Paris) goes out regularly with the Duc de Nemours' stag-hounds, and excites very great notice amongst the French from the boldness of her ladyship's riding. A lady on horseback, which they somewhat appropriately denominate an *amazone*, is a rarity in France, but for one to join like a true Diana in the chase is an event of very rare occurrence indeed. On the 20th ult. there was an excellent day's sport. Lady Seymour rode a horse lent her by the Russian Prince de Labanoff; her ladyship during the day rode up to the hounds, and was in at the death. Besides the three Princes de Nemours, Joinville, and d'Aumale, there were at the meet—Count d'Aquila, Prince Labanoff, Counts de Plaisance, Greffuhl, de Nicaulay, d'Hautpoul, and a numerous field of other persons of distinction.

THE NEW GAME LAWS.—The French journals are daily filled with cases of great severity arising from the new laws relating to game, and much excitement prevails in most parts of the country. At the Court Royale at Nancy two convictions have just taken place, where greyhounds being found loose on the highway have been pronounced as "sporting," and that their owners were responsible for it. In one instance it was remarkable that the owner was driving in his cabriolet along the highway, and the dog running by its side. Notwithstanding, the master was convicted the same as if he had coursed at a prohibited season.

## CURIOSITIES OF MURDER.

For a time the field near Haverstock-terrace, Hampstead—the scene of the late terrific murder—promises to empty the parks and Kensington Gardens of the beauty and fashion generally to be found there. We learn from the *Post*, that two days after the discovery of the murder—

"Several carriages containing ladies drove up to the field, and gentlemen on horseback, attended by their grooms, rode across to view the place. Not content with seeing, many brought away boughs and twigs from the surrounding trees, and chips from the fence against which the unfortunate man fell after he was struck, and whereon the marks of the bloody fingers of the murderers were imprinted."

Of course these boughs and twigs will be carefully planted, and so may grow up and flourish a continual memento of agony and blood. Thus, instead of camellias and other exotics, forming opera bouquets for "beauty and fashion," we may for a time have twigs of hawthorn and privet, from the field of murder, as the only wear. We humbly suggest, too, that the "chips from the fence" should be curiously preserved—set in gold, as shawl-brooches and other trinkets for those "ladies" of susceptible hearts who flock to a scene of frightful homicide as to a flower-show—and who inspect and pry into the bloody finger-marks of murderers, as though they were exhausting their admiration on some new geranium or wonderful fuchsia. One of the supposed murderer's buttons was found in the field: what a gem that would be, shining in the bosom of lovely and fashionable woman! Should the assassins happen to want money for their defence, we doubt not that they could obtain a very handsome sum by selling locks of their hair to fashion and beauty—the genuineness of the article duly warranted by the turnkeys and hangman. As certain ladies and gentlemen cast such an air of fashion about murder, we earnestly advise M. JULIEN immediately to put forth his *Haverstock Polka*. The music-sheet might be further recommended by a very striking lithograph, commemorating the atrocity.

CARRYING A MESSAGE.—"John," said a man to his Dutch servant, "go to Mr. Robin's house and tell him if there is any law in the land, I will prosecute him. Tell him not to bring his dog here, for the animal is rabid; and that if he comes here in my absence to scold, and bawl, and pick quarrels, I will send for Mr. Jarvis and have him taken care of." John went and delivered his message—"My master says that you shan't bring your dog to his house, for he is a rabbit, and if you go there in a bow to pick squirrels, he will send you to the barber's and take your hair off."

PERL'S PERIODICAL.—When the Act for prolonging the Income Tax is printed, we hope in fairness it will have at the end the same notice as is attached to serial articles in magazines, viz:—(To be Continued).

BROUGHTON AND SLACK, April 10, 1750; from a curious print, published the same year.

## THE HISTORY OF BRITISH BOXING, FROM FIG AND BROUGHTON TO THE PRESENT TIME.

### INTRODUCTION.

**H**ANKS to British spirit, the *ars pugnandi*—the dread of foes, the succour of friends, and the “cheap defence of the individual,”—still flourishes among us, although the occasional misdeeds of some of its professional upholders may cast a slur on its deserved fame.

Before entering upon our History, however, it behoves us to say a word or two on those who have “the merit of having been born before us,” and to point out wherein the present task,—to us a “labour of love,”—differs from those which have preceded it.

In the early part of this series of papers, due acknowledgment must be made to the “Sketches” of the eminent pugilists of his own time, contained in the spirited quarto of Captain Godfrey; albeit, therein more pages are devoted to back-sword and cudgel-play than to fistic science. From his time (1724-47) though numerous proofs are daily and weekly afforded by the journals of the love of the denizens of this “tight little island” for a “bellyfull,”—as more congenial to their manly tastes and spirit of fair play than the small-sword of the Frenchman, the knife of the phlegmatic Dutchman, the rapier or dagger of the sombre Spaniard, and the stiletto of the cowardly Portuguese and Italian—we find no writer (except the “Chronology” of Jon Bee,) who has endeavoured to put into a permanent form the deeds of the British boxers, until we arrive at the publication so well known as *BOXIANA*.

Of this, as the text-book of the Ring—though ceasing about 1826—we are bound to speak with some respect; nevertheless it is, perhaps, for a work of such extent, the most extraordinary specimen of confusion, bad-arrangement, and no-arrangement, that ever issued from the press. Its anachronisms, solecisms in grammar, oversights in compilation, and delightful self-sufficiency, place this cento of scraps (with the exception of its *duplicate* fourth volume) in the van of all undigested galimatias. The first volume of this work, originally published by Smeaton, was supposed to be that publisher’s own compilation; Pierce Egan, who yet flourishes in green old age, performing the like labour for the remaining three. There are two fourth volumes; one bearing the marks of literary capability, talent, and care, from the pen of Jon Bee (Badcock) the author of the “*Lexicon Balatronicum*.” The plan of this work, as a whole, is beyond the unriddling of an *Œdipus*; we will, therefore, briefly state the plan we propose to pursue.

We shall, at the beginning of each *epoch* or *period* in the History of the Ring, present the reader with a brief notice of the principal fistic

heroes who flourished therein, following this by a **DETAILED MEMOIR** of the pugilistic career of the most celebrated individuals. By this method, we trust, in the pages of this little Miscellany, to present the reader with a complete **HISTORY OF BRITISH BOXING**.

Ere we lay down our pen at the close of this preface, we should, indeed, deserve censure were we to omit all notice of the most talented, the ablest, the most powerful, and the most persevering writer that has hitherto lent his pen to the support of pugilism. We need scarcely say we speak of the Editor of *Bell’s Life in London*, Mr. V. G. Dowling; a gentleman by birth and education, and an admirer and champion of every manly sport from principle and conviction. Although he has not figured in bulky tomes as “the Historian” of the Ring, few can doubt that, without his energetic endeavours, the craven and the canter would have dealt yet heavier blows at the manliest of arts—the very antithesis of *treachery* and *foul play*—British Boxing. This gentleman,

On whose Atlantean shoulders borne

The “fistic” world once held its equipoise,

Which else had sloping plunged in endless night,

still survives, and long may he do so, for his name and abilities are indeed

A tower of strength,

Which those upon the adverse faction want.

To his admirable *résumé* of the History of Boxing, in the *Cyclopædia of Rural Sports*, and prefixed to his own “*FISTIANA*,” we confess the strongest obligations; and had they been (which was, of course, impossible from the space to which they were necessarily limited, as mere chapters of larger works) sufficiently extensive to have embraced the details of the more remarkable pugilistic encounters, this series of articles would never have seen the light.

### PERIOD, 1719—1734.

FIG, SUTTON, WHITAKER, PIPES, AND GRETING.

It would be foreign to our purpose here to indite a defence or eulogium of Pugilism, to cover the poverty of recorded facts. Indeed, this first period will present little more than a *CHRONOLOGY*, into which form we shall accordingly throw these few paragraphs.

1719.—FIG opened his theatre in the Oxford-road (now called Oxford-street), where the sword and single-stick were royally patronised, and occasionally fistic; yet, though eminent as a boxer, FIG appears principally, from the testimony of Captain Godfrey, to have shone as a cudgeller and swordsman. He says, “I have purchased my knowledge of backsword

with many a broken head and bruise in every part of me. I chose to go mostly to Fig, and exercise with him; partly, because I knew him to be the ablest master; and partly, for that he was of a rugged temper, and would spare no man, high or low, who took up a stick against him."—*Preface to Treatise on Science of Defence*, p. 4.

"In Fig," says Captain Godfrey, (in his "Characters of the Masters," p. 40, Ed. 1747), "strength, resolution, and unparalleled judgment, conspired to form a matchless master. There was a majesty shone in his countenance, and blazed in all his actions, beyond all I ever saw. His right leg bold and firm, and his left, which could hardly ever be disturbed, gave him the surprising advantage already proved, and struck his adversary with despair and panic." Our "early champion" soon found a customer, for in

1729:—Sutton (the Pipemaker of Gravesend) challenged Fig to fight him "English fashion." This contest, however, although recorded in "Chronologies" of the Ring, was neither more nor less than a cudgelling-match, as may be found by contemporary records. They fought twice (with cudgels) with alternate advantage; and at the third trial victory hung long doubtful, as we learn from the contemporary verses of Dr. John Byrom: the reader will there find that the "colours" were even then in vogue, though a century since they were tied to the arms of the combatants. The poem is reprinted in "Doddsley's Collection," vol. vi., p. 312, under the title of "Extempore verses upon a trial of skill between those two great masters of defence, Messieurs Fig and Sutton."

In 1723—"The Ring" in Hyde-park was formed by order of his Majesty, and encircled with a fence, about 500 yards from Grosvenor-gate. The area is still visible—a plantation of younger trees around a very old one. It was destroyed in 1820. The "New Theatre," as it was called, and Fig's Exhibitions, seem to have been at this period in high vogue; it was here that the celebrated Captain Godfrey (the *Barclay* of that time) displayed his uncommon skill and elegance in those manly sports, with the most hardy and determined competitors, contending for the palm of victory: and often was the captain witnessed by royal and noble personages, who, it should seem, were liberal supporters of a science tending to instil into the people fortitude and forbearance.

We shall not pause to notice the minor doings in the intervening eight years, as announced in the "Flying Post," and "Daily Newsletter," but hasten on to

1733,—when a gigantic Venetian, known as "the Gondolier," came to this country, in the suite of a nobleman. This immense fellow was famed for his feats of strength; but we will give the sequel in the words of Captain Godfrey:—"BOB WHITAKER was the man pitched upon to fight the big Venetian. I was at Slaughter's Coffee-house when the match was made by a gentleman of advanced station: he sent for Fig to procure a proper man for him. He told him to take care of his man, because it was for a large sum; and the Venetian was of wonderful strength, and famous for breaking the jawbone in boxing. Fig replied, in his rough manner, 'I do not know, Master, but he may break one of his countrymen's jawbones with his fist; but I'll bring him a man, and he shall not be able to break his jawbone with a sledge-hammer.'

"The battle was fought at Fig's amphitheatre, before a splendid company, the politest house of that kind I ever saw. While the Gondolier was stripping, my heart yearned for my countryman. His arm took up all observation; it was surprisingly large, long, and muscular. He pitched himself forward with his right leg, and his arm full extended; and, as Whitaker approached, caught him a blow at the side of the head that knocked him quite off the stage, which was remarkable for its height. Whitaker's misfortune in his fall was the grandeur of the company, on which account they suffered no common people in, that usually sat on the ground, and lined the stage all round. It was thus all clear, and Whitaker had nothing to stop him but the bottom. There was a general foreign huzzza on the side of the Venetian, as proclaiming our countryman's downfall; but Whitaker took no more time than was required to get up again, when, finding his fault in standing out to the length of the other's arm, he, with a little stoop, dashed boldly in beyond the heavy mallet, and with one English peg in the stomach," by which the Captain in another place explains he means what is called "the mark,"—"quite a new thing to foreigners, brought him on his breech. The blow carried too much of the English rudeness with it for him to bear, and finding himself so unmannerly used, he scorned to have any more doings with such a slovenly fist." We could not resist transcribing this graphic, terse, and natural account of a prize-fight for our "Chronology." The rarity of Captain Godfrey's book, and the bald, diluted, silly, amplification of it in "Boxiana," pp. 22—25, vol. i., being the moving reasons thereto.

"So fine a house," says Captain Godfrey, alluding to the company which assembled to see Whitaker fight the Gondolier, "was too engaging to Fig not to court another. He therefore stepped up, and told the gentlemen that they might think he had picked out the best man in London on this occasion: but to convince them to the contrary, he said, that if they would come that day se'nnight, he would bring a man should beat this Whitaker in ten minutes by fair hitting. This brought near as great and fine a company as the week before. The 'man' was Nathaniel PEARTREE, who, knowing the other's bottom, and

his deadly way of flinging, took a most judicious manner to beat him. Let his character come in here.—He was an admirable boxer, and I do not know one he was not a match for, before he lost his finger. He was famous, like Pipes, for fighting at the face, but was stronger in his blows. He knew Whitaker's hardness, and, being doubtful of beating him, cunningly determined to fight at his eyes. His judgment carried his arm so well, that, in about six minutes, both Whitaker's eyes were shut; when, groping about a while for his man, and finding him not, he wisely gave out (*mordernicé*, gave in,) with these odd words—'Damme, I'm not beat; but what signifies my fighting when I can't see my man?'

Two other pugilists only of the school of Fig claim our notice, and these are PIPES and GRETING.—"PIPES was the neatest boxer I remember. He put in his blows about the face (which he fought at most) with surprising time and judgment. He maintained his battles for many years with extraordinary skill, against men of far superior strength. PIPES was but weakly made: his appearance bespoke activity, but his hand, arm, and body, were small; though by that acquired spring of his arm he hit prodigious blows: and at last, when he was beat out of his championship, it was more owing to his debauchery than the merit of those who beat him."

"GRETING was a strong antagonist to PIPES. They contended together for some time, and were almost alternate victors. GRETING had the nearest way of going to the stomach (which is what they call the 'mark') of any man I knew. He was a most artful boxer, much stronger made than PIPES, and dealt the straightest blows. But what made PIPES a match for him, was his rare bottom spirit, which would bear a great deal of beating; and this, in my mind, GRETING was not sufficiently furnished with; for after he was beaten twice by PIPES, a mere sloven of a boxer, and everybody that fought him afterwards beat him. I must notwithstanding do that justice to GRETING's memory to own that his debauchery contributed to spoil a great boxer; yet, I think he had not the bottom of the other."—*Godfrey*, p. 75, 58.

With these brief extracts we close the First Period; for in the year 1734, "the valiant Fig" after fig-uring for some twenty years as master of the revels at the various fairs in Moorfields, St. George's fields, and at Southwark, and usually erecting a booth for the exhibition of single-stick, boxing, &c., at these gatherings, received his last "knock-down." We learn from Hogarth's print and contemporary records, he was wont to parade the tumultuous scene as champion, inviting all comers to contest "for money, love, or a belly-ful!" and issuing bills containing a sort of programme of the entertainments. Fig was a native of Thame, in Oxfordshire, and died December 8th, 1734, as appears from a notice in the obituary of the "Gentleman's Magazine," for that month. "Boxiana," vol. i., p. 23, erroneously says, 1740.

It was the opinion throughout Europe at this period, that the English nation were more expert than any other, not only in boxing, but in the use of the back-sword; and sorry should we be were it not so at this day. The amphitheatre, boxing, foil-play, and cudgelling-schools, were openly advertised, and the amusements made known, like any of the regular theatres; the audiences were equally fashionable, and they were patronised by the noble and great, and not disturbed by the magistrates. Although it was admitted, that these amphitheatrical practices were productive of some ill, as offering a kind of encouragement to idleness and extravagance among the vulgar; yet there is hardly any useful thing that does not present some opening for mischief, or is not liable to abuse. The practices of cudgel-playing and boxing have been thought commendable by the legislator in fostering British spirit. Courage is allowed to be chiefly natural, and surely it may be not only acquired but strengthened by use and familiarity with danger. But we are digressing, and in our next chapter shall come to metal more attractive than mere disquisition.

VELOCIPEDE'S STOCK.—From a statement published in the new book *Calendar* it appears that the stock of this celebrated horse have won the following sums:—In 1833, 500*l.*; 1834, 3,510*l.*; 1835, 13,364*l.*; 1836, 7,747*l.*; 1837, 3,363*l.*; 1838, 9,196*l.*; 1839, 2,844*l.*; 1840, 3,120*l.*; 1841, 1,632*l.*; 1842, 5,801*l.*; 1843, 7,674*l.*; 1844, 7,911*l.*

THE MOST WONDERFUL FEAT ON RECORD.—On Thursday last, the Honourable Sydney Fitzroy de Lushington, a chief *employé* in one of her Majesty's offices at Somerset-house, undertook for a wager to read two of Mr. G. P. R. James's novels, sing a comic song, poke the fire once every quarter of an hour, play a game at cribbage every second half-hour, read all the morning papers, answer ten invitations, eat a pound of sponge-cake, peel three oranges, curl his hair, and dress himself for dinner, between the office hours of 10 and 4. A number of bets were dependent on this arduous undertaking in all the Government Offices. The wager, however, was gloriously won within the time prescribed, and forty-five minutes to spare. The honourable gentleman, far from being punished, did not look in the least fatigued. There was a very large attendance of gentlemen in the office, waiting with breathless impatience for the issue of the wager, but we regret to say they did not express themselves very well pleased when directed to "call again to-morrow." A number of I O U's changed hands on the occasion.—*Punch*.

## SONGS OF THE NEW TARIFF.

Come pile up the logwood and let us be gay,  
Quaff Sarsaparilla while cheaply we may;  
Let's send round the cup, and let's banish our ills,  
By drowning our care in "the syrup of squills."

Now vainly does sorrow the spirits assail,  
While our table shall groan with the fins of  
the whale;  
For the good we are all of us likely to feel,  
Here's a health and nine cheers for the tariff  
of Peel.

Now THEN!—Why ought a bishop be a good  
geographer? Because he is the most likely  
person to know how many a-iles there are in  
each sea (see).

REDUCTION IN WARM BATHING at  
the OLD ROYAL BATHS, 11, Bath-street, Newgate-  
street.

TERMS OF COLD BATHING.—Year, £1 3s. 6d.; Quarter,  
10s.; Each time, 1s.; Shower, 1s.; Vapour, 3s.; Eight  
vapour, £1 1s.

An entrance to the Baths through Christopher-court, op-  
posite the Clock of the General Post-office.  
N.B. No Warm Subscription Baths to be taken after Five  
o'clock on Saturday afternoon.

**KINAHAN'S LL WHISKY** (seven years  
old).—This celebrated spirit, equal in flavour to Cog-  
nac brandy, or Holland, will be forwarded to any part in  
cask or bottle from KINAHAN and CO'S STORES, 25,  
King William-street, Strand. Sealed bottles, 3s. 6d. each  
may be obtained at most respectable retail houses. KX  
Dublin Stout, particularly recommended by the Faculty  
(Quarts, 6s. 6d.; Pints, 3s. 9d. per dozen.) Bass's Pale Ale,  
Scotch and Burton Ales.—N.B. The trade supplied.

**PISCATORIAL**.—For the sole benefit of  
Gentlemen Anglers. W. Blacker takes the liberty of  
advertising the following valuable and highly complimen-  
tary communication, which he has received from the pen of  
a gentleman, a true brother of the rod and fly, viz.:—"Sir:  
I last week procured through my bookseller, your excellent  
little book on 'Flymaking, &c.' a work far superior to any  
I have yet seen; and I know of it earlier, it would have  
saved me a great deal of mispent time in learning the art it  
so ably teaches. To make it a complete guide, I shall feel  
obliged if you will send me modelled flies of those described  
at pages 19 to 34, and at page 68 for the River Ribble and  
hopper fishing; if you will send me your charge I will remit  
the amount by a Post Office order.—I am your obedient  
servant, Leo. Wilkinson, jun., solicitor, Blackburn, 3rd  
March, 1845."—"Try Blacker's Hallie for the rivers." I find,  
Blacker," says the R. H. Lord Henry Bentinck, "that you  
know how to work; I killed seven salmon in Scotland, with  
one of your flies this season."—44."

**CLOWN**.—Now Ready.—A FRIEND OF  
PUNCH'S.—THE CLOWN OF LONDON at all the  
Theatres, being out of work, intends, during the Summer  
season, to follow the example of his betters, and publish

for which Horses should be sent the previous Monday. Ex-  
cellent boxes for Stallions, Brood Mares, Blood Stock, and  
other Horses of value.

N.B. The Public is respectfully requested to take notice  
that the business of Aldridge's Repository is strictly confined  
to Sales by Auction and Commission, there being no dealing  
on the part of the Proprietor, nor by any person employed  
by him to operate to the prejudice of either Buyers or Sellers,  
and that under no circumstances is the practice of misrep-  
resenting the ownership of Horses ever resorted to.

**LUGGAGE LABELS.**—Take Care of your

Luggage.—Adhesive Luggage Labels, for the direction  
of every kind of package, parcel, and portmanteau, and of  
boxes, bags, and baskets.—Now ready, for the use, safety,  
and convenience of all Travellers throughout the World,  
the RAILWAY and STEAM-BOAT BELL LUGGAGE  
LABELS, in books of plain and coloured paper, price 1d. to  
6d. each, at the General Depot, 332, Strand: to be had  
wholesale at Bradshaw's Railway Guide Office, Fleet-street;  
Delamotte, 46, High Holborn; J. Limbird, stationer, 143  
and 144, Strand; and to be had of all booksellers, hotels,  
railway stations, and booking offices throughout the king-  
dom. Encomium and recommendation of *The Times*, news-  
paper, in favour of the Railway Bell Luggage Labels.—"The  
paper on which the labels are printed, is made adhesive in  
the same manner as Post-office stamps; thus, in the space  
of two minutes, half-a-dozen labels may be prepared and  
stuck upon the packages, and mistakes and confusion avoid-  
ed. The invention is a prevention to losses, and will doubt-  
less receive universal patronage."

**GARRICK'S HEAD HOTEL**, Bow-street,

opposite Covent-garden Theatre.—The grandest  
achievement of modern art since the great picture of the  
Mock Election in the King's Bench, by Haydon, is the paint-  
ing by Henning, of the sitting of the Judge and Jury Society,  
now exhibiting at the Corner of Leicester-street, Regent-  
street. The biographical key, the picture, and synopsis of  
the institution, written by the Lord Chief Baron Nicholson,  
may be had, price 2d., at the bar of the hotel. The picture  
contains the portraits of fifty-nine celebrated characters, in  
varied walks of life, viz., the statesman, the lawyer, the  
poet, the actor, the pugilist, the police-officer, the orator,  
the wit, and the whole of the judge and jury bar, with the  
Lord Chief Baron presiding in his ermine robes. The Judge  
and Jury Society sits every evening at nine o'clock, and is  
succeeded by an excellent Concert, supported by vocalists  
of celebrity, including Mrs. Charles, the modern Malibran.  
Chops and stews cooked under the eyes of the devourer, on  
a gridiron in the coffee-room; by Diogenes Dreaswell, coquo-  
ner magister to the Garrick Inn of Court.—Beds, 1s. 6d.  
A porter up all night.

Cum opima ex roborata.—Virgil.

A splendid supper for a bob.—Free Translation.  
Ex uso meo est.—Nicholson.

**GARRICK'S HEAD HOTEL, BOW-STREET,**

OPPOSITE COVENT-GARDEN THEATRE.

**MR. NICHOLSON** at home!—The "Judge  
and Jury Society," every night.

The Lord Chief Baron suggests the attention of his Coun-  
try cousins to the following synopsis of arrangement and  
charges at the Garrick's Head Hotel:—Bed-rooms, excel-  
lently appointed, with the use of shaving tackle, 1s. 6d.  
In the coffee-room, Dinners in the first style, with silver fork,  
and off damask, for less than One Shilling. Private rooms  
for large and small parties. Tea, Coffee, &c. Supper and  
Singing after the Theatres. Board and Lodging, £1 11s. 6d.  
per week.

Country Friends, when you arrive in London, order the  
cabman to drive to the Garrick's Head Hotel, Bow-street,  
opposite Covent-garden Theatre.

"The Garrick's Head Hotel, in Bow-street, is one of the  
best houses in London for a countryman to stay at; the  
worthy Lord Chief Baron pays vast attention to his visitors  
from the provinces—a man may see and rationally enjoy life,  
under the auspices of his Lordship."—*Bell's Life*.

LONDON:—Steam Press of W. M. CLARK, 10, Red Lion-  
court, Fleet-street; and Published by J. DUNN and  
E. SWERT, Holywell-street, Strand; and W. M. CLARK,  
17, Warwick-lane, Paternoster-row.

# The Sporting World, OR LIFE IN LONDON, & THE COUNTRY.

No. 2.]

SATURDAY, MARCH 22, 1845.

[THREE HALFPENCE.]

The Great Fight between JOHNSON, the CHAMPION OF ENGLAND, and ISAAC PERRINS, of Birmingham, at Banbury, Oct. 22, 1789, from an original print.

## THE HISTORY OF BRITISH BOXING, FROM FIG AND BROUGHTON TO THE PRESENT TIME.

PERIOD II., 1735—1786.

FROM THE TIME OF BROUGHTON TO THE APPEARANCE OF DANIEL MENDOZA.

### CHAPTER I.

GEORGE TAYLOR—BROUGHTON—SLACK—SMALLWOOD—BUCKHORSE—WILL WILLIS.

**AS** the decease of Fig, GEORGE TAYLOR, assuming the title of CHAMPION, erected his "Great Booth," as it is termed in the advertisements of the day, in Tottenham-court-road. It may not be improper to observe in this place, that the word "champion" at this period, and for nearly half a century subsequent, was assumed by and applied to almost every public boxer; it is, however, to those only whose exploits justify that title, that we shall here apply it.

#### GEORGE TAYLOR.

George Taylor came rapidly and deservedly into notice about the period of Fig's decline, by beating in succession most of the best men of the day. He, however, fell beneath the conquering arm of Broughton, as will be noticed in another place. Some curious blundering appears as to the date of this celebrated fight. All the Chronologies (Jon Bee's, the detail of Boxiana and Fistianaa,) give 1740 as its date, yet Taylor had been then five years a CHAMPION and proprietor of the "Great Booth," and we have Captain Godfrey's authority for saying he was not, when he fought Broughton, more than twenty years old! and he comments on the imprudence of this first attempt! Taylor was a strong, able pugilist,

according to the fashion of those times, but deficient in bottom. His most remarkable recorded conquests were June 16, 1741, PRINCE BOSWELL, the Gipsy, at his own booth; and Jan. 31, 1750, the celebrated Jack Slack (subsequently the conqueror of Broughton), at the Champion's booth in Oxford-street, with whom he had coalesced, as will be noticed subsequently.

Of PRINCE BOSWELL, Godfrey says:—"Praise be to his power of fighting, his excellent choice of *time* and *measure*, his superior judgment, despatching forth his executing arm! But fie upon his dastard heart, that mars it all! As I knew that fellow's abilities, and his worm-dread soul, I never saw him beat, but I wished him to be beaten. Though I am charmed with the idea of his power and manner of fighting, I am sick at the thoughts of his nurse-wanting courage. Farewell to him, with this fair acknowledgment, that, if he had a true *English* bottom (the best fighting epithet for a man of spirit), he would carry all before him, and be a match for even BROUGHTON himself!" BOSWELL proved no difficult conquest to TAYLOR, as the fight was only of short duration.

Of his battle with Slack little record is preserved; it appears, however, to have been a fight displaying the superiority of coolness and science over courage and impetuosity. Slack proved an awkward customer; but after twenty-five minutes punishment the butcher had got enough and to spare, and George received the purse.

Taylor now retired from public pugilism and became Boniface of an

inn at Deptford; but as the old war-horse is said to prick his ears at the trumpet, so, although declining in years, he was ill-advised enough to reply to the challenge of one Faulkner, who proposed to fight him for 200 guineas and the door-money. The affair came off at St. Alban's, Hertfordshire, since a classic sport in pugilistic annals, on August 5, 1758. It would appear from the style of the paragraph, that they had had an encounter before, and therefore there was no "love lost."

It was a complete hammering set-to. For the first twelve or thirteen rounds, Faulkner was dreadfully punished and flogged several times. The fourteenth round proved a proper trial of skill and strength; at length, Faulkner levelled Taylor, when the odds began to drop a little, and Faulkner was getting into favour. George, finding that his man gained upon him, began to shift, and fell now and then without a blow, which occasioned considerable murmuring, and the friends of Faulkner insisted that he had won the battle; but Faulkner was above taking any advantage and wished to fight it out. The combatants set-to more furiously than ever.

Taylor, inspired with the thoughts of his fame and former victories, stood up like a hero; and Faulkner, recollecting that it must either make or break him, fought like a lion. After a terrible conflict of an hour and fifteen minutes, the veteran George Taylor acknowledged he was conquered. Greater courage and skill could not be displayed; and it was supposed, that had not Taylor laboured under the manifest disadvantage of an eye, of which he had been blind for some time, Faulkner could not have beat him; as the contest was only put an end to by Taylor having the other eye closed from a blow. Taylor died in December, 1758, at Deptford.

We now revert to his conqueror.

#### JACK BROUGHTON,

THE WATERMAN.

Broughton is unquestionably entitled to be regarded as the father of the art of self-defence. The successor of Fig in popularity, he far exceeded him in science, and the application of those principles which stripped the practice of boxing of many of those features of ruffianism and barbarity with which the unregulated contests of mere bruisers had invested it. There was a neatness and quickness in his style which far distanced his competitors, and drew crowds to witness his exhibitions. He appears first to have introduced *stepping and barring* blows, then *hitting* and getting away; before him it appears to have been toe-to-toe work, or downright hammering; at any rate, his method appears to have had the novelty of a discovery with his audiences and his antagonists: he stopped the blows aimed at any part of him by his antagonist with so much skill, and hit his man away with so much ease, that he astonished and terrified his opponents beyond measure; and those persons who had the temerity to enter the lists with Broughton, were soon convinced of his superior knowledge and athletic prowess: and most of his competitors, who were compelled to give in, from their exhausted and beaten state, had the mortification to behold Broughton scarcely touched, and to appear with as much cheerfulness and indifference as if he had never been engaged in a set-to.

He was indebted to nature for a good person; his countenance was manly and open; and possessing a sharp and penetrating eye, that almost looked through the object before him, gave a fine animation to his face. His form was athletic and commanding; there was an importance about it which denoted uncommon strength, and which every spectator felt impressed with that beheld him. Six feet, wanting an inch, in height; and fourteen stone, or thereabouts, in weight.

Broughton became as a *fixed star* in the pugilistic hemisphere; his talents as a Boxer gained him many admirers and patrons; but his good temper, generosity of disposition, and gentleness of manners, ensured him numerous friends. He was intelligent, communicative, and not destitute of wit. The system he laid down was plain, and easy to be understood; and, under his instruction, several of his pupils arrived at a pugilistic eminence, and gave distinguished proofs of the acquirements they had gained under so great a master.

But the best monument to the memory of Broughton is the character and description of his pupil and admirer, the gallant Captain, which eulogy, like that of Byron's of the eminent Mr. John Jackson, remains permanent answers to the canting and hypocritical slanderers of pugilists and pugilism. Godfrey's words are:—

"Advance, brave Broughton!" exclaims Captain Godfrey; "Thee I pronounce captain of the boxers. As far as I can look back, I think I ought to open the 'Characters,' with him: I know none so fit, so able, to lead up the van. This is giving him the living preference to the rest; but I hope I have not given any cause to say, that there has appeared, in any of my characters, a partial tincture. I have thoroughly consulted nothing but my unbiased mind, and my heart has known no call but merit. Wherever I have praised, I have no desire of pleasing; wherever I have decried, no fear of offending.—Broughton, by his manly merit, has bid the highest, therefore has my heart. I really think all will poll with me, who poll with the same principle. Sure there is some standing reason for this preference: what can be stronger than to say, that, for seventeen or eighteen years, he has fought every able boxer that appeared against him, and has never yet been beat? This being the case, we may venture to conclude from it: but not to build alone on this, let us examine, farther into his merits. What is it that

he wants? Has he not all that others want, and all the best can have? Strength equal to what is human, skill and judgment equal to what can be acquired, undebauched wind, and a bottom spirit never to pronounce the word *enough*. He fights the stick as well as most men, and understands a good deal of the small-sword. This practice has given him the distinction of *time* and *measures* beyond the rest. He stops as regularly as the swordsman, and carries his blows truly in the line; he steps not back, distrusting of himself, to stop a blow, and piddle in the return, with an arm unaided by his body, producing but fly-flap blows, such as pastrycooks use to beat those insects from their tarts and cheesecakes. No; Broughton steps bold and firmly in, bids a welcome to the coming blow; receives it with his guardian arm; then, with a general summons of his swelling muscles, and his firm body seconding his arm, and supplying it with all its weight, pours the pile-driving force upon his man.

"That I may not be thought particular in dwelling long upon Broughton, I leave him with this assertion, that as he, I believe, will scarce trust a battle to a waning age, I never shall think he is to be beat till I see him beat."

With such a character, and from such a patron of pugilism, who had viewed its effects nationally, in promoting heroism in the field, where he had fought and bled for his country; and who, in his leisure moments, had practised the science for pleasure and profit, it would be a matter of surprise if he lacked either friends or money to put him forward in the world. Accordingly he was promised liberal support if he would open a booth for the accommodation of the admirers of Boxing. But as he was still, up to 1742, an exhibitor at the great Booth of George Taylor, we will here, before giving an account of his adventures on his "own hook," turn to his exploits while at the Tottenham-court-road establishment.

Like all great masters, Broughton, we learn, always exhibited something new in his several contests; and those pugilists who had seen him fight, and supposed they had observed his method, were awfully deceived when they entered the lists with him, and expected to "nail" him on "the old suit."

Contrary to most other boxers, he did not depend upon any particular blow, although he was distinguished for giving some remarkable hits, which were not easily forgotten. Broughton, when necessary in the conflict, by putting in his "stomach-blow," often decided the battle; and his lunge under the ear generally produced terrible consequences to his opponent—the eye of Broughton was lively, piercing, and acute, soon perceiving the weakness of any adversary; his arm, keeping pace with that valuable assistant, protected him from the most destructive blows: and his quick penetration made him always aware of any direct intent pursued by his adversary, as immediately to render it futile and unavailing. His guard was so complete, that his frame appeared secured as if in a fence—uncommon strength and bottom often fell before him; and his expertness in the cross-buttock was great. His various attitudes in the fight were fine and impressive, and his countenance always animated and cheerful.

*Pipes and Greeting*, both distinguished pugilists—the former of whom hardly maintained the title of a Champion for a number of years, appeared nothing in the hands of Broughton, who gave them several chances to recover their lost laurels—these proved severe beatings to them, and only tended to increase his growing fame.

George Taylor, of whom honourable mention has been made, was an easy conquest to Broughton.

"George Stevenson, the coachman," says our perpetual resource, Capt. Godfrey, whose thin quarto we must almost plead guilty to reprinting piecemeal, "stood up for the length of forty minutes in a most heroic style to Broughton. It was a hasty match, and although Broughton was extremely unwell, sooner than make any excuse, he agreed to fight Stevenson without having that regard for his preparation, which he afterwards found he ought to have had. But here his true bottom was proved, and his conduct shone and admired. The battle was fought in one of the fair booths at Tottenham-court-road, railed at the end towards the Pit. After a most desperate conflict of thirty-five minutes, being both against the rails, and the coachman endeavouring to get the whip-hand of Broughton; the latter, by his superior genius, got such a lock upon Stevenson, as no mathematician could have devised a better. There he held him by this artificial lock, depriving him of all power of rising or falling, till resting his head for about three or four minutes upon his back, he found himself recovering, then loosed his hold; by this manœuvre Broughton became as a new man—and, on setting-to again, he gave the Coachman a most tremendous blow, as hard as any he had given him in the whole battle, that he could no longer stand, and his brave contending heart, though with reluctance, was forced to yield. Stevenson was a beautiful hitter; he put in his blows faster than Broughton, but then one of the latter's told for three of the former's. Stevenson had a most daring spirit, but his strength could not keep pace with it." Broughton expressed a very high opinion of Stevenson as a pugilist.

Jack James, a dashing boxer, who ranked high in the annals of pugilism, as a thorough-bred man, was compelled to acknowledge that he had

\* This was written in 1747, it had been well had the friendly captain's admonition been remembered.

found his master in Broughton. James's wrist, which in other contests had been considered so remarkably "handsome," lost all its attraction when in contact with the athletic arm of Broughton.

We will not proceed further with this enumeration of his minor contests, but come at once to his appearance at his own theatre in the character of CHAMPION OF ENGLAND.

(To be continued in our next.)

## BRITISH SONG BIRDS.—No. II.

THE WOODLARK.

**W**E follow the skylark immediately by its nearly allied congener, the woodlark, influenced by the motive of pointing out the distinctive difference of two birds very apt to be popularly confounded. The colouring of the two species is very similar, but the bill of the woodlark is much slenderer, its hinder claw less elongated, and its wing of a different form. The woodlark, moreover, is not met with in Scotland, although sufficiently common in England. The feathers on its head are much longer, the upper parts of a redder tint, the white of the under parts tinged with yellow, instead of brown, and the spots on the foreneck smaller and lighter. The dark markings on the female are larger than the male, and its lower parts less tinged with yellow. The woodlark is met with chiefly in the southern, western, and midland districts of England. It is not a bird of passage, but a permanent resident, and in the winter, generally appears in small parties, which search the fields for larvae, insects, and seeds of various kinds. Its ordinary flight, and mode of progression when on the ground, resemble those of the skylark: it reposes at night in fields, but by day, it perches on trees or bushes. When snow is on the ground, it joins the sparrows, buntings, and other small birds, in its approach to stack-yards, or betakes itself to marshy meadows in search of worms.

Early in spring (if the weather be mild), the small flocks disperse, and by the middle of March (in ordinary seasons), the different pairs of woodlarks have begun their nests. At this time, the woodlark is in full song, and may be seen springing from the field, very much in the same manner as the common species, ascending in a slanting direction, and sweeping in sidelong curves, all the while warbling a tuneful song, which, if not quite so diversified as that of the skylark, is certainly more melodious. As a songster, this bird is little beneath the nightingale, or garden warbler. It sings when perched on a tree, as well as on the ground; and continues its song through most part of the year, being silent only from the middle of autumn to the middle of winter, for in the latter season, on fine sunny days, and in very early spring, the note of the woodlark may be often heard.

The nest is on the ground, generally in a corn-field or pasture land, and near a wood or thicket: it is composed externally of dry grass, and lined with finer blades intermixed with hair. The eggs are four or five in number, of a pale yellowish brown, speckled with amber or greyish-brown, and often have a few dusky yellowish lines at the bigger end. We now turn to the Woodlark in his state of captivity.

### METHOD OF TAKING WOODLARKE.

The woodlark may be caught in the nest by limed twigs, but as it is cruel to separate a pair, and thus destroy a whole family, it is better to wait till autumn, and use the night-net. They may be taken early in the spring, when there is snow on the ground, by placing limed twigs or nets in cleared places, which is the best mode. It is true that this plan will not succeed in all years; but another may be substituted. Place a decoy woodlark under a folding-net, in a field frequented by a flight of this species, and they will not fail to join it. The same means also may be used as with the chaffinch, namely, by tying the wings of a woodlark

with a limed twig on his back, and letting him run to the place where there is a male of the same species. By this means the bird-fancier may obtain whatever kind of singer he prefers.

Of all the species of larks the woodlark has the finest song, and is, of all our indigenous birds (always excepting the nightingale), the one whose natural notes are the most delightful. Its clear flute-like voice executes a sonorous, tender, and somewhat melancholy air.

In the house, it is from a retired corner, tranquil and motionless, that it utters the different modulations of its beautiful voice. The singing time in its wild state is from March to July; in the house, from February to August. The female, like other larks, sings also, but her strains are shorter and less sustained. These birds appear to be subject to whims; I have seen some which would never sing in a room or in the presence of an auditor. These perverse birds must be placed in a long cage outside the window. In general these obstinate birds are the best singers. Their abrupt step and various frolics, in which they raise the feathers of the head and neck, are also very amusing.

In the house, if safe, it is better to let them run about, because experience shows that they sing better in this way than when caged. They must be well supplied with river sand, as well to roll and dust themselves as to pick out grains necessary for their digestion.

### FOOD.

When wild, in summer, the food consists of insects; in autumn, of rape, millet, seed, and oats; in spring, before they can find insects and worms, they are satisfied with the young buds of herbs, water-cresses, and, on an emergency, with the buds of the filbert.

In the house, as this species is more delicate than the Skylark, it is well to vary the food, and to give it occasionally, independent of the universal paste, poppy-seed, oats, hemp, sprouting wheat, fresh curds, fresh and dried ants' eggs, minced ox heart, meal worms, and the like. When one of these birds is caught by the net or otherwise, the best things to induce it to eat when it reaches the bird-room are poppy-seeds and ants' eggs.

I have seen two woodlarks which had been kept in a cage for eight years, very healthy and gay, with their feet quite free from disease, and singing perfectly. Their food consisted of crumbs of white bread and pounded hemp-seed mixed together; a piece of white bread, enough for the day, soaked in milk, which was poured boiling over it every morning, was also furnished; and finally, some ants' eggs, given two or three times a day as a treat. The bottom of the cage was also covered with sand, which was changed regularly every day, as well as the water. They were always kept in summer outside the window, exposed to the free air, screening them from the sun by covering the top of the cage with a sheet of paper or piece of linen by way of parasol. The success of this mode of treatment sufficiently proves its advantage. The cage was furnished with two bars, because the woodlark perches.

### DISEASES.

To the list of diseases already spoken of under the SKYLARK in our last number, one must be added peculiar to the woodlark. This attacks the feet, and renders them extremely brittle. They must therefore be cleaned carefully from everything which might entangle them; a single hair may cut them, so that the toes shrivel, or ulcerate and fall off. They become so brittle with age, that they are very seldom kept beyond four years; the least thing breaks them. Most of the woodlarks which I have had perished from broken legs; and this peculiarity I have remarked in no other species of bird.

We see from these instances, that if birds allowed to hop about a room enjoy more space and free exercise, they are also subject to more inconveniences and disadvantages than caged birds. Their food is neither so appropriate or regular; they cannot be kept so clean; their feet are almost inevitably injured; and lice devour them, without the power of prevention.—*Bechstein*.

In our last Number we spoke of an UNIVERSAL PASTE, and a second Paste; the recipes for these are copied from the celebrated Germain work of Dr. J. M. BECHSTEIN, which has been translated and published in both French and English.

### THE UNIVERSAL PASTE.

Though an universal remedy savours of quackishness, and the food of birds varies materially, yet the following will be found so valuable for most birds as to deserve the title of UNIVERSAL.

Take a loaf of wheaten bread well baked and stale, put it into fresh water, and leave it there until quite soaked, then squeeze out the water and pour boiled milk over the loaf, adding about two-thirds of barley meal well cleared of bran, or wheaten meal.

This will be found from its happy union of the qualities of vegetable and animal food, and thus agrees with most kinds of grain-eating as well as insectivorous birds.

### THE SECOND PASTE

Is made by grating a carrot very carefully (you may keep this root good in sand all the year), and soaking a small white loaf in fresh water, press the water out, and put it and the grated carrot into an earthen pan, add two handfuls of barley or wheaten meal, and mix the whole well together with a rolling-pin or a pestle.

N.B. These pastes should be made in small quantities fresh every morning, or they become sour.

## A FEW WRINKLES IN HORSE BUYING, AND THE TRICKS OF DEALERS.

BY HARRY HIEOVER.

**S**ARTICULAR shoeing—beaning, or other ways of producing the same effect—hot water, stimulants, sedatives, physic, copious general or local bleedings, rest or constant exercise, tonics, sickening medicine, fatigue, keeping a horse awake for three or four nights and days, will all produce wonderful effects on horses in palliating lameness, bad eyes, bad wind, internal or external weakness, vice, or violence. People will suppose a horse's throat an open sepulchre when I tell them I have seen once as many as six-and-thirty balls popped down a broken-winded one's throat one after the other: it is nevertheless fact; he seemed to take it as a matter of course. I saw the same horse sold more than ten times over in Dublin in about six weeks; so, as he doubtless got his dose each time he was sold, reckoning by length, he got in that time about thirty yards of ball down his throat. Pretty well for the time! If he has gone on ever since, I conclude his inside has by this time become tolerably well lubricated.

I have mentioned sickening medicines, and it might appear to some persons strange that a dealer should wish to sicken his own horse. Well, then, suppose a dealer has bought a thoroughly-known vicious restive run-away brute—to be sold he must be tried; and to be tried, he must be rode. Now it is not so extraordinary he should wish to sicken him a bit. If my reader has ever enjoyed the pleasant sensation of a thorough sea-sickness, I will answer for him, that, hasty or belligerent as he might be on ordinary occasions, he was tame enough then: so I have seen horses so violent that it was next to impossible to mount them, and as difficult to keep on their backs when mounted, rendered so sick and tame that you might have lifted them into a waggon for all they cared at the time; and thus have they been prepared when "the gentleman was coming to ride them." In a few hours the effect goes off, and then, when the gentleman attempts to ride, the horse goes off too. "Very astonishing! nothing could carry him quieter than the horse did yesterday." If the gentleman is only astonished, he is very lucky; but he is farther astonished, when, on calling on the dealer, he probably has also gone: so altogether he finds it a very pretty go!—The first go was wrong in going to such fellows.

But suppose "Mr. Rascal" does not mean to go, but intends to stand his ground and show fight: he then brings this violent customer of a horse to his senses in another way, and for a more permanent (but still temporary) period. He ties my gentleman's head up to the rack, which he gives him full permission to look at; if he can derive any nourishment from that, he is at liberty to do so: a man is placed behind him with a whip night and day; this keeps the horse from getting a wink of sleep—the man of course relieved by a substitute. The horse does not find himself particularly relieved by this process, nor is the substitute behind him and two or three pounds of hay and a little water a very pleasant substitute for good feeding; nor is the addition of his forty-eight hours' vigil any pleasing addition to his comfort. Mr. Horse begins to find this anything but a joke, and keeps looking round as far as he can to see if any one is coming. Right glad would he be to welcome the very man whose brains he would have tried to have knocked out two days before if he went up to him; but no, there is the man on the stool of reform, and Mr. Horse finds himself on the stool of repentance. He is now well prepared by abstinence for a dose of physic; very sick; no sleep allowed; warm water *ad libitum*; must not be made to look too lanky. By the time the physic has done, and four days and nights of constant wakefulness, with nothing but a little bran and warm water, have passed, what with weakness, drowsiness, and fatigue, there is little doubt of the horse carrying quietly enough. He is accordingly ridden: if any remains of restiveness or vice appear, he gets first a sound thrashing, which he is too dispirited to resist, and then he gets another night of it till he is thoroughly tamed and brow beaten: he is then sold; and probably, though then put on proper feeding and allowed proper rest, it takes some days before he so far recovers himself as to resume his former habits. Perhaps, from having been thoroughly cowed, he never does become quite as violent as he was before; but restive he will be no doubt. Now what is the Gentleman to do? he cannot most probably prove the horse had been restive, while Mr. Dealer will not only swear, but bring plenty of witnesses to swear, he never was; and indeed the Gentleman and his groom cannot help allowing that for a week the horse was quiet. If he goes to law and gains his cause, it will cost him a good deal of money and a great deal of trouble; and the chances are that so many witnesses will outswear him. The only wise thing for him to do is to give the scoundrel a sum to take him back, which he will do, as such a horse is an income to him: he is a good screw, though not a lame one, and will be sold over and over again by the same party and his coadjutors.

Having mentioned Dublin, and a horse there, I will mention another that I saw sold there, at the different Repositories and fairs in the neighbourhood, I should say twenty times. The fact was, if he was sold on the Tuesday at one Repository, he was certain to be on Friday for sale at another, as the buyer was sure to find him out in an hour after he had got him. He was what is termed "a chinked-backed one," that is, he had been injured in the spine. Many of these horses will do well enough

with no weight on them when going straight along: stop them short, or turn them round quickly, the secret is out at once; but this is of course avoided when shown for sale. The horse I alluded to was a very good-looking harness-like horse, five-years-old, and worth fifty if he had been sound: he was in the hands, or at least was most of his time in the hands of one of these "Mr. Rascals:" he was not only a good, but a superfine screw to him. On one of the various occasions of this horse being sold, I was much amused at the fellow's consummate impudence and ingenuity. Some of my readers may have to learn that a horse thus injured in the spine is, in dealers' slang, termed a "German," why, I know not: and from this, I suppose, is by some also called "a foreigner." On the occasion to which I allude, a gentleman was very properly abusing the fellow—he was an Englishman, much to the credit of my country!—for selling him this horse. The fellow's reply was, first, "Did I warrant him sound?"—"No, you did not: you said you could not, as he had a corn."—"Well, so he has a corn."—"Yes, you scoundrel, but you did not tell me he was broken-backed."—"No, nor he ain't broken-backed: he is only chinked a bit. Did not I tell you he was a furriner, and that was why I sold him so cheap?" "Yes you did; but what has his being a foreigner to do with his back?"—"Why, everything; if I told you a horse was a buck, I suppose you'd know his eyes warn't right, wouldn't you?"—"No indeed I should not."—"Why, then, more's the pity! I say, Jem (continued the fellow to some friend going by), I sold the furriner to this gemman; told him he was one; and now he wants to know what thathas to do with his back?"—"Does he?" said the fellow; "let him get on him an' he'll know."—"Now," says Mr. Rascal, "you see everybody vot knows anything knows what a furriner means. I didn't warrant him! You harn't got no law ner justice on your side; I wish you luck with him!" The gentleman looked as if he doubted very much the arrival of the luck bespoke for him, and I doubt not would have sold his expectation a bargain. In short, he did not seem to know quite what to do; but he was likely to be relieved from his dilemma by a man (of course one of Mr. Rascal's friends) coming up to him, and saying, "Why, I hear, sir, you have bought the broken-backed-'un:" (he was broken-backed now!)—"he's of no use to nobody; he can't carry a pound on his back, and he can't draw more nor an empty cart: he's been sold here for three pound many a time. The fellow you bought him off oughtn't to be allowed to come into no sale-yard."—"Well," says the gentleman, "I am taken in I know; I paid eighteen pounds for the horse, and am willing to lose by him; but he is not so bad as you represent him."—"Ain't he, though?" says the fellow: "just let's see him out." The horse was brought out. "Here," says he to some scamp in the secret, "just run this horse, will you?" The horse was put to the best of his trot, turned as suddenly round as possible, and, as it must be with such horses, he nearly fell on his side as he turned, and appeared for a minute or two hardly able to stand. I need not go on further with the thing than to say, that, as is always done in such cases, a crowd of vagabonds got collected round the gentleman, and to avoid their sneers, coarse jokes, and being laughed at, he was glad to get out of it by selling the horse for three pounds! But, as a finale to his wounded pride and purse, in a few minutes afterwards he saw the fellow riding the horse, who came up to him, saying, "Why, he ain't half as bad as I thought he was: he ain't *all* the money too dear now!"

I saw nothing more of my friend the *furriner* till about a month afterwards, when "a horse, cart, and harness," the property of a tradesman, was advertised for sale at one of the repositories at a particular hour; at which particular hour, a horse was driven into the yard at a fair trot straight up to the auction-box, but, owing to the crowd and carriages for sale being in the way, this "horse, cart, and harness" could not be conveniently turned round—(Mm. we know the horse could not.)—This was, of course, foreseen; so he was sold standing there, and for cart purposes his action was no great matter, and it was seen he drew quietly. I think he fetched twenty pounds. I need scarcely say the cart and harness were bought in, having only been borrowed for the occasion. So soon as he was knocked down, he was slipped out of the cart, led straight up the yard, and put into the stable, no doubt the purchaser congratulating himself on having got a good horse, the genuine property of a tradesman! Now, although this was all preconcerted—the cart and horse only coming at the time specified—the trot straight up the yard, as if done from being late—the cart not being able to be turned round—and the horse being taken straight out to enable the man to run the cart out of the way—all was done so naturally that nothing like deception or anything particular appeared. This was the last appearance of *furriner* while I was there: probably, if he did not take a benefit there, he has given many a one to others since.

(To be continued in our next.)

**SALMON FISHING.**—The season on the Tay has hitherto been attended with good success in the upper waters, but indifferent below. At Linn of Campsie twelve fine fishes were taken. A Blairgowrie gentleman killed two with the rod, on the Ballathie station, still farther up the Tay, on the same day. They were fine clean fish, and weighed 15 pounds each. This is rather an uncommon occurrence on the first day of the fishing, and in such severe weather, and may be taken as an indication of an early and productive season.

## CITY SKETCHES.

BY ARBUS LYNX.

THE City, with its streets and alleys, lanes and corners, all occupied as the busy haunts of men—each nook appropriating to itself with some degree of assumption a particular knot of the human kind, who, moving in their own sphere and almost solely among themselves, regard all general intercourse as irksome, and a bar to the enjoyment of social life and polity—appears one vast labyrinth, only to be known and understood by close inquiry and acute observation.

To find the underwriter and insurance-broker you must not travel to the London Commercial Sale Rooms, Mincing-lane, where the "prodance people" exhibit their showy exteriors, but must, with steady bearing from the docks, keep your way, clear of scavenger carts if possible, to Threadneedle-street, and, in the heart of the monument of the famous South Sea bubble, you will discover him in all the activity of shipwreck and loss of life, which the books of Lloyd's exhibit in "double lines" during the rude and boisterous weather of March or October. Lloyd's, however, is not now what it once was. The subscribers' room, the great mart of freightage and insurance, has been reduced in numbers and in wealth; and the very waiters themselves, in all their spruceness and humility, seem to feel the density of the atmosphere in the close and narrow windings of their present establishment. It is said that Lloyd's has suffered from the never-expected competition of the associative or joint-stock principle which has affected the profits of its subscribers, and that therefore the bright days of its era have passed. This I do not believe; a temporary check may have been given to the usual run of business by the low rates which many of the offices accept, but the losses lately incurred, both by the proprietors and their supporters, are considered a sufficient proof that before long the "old room" will shine in its glory, and that the subscribers will maintain the high and privileged character which their names have long merited.

## THE PUNCTUAL MAN.

*(After the original at Lloyd's.)*

Who is that tall, gaunt-looking individual, with the age of sixty marked in his hardly-lined countenance, whose straggling grey hair, slightly protruding from the brim of his closely-brushed beaver hat, gives him a truly venerable appearance?

That gentleman, kind reader, is John Stedfast, an underwriter of some note and standing, whose punctuality in business is proverbial, whose habits are as methodical and systematic as the wheels of an eight-day clock, and whose mind was fitted for his occupation by a master hand. The very tie of the black handkerchief swaddled round his neck, the ancient cut of his modest and sober black suit, with his bluchers so decently polished, proclaim him one of the steady-going school, with a serene mind fitted for all events and all times. It is five minutes to ten, a.m., and you see him slowly and carefully vending his way from Wragg's Walthamstow coach, which, dropping him at the — inn, in Bishopsgate-street, allows him just sufficient time to pass the iron-gated edifice in Threadneedle-street, for the subscription-room. Ah! does thy heart sink within thee as thou passest the portico of the dreary building—does it tell thee of loss or good fortune? I can feel with thee—the barometer of thy frame knows the effect of weather as well as a Barraud or a Fagioli; hence the reasonableness of thy quaint remark, that "we may know good fortune too late, and cannot know our losses too soon."

He has passed the reading-room, and, in moody thought, with a casual "Good morning" to the few stragglers who are, like himself, punctual to the hour, joins the small bevy who are waiting entrance. The clock is on the stroke, the first sonorous peal of ten is heard, the clerk rushes through the folding-doors from the "book," answering the general inquiry of "good" or "bad," and, ere the remaining nine peals die away, the punctual man, with his followers, have scattered themselves for their various points of observation. John Stedfast seeks his box, and, having first deposited his hat on its accustomed peg, slowly mounts his silver spectacles, a process necessary before he can, with any satisfaction, read the particulars of arrivals and departures, losses or salvage, or other chances and mischances which it is his daily lot to contemplate. His spectacles are now on his broad expansive forehead. What a smile of serenity is there! Before another five minutes passes he may be the loser or the gainer of thousands "in his risks." But this does not disturb his equanimity. He is prepared for the one, he can encounter the other.

Two officials approach him: one, the prototype of good humour and fellowship, who, with bland smiles, offers the *Times*; the other has the air of quiet reserve and respect for superiors—he offers the *Chronicle*. John Stedfast does not accept either of the papers. His road is to the "book of fate," and here he reads the "lines" which most affect him. It may be loss or profit. The news is received with all the calmness and serenity possible. The congratulation of his friends upon the "lucky go," or their sympathy for the "swamper," are received with the same air of affability that characterizes his general bearing, and his day's business proceeds in the same regular and precise

manner till the near approach of four, when John Stedfast, carefully arranging his books in his drawer, leaves the room for his toilet, as custom doth require, in the washing-apartment below. Reader, this is the faint outline of one who is still a visitor at Lloyd's; of one who is desirous of keeping their ancient rights and privileges inviolate, and to give an idea of his insensibility to the flattery of the world, a single authentic anecdote may suffice:—A vessel was named after him, and it was of course imagined that he would be ready to do business on her; but the favourites of the room found themselves mistaken:—

*The Beau:* "What! not do a 1000*L.*, a single 1000*L.*, on the John Stedfast, your own namesake?"

*John Stedfast:* "No; not on that bottom. I have told you over and over again I don't like her, though they say she is of my build."

It was about the year 18— that the book exhibited the total loss of the John Stedfast. The punctual man was there reading the page; I was by his side. "Ah, ah! she has gone at last," was the solemn ejaculation that escaped him.

## HUNTING THE ANTELOPE.

SINCE the occupation of Algeria by the French, from their frequent incursions into the interior of that part of Africa, so little known to Europeans, a vast insight has been afforded as to the "wild sports of the East" of the native Arab tribes. In a foreign sporting publication which has just appeared we find an interesting description of the extraordinary mode of hunting the gazelle, or antelope of the Desert, one of the swiftest of quadrupeds.

The gazelle, or antelope, lives in herds of immense numbers in the Desert, like the fabulous animals of old; they occupy that immense tract of the continent lying between the Cape de Verd and the Indus, embracing in its compass Africa, Egypt, Arabia, Palestine, Persia. The Desert, which is not so destitute of inhabitants and vegetation as is generally imagined, is, at the same time, the location of the lion and panther, and nearly all of the larger and more powerful description of beasts of prey; a country which, from the time of Virgil, has been famous on this account. The flesh of the gazelle, which is extremely delicate, serves in a great degree as the habitual food of the numerous voracious tribes of wild beasts. The delicately formed and inoffensive gazelle has no other means of saving itself than by flight, and its excessive fleetness surpasses all other animals. It escapes from the pursuit of the greyhound by ascending pointed rocks and bounding from one point to another; like the stag and the deer, it sheds tears when its strength fails and it perceives the approach of death. With the advantages of escape which the gazelle possesses over less fleet animals, it is naturally to be supposed that the capture of them by man became a work of difficulty, in which stratagem must make up for physical inability. Hence the chase of the gazelle became one of *recherche* taste. After training the guepard (a species of tiger-cat, susceptible of being tamed), the Persian, Arabian, and Egyptian gazelle hunters took the animal on the crupper of the saddle, keeping it thus fresh and unfatigued, until a suitable opportunity offered of letting it loose on the exhausted gazelle; this mode was long practised in the olden times, until a novel and extraordinary species of hunting proved more successful, and that was by means of a bird—the falcon.

The chase of the gazelle with the falcon has long been and continues to the present day to be the favourite sport of the Persians, the Arabs, and all the principal natives bordering on the Desert. The white falcon is the species selected for the purpose; it is very common in the Sahel of Algiers, and in the Mitidja. In size it is somewhat less than the wild pigeon, and is remarkable above all for the brilliancy of its eyes of gold; the pinions of the wings are tinted lead colour, all the rest of its plumage is of the purest white. The natives train this bird for the chase of the gazelle in the following manner, for which its courage, docility, and sagacity well qualify it. The bird is compelled by hunger to seek for its food in the eyes of a stuffed gazelle, care being taken that it is placed in front of several other similarly stuffed animals, whose eyes are without food, so that the bird is habituated to attack the leader of the flock of gazelles, which always goes in advance, and is invariably the strongest and finest. The training of the falcon does not require more than a month; at the end of that time it is in a state to take its first trial. It is then led out to the chase, hungry and *chaperonne* (hooded). The mounted hunter having discovered a flock of gazelles, the bird is unhooded and shown its prey. The half-famished falcon flies with all its power of wing, and soon rivets its steel claws on the slender horns of its victim; and seeks to peck out its eyes. The poor animal is soon blinded, and separated from the herd, whirls round and round, staggers, and falls; and the huntsman, who sees from afar the contest, rides up to secure his prey. The Arabs, who deal in ostriches and gazelles, assert that it very often happens that the falcon fails in its attack, and it then never after returns to its master, from fear of punishment.

The gazelle forms an immense theme of admiration to the Persian poets. Hafiz, the greatest of Persian love poets, continually refers to his brilliant eyes, comparing them with those of his *inamorata*. This occurs so frequently that a love sonnet in the Persian is called, "A Gazelle."

## TO CORRESPONDENTS.

**AN AMATEUR.**—The early chapters of the "History of Boxing" will be succinct and short as we can possibly make them, consistently with a detail of the few recorded battles preceding 1800. JEM BELCHER, Cribb, Randall, Turner, &c., will be given in the fullest manner, in due order. We shall bring the history down to the present day.

**ROBERTUS.**—Cricket, with numerous illustrations of "batting" and "bowling," will be given in due time.

**SIMON SLACKREIN.**—Frank Butler rode the winners of the Oaks in 1843 and 1844. Buckle rode nine winners of the Oaks; John Day, five; Sam Chifney, five; Tommy Lye, three. Robinson won six Derbys, two Oaks, and two Legers; Bill Scott, four Derbys, three Oaks, and eight Legers. Mangle won the St. Leger six times; Jackson, seven times; Robert Johnson, four times; John Day, twice; and Lye, twice.

**QUEERIST, Mitcham.**—Of course not. Ours is a weekly sporting miscellany. We do not give turf news.

**ORNITHUR, Clapham.**—We were not aware of the fact. Correspondents letters must reach us early in the week, as this paper is printed early on Thursday, to ensure a supply in the remote districts by rail or other conveyance. We shall feel happy to receive any gleanings in Natural History: such correspondence will be duly acknowledged, and, if approved, inserted.

**WILLIAM SWEET, Hoxton.**—A raffle takes place for two birds, the highest to have the choice of birds, and the lowest the other. The highest is settled by the highest number; a tie takes place for the lowest; both parties agree to have one throw. Which wins, the highest or the lowest?—Why, the lowest, of course, according to the agreement, *Sweet William*.

**CHESS.**—A correspondent asks us.—Can I after making a move, if I discover that my king is in check, recal the move and check my opponent's king?—The question is too absurd to answer; you have made your move and must take the consequences; your adversary makes his, and at the same time announces "check." We would recommend the following from *Punch* on Chess: "to our correspondent, who surely must be joking, us when he talks of 'A chess club to which I belong.' *Punch* inquires:—'If you have a check, what ought you to do with your pawn?' Though it is somewhat out of our way, we will give the best answer we can to this question. If you have a check, and the amount is sufficient, release your pawn at once. Our correspondent, however, had better apply to some respectable pawnbroker."

**A SERVANT.**—Soldiers can send and receive letters to and from the East Indies, under the weight of half an ounce when employed on her Majesty's service, or in the East India Company's service, for one penny. Newspapers are sent free of postage to any of the British colonies, with some slight exceptions.

**THE RING.**—The champion's belt is not transferable. There has several times been much "gaggery" on the subject of the Championship, and for "benefit" purposes investitures of this kind have taken place, which were neither justified by the prowess of the receivers of them, nor the position of ring affairs at the time; we shall notice several such events in our HISTORY OF THE RING, and shall, of course, treat the *soi disant* champions impartially, not by quoting the scribblings of interested or corrupted newspaper reporters of the day.

**R. SEWELL.**—George Sinclair (the Liverpool Slasher) has fought seven times in the P.R. He was beaten in his first battle with Ned Adams.

**JOHN WELLS.**—The first match of the Royal Thames Yacht Club will take place in May.

**AN EAST-ENDER.**—When Johnny Broome and Joe Bostock fought, the latter was nearly three stone heavier than the former. The fight took place Oct. 6, 1840, at Earby, in Warwickshire, and lasted 46m., during which 29r. were contested. It is the same Bostock who was lately matched against young Caunt, the Champion's brother, after his defeat by Nobby Clarke.

**HELL-ITE** must take us to be green as a pickled ghirkin, though as yet one week old, we have opened our eyes, not being of the puppy breed, and are wide awake. *Sporting* is not synonymous with *blackguardism*, and therefore we conclude Hell-ite is no sportsman. His letter, moreover, is libellous, and we do not belong to the school of the defunct "PAUL PRY," and such like *ulcers* of the press.

\* \* All Communications to be addressed to THE EDITOR of the Sporting World, care of the Publishers, Holwell-street, Strand.

## OUR WEEKLY CALENDAR.

AN EPHEMERIS IN JUST AND EARNEST.

**SUNDAY, MARCH 23.**—Easter Sunday. —Astronomically, the Spring Quarter commenced on Thursday, the 20th, at 44 minutes past five in the afternoon; meteorologically, the Winter Quarter was in full "feather" of snow flakes on that auspicious day.

**Amusements for the Young.**—A kitten should always be kept where there are children; when they are tired of pulling its tail, they can put it into their fathers' boots. A box of colours is also a source of great amusement, affording them an opportunity of daubing their faces, and of appearing in illuminated pinafores. It is well to let them know where the preserves and pickles are kept, so that going after the jam, they may get a bite at a capicum. On wet days they should be allowed to put peas into the piano, and thump the keys with their drumsticks. Train them to pull gentlemen's whiskers, and wipe their lollipopped hands on ladies' dresses.

**MONDAY 24.**—Easter Monday. —Short fairs and long trains to Greenwich. —Rolls may be had all this day and the two following, for nothing—apply to anybody at the top of the slope of Observatory Hill. —Queen Elizabeth died, 1603.

**TUESDAY 25.**—LADY DAY.

And lo! distressing more his tattered breeks,  
An awful rent appears!  
Thames Tunnel opened at both ends, 1843; this enormous bore is very properly named, for the Thames first opened it in the middle.

**WEDNESDAY 26.**—A Fox escaped from a kennel in St. George's in the Fields, after a long chase Fox was sheltered by a Pit.—Prince George of Cambridge born, 1819.

**THURSDAY 27.**—Mr. O'Connell being an admirer of the *voluntary* system, goes to Coventry, without being sent there, 1844.—The Police supplied with new ventilating hats. No doubt from their well-known love of the *dirty* (area).

**Directions for Finding a Policeman.**—Look down every area in the street; if you do not by accident see one, ring the bell and inquire if the policeman is in the kitchen. Repeat this at every door, and you cannot fail eventually to find one.

—OUR "TRIP TO GREENWICH" will be published, with cuts, and come again. **FRIDAY 28.**—Mr. Wood moves in the House of Commons, for a return of the Malt and Hops used by Brewers! Malt and hops used in Beer! "Oh, the merry green Wood! Sing, Oh, the merry green Wood."—Gunpowder first used in Europe, 1380.—General Sir Ralph Abercrombie killed, 1801.

**SATURDAY 29.**—The crown-lawyers in the House of Commons contradict the assertion that the Attorney-General in the island of St. Lucia, is a man of colour: why shouldn't they; everybody knows that a good lawyer can prove that black is white?

**Important to Borrowers.**—The present quotations in the money market for a £50 bill, are £10 in money and the rest in good cholera Caps. The advantages of this system are, you can have your bill discounted by the father, be sued by the son, arrested by the uncle, sold up by the nephew, and locked up in the sponging-house by the first cousin.

## The Sporting World.

LONDON, SATURDAY, MARCH 22, 1845.

## THE MONTH OF MARCH.

**ARCH** has forfeited his character this year; and, by some mistake of the "Clerk of the Weather," has changed sides with January, though his place in the calendar is after February. We had threatened to indite an article of Field Sports for March, but amid postponed Steeple Chases, frozen-out Anglers, and inquiries on every hand as to whether the season, to use a Hibernian phrase, is not *advancing backwards*, we have not the heart to do it.

"March comes blustering in his chariot of clouds," says Leigh Hunt, "but bright blue skies peep out, and gorgeous sun-risings attend him as he scatters the mists and damps of February. He is a prophet; for he telleth of leafy spring, and who does not feel the difference between a March and an October wind—the one," &c. Alas! the poet of Cockaigne in his "Characters of the Month," has this year given "a false written character" to March, which we take to be a misdemeanour at law, and in our vexation would have him prosecuted accordingly.

If March be a prophet it propheth us little, and his prophesying is as yet of sleet, snow, frost, and the sinking of the thermometer and barometer. But "patience, and shuffle the cards," the *longest March* must have an end, and we must endure what can't be cured, looking forward confidently for our postponed say, until that ominous day, the First of April.

## THE BUSS-DRIVER'S LAMENT OVER BYGONE DAYS.

I've known the time, alas! 'tis past!  
When I might drive my buss  
Through thick and thin, go slow or fast,  
And no one make a fuss.

When we,—that is, myself and cad,—  
Could o'er our pewters slumber;  
But, stop an instant now, and, 'gad!  
The p'liceman's got your number.

I've known the time when I might race  
With CLOUD or SHILLIBREER,  
Down Cheapside, at a furious pace,  
Without a moment's fear;

When if I spilt an apple-stall,  
Or overran a few,  
I only got a fine, that's all,  
And went to work anew.

But times and beaks are sadly changed!  
I can't abide that BROUGHTON;  
Lord Mayors among my foes are ranged,  
With MALTBY and with NORTON.

But, O, there's one! he likes his task,  
(And we're the class he's foe to,)  
Whose persecutions make me ask,  
"Where HARDWICK thinks he'll go to?"

"HOME-KEEPING YOUTHS HAVE EVER HOMELY WITS."—Pat Hogan was an emigrant, who left the shores of the Liffey for those of the Susquehannah. It was the evening of a summer's day, and, as he sat by the shining river, with his eyes fixed upon a creek, he espied a small turtle emerging from the stream. "Och, murder!" he exclaimed in botheration and perturbation, "och, murder! that ever I should come to Ameriky to see a *snuff-box* walk!"

## THE FISHER'S CREEL.

THE TROUT.

**I**N March, or if mild open weather (which every fisherman knows to his sorrow has not yet arrived), or even in February, trouts begin to leave their winter quarters, and approach the shallows and tails of streams, where they cleanse and restore themselves to health; as they acquire strength they advance still higher up the rivers, until they fix upon their summer residence, for which they generally choose an eddy, behind a stone, a log, or bank that projects forward into the water, and against which the current drives; whirlpools and holes into which sharps and shallows fall, under roots of trees, and in places shaded by boughs and bushes; in small rivers they frequently lie under sedges and weeds, especially in the beginning of the year, before their perfect strength is recovered; but when in their prime, they feed in the swiftest streams, and are often found at the upper end of mill-pools, at locks, flood-gates, and weirs, also under bridges, or between two streams running from under their arches, and likewise in the returns of streams, where the water seems to boil; in the decline of summer, they lie at mill tails, or the end of other streams, and in the deep water.

Trout spawn, or deposit their ova and seminal fluid in the end of the autumn or beginning of winter, from the middle of November till the beginning of January; their maturity depending upon the temperature of the season, their quantity of food, &c. From some time (a month or six weeks) before they are prepared for their sexual function, or that of reproduction, they become less fat, particularly the females; the large quantity of eggs and their size, probably affecting the health of the animal, and compressing generally the vital organs in the abdomen. They are at least six weeks or two months after they have spawned before they recover their flesh; and the time when these fish are at the worst is likewise the worst time for fly-fishing, both on account of the cold weather, and because there are fewer flies on the water than at any other season.

It has been remarked by many other people, as well as myself, that, of all fish in existence, there is not one that you can partake of so many days in succession, without ceasing to enjoy it, as a trout, provided it be fresh caught, and well in season. Almost every sportsman, and every fishmonger, has his own way of fancying that he can tell when a trout is in season. As to the red spots on the skin having anything to do with it, the very idea is absurd and fallacious. But the more general criterions are a small head and high crest, a full tail, and the roof of the mouth, or, what is still better, the flesh under the tongue being rather of a pink colour. Another excellent criterion, is the smallness and tightness of the vent; for the better the trout is in season, the smaller will be that vent-hole, which is formed just before the under or belly-fin. And, after all, I prefer this, and one other way of deciding; which is by the bright and silver-like appearance of the scales. Take twenty trout, and, I think, if you dress them all, and previously mark that one on which the scales shone the brightest, it will prove to be the best fish. This may be frequently ascertained, even before you land a trout, as a bright one, on being first hooked, generally gives two or three leaps out of the water.

Before you send trout on a journey, always have them cleaned and gutted, and let them be laid on their backs, and closely packed in willow (not flag) baskets, and with either flags or dry wheat-straw. Packing in damp grass or rushes is apt to ferment, and therefore liable to spoil your fish.

The burn or river trout, with plenty of food and good water, grows rapidly. Several experiments were made in ponds fed by river water, and some by clear springs, into which the young fry were put at five or

six months old (that is, in September or October, reckoning from April, when they first come from the spawning-beds) at which time they were six or seven inches long; in eighteen months the change was surprising. A pond was drained ten months after being thus stocked, in July, when the fish were fifteen months old; some were fifteen or sixteen inches, others not more than eleven or twelve; the fish were returned into the pond, and it was again drained the March following, when some were twenty-two inches, and weighed three pounds; others were sixteen inches, and some not more than twelve.

This elegant species is a fish of prey, has a short roundish head, a moderately blunt nose, mouth wide and filled with teeth, not only in the jaws but on the palate and tongue; the scales are small, the back of an ash colour, the sides yellow, and when in season it is sprinkled all over the body and gill-covers with small beautiful black and red spots; the tail is broad. The shape of the body is beautiful, but in several of the Scottish and Irish rivers and lakes, they grow so much thicker than in England, that a fish from eighteen to twenty-two inches, will often weigh from three to five pounds. Thus much of the fish. We hope soon to clear our columns a little and treat more at length of taking him: contenting ourselves for the present with a few of the best flies for March (if this month as yet have not mistaken its mission.)

## FLIES FOR MARCH.

We do not know that we can from time to time render a more acceptable service than by giving, occasionally, representations of the flies in season, or rather in use, for the various months; appending to them where practicable, a representation of the natural fly they are supposed to counterfeit. We think this will prove not only useful, but a sort of everpresent commentary on the principles we have laid down in our first number, when speaking of the angler's imitative devices.

1, 2. Cow-dung fly, natural and artificial. 4, 3. Blue-dun fly, natural and artificial.

*The Cow-dung Fly.*

The body is best made of a dubbing of lemon-yellow mohair and a yellow feather whipped with yellow silk, in a hook No 7. The best material for the wings is the greyish blue feather of a land-rail, a hen, or of a mallard.

*The Blue-dun, or Violet-fly.*

This favourite fly is found on almost every river. Its body is to be dubbed with light violet worsted, mixed with down (combed from the neck of a black greyhound, or the roots of a fox cub's tail! says a venerable authority); the wings from the pale part of a starling's wing, whipped with pale yellow silk, on a hook No. 9 or No. 10. We will now add four favourite flies for salmon, which press of matter compelled the omission in Number 1.

## Salmon Flies.

1. A Spring-fly.

2. Quaker-fly.

We need hardly say that the flies used for salmon are much larger and more gaudy than those for trout. Indeed, the trout, in the matter

No. 3.

No. 4.

of flies, seems much more discriminating and fastidious. Many salmon flies approximate a small bird in size; and the following four are from most approved specimens in the fly-book of a friend:—

#### 1. *Spring-fly.*

Make the wings of the dark mottled brown or blackish feathers of a turkey; body orange camlet, mixed with a little mohair; and a dusky red or bright brown cock's hackle, plucked from the back, where the fibres are longest, for the legs. The hook No. 2. All large salmon-flies should be dressed upon two or three lengths of gut twisted together, and the silk in dressing brought beyond the shank of the hook, and wrapped four or five times round the gut, or it may be cut by the sharpness of the steel. This same fly, dressed with the wings of a somewhat lighter shade, and with the addition of a little gold wire or thread, wrapped round the body at equal distances, will also serve for a more advanced season of the year.

#### 2. *The Quaker-fly.*

The Quaker-fly is of smaller size, and may sometimes be dressed upon very strong single gut. Any feathers of a coppery or dingy yellow colour, if not too coarse in the fibres, will be suitable for the wings; the body is of lemon-coloured mohair, mixed with a small portion of light brown fur, or camlet, with a pale dusky ginger hackle, over the whole. The chief object to be attended to in dressing this fly, is to produce that uniform hue, devoid of gaudy colouring, from which it has received its name.

Number 3 is a favourite of ours: the wings are formed of the mottled feathers of a peacock's wing, intermixed with any fine plain dusky red; the best mixture of the body is the light brown inner hair from a bear's skin, sable fur, and gold-coloured mohair; gold twist, a large black cock's hackle, and a red one a little larger, with a bit of deep red mohair for the head.

Number 4 is the next variety. Its wings are formed of the extreme end of a Guinea fowl's feather, not stripped, but having the fibres remaining on both sides of the middle stem. A blood-red hackle is fastened on with the wings, and so arranged as to extend beyond them: the dyed feathers used by military men will suit, if another showy bird, the scarlet macaw, is not accessible. The green feather which forms the eye of the peacock's tail should be fastened at the head, and left hanging downwards, so as to cover the body for the space of half an inch; and a few filaments of the same part of the same feather may be fastened at the tail. Another fly has the wings formed from the darkish brown speckled portion of a bittern's wing, stripped off from the stem: the head ought to be of the same colours as the body, which is formed of the reddish brown part of a hare's fur, and deep copper-coloured mohair; a bittern's hackle is put over the body for legs; and a forked tail is added, made of a pair of single filaments of the same feather as the wings.

In addition to these, we may enumerate the brown fly, the blue fly, the kingfisher, the golden pheasant, the great palmer, the prime dun, *cum multis aliis*, but for the present these must suffice. We shall soon have a say upon the humbler branches of the piscatorial art, according to the request of several correspondents.

#### REVIEW.

RUFF'S GUIDE TO THE TURF FOR 1845. ACKERMAN.

Simultaneously with the commencement of the racing season we welcome this arrival of this most useful little book, without which the sportsman would be continually "at fault." As a pocket companion it is truly invaluable, containing, as it does, such an immense stock of information in a neat and small compass. Amongst the "contents" will be found the nominations for 1845 and 1846, alphabetically arranged and indexed; performances of the two-yr-olds in England, Scotland, and Ireland; list of winning horses in 1844, showing the amount and number of each horse's winnings—lengths of courses—colours of the riders in England and Ireland—laws of racing—winners of the Derby, Oaks, and St. Leger since the commencement—list of the English and Irish trainers and jockeys, with their masters, addresses, and the lowest riding weights of the latter—list of races to come—and last, but not least—a list of the principal Derby, Oaks, and Leger "lots." The compiler, Mr. W. Ruff, is well known as the turf-reporter to the daily press and *Bell's Life in London*—a sufficient warranty that its accuracy may be depended upon.

ILLUSTRATIONS OF THE BREEDS OF THE DOMESTIC ANIMALS OF THE BRITISH ISLANDS. BY DAVID LOW, ESQ., F.R.S.E. LONDON: LONGMAN AND CO.

This publication fully bears out the anticipation we formed on the appearance of the first part, namely, that, when completed, it would form the most admirable work on the domestic zoology of this country heretofore attempted. This conviction enhances the regret we feel at our inability to do the justice to it that it so eminently deserves. Allowing Professor Low every praise for the careful talent with which he has handled his various subjects, it must be admitted that the claims of his volumes are by no means limited to their literary excellence. The pictorial illustrations, with which they abound, constitute an invaluable gallery of British Natural History. In the quotation now made we give a sample of the author's method of treating an important question to all interested in the domestic economy of these islands.

"Within the last sixty or seventy years, a surprising revolution has taken place in the means of communication throughout the British islands, by the extension and improved construction of roads. The increase of highways, now extending to upwards of 170,000 miles of carriage road, has accompanied the general improvement of the country; and during the latter part of the period in question, the application of a few simple principles has rendered the roads better fitted for all kinds of wheel-carriages. From these two causes, the means of internal intercourse have been prodigiously increased, and the modes and rate of travelling greatly changed. The method of conveying letters by public coaches, begun in 1784, was immediately followed by a more expeditious rate of travelling, and by an increase in the number of public carriages throughout the country. The rate of travelling, from being four or five miles in the hour, increased to six, seven, and eight, and now, at length, to ten, and even twelve.\* The effect of this change in the rate of travelling has produced a corresponding one in the kinds of horses employed. The coarse and heavy horses of former times were little fitted for this increased exertion, and hence the substitution became necessary of a lighter class with superior breeding. The demand, too, for horses thus employed is large and constant, not only from the numbers employed, but from the waste of the animals. Although a class of horses better suited for the service than the old has been employed, and the stages have been greatly shortened, the burdens could not be reduced in proportion to the increase of speed; and hence the exaction on the muscular powers of the animals has been greatly augmented. We may please ourselves with the speed and facility with which our journeys are performed, but assuredly our convenience is served at the expense of an unheard-of degree of animal suffering. In no country does so great waste of the lives of horses take place as in England; and in no country, it is humiliating to own, is there so much cruelty exercised towards these faithful servants. The mortality of horses in the British isles is at least three to one, as compared with that which exists in any other country in Europe. Not only does the general demand for horses of all kinds cause them to be employed at an earlier period of life than in other countries, but the cruel service of these public carriages being one in which our finest saddle-horses are often doomed to end their lives, a great increase in the general mortality is produced. When the powers of our saddle-horses begin to fail from age, or when they have met with accidents, or have suffered from the effects of diseases, they are transferred in the course of trade, to this their new and last employment. How many fine hunters and saddle-horses of all kinds, after having rendered their best services to successive masters, are forced into this terrible service, from which they are never released until they have sunk under their tasks! How many beautiful creatures do we see, spavined, greased, foundered, and otherwise lame, whipped along in our heavily loaded vehicles, and forced to fulfil tasks under which they must shortly perish! Such are the spectacles that meet our eyes on every highway; such is the price paid for our convenience in the sufferings of our helpless servants! But in the marvellous progress of invention, an agent has been called into action which is probably destined to lighten this mass of suffering. This is the power of steam applied to land carriages, and producing the substitution of mechanical for animal power in the performance of the longest journeys. Up to the present time seventy-one railways, unequalled as monuments of public industry and opulence, have been formed, or are in progress, in Great Britain and Ireland. Of these vast roads, fifty-three are opened, and continually employed in the conveyance of innumerable travellers; eighteen are partially so, and ten are incomplete. They are computed to extend to more than 2000 miles, and, passing through the great lines of communication in the country, they must tend, in an extraordinary degree, to diminish all other methods of travelling.

"The old English coach-horse may be said to have disappeared, or, rather, to be used only for the heavier labours of draught. He was a large animal of the cart-horse form, usually black, denoting his affinity with the horses of Flanders, which long supplied England and other countries with this kind of horse. He was round-shouldered and heavy in his paces; but, being generally trained in the manner of the manège, he had a high and prancing action. His pace was the slow trot, and rarely exceeded four or five miles in the hour. Some of these horses are still to be seen in the carriages of the nobility and older gentry of England; but for the most part they have given place to animals of far superior breeding and action. The modern coach-horse is a very different animal from the old. He is a large horse, having the degree of breeding conducive to spirit and action, with the strength and bone required for draught. He is greatly used in private carriages, as chariots, gigs, and the innumerable other light and elegant vehicles which are everywhere to be seen. But not only is the modern coach-horse largely used, but likewise others taken from the various kind of saddle-horses with which the country abounds, from the high-bred hunter down through every degree of strength suited to the weight of the equipage; and universally the tendency is to

\* "From twenty to thirty miles a-day, at the rate of four miles an hour, was the usual work of the few public coaches in England so late as the accession of George III. At that period, there was but one public coach from London to Edinburgh, which started once a-month, and occupied nearly three weeks in the journey. The other heavy coaches which set off from London performed in like manner slow journeys, in the manner of waggons, to distant parts of the kingdom."

use horses of lighter form than were thought suited to the heavier carriages and less improved roads of former times.

"The term hackney, in common use, is employed to denote a kind of horse fitted for general services; and is, therefore, understood to exclude the horses of the highest breeding, as the thorough-bred horse and hunter; and there is further associated with the idea of a hackney, an animal of moderate size, not exceeding fifteen hands, and possessing action, strength, and temper. The hackneys of the present day are of lighter form than those formerly sought for, and there is greater difficulty in obtaining them to suit the services required, from our present mixed varieties of half-bred horses, than when horsemen were contented with the older class of hackneys of stouter form but inferior breeding.

"Although the change so widely produced in the horses of this country, by aiming at a lighter standard, has doubtless given us animals more spirited, active, and graceful, it has, at the same time, had the effect of causing great numbers to be reared defective in form, deficient in strength and bone, and which have lost the hardy qualities of the older racers, without having arrived at the properties which superior breeding should communicate. The deterioration is generally admitted, and the causes are deserving of consideration, as indicating the remedies.

"A full account has been already given of the system of the modern course, and the effects have been pointed out of the prevalent practice of running short races with colts not yet arrived at sufficient maturity of bone and muscle to fit them for the full exercise of their powers. The consequence of the system is, that exclusive attention has been directed to the properties of speed, and that the important requisites of strength and power of endurance have come to be regarded as secondary in the cultivation of the animals. Their form, suiting itself, by insensible degrees, to the conditions required, a race of surpassing swiftness, but inferior in strength and bone to the older horses of the turf, has been called into existence. Now, as this is the race employed to communicate its peculiar properties to the others, it is manifest that a deterioration of its properties, from whatever cause, is calculated to exercise an injurious influence on all the individuals with which it is mingled in blood. But yet more injurious than the rearing of a race of swift but feeble horses, is the constitutional injury inflicted upon the individuals of the race by that system of early forcing, with respect to food and discipline, to which they must be subjected at the earliest possible period of life. Hence the mortality amongst these animals, the strains, the founders, the hernia, and other accidents consequent on over-tension of the parts, and all the functional maladies in the respiratory and other organs which a premature and unnatural exertion generates in the system, and which, not confined to the individuals, descend to the offspring. The evil resulting from these causes to the other breeds of the country, is in proportion to the just estimation in which this noble race of horses has been hitherto held, and the increasing desire to communicate its properties to the inferior races. The remedy might be found in a determination, rigidly carried into effect, by the influential supporters of the turf, to root out the more flagrant corruptions which fashion and cupidity have introduced, especially with respect to the age at which horses shall be permitted to run; or should the influence of individuals be insufficient to effect the necessary reformation, then legislative measures should be called for to correct abuses which are no way essential to the legitimate purposes of the turf, and which deprive the country of the benefit which it is entitled to derive from a race of horses brought to a high degree of perfection, not by the modern gamblers of the turf, but by the care of many generations.

"Another cause of the deterioration of the horses of the country is to be ascribed to errors in breeding, arising chiefly from injudicious and extreme mixtures of blood, and inattention to the soundness and qualities of the female parents. It is shown, by experience, that the nearer the characters of the parents approach, the more likely are we to succeed in communicating their common properties to the progeny. By extreme crosses good animals may, without doubt, be produced, but this will be by a kind of chance, and the greater probability is, that the offspring will be defective in some point or other. Nothing may seem so easy to the inexperienced breeder as to produce a splendid coach-horse, or charger, or hunter, by crossing a large cart-mare with a thorough-bred horse; yet how rare are the cases in which the offspring of such extreme mixtures is good! Either the body is too large for the limbs, the head too large for the neck, or some other want of harmony of parts presents itself, which renders the animal comparatively worthless. This effect is constantly observed in the numerous attempts which are made to procure horses of breeding from coarse ungainly mares through the means of extreme crosses. Repeated failures are too often required to convince the breeder that this is not the mode by which well-proportioned animals are to be obtained. We may readily produce a fine ox from animals the most dissimilar; but where everything depends, as in the horse, upon a nice adjustment of parts, it is rare that the dissimilar characters of the parents will be so harmonized in the offspring as to produce a well-formed individual. The other error, still more common, is to disregard the soundness and other properties of the mare in breeding. A mare, which is good for nothing else, is by too many thought sufficiently good for bearing a foal, and hence numbers of worthless animals are destined to a purpose for which they are in a peculiar degree unsuited. Even in such a case, chance may do something for the ignorant and careless breeder; but the

far greater presumption is, that the offspring will inherit the defects of the dam, and prove of little value.

"The remedy for such mistakes is increased intelligence on the part both of those who rear horses, and those who acquire them. The breeder, by possessing adequate knowledge of the principles and practice of breeding, will avoid the error of injudicious mixtures of blood, and of employing females for breeding which are unsuited for the purpose; and the consumer will refuse to purchase animals which are wanting in that harmony of conformation and constitutional soundness, without which no horse can be depended upon for performing the services required of him. The more palpable defects of a large proportion of our mixed class of half-bred horses are the want of depth of the chest, the flatness of the sides, and the too great apparent length of the limbs. Such horses are technically termed weedy, and they form, perhaps, the worst class of saddle-horses in any country in Europe. They have, for the most part, spirit enough, but they are deficient in strength and bottom; and although they may be easy in their paces, they are usually feeble in their limbs, and unsafe. Great numbers of these very worthless creatures are every year reared and brought to market, which the result shows not to be worth half the food they have consumed.

"The number of horses reared and maintained in the British islands is large, and their value forms no inconsiderable amount of national capital; and it is for the public interest that they should be cultivated with care. By the returns made under the Acts for assessed taxes, it appears that the total number of horses in England, Wales, and Scotland, exclusive of foals, of cavalry-horses, and of the many which it cannot be doubted evade the returns, is 844,505; in Ireland, which pays no assessed taxes, the number may be fairly estimated at 400,000. The prices of the superior horses are very high; but, rating the mass of all ages at from £5 to £25 each, the average is £20, and the total value £24,890,100."

#### ABOLITION OF THE INCOME-TAX.

AFTER the most mature deliberation, we have discovered the period of this important event. It is an epoch which has been long regarded as most illustrious, and is generally distinguished by the title of "The Greek Kalends." Among the occurrences which will be contemporary with the abolition of the income-tax are the following:—

1. Death of Mr. Widdicombe.
2. The labourers of England declared to be happy and well treated.
3. Recovery of the intellects of Lord Brougham.
4. Continuation of Farringdon-street completed.
5. Final establishment of peace in Mexico.
6. A policeman found when wanted.
7. Last jokes uttered on the Walbrook account, the fountains in Trafalgar-square, and Waterloo and Hungerford Bridges.
8. O'Connell makes a speech in the Conciliation-hall without either alluding to a "Parliament in College-green," or saying,

"Hereditary bondmen! know ye not  
Who would be free, themselves must strike the blow?"

9. Fourpence taken in one day by the toll-collector of the Thames Tunnel.
10. Middle sheet of the Times obtained in an eating-house within two hours after asking for it.
11. A Sunday steamer goes from London-bridge to Woolwich, without anybody smoking a bad cigar on board.
12. Use of the encaustic painting in the new Royal Exchange discovered.
13. Mr. James Grant receives knighthood for his literary acquirements.
14. A man in livery is allowed to carry a couple of chairs off the stage without receiving a shout of laughter.
15. Shooting prisoners in Spain is discontinued.
16. Mr. Hume makes an eloquent speech.

#### IMPROMPTU.

"He caught the Whigs bathing, and he has walked away with their clothes."—(Speech of B. D'Israeli, Esq., M.P., in reference to Sir R. Peel.)

When London prigs get up a fight,  
As everybody knows;  
There's always by some honest knave  
To walk away the clothes.  
Some folks, aware of this same dodge,  
A body's traps to steal,  
When they turn out to have a shy,  
Set to, without a Peel.

Shrewsbury, March 7, 1845.

ALEXANDER MUDFOG.

ABSENCE OF MIND.—A gentleman while out shooting in Tennessee, put the wadding in his clothes, and rammed himself down his rifle instead. Having, however, fortunately left his cap on, he was instantly shot to the top of a pine-tree into the society of a racoon, who explained to him his mistake.

### THE GRAND NATIONAL STEEPLE-CHASE—CROSSING THE BROOK.

"Then the leap!  
To see the saucy barrier, and know  
The mettle that can clear it."—SHERIDAN KNOWLES.

**OPONENTS** are to be found to the majority of our field sports—a canting, sectarian humbug, for instance, may dwell week after week on the horrible crimes and cruelties appertaining to the turf, without giving one moment's consideration to the benefit's which might and do arise from the practice of it; a petty, tenacious landowner, who lacks either health or inclination to join them, cries out against the fox-hounds "for passing o'er his grounds," and forthwith begins to bully and bluster about the law of trespass; or a would-be popular Justice Shallow exercises the authority unfortunately invested in him, in suppressing what he terms "the brutalities" of the ring. Few of these fellows, I am happy to say, lay claim to the title of sportsmen of any description; indeed, the natural character of what the list-sellers hail as "gentlemen sportsmen" of itself disclaims interfering with, or offering the least obstruction to another, however their pursuits may vary. Nay, "a fellow feeling makes us wondrous kind," and in general we find the aim of every true sportsman is to give all the encouragement in his power to promote amusement of all sorts. The gallant fox-hunter, though he want either the taste or head for embarking on the turf, will never refuse his assistance or subscription in supporting the county races; the eager shot and strict pheasant preserver, though he seldom mounts anything higher than his well-broke cob, still feels proud to hear the bound challenge in the heart of his manor; and some of the wealthiest, highest, and best have not disdained to patronize, readily and steadily, the manly and honourable aspirant for the laurels to be gained by true valour and fair play.

Perhaps, were we to analyze the feelings of some of these, we might scarcely find them to agree so well, as when only superficially surveyed: the dashing stag-hunter, who thinks nothing of coming his thirty or forty miles for one hour's gallop straight away, can too rarely suppress a sneer at the sight or mention of a "dull" coursing party, or a "pottering" pack of barriers; the heart of the grouse-shooter or hale deer-stalker may sicken at the idea of a barn-door battue, or a trap pigeon match; and a winner of the Derby may experience but little gratification in witnessing half-a-dozen heats for a fifty pound plate. One branch, I repeat may not exactly admire the leading features of another; but who, calling himself a sportsman, would dare openly to abuse hunting, racing, shooting, coursing, fishing, or many other methods of "driving dull care away," from a

quiet, cosy game at chess, to a tiger-hunt in the jungle? Are they not each and all superlatively attractive and enchanting, and could not hundreds of their respective admirers sit down and write off at least a dozen pages in singing their praises, when it would puzzle them to compose half a column to their detriment or disadvantage? Still is there no *sport* against which the sportsman may preach, and even add to his own consequence by so doing? Is there, or is such a question necessary to enlighten the understanding of the most obtuse, while those three unfortunate, ill-used, terribly persecuted words stand out as the heading of this paper—the steeple-chase? If any old hand has ventured thus far (though, I fear, my title may have prevented his skimming through it), I fancy I see his bile rise, and an overflow of bitter but well-bred abuse poured on my devoted head, when I announce myself as the volunteer champion of this headlong, limb-cracking, horse-killing introduction of later days.

With the reader's permission we will now consider some of the graver charges, season after season, and at every available opportunity, raised against this now unquestionably established national sport, beginning with the most common and readiest of all—cruelty towards the horse, and danger to the man. This is the charge the fox-hunter re-echoes to his friend, using strong language to mark his disgust and abhorrence, while alluding to the fatal misfortunes of last season—"Two horses, ridden by perhaps the best of these steeple-chase riders, killed in *two* consecutive chases; why, it is downright murder." And perhaps before the conclusion of that same season, this very man will pen a description of a brilliant run, to something like the following tune:—"Five-and-twenty miles as the crow flies, best pace nearly all through, &c. &c.," congratulating himself, again and again, at having enjoyed the good fortune to go to the end of it, and concluding with this spirited N.B.—"All the nags were dreadfully distressed; two, indeed, died on the field; three more also gave up the ghost before the end of the week; and Tom, the huntsman, fears his favourite old brown horse is not worth another day's work. You may see from this that it was nothing but a clipper." Such is the system on which the steeple-chase is treated; a horse who breaks his neck or his back in going four miles over a fair hunting country, is certain to have a requiem, "long and strong," lamenting his untimely end, coupled with no very charitable observations on such as were the instruments in causing his destruction; while, on the other hand, a hunter who drops down and dies from sheer fatigue, in attempting to struggle through a run of four, fourteen, or forty miles, creates by no means an equal degree of sympathy. Even the distance—four miles—is often cited as an item in the

catalogue of cruelties; and, of course, to support this, the well-known fact that four-mile races are now obsolete, is brought forward; but I would ask, if the breed of race-horses is improved by this substitution of short for long, or speed for stoutness? The general opinion appears to be that it has not; and it should be moreover remembered, that the steeple-chaser is regarded quite as much or more for his capabilities as a hunter than as a racer. It is true he may go at nearly the top of his speed for the whole four miles; but I only appeal to the crack men who hunt with the Queen, whether their horses are not kept at high pressure for three, four, or five times that distance; and in the words of a gentleman, who very amusingly describes a good day with the Royal hounds—

"McDonogh and Mason, and bardolph-nosed Bean,  
Of steeple-chase riders at first we had plenty;  
'Tis one thing to go for ten minutes I ween,  
'Tis another to go for two hours and twenty."

"Rome was not built in a day," and certainly for the first few years, in consequence of impracticable fences being generally included or purposely erected in a steeple chase line, accidents were of frequent occurrence; time, however, and attention have materially improved upon this, and "over a fair hunting country" is no longer merely inserted in the articles, but strictly acted up to, so that fatal accidents have decreased in as great a proportion as the passion for the sport has increased. But there is a practice, until within the last year or so confined to the sister kingdom, now gradually gaining ground with the managers of steeple chases in England (who are apt to adopt it with the view of lengthening a day's play) which threatens to throw more opprobrium on it than anything else connected with the sport: I allude to running heats for steeple chases—a system which never has, and never can be justified. It is true, the heat is rarely more than half the usual distance; but heats on the flat never exceed two miles, and it cannot for a moment be questioned but that the heat across a country takes much more out of a horse than one of equal distance over the course—independently of the greater liability of the steeple chaser to mishaps, trifling or otherwise, which may (in some cases, *fortunately*) prevent him starting for a second or third chase for the same prize. "Shamrock," who wrote more and better on the steeple chase than any other subject, declared, on a bed of sickness—his death-bed, in fact—that, having suffered his horses to start for chases which were decided by the best of heats, grieved him more than any other fault or cruelty he was ever conscious of having been a party to; and he feelingly and at some length describes the scenes he had witnessed arising from this practice. "Horses, so lame from over-reaches, spavins, or some accident in the first, spurred and whipped by their riders absolutely to get them up to the starting-post for the second heat, or so stiff from what they had been through an hour previous, as to fall powerless over the first fence on being called on to repeat the performance;" with many similar heart-rending sketches; but which, not having the article by me, I am unable to quote. This, the reader must remember, took and does take place in Ireland: and to it I beg leave to call the attention of all such authorities on this side of the water as may have felt inclined to follow it, trusting they will ever avoid so cruel a regulation, and one so certain to bring the steeple chase into disrepute. As to the danger of men riding steeple chases, I consider it not a whit greater than when *really* riding to hounds; indeed, there has in this country, within the last few years, been more serious accidents in the hunting-field or on the race-course than over a steeple chase line. The only case I remember of a professional steeple-chase rider dying from an injury sustained while labouring in his vocation, was that of Mr. Solloway, which occurred eight or nine years back in riding Wild-geese at Abergavenny; and, as he was up and about for some days after the chase, it can be little more than a matter of supposition to say he fell a victim to it. Barker's severe accident at Cheltenham last season cannot be considered as a fair example, it having befallen him at the finish of a six-mile chase; whereas the line was never intended to exceed the usual distance, and his horse consequently far more distressed than he otherwise would have been. In concluding our dissection of this charge, we may admit that there is some hazard in steeple chasing; but let us at the same time ask if there be a field-sport in the world, which requires courage, skill, and exertion, not liable to the same accusation? Nay, does not this very feeling rather increase our pleasure and excitement?

"For, if a path be dangerous known,  
The danger's self is here alone."

Sportsmen have and will meet with accidents—perhaps with death itself—in pursuing their favourite recreations: either in angling on the bosom of Father Thames, or rousing the monarch of the forest from his lair, we cannot boast ourselves invulnerable; and a blow from a cricket-ball may inflict as severe and lasting injury as though it came from a rifle instead of the hand of a Myna. *Apocryphal*, too, "now you speak of a gun," how many dreadful accidents we hear of in shooting parties! and I regret to say we have but too lately had cause to consider how terrible may be the consequences of one day's hunting. Again, race-horses have fallen dead in their stride, and jockeys have lost their lives from some unavoidable and unforeseen occurrence, or through unpardonable neglect on the part of those to whom their safety was principally entrusted. In

a word, I maintain that the steeple chase is little more liable to the charge of cruelty or danger than the majority of other sports.

The next point to which we may call attention is, "that the steeple chase seldom meets with the approbation of old and true sportsmen," another common cry with the opposition; let us admit that in some instances this may be the case with the *old* sportsman—and for his opinion I think we may find some tolerably good reasons. In the first place we do not expect the old sportsman to go with the front rank, and are therefore not disappointed at his refusing to take an active part in this kind of sport; then, we all know that old men, whether sportsmen or not, are apt to think there are no days like

"The days that they went gipsying,  
A long time ago."

Still they do not abuse the sports which were in force in their youth, because they can fight their battles o'er again, and dilate upon their own individual prowess in one or all. But the steeple-chase—paha! a new-fangled, modern innovation, fitted only for wild youngsters or downright madmen; it must be bad, because they never practised it; or, like many other things, it cannot be worthy of their support, because—they know nothing about it. So much for the old sportsman, whose dicta on a subject of which he himself boasts he has little or no experience, can, when properly considered, carry weight in about the same proportion. Some "whole hog" men, however, go still further, and declare that the steeple-chase is entirely supported by horse-dealers and legs, when they might with equal propriety and veracity say the same of the turf. It is true that Mr. Kimore, amongst others, was singularly successful, and for one of the best reasons (though not invariably a *sequitur*)—he has gone to the greatest expense, bought the best horses, employed the best jockeys, and brought his horses out in the best possible condition. He, I repeat, has carried off some of the most valuable stakes; but do we not see parallel cases on the turf? But do not the professionals in many other callings, as well as racing or steeple-chasing, generally get the best of it? Just, however, to prove that many of our leading sportsmen do not disdain to have their names coupled with the steeple-chase, let us take the names of some of the stewards of last season's chases. The Marquis of Clarendon; the Earls of Chesterfield, Eglington, Cassilis, Sefton; Lords Ranelagh, Ward, A. St. Maur, Akford, Maidstone, A. Russell, Gifford; Hon. G. F. Berkeley, Hon. General Lygon, Hon. W. Coventry; Sir T. Wintington, Sir W. Watkins Wynn; George Payne, Esq.; H. De Burgh, Esq.; with many members of parliament, masters of foxhounds, and, in fact, the very highest, both as sportsmen and country gentlemen, a list of whom it is not necessary to give here, the above being quite sufficient to dispose of the assertion, that none but the *cannaille* affect this diversion.

It may be argued that these gentlemen undertook the office merely because they were leading men, and on the same terms they would have headed any other meeting to which they could offer no decided objection. This might tell, did we regard them only as leading men; but it is as sportsmen we mention their names; and masters of hounds, for example, would never give their aid in this indifferent manner, as by their presence or absence they definitely mark the opinion they entertain of the amusement; and most steeple-chases, I am prepared to prove, are favoured with their support. Again, the stewards at the principal chases, as is the case with race-meetings, are chosen more for their influence in the sporting world than for what interest they may have in the vicinity of the course. But perhaps the most weighty argument which could be given in favour of our subject would be the names of the noblemen and gentlemen who have been, and are at present, in the habit of riding steeple chases, and who, in a word, comprise nearly all the gentlemen jockeys (class the first) now in practice. Let the reader who doubts this, run his eye over the list of the members of the Croxton Park Club, and then I think he will not be much inclined to dispute it. There he will see Waterford and Howth for Ireland, Eglington and Drumlanrig for Scotland, and Maidstone and Villiers for old England—each party with a tail as long as Dan's, of brilliant performers across country. "The Squire," Sir Harry Goodricke, Lord Kennedy, and the crack riders of their day, put the merits of themselves and their horses to the test of a steeple-chase over Leicestershire; and Lord Waterford, Lord Dysart, Mr. Villiers, and many stars "now brightly shining" have followed their example over the same country. The fact of steeple-chasing being practised in this renowned quarter for fox-hunting seems to indicate that these two sports pull better together than some people would have us imagine. Opponents of this class raise their objections on the plea that one steeple-chase gives the farmers more annoyance than a whole season's hunting. There are, no doubt, some tenants like their landlords, to whom I have already alluded as over-tenacious and inimical to any sport, or anything should it at all interfere with their prerogative; but the fact of farmers generally running horses for steeple-chases—which have, indeed, in many instances superseded hunters' stakes and yeomanry plates—proves this charge to somewhat fallacious. The new fashion, I think far preferable, by way of deciding the right to a farmers' prize, to running over the flat for it; in which case we too often see it carried off by some weed from a racing stable, of no service to a farmer but to win this race, for which purpose he was either bought or borrowed; while for a steeple-chase a horse must have some pretensions as a weight-carrier and a hunter, and, what is yet of greater importance, the contest far more likely to be an open one.

**THE CURE AS BAD AS THE COMPLAINT.**—The universal inquiry is, where can all the base coin that is about London have come from? Surely it is not in consequence of a dividend having been paid on the Pennsylvania bonds last week?

**A NEW CURE FOR DEAFNESS.**—Look out for a house on fire; make your way rapidly into the most fiery room in it; turn your deaf side to the window, and let the firemen in the street direct a vigorous stream of water from their engine-pipe slap into your ear! The concussion will knock you down, perhaps; but never mind that; your deafness will be cured; the cure is sharp but certain. The Yorkshire papers say it was tried last week with perfect success by a very respectable hairdresser in Halifax, who had been deaf as a post for nearly half a century. —N.B. Should the fire be very fierce, you would do well when you are down to get up again as quickly as possible, or perhaps your coat-tail may take fire.

**TO BUILDERS, SCULPTORS, AND STEREOTYPE FOUNDERS.**  
**THE BEST PLASTER OF PARIS** is to be had at Warren's, Baldwin's-place, Baldwin's-gardens, Leather-lane.—Punctuality in the execution of orders strictly observed.

**REDUCTION IN WARM BATHING** at the OLD ROYAL BATHS, 11, Bath-street, Newgate-street.

**TERMS OF COLD BATHING.**—Year, £1 3s. 6d.; Quarter, 10s.; Each time, 1s.; Shower, 1s.; Vapour, 3s.; Eight vapour, £1 1s.

**TERMS OF SUBSCRIPTION FOR WARM BATHING.**—100 Baths, transferable for twelve months, £5.; 16 Baths, £1 1s., or Eight Baths (transferable), 11s.; Three Warm Baths per Week for twelve months, and Cold or Shower Baths at pleasure, not transferable, £3.; One Warm Bath per week for six months, £1 10s.; One Warm Bath per week for twelve months, £3 2s.; One Warm Bath or Warm Shower, each, 1s. 6d.; Salt-water Bath, 2s.; Sulphur, 3s.

Private Warm Baths always ready for Ladies or Gentlemen. An entrance to the Baths through Christopher-court, opposite the Clock of the General Post-office.

N.B. No Warm Subscription Baths to be taken after Five o'clock on Saturday afternoon.

**The Cheapest Illustrated Publication in the World.**  
Now ready, price only One Penny, No. III. of

**THE LONDON JOURNAL; and Weekly Record of Literature, Science, and Art.**

This Number contains a dozen beautiful Woodcuts, one of which gives a true and faithful representation of the Secret Chamber in the General Post-Office; and the accompanying Letter-press fully describes the manner in which Letters are opened and re-sealed. Amongst the Literary contents are the following articles:—1. The Greek Pirate—2. The Secret—3. The Newspaper Press of London—4. Cannibalism—5. The Adriatic Bride—6. Mesmerism—7. A Strange Dilemma, &c.

London: G. VICKERS; and all Booksellers and Newsmen.

Messrs. R. and L. PERRY and Co., Consulting Surgeons, 19, Berners-street, Oxford-street, London, have just published a New and Important Edition (the Fourteenth) of the "SILENT FRIEND," on Human Frailty, price 2s. 6d.; free by post, 3s. 6d.

**THE SILENT FRIEND, a Medical Work, on PHYSICAL DECAY, NERVOUS DEBILITY, CONSTITUTIONAL WEAKNESS, &c.** With Observations on Marriage, &c. By R. and L. PERRY and Co., Surgeons, London. Published by the Authors, and sold at their residence; also by Strange, 21, Paternoster-row; Noble, 109, Chancery-lane; Gordon, 146, Leadenhall-street; and Fulkess, Compton-street, Soho, London.

**OPINIONS OF THE PRESS.**  
"The Authors of THE SILENT FRIEND seemed to be thoroughly conversant with the treatment of a class of complaints which are, we fear, too prevalent in the present day. The perspicuous style in which this book is written, and the valuable hints it conveys to those who are apprehensive of entering the marriage state, cannot fail to recommend it to a careful perusal."—*Fre.*

"This work should be read by all who value health, and wish to enjoy life, for the truths therein contained defy all doubt."—*Farmer's Journal.*

**THE CORDIAL BALM OF SYRIACUM** is a stimulant and restorative in all spasmodic complaints. Nervous Debility, Indigestion, Acidity, and Consumption, are gradually and imperceptibly removed by its use, and the whole system restored to a healthy state of organisation. Sold in bottles, price 11s. and 3s. Perry's PURIFYING SPECIFIC PILLS, have long been used as the most certain remedy for Scorbutic Complaints of every description. Eruptions of the Skin, Pimples on the Face, and other disagreeable affections, the result of an impure state of the blood. These Pills are perfectly free from mercury, copaiva, and other deleterious drugs, and may be taken with safety without interference with, or loss of time from business, and can be relied upon in every instance. Sold in boxes at 2s. 9d., 4s. 6d., and 11s., by all medicine Vendors. Messrs. Perry and Co. may be consulted at their residence daily, from 11 till 2 and 5 till 8. On Sundays, from 10 till 12.

Now Publishing, in an Embellished Wrapper, Part 3. Price SIXPENCE, of  
**THE PEOPLE'S EDITION OF THE ENTIRE WORKS OF M. EUGENE SUE:** containing Sixty-four Pages of Large 8vo. closely printed.

**CLARK'S TALES OF THE WARS, and NAVAL and MILITARY CHRONICLE,** is now in progress towards completion to 1844, Number 4 of the continuation of

**TALES OF THE WARS,** is now ready. No. 1, embellished with Two admirably executed Steel Plates, and an excellent Wood Engraving.

Plate I.—A beautifully executed emblematical Frontispiece:—comprising Portraits of Admiral Sir Charles Napier, K.C.B., &c.; General Sir Robert Sale; the Heroic Lady Sale; Akbar Khan, and the Emperor of China.

Plate II.—A splendidly engraved Title Page, with a Vignette representing "The Golden Island," the site of the principal mines whence the Chinese ransom is drawn. The Work will be continued Weekly, in Numbers, price 1d. and Parts, Monthly, price 6d.

Just published, In One Volume, 8vo., handsomely bound, price 5s., with nearly Seventy Engravings, an entirely New Edition, revised, and nearly re-written, of the popular romance of  
**DICK TURPIN, THE HIGHWAYMAN.**  
BY HENRY D. MILNE.

**PEOPLE'S EDITION OF COOPER'S NOVELS.** Each Novel containing 20 Engravings, complete for One Shilling, and comprise the following:—  
Part. I. The Pilot. Part V. The Pioneers.  
II. The Spy. VI. The Prairie.  
III. Last of the Mohicans. VII. The Red Rover.  
IV. Lionel Lincoln. VIII. The Water Witch.

All Orders should specify "People's Edition." A beautiful Ornamented Case, to bind the above, price 1s. 6d. Or the work may be had in one very handsome Volume, price 10s.; consisting of nearly 1000 Octavo Pages, and 200 Engravings. Beautifully printed in Nonpareil type. Originally published in 24 Volumes, at Twelve Guineas.

Now Publishing. Nos. I. II. and III. Only One Penny.  
**THE BRILLIANT SONGSTER.** Each Number containing a Choice Collection of Ninety-One New, Favourite, and Standard Songs.

Just Published. Only One Penny.  
**THE BRILLIANT JESTER; or, MODERN MAGAZINE OF MOMUS.** Containing a Thousand Jeux d'Esprit of the best Writers and Sprightliest Wits.  
By the Editor of the "Brilliant Songster."

The following Works are all uniformly bound in cloth, gilt edges, price 8d., or post free, 1s. each.  
Embellished with an outline Engraving of a Ground and Players.

**CLARK'S CRICKETERS' HANDBOOK:** Containing the History and Origin of that manly Game, an Account of celebrated Players, and remarkable Matches, Instructions to Young Cricketers, and the NEW LAWS OF CRICKET.

**WRESTLING and PEDESTRIANISM,** with full Instructions in TRAINING for ATHLETIC SPORTS and EXERCISES: with Engravings.

**MODERN BOXING:** containing the History and Practice of Pugilism, illustrated with Numerous Engravings.

**SPORTING SONGS:** containing upwards of 100 of the most approved Sporting Songs extant.

With the Magazine, Monthly.  
**THE GO-A-HEAD JOURNAL, with Forty Engravings.**

Twelve months subscription to this beautiful work is only Two Shillings. The "Go-a-Head" is the cheapest work of the present day. Order the "Go-a-Head Journal" of any Bookseller it will be sent with the Magazine Parcels every month.

In One Volume, neatly bound, price 5s., a new Historical Romance, by a Highly Popular Writer. Illustrated with Fine Engravings, founded on Fact, entitled

**WILL WATCH; a TALE OF THE COAST.** This highly interesting Work is founded on Popular Facts, and abounds with Scenes and Incidents of the most Thrilling description, portrayed in a Bold and Masterly style.

Now Ready.  
**CLARK'S PENNY MEMORANDUM BOOKS** for 1845. Containing an Almanac for the Year, Stamp Duties, Tax Tables, and all the Information usually found in an Almanac.

Just Published, No. 1. price One Penny, of  
**DIBDINS SEA-SONGS.** To be completed in Three Penny Numbers.

**NEW WORK BY THE AUTHOR OF "VALENTINE VOX."**  
Price One Shilling, with Superior Etchings on Steel, by ONWYER.

**THE LOVE MATCH.** A work of the most profoundly humorous character, designed to illustrate the various conflicting influences which sprang from the Union of Mr. and Mrs. Tom Todd. By HENRY COCKROTT. Author of "Valentine Vox," "Stanley Thorn," "The Sisters," &c. &c. &c. To be completed in Twelve Monthly Parts.

LONDON:—W. M. CLARK, Warwick-lane, Paternoster-row; DUNN and SWEET, Holywell-street, Strand; CLEAVE, Shoe-lane; and all Booksellers.

## PERFECT FREEDOM FROM COUGHS

In ten minutes after use, and a rapid cure of Asthma and Consumption, and all disorders of the Breath and Lungs, is insured by DR. LOCOCK'S PULMONIC WAFERS. The truly wonderful powers of this remedy have called forth testimonials from all ranks of society, in all quarters of the world. The following have just been received:—From the Rev. J. STAINSBY, Rector of Hanover, Jamaica. Nov. 20, 1844. Gentlemen,—Having been cured of an obstinate and distressing cough, under which I laboured for the last eleven months, by the use of Locock's Pulmonic Wafers. I take the liberty of addressing you these few lines, hoping that my feeble testimony of their efficacy may be the means of inducing those who suffer as I have, to apply to so safe and effectual a remedy. I have the honour to be, &c., J. STAINSBY, Rector of Hanover, Jamaica. Cures of Coughs, Colds, and Improvement of the Voice. Oct. 31, 1844. Sir,—I cannot but recommend Dr. Locock's Wafers, since I have realised myself, and seen in my family such marked benefit from them, in Coughs, Colds, and on myself in particular, in removing Hoarseness and strengthening the Voice. I find them invaluable. WILLIAM HAMILTON, 7, Albion-place, Walworth. The particulars of many hundred Cures may be had from every agent throughout the Kingdom and on the Continent. Dr. Locock's Wafers give instant relief, and a rapid cure of Asthma, Consumptions, Coughs, Colds, and all disorders of the Breath and Lungs. To Singers and Public Speakers they are invaluable, as in a few hours they remove all hoarseness, and increase the power and flexibility of the voice. They have a most pleasant taste. Price 1s. 11d., 2s. 6d., and 11s. per box. Agents—Da Silva and Co., 1, Bridge-lane, Fleet-street, London. Sold by all Medicine Vendors.

## A CURE! FOR ALL!! HOLLOWAY'S OINTMENT.—HOLLOWAY'S PILLS.

### EXTRAORDINARY CURE OF A CASE

abandoned by Guy's, the Metropolitan, King's College, and Charing-cross Hospitals. This fact was sworn to this 8th day of March, 1842; before the Lord Mayor, at the Mansion-house. Summary of affidavit.—Wm. Brooke, messenger, of 2, Union-street, Southwark, London, maketh oath and saith, that he (the deponent) was afflicted with Fifteen Running Ulcers on his left arm, and ulcerated sores and wounds on both legs, for which deponent was admitted an out-door patient at the Metropolitan Hospital, in April, 1841, where he continued for nearly four weeks. Unable to receive a cure there, the deponent sought relief at the three following hospitals:—King's College Hospital in May, for five weeks; at Guy's Hospital in July, for six weeks; and at Charing-cross Hospital at the end of August, for some weeks more; which deponent left, being in a far worse condition than when he had quitted Guy's, where Sir Bransby Cooper, and other medical officers of the establishment, had told deponent that the only chance of saving his life was to lose his arm! The deponent thereupon called upon Dr. Bright, chief physician of Guy's, who, on viewing the deponent's condition, kindly and liberally said, "I am utterly at a loss what to do for you; but here is half-a-sovereign: go to Mr. Holloway, and try what effect his Pills and Ointment will have, as I have frequently witnessed the wonderful effects they have in desperate cases. You can let me see you again." This unprejudiced advice was followed by the deponent, and a perfect cure effected in three weeks, by the use alone of Holloway's Pills and Ointment, after four hospitals had failed!!! When Dr. Bright was shown by the deponent the result of his advice and charity, he said, "I am both astounded and delighted, for I thought that if I ever saw you again alive, it would be without your arm. I can only compare this cure to a charm!!!" Sworn at the Mansion-house of the City of London, this 8th day of March, 1842.

Before me, JOHN PRICE, Mayor. Wm. BROOKE.  
In all Diseases of the Skin, Bad Legs, Old Wounds and Ulcers, Bad Breasts, Sore Nipples, Sorey and Ulcerated Cancers, Tumours, Swellings, Gout, Rheumatism, and Lumbago, likewise in cases of Piles, the Pills, in all the above cases, ought to be used with the Ointment; as by this means cures will be effected with a much greater certainty, and in half the time that it would require by using the Ointment alone. The Ointment is proved to be a certain remedy for the bite of Mosquitoes, Sand-flies, Chigoe-foot, Yaws, and Coco-bay. Burns, Scalds, Chilblains, Chapped Hands and Lips, also Bunions, and Soft Corns, will be immediately cured by the use of the Ointment. The Pills are not only the finest remedy known when used with the Ointment, but as a General Medicine there is nothing equal to them. In nervous affections they will be found of the greatest service. These Pills are, without exception, the finest Purifier of the Blood ever discovered, and ought to be taken by ALL!!! Sold by the Proprietor, 214, Strand (near Temple Bar), where Advice may be had, Gratis, and by all respectable Vendors of Patent Medicines throughout the Civilized World, in Pots and Boxes, at 1s. 11d., 2s. 9d., 4s. 6d., 11s., 22s., and 33s. each. There is a very considerable saving in taking the larger sizes. N.B. Directions for the Guidance of Patients are affixed to each Pot.

LONDON:—Steam Press of W. M. CLARK, 10, Red Lion-court, Fleet-street, and Published by J. DUNN and E. SWEET, Holywell-street, Strand, and W. M. CLARK, 17, Warwick-lane, Paternoster-row.

GREENWICH HOSPITAL FROM THE RIVER.

## MILES'S BOY'S MAUNDERINGS ON AN EXCURSION TO GREENWICH.

### THE WEATHER.

**E**LORIOUSLY shone the dawn of Monday, the 24th of March, in bright contrast with all its "precursors" of the month; which, like the "pray-curse-hers" of the Irish agitation, had shown themselves rife for elemental strife. Easter Sunday, that calendrical holiday, had been passed by "Miles's Boy" in singing an "anthem through the nose" in dispraise of the clerk of the weather, the burden of which, after the fashion of Tom Hood's "Song of the Shirt," was rather lugubrious, for 'twas something like:—

Sleet, and slop, and sludge,  
Sludge, and slop, and sleet,  
I wonder if one who could help the trudge  
Would venture to wade in the street?  
"And it's oh for a yard of blue sky!  
Just enough to make a cravat,  
That the wind would change, and the clouds would fly,  
That I might know what to be at!"

And thus his meerschaum he whiffed,  
While grumbling he sipped his drink,  
As anon and ever he peered at the "lift"  
Where the clouds looked black as ink.  
Drizzle, and slop, and slush,  
Slush, and drizzle, and slop,  
While the muggy Sou' West in teetotal "lush"  
Trundled his watery mop.

But should Monday the vapours clear off,  
And promise a fair weather "spirt,"  
My "Paris" I'll sport, and my "upper" I'll doff,  
And cut singing "The Song of the Dirt!"

And as with Harry the Fourth's "Boy," so was it with Miles's; the "wish was father to the thought," and the wished-for change came. Right gloriously did "Bright Phoebus salute the gay morn," and leaving Murphy unconsulted he hastened to where fair-goers "most do congregate," namely, the wharf of Adelaide, of which the "counterfeit presentment" figureth at the figure-head of this diary. "Now be it known unto all men by these presents"—as our loving and beloved Victoria says, when she is going to give you a good place, or take your *corpus* into custody for some social offence of neglecting, or being unable to pay some debt over twenty pounds—that gladly doth "Miles's Boy" greet these seasons of mirth and misrule; and that he holdeth that man's wisdom not worth a "motherly" turnip, who never plays the fool—in the right place. For as King Solomon says, "There is a time for all things," and therefore there is a time for Greenwich Fair.

Splendidly did burnished Sol, who for the first time this season sported a polished face, shine down on the holiday folk as they elbowed their way on board the various steamers, which lay puffing and blowing off the "surplus strength of their inactivity" at pier and landing. And innumerable happy parties crossed London's pont to where the Railway Company exhibited by day the attraction of a painted board—by night, in brilliant illuminations, "To Greenwich in twelve minutes." But it was my aim to see what was to be seen: and a *flying rabbit-hutch* not falling

[Continued on page 30.]

## THE FISHER'S CREEL.

HE talented and amusing correspondent of *Bell's Life*, "the Old Fly," having this week delectated himself by an excursion into the kitchen (no bad place in such a backward season), we are tempted, by the savouriness of his recipes, to give our readers a "taste" of his quality in the *ars coquandi*.  
—ED. S. W.]

## HOW TO DRESS FISH AND GAME.

Some sceptics entertain the romantic idea that the pike, even though he should have afforded the angler plenty of sport, is not worth dressing. Now, with due deference be it written, this is an erroneous opinion. The pike, when in full season, is a good fish; but it is, in the first place, a difficult fish to carve, for few people know where to hit upon the most appetising *marceaux*; and, in the second, not one cook in a thousand, male or female, knows how this fish should be dressed. The only reasonable ground of objection to the pike, as a delicacy for the table, is its superabundance of forked choking bones; but if the masters and mistresses of all well-regulated establishments are not above taking a hint from an humble individual like myself, I will give them a "wrinkle," and a "notion" into the bargain, as to the manner of carving a goodly sized pike of eight or ten pounds. Before I give directions as to the dissecting process, a word about dressing the dainty, for it is a secret worth knowing; and as we should not think of cutting him up raw, let us see how he can be brought to table in his most captivating form. I see no just reason why a sportsman should not possess a smattering at least of culinary lore. There will be many occasions during his rambles when he will find a little practical knowledge in the savoury art especially useful. Your true sportsman is not above learning anything; hence it is that he is a superior and a better informed member of society than the common run of his fellow men.

The pike is by no means a despicable fish, and should any of my readers feel induced to try the experiment in London or any provincial town where the concomitant ingredients can be readily procured, here is the secret: Having well cleaned and scaled the fish, which must be a large one, of from seven to ten pounds, lay it in cold pump water, with half a pound of salt thrown into it, for about an hour. Prepare a goodly sized pudding of veal stuffing, with the addition of a couple of dozen or so of oysters chopped fine; cram the pike's interior with this, sew him up, strew him with raspings, and dab him all over with butter. Send your *plat* to the bakehouse, and while it is undergoing the ordeal of the oven, prepare at home the following gravy, which will be found a very pleasing accompaniment to the piscine delicacy:—Take some *coulis* or strong *consommé*, which must be thickened with the flesh and trail of a cold roasted woodcock, pounded in a mortar, add one anchovy, pounded, or two tea-spoonfuls of essence of anchovy, and some cayenne to taste. With this addition, which is extremely savoury, the gravy will be of a proper thickness, and if the fish be artistically baked, they will be found to harmonize very palatably together. A word, however, as to the carving of the fish, for the comfort of the *convives* will materially depend upon the manner in which the host distributes the luscious morsels. Pike feeders in general, and the pike fisher in particular, will have observed a rectilinear brown mark which runs horizontally about midway along the side of the fish from the snout to the tail, below this the fish slice should never be insinuated, for there nothing will be found, save the thinner portions of uneatable substance filled with forked bones, and fit only for the curious in picking; above this said line, however, the epicure will discover much to delight him; the flesh will be found firm and flaky, and free from those interruptions so distracting to the enjoyment of the piscivorous gourmet, known by the name of bones. Joking apart, the pike thus dressed is excessively palatable, and, with the gravy concocted as I have described, is worthy a place at an aldermanic feast. Now, be it known, this receipt is not copied from any work on cookery, but was given to me by an old and valued friend, who prizes the good things of this life, and with whom I have many a time and oft partaken of a pike dressed under his own supervision; I can, therefore, take upon myself to pronounce upon the super-excellence of the invention, as well as to recommend it to every troller in her Majesty's dominions. Return we now to the pent up sportsman—a prisoner in a pot-house, and without any provisions, excepting the produce of his rod and gun. Here, I think, I can be of use to him. We will suppose, for instance, he has shot an old jack hare, a couple of antiquated buck rabbits, and a brace or more of old birds. Such an occurrence is by no means improbable, but that which would be still more certain is, that hare, rabbits, and birds, would be *unchevable* if dressed immediately after being killed, to say nothing of the chance—by no means an unlikely one—of their being spoilt by the female butcher, the presiding priestess of the kitchen. That very erudite and eccentric member of the prize ring, the late lamented Jack Scroggins, from whom I received lessons in the art of self-defence some years ago, was wont to observe, when expounding the mystery of some flatish dodge, that "We none on us can know too much." Acting, therefore, upon this broad principle during my sojourn on the Continent and rambles through France, I cultivated the acquaintance of every *chef* of note at the principal hotels I inhabited. A French dog cook—and I use the term in contradistinction to the feminine *artistes* of England—with the character-

istic urbanity and politeness of his nation, will express himself as flattered and obliged by your visiting him in his temple of epicurism, praising his talent, and soliciting information as to the particular manner of preparing any particular dish. The intruder need not stand in awe—as he would of the she-devils in the basement story of a kitchen in this country—of a dish-clout being pinned to his tail; on the contrary, he will be kindly and courteously received, and the art and mystery of *civets*, *salmis*, *bechamels*, and *fricandeaux*, explained to him by the obliging *chef*. In this way did I acquire a smattering of cookery, and I have treasured some valuable receipts, which, on more than one occasion, have been turned to good account for the benefit of my friends.

The following receipts for dressing game too old and tough to be served up *à la broche*, were given me by the two best cooks I ever met with in France: old Père Pacquet of the Canon d'Or at St. Omer, and young Mallet of the Hotel de l'Europe at Abbeville, whose equally talented mother keeps the Hotel d'Angleterre at Montreuil, from which celebrated establishment Mr. Morel, of Piccadilly, receives his *pates de beccasses*, and other game pies, for which he is so renowned:—

Butter, bacon, and onions, can always be found in every road side public house; with these and a lemon (a dozen or so no sportsman should ever travel without) a very appetizing dish can be tossed up if the shooter should have provided himself with a hare, rabbits, or birds. We will take it for granted that he has, and proceed at once to impart a valuable secret to him. The foundation of all French cookery is what is termed a *roux*, and it is thus made:—

Into a small saucepan or stewpan, the tin lining of which has been worn or melted away, put three or four spoonfuls of flour, according to the quantity of gravy required, and about two ounces of butter. Place the saucepan over a slow fire, and as the butter melts stir it well, that the flour may mix with it thoroughly. Keep stirring until the flour and butter are of a fine red brown colour—hence the name of *roux* which is now made—add, by very slow degrees, stirring with a wooden spoon the whole time, a little cold water or thin gravy, or broth if you have it, but it is not necessary, until the mixture is of the consistency of cream. Having prepared this, take a large stew or saucepan, cut some thin slices of bacon and lay them on the bottom of it, limb your rabbit or hare in helpable joints or pieces, and place them on the bacon in alternate layers, with four or five onions cut in slices, add pepper and salt, and a couple of slices of lemon and one bay leaf; pour your *roux* mixture over all, which will about cover the hare or rabbit. Let the whole simmer gently for two hours and a half or three hours, and one of the most relishing stews it is possible to partake of will reward the skill of the amateur. This is termed a *civet*, is easily made, and by far the best, as well as the most economical method of dressing an old jack or an old buck. Old birds are excellent done this way, but the bacon must then be omitted. This is a *salmi*. All kinds of wild fowl are delicious when so dressed; a glass of port wine or claret is an improvement; but wine is seldom to be had in pot-houses remotely situated from market towns. A *matelotti* of eels is composed of the same simple materials—merely the *roux*, onions, lemon, and bay leaf—and, if properly concocted, will be far superior to the bedevilments we are poisoned with, under the denomination of stewed eels at Greenwich and Blackwall, which taste of nothing but unwholesome spices and sour wine, the flavour of the fish being overpowered by the ignorance of the cook. In a veritable French *matelotti* one can taste the eel, carp, or tench, which is much to be preferred. That emperor of sportsmen, and *beau ideal* of an English gentleman and old soldier, Colonel Hawker, with whom I have the honour of being acquainted, has, in his finishing instructions to young sportsmen, given several useful hints as to the expediency of carrying a few creature comforts to retired nooks and corners, where luxuries are not within the reach of fisher or shooter. His receipts are all excellent, and I have taken the liberty of adding mine, which are all original, and so simple that, without infringing upon his palatable precepts, I trust I have given a trifling wrinkle to those who may not know what to do with their game after it has been shot, and which, without any fish, flesh, or fowl, within their reach, would scarcely be eatable upon the day upon which it was killed, save in the manner I have pointed out. The reader may, with some show of reason, exclaim, "What has this lecture on cookery to do with angling?" I answer, that my reason for having so digressed is a wish to contribute to the comfort of my brother sportsmen; and, regardless of being termed a disciple of Ude, rather than old Walton, I opine that the fisherman may add materially to his enjoyment by being able to superintend the dressing of the contents of his creel. For instance, a broiled trout I think superior to a boiled one; the most appetizing sauce for the former is thus made:—Boil three or four ounces of butter by itself, until it has done hissing—this is termed burning it; when it is of a gold colour, add two table spoonfuls of the best vinegar, some eschalotte shredded fine, and some pepper and salt; this is the best *sauce-piquante* extant. For boiled trout:—To some good melted butter add the same quantity of vinegar and some chives finely chopped, and a little parsley; these herbs can always be procured in the country, and supersede the necessity for fish sauces; indeed, some of my friends prefer this last receipt to all the Harvey, soy, and anchovy I could offer them.

THE OLD FLY.

## BRITISH SONG BIRDS.—No. III.

THRUSH.

**T**HE song-thrush, garden-thrush, throistle, or mavis, is a resident bird, pretty generally distributed over all parts of Scotland and England. Its delightful, inimitable, and indescribable song is heard at all seasons in fine weather, but especially in spring and summer, at early morn and about sunset. But it is not in sunshine only that this attractive warbler tunes its wild notes; for after, in heavy rain, it takes its stand in some sheltered spot, under cover of some projecting crag or stone, and for hours amuses itself with repeating its never-tiring modulations.

In summer it prefers the woods and hillsides, the bushy banks of streams and sheltered places, at some distance from human habitations, although in cultivated districts it often nestles in orchards, hedges, and gardens, from which last it derives one of its popular names. In winter, the individuals which had made the woods and vales their summer residence, draw nigh to the abodes of man, and feed in the gardens and fields, or betake themselves to the rocky shores, where they find subsistence by breaking the shells of whelks and other shellfish.

Although in cultivated districts it is seldom seen except in the bushes and hedges, it is capable of flying to a great distance, which it does in gentle curves, with quick flaps, intermitted at intervals, sometimes at a considerable height, but more frequently only so high as to clear the trees. Its flight is always rapid, and it selects its place with quickness, settling instantaneously. When on the ground in the attitude of observation, it droops its wings a little, keeps its tail nearly horizontal, and raises its head obliquely. On catching sight of a worm or other object, it hops briskly towards it and picks it up; or, if it has withdrawn, pecks at the earth until it has seized it. Its general mode of progression on the ground, is by a series of jumps. When in a listless mood it droops the tail and wings, draws in its necks, and ruffles its feathers: in this attitude it is often seen perched on a tree, bush, or stone.

Its food is chiefly on the ground, consisting of snails, earthworm, larvae, beetles, and in autumn and winter, hips, haws, and berries, and seeds of many kinds. In winter, also, the garden snail supplies much of its food, which it procures by breaking their shells: this it effects by lifting them in its bill and knocking them repeatedly against a stone. Heaps of shells thus broken may be seen by garden walls, and in fields near the edges of thickets. Mr. McGillivray, in his elaborate and scientific treatise on British Land Birds, among other anecdotes of the Thrush, states, that in his rambles in the Island of Harris, he heard frequently a sharp sound like that of one small stone struck upon another, and long endeavoured to discover its cause in vain, until one day the tide being out, he heard the wellknown chink, and standing still, espied in a recess formed by two flat stones, a bird moving its head alternately upwards and downwards, each downward motion being followed by the hitherto mysterious noise. On going up to the place, he found a thrush, which, flying off, left behind him a whelk newly broken, but with the fish in it, lying amid a heap of fragments around a smooth stone. We shall here trespass on the same accurate and observant writer for some other particulars of this delightful bird.

The full song of the thrush is heard in April, May, and June, although it may be occasionally heard at any season. In March it pairs, and by the end of that month or in the beginning of the next, begins to construct its nest, which is placed in a thick bush of any kind, or in a hedge, at a small height, or on a rough bank among shrubs or moss. In the unwooded parts of the country it is found under shelter of a projecting stone or crag, in the crevice of a rock, or at the root of a tuft of heath, or among the stunted willows on the rocky bank of a stream. It is com-

posed externally of slender twigs, roots, grass, and moss, and is lined with a thin layer of mud, cow-dung, or rotten wood, neatly laid on, and between which and the eggs no other substance is interposed. The diameter of the cavity is usually about four inches, its depth from two and a half to four. As a good deal of wrangling has taken place on the subject of Thrushes' nests, I may be allowed to be somewhat particular in this matter.

Although the structure of the nest does not vary much, the materials are very diversified. In a nest before me, which is very bulky, the exterior is formed of the long tough roots of various plants, a twig of broad or of curled leaf sorrel, another of the rasp, a clipping of boxwood, a piece of packthread, numerous tufts of *Poa annua* and *Stellaria media*, two or three mosses, and some other substances. Within this is a more elaborate structure of fibrous roots, tufts of grasses, straws, and some beech leaves, interwoven, and compacted with some tenacious substance. This inner cup is lined or plastered with a very thin but firm coating of what seems to be horse-dung, on the surface of which are spread numerous chips of straw and slender grasses, but certainly no decayed wood, as some allege to be usually the case. This nest is in diameter three inches and a half, in depth two and a half, its greatest diameter seven inches, and its greatest depth four and a half. This is the nest of a civilized Thrush, it having been found in a hedge in the immediate vicinity of Edinburgh.

The eggs are generally five, but vary from four to six, of a regular or broad oval form, bright bluish-green, with scattered spots of brownish-black, of a roundish form, and more numerous at the larger end. They vary considerably in size, the largest in my collection measuring thirteen-twelfths by nine and a half, the smallest eleven and a half by eight and a half twelfths. They are deposited in the end of April, sometimes so early as the beginning of that month, and sometimes not until May. The young I have found abroad from the twentieth of April to the middle of June. Another brood is generally reared in the season.

After the first autumnal moult the plumage is complete. As the bird advances in age, the buffy tints of its fore-neck and sides fade, but the other changes are not worth notice. In some aged individuals, the yellow of the under and lower parts entirely disappears. We now proceed, according to the plan we have laid down, to the Thrush in its state of captivity to man.

## MODE OF CAPTURING THE SONG-THRUSH.

The best plan for catching a fine-toned male, is by means of a perch and a limed twig. In a future article, which we purpose to devote to BIRD-CATCHING, we shall have something to say on the preparation of bird-lime, on nets, and on that pleasant and simple method, the water-trap. In September and October this last-named contrivance is most effectual, and they may be taken about sunrise and sunset, sometimes at so late an hour that they can only be heard, but not seen, so that the ear is our only guide. When they enter the water you must not be in a hurry, because they like to bathe in company, and will congregate to the number of a dozen or so, at a particular call. "The first," says Bechstein, "that discovers a convenient stream, and wishes to go in, cries in a tone of joyful surprise, 'sik, sik, sik, sik, teak, teak, teak,' and in a moment, all the neighbouring thrushes reply, and hasten to the spot. They, however, enter the bath with some caution, and seldom venture till they have seen a redbreast bathe without accident; but as soon as one ventures, he is followed by others, which begin to quarrel if the place is not sufficiently capacious for their amusements." In order to attract them, you will find it a good plan to have a tame bird running and fluttering about the banks of the brook.

## FOOD, &amp;c.

In confinement, this bird should always have a large cage. The song-thrush, which differs only from the missel-thrush, in being smaller and much more pleasing in its song, is a delightful cage-bird; and will be found to thrive upon oatmeal, moistened with milk. It requires a good deal of fresh water for bathing, as well as drinking. When the bird taken is an old one, it will often refuse to eat, and the greater number of such die in consequence.

## BREEDING.

As this bird usually builds on the lower branches of trees, and its nest is rather large, it is often taken. Earth and cow-dung, mixed with moss, are its ordinary materials. The hen lays twice a year, from four to six green eggs, speckled with irregular dark brown spots. In the young brood, the upper part of the body is spotted with white, and the first hatch is ready to fly shortly after the period at which we are writing—namely, the beginning of April. When taken from the nest about half-grown, they are easily reared on white bread, soaked in milk, and readily learn to whistle tunes. As the thrush in the southern parts builds by preference in the neighbourhood of water, the nest is easily found by seeking it in the woods beside a stream, and the male bird will usually be heard singing pretty near it. With proper care, and varying its food occasionally, the thrush may be kept in cage for five or six years.

**NEW TENNIS COURT.**—We hear from good authority that Prince Albert was so much delighted with the game of tennis, whilst at Brighton, that it is his royal highness's intention to build a tennis court, we believe, at Buckingham Palace.

## THE HISTORY OF BRITISH BOXING, FROM FIG AND BROUGHTON TO THE PRESENT TIME.

PERIOD II, 1735—1786.

FROM THE TIME OF BROUGHTON TO THE APPEARANCE OF DANIEL MENDOZA.

## CHAPTER I.—(Continued.)

GEORGE TAYLOR—BROUGHTON—SLACK—SMALLWOOD—BUCKHORSE—WILLIS.

## BROUGHTON.—(Continued.)

**B**N an after part of this chapter we will note some of the minor stars of George Taylor's booth, who appear to have left their orbits, attracted by the superior effulgence of Broughton's "NEW AMPHITHEATRE," as we find it termed in its first announcement; for the present we pursue the career of Broughton, for the sake of method and clearness in this, our history.

Under the patronage we have already spoken of, Broughton seceded from the Tottenham-court-road establishment, rapidly completing a new building adjoining the Oxford-road, near the spot where Hanway-street, Oxford-street, now stands, opened it on March the 10th, 1743, with the subjoined advertisement in the *Daily Advertiser*; from prints yet existing in the British Museum, it appears that this edifice was somewhat similar to Astley's original circus and riding-school, in the Westminster-road, or rather the large temporary and removable theatres, which have of late travelled with equestrian exhibitions round our principal provincial towns. There were boxes, pit, and a gallery; a stage for the combatants in the centre of the ring, and the *tout ensemble* bore some resemblance to the pictures of the Old Fives Court, in Windmill-street. The following is a copy of the announcement:—

## AT BROUGHTON'S NEW AMPHITHEATRE,

OXFORD-STREET,

The back of the late Mr. FIG's,

On TUESDAY next, the 13th instant,

Will be exhibited

## THE TRUE ART OF BOXING,

By the eight famed following men, viz.,

ABRAHAM EVANS,  
SWEEP,  
BELAS,  
GLOVER,

ROGER,  
ALLEN,  
ROBERT SPIKE, and  
HARRY GRAY, the clog-maker.

The above eight men are to be brought on the stage, and to be matched according to the approbation of the gentlemen who shall be pleased to honour them with their company.

N.B. There will be a BATTLE ROYAL between the NOTED BUCKHORSE, and SEVEN or EIGHT more; after which there will be several BYE-BATTLES by others.

Gentlemen are therefore desired to come by times. The doors will be open at nine; the champions mount at eleven: and no person is to pay more than a SHILLING.

The appearance of this rival was a cruel blow to George Taylor, who saw the ruinous results which must ensue to his "booth" from Broughton's popularity: he, therefore, as a counter-hit, instantly let fly in the following terms:—

## TO THE PATRONS AND ENCOURAGERS OF THE MANLY ART OF BOXING.

Whereas, Mr. Broughton, well knowing that I was to fight Mr. Field on Tuesday next, the 13th of March, 1743, in order to injure me, has maliciously advertised to open his Amphitheatre on that day, and where several battles are then to be fought. To prevent the public from being deceived, I feel it my duty to inform them, that the principal part of the persons mentioned were never made acquainted with such circumstance, and have no intention of so doing. Mr. Broughton wishes to make it appear that he never imposed upon any of the pugilists who had been concerned with him in any transaction whatever; but his impositions shall soon be made manifest to the world. And to show Mr. Broughton that I have no animosity against him as a pugilist, or any jealousy concerning his amphitheatre, I am willing to fight him, as soon as he may think proper, wherever it may please him, not regarding, as he loudly sets forth, the strength of his arm.

GEORGE TAYLOR.

We are inclined to suspect that there was a little of the "gag" in the names of the pugilists set forth by Broughton, from subsequent occurrences; be that as it may, Taylor had already fallen beneath his conquering arm, and his challenge was viewed as nothing more than mere bounce, to detract from the triumph of the rival manager.

The charges of Taylor, made from time to time, led to a sort of paper war: Taylor charged Broughton with appropriating to himself the "Lion's Share" of the door-money to the injury of the other pugilists; and this accusation Broughton replied to by showing to the satisfaction of his patrons that he had not received one hundred pounds; that his amphitheatre had cost him upwards of £400, that he had appropriated, but a third part of the door-money for his own individual emolument, and that the rest had been shared among the pugilists. This account proving perfectly satisfactory, firmly established Broughton; and Taylor, perceiving that it would be useless to oppose so powerful an oppo-

nent, relinquished his booth, and was engaged at the amphitheatre, where the most noted of his "merry men" followed him.

We now come to one of the most important epochs in the history of boxing, namely, the promulgation of a "Code" for the guidance of the combatants, and the satisfaction of the judges, were "produced by Mr. Broughton, for the better regulation of the *amphitheatre*, and approved of by the gentlemen, and agreed to by the pugilists, August 18th, 1743." These rules promulgated by this FISTIC NAPOLEON, whose law making and fall were alike, had a much longer duration than the "Code Napoleon": for they lasted in perfect integrity from the period of their date until 1838, when after the fight between Owen Swift and Brighton Bill, the "NEW RULES OF THE RING" superseded Broughton's. We here give the original:—

## BROUGHTON'S RULES.

1. THAT a square of a yard be chalked in the middle of the stage; and every fresh set-to after a fall, or being parted from the rails, each second is to bring his man to the side of the square, and place him opposite to the other; and till they are fairly set-to at the lines, it shall not be lawful for the one to strike the other.

2. That, in order to prevent any disputes, the time a man lies after a fall, if the second does not bring his man to the side of the square, within the space of half a minute, he shall be deemed a beaten man.

3. That, in every main battle, no person whatever shall be upon the stage, except the principals and their seconds; the same rule to be observed in bye-battles, except that in the latter, Mr. Broughton is allowed to be upon the stage to keep decorum, and to assist gentlemen in getting to their places; provided always, he does not interfere in the battle; and whoever presumes to infringe these rules, to be turned immediately out of the house. Everybody is to quit the stage as soon as the champions are stripped, before they set-to.

4. That no champion be deemed beaten, unless he fails coming up to the line in the limited time; or that his own second declares him beaten. No second is to be allowed to ask his man's adversary any questions, or advise him to give out.

5. That, in bye-battles, the winning man to have two-thirds of the money given, which shall be publicly divided upon the stage, notwithstanding any private agreements to the contrary.

6. That, to prevent disputes, in every main battle, the principals shall, on the coming on the stage, choose from among the gentlemen present two umpires, who shall absolutely decide all disputes that may arise about the battle; and if the two umpires cannot agree, the said umpires to choose a third, who is to determine it.

7. That no person is to hit his adversary when he is down, or seize him by the ham, the breeches, or any part below the waist: a man on his knees to be reckoned down.

These rules may be called the groundwork of fair play and manly boxing, and no man, from his experience, was better able to frame such a code than Broughton. And it is to be observed, says the talented author of *FISTIANA*, that to them we greatly owe that spirit of fair play which offers so wide a contrast to the practices of barbarous ages, when every advantage was admissible where brute strength or accidental casualties placed a combatant in the power of his antagonist. It is to be lamented that, even in modern times, the inhuman practices of uncivilised periods have subsisted to a disgraceful extent, and hence we have heard of gouging, that is to say, forcing out the eye of an antagonist with the thumb or finger; purring, kicking a man with nailed shoes as he lies on the ground, striking him in vital parts below the waistband, seizing him when on his knees, and administering punishment till life be extinct, and a variety of other savage expedients by which revenge or passion has been gratified; and it is remarkable that in those countries in which pugilism or prize fights have been least encouraged, these horrors have been most frequent: we refer to Lancashire in particular, where even to this day that species of contest, called up and down fighting, that is, when a man is got down he is kept down and punished till incapable of motion, is permitted with impunity, unless indeed the death of the victim leads to the apprehension and trial of the survivor.

The adoption of Broughton's rules in the metropolis soon led to their extensive dissemination in the provinces, and public boxing was thereby stripped of half its terrors; while in the adjustment of private quarrels, the settlement of the simple issue of "which was the better man" after "a fair stand-up fight," put an end to all bad feeling; and the conqueror or the conquered submitted with a good grace to "the fate of war," the strongest proof of the effects of cultivation, and the best test of a manly and honourable feeling.

(To be continued.)

WANTED—AN EXPLANATION.—In the window of a shoemaker's shop in Holborn the following mysterious inscription in large letters was lately appended to a pair of those ambiguous articles which are more than a shoe and less than a boot:—"Miss Fits Clarence—only 6s. 6d." Can anybody tell us what it means?

## TO CORRESPONDENTS.

**SELLER, Taunton.**—The forehead implies that part of a horse extending from the ears to the withers. A horse low before, with a short forehead and a depressed crest, can never be handsome, or (we should say) very good.

**TYRO.**—This is not a question for a "Tyro" to ask. Let him seek legitimate sport, if he is a true angler. The recipe he seeks is unworthy; poisoning fish is detestable and felonious, and he seeks in vain, under cover of a flimsy pretence, to acquire the information he wishes, from this quarter.

**CANIA.**—This is not the season for a series of articles on "SPORTING DOGS,"—bide your time. To your question, we reply: if your dog has ticks, you cannot do better than rub him over with oil. The oil operates by closing their spiracles or breathing pores (remember the dog does not perspire through the skin), and this will kill them; a drop of oil poured on a wasp so as to cover it, will kill it in a few seconds.

**QUEST.**—To your first question: Really we are not M. R. C. S., but in reply to No. 2, tell you that "Opodeldoo" is soap and camphor dissolved in spirit of rosemary. It is either liquid or solid. The former is made with soft, the latter with hard soap. We will put on our "considering cap" and give you a recipe for compounding it next week.

**J. WILSON.**—An "inch" is the twelfth part of a foot in England. We are not "far north" enough to give you a better definition of the Scottish word than that of "a smooth verdant island or meadow in a river or estuary." The "Inch of Perth" is spoken of by Sir Walter Scott in his "Fair Maid" of "that ilk."

**R. S., Rotherhithe-wall.**—Through some irregularity your former epistles have not come to hand. The first battle between Tom Oliver and Ned Painter (both of whom are living, one in London, the other at Norwich) took place May 17th, 1814, at Shepperton, when "ould Tom" was victorious in eight rounds, occupying twenty-six minutes. The stakes were £50 aside. Upwards of four years after (having beaten Tom Spring in the intermediate period), Painter beat Oliver, at North Walsham, in Norfolk, in twelve rounds, occupying fifty-one minutes; the prize £100, and the door-money £130: the last battle took place July 17th, 1820. Of course Ned Painter's exploits will be detailed in our HISTORY OF BRITISH BOXING.

**L. JONES.**—You can obtain lessons in boxing from Alec Reid, whom you may hear of at Owen Swift's, Titchbourne-street; Jack Cullen, Jerry Donovan, Jemmy Shaw (who may be heard of at the Lamb, in Houghton-street, Clare-market), and many others, are teachers of more or less ability. We cannot insert terms for teaching without prejudice to some teachers; and also subjecting ourselves to the payment of advertisement duty for every such announcement.

**F. S., Pentonville,** has mistaken the scope and purpose of "THE SPORTING WORLD;" it is not to calendar and catalogue every unimportant as well as important occurrence of the day; but to present weekly a readable and instructive "sporting miscellany." Several correspondents have forwarded us ephemeral sporting paragraphs: we thank them for their misdirected zeal, but decline their favours.

**B. W., Gravesend.**—You have lost your wager. How could you dream that Harry Holt fought in 1840? Joe Pariah, Holt's first antagonist in the ring, is still living, and keeps the Spotted Dog, in Strand-lane: they fought August 16, 1816, for ninety minutes, and seventy rounds. The Tom Holt who beat Linsey, in 1840, near Manchester (which fight led you into this egregious mistake), we know nothing of; for these sort of questions, we would recommend the purchase of FISTIANA, you cannot have a better guide; indeed there is no other Chronology worthy of the name, except one that ends so far back as 1822.

## OUR WEEKLY CALENDAR.

AN EPHEMERIS IN JEST AND EARNEST.

**SUNDAY, March 30.**—LOW SUNDAY: which is anything but a *gentle* calling for the day. The Brazils discovered, 1498; and in consequence the African slaves are made to know the *vanities* of labour—and get the *come* for their share of the sugar. To Epicures—"What to eat—what to drink—what to avoid."—Turtle—Champagne—and "Ham Sandwiches a penny each."

**MONDAY, 31.**—Hares recover their senses, which are supposed to be lost during this month. England is again invaded by William the Conqueror, who breaks ground at Astley's (now Batty's) Amphitheatre, 1844—the Queen's English dreadfully mangled by the barbarous "Conqueroo."—Sir R. Peel subscribes £10 to the Rowland Hill testimonial. Only £10! we thought it had been ten and a kick (vide "Pelham") for he had just before bundled him out of Place.

**TUESDAY, April 1.**—ALL FOOL'S DAY.—Expedition to the North Pole sailed 1818; rather ominous that they wouldn't find it.—Forty tradesmen at Putney hoaxed by false summonses to serve on the grand jury, 1844. They gave up the *Leider* and started for the *Hoax*.—Dowager Lady Lyttleton appointed Governess to the Princess Royal, 1842; who teaches her to get (like her cousin Augusta) a good pen'orth of Parliament.

*State of the Provinces.*—A man arrives at Herne Bay and takes a first floor—an event "unparalleled in the memory of the oldest inhabitant."—Report of the failure of the potato crop in Scotland proves to be unfounded; so that there was no "speculation in their eyes."

*Hints to Recruits.*—The Lumber Troop is to be met with any evening at the Falcon public-house, in Fetter-lane. They charge their glasses precisely at seven, and go through their evolutions of *walsh-rabbits*, chops, and kidneys, till three in the morning. The sergeant is to be met at the bar. The bounty for entering this fine corps varies from a bowl of punch to "goes all round."

*Experiment in Chemistry.*—Potato is nothing but starch; but a piece of potato dropped into a glass of grog would not have the effect of stiffening it.

**WEDNESDAY 2.**—Oxford and Cambridge Term begins.

*Things to be remembered in April* [which we wouldn't tell you yesterday, lest you should think us in fun]: That County Sessions are on the 5th, and most of the Borough Sessions the same week. Persons reducing the number of their windows, or giving up anything subject to Assessed Taxes, must do so before the 4th.

*Hours of Rest.*—Archbishop Williams used to sleep only three hours out of the four-and-twenty—or more probably his biographer was given to *lying* more

than he was. Modern instances, however, of extreme endurance are not wanting: for instance, we have heard of a young man at Sewell and Cross's, who has several times gone half-price to the play and wined up at the Cider Cellars, returning to take down the shutters at eight in the morning, and never slept at all; so that on such occasions as these he beat the Archbishop hollow.

**THURSDAY 3.**—Tom Thumb exhibited in the evening at Buckingham Palace as Napoleon, 1844; her Majesty liking a little nap after dinner.

*Five minutes' advice on Lamps.*—The best lamp for a drawing-room is the Camphine, as it gives the light of twelve candles and the soot of three kitchen chimneys; it also emits a perfume equal to Patchouli. It is worthy of the attention of the philanthropists of Exeter Hall, who take such an interest in the blacks; for after a night with the Camphine Lamp, a Negro, upon entering the room, would take every gentleman present to be "a man and a brother."

**FRIDAY 4.**—Queen Isabella receives a basket of sweetmeats from her soldiers, as a hint to her Majesty to attend to their comfort. (Shade of Jee!)—The *Aylesbury News* says—"A prophet has appeared in Bucks"—and top-boots, we suppose.

**SATURDAY 5.**—Remember, GAME CERTIFICATES EXPIRE.—The Chancellor of the Exchequer brings out his Annual Budget—or John Bull's "Forget me Not," 1843. Mr. Home suggests that the work would be relieved by a few good cuts. Married officers out of barracks ordered 2s. 6d. for candles and coals per week. The officers *bring* anything but *herry charges*.

## The Sporting World.

LONDON, SATURDAY, MARCH 29 &amp; APRIL 5, 1845.

**OLIDAY-TIME** and the communication of MILES'S BOY having somewhat deranged the symmetry of this third number, we trust the reader will excuse the postponement of several of the ordinary features of this miscellany.

Again we solicit the communications, experiences, and support of the lovers of sport in all its branches. Feeling satisfied that we shall go on, giving and receiving good, and widening the circle of our utility, in proportion as we acquire aid and patronage.

The articles on the various fish will be resumed next week (with an engraving of the BREEM), to be followed by the CARP and the BARBEL; and we have in *petto* a series of articles on "Vermis" destructive to the fish-pond, the warren, or the preserve: with this view the engraver is already transferring to the wood the Badger, the Otter, the Weasel, &c., &c. A brief history of DOGS, with faithful engravings of the various breeds, and explanatory articles on feeding, breaking, rearing, physicking, &c., is in "training."

**IMPROVEMENTS IN BOAT BUILDING.**—The novelty of outriggers or projecting rowlocks for river boats, of which a successful specimen was presented at the last Thames Regatta in the four-oared boat in which the Claspers of Newcastle carried off the prize, is now being adopted in an *Eight-Oared Cutter* of a very novel and peculiar construction, at Messrs. Searle's. She is of the extraordinary length of 60 feet, the principle being to ascertain whether an increased speed cannot be gained by the advantages afforded not only by her length, in one respect, but by the opportunity it affords of making a much finer bow, greater distance between the thwarts, and other *desiderata*. She is a fir boat, of clinker build, and will be an outrigger, but her form and shape will be peculiar, the object being to ascertain whether the present style is susceptible of improvement. Although at the first blush 60 feet appears enormous for an eight, it must be remembered that the four-oared boats average 40 feet, and the ordinary lengths of eights, 53 feet, does not seem consistent for the increase.

**REMARKABLE PRESERVATION OF TWO HOUNDS.**—A short time since one of the gamekeepers of the Duc de Nemours' establishment at Fontainebleau was returning home through a distant part of the forest, in the dusk of the evening, accompanied by two favourite hounds, when a hare suddenly crossing the path, the two dogs immediately gave chase. In spite of all the endeavours and exertions of the gamekeeper to call them off. It being nearly dark, the dogs were soon lost sight of, and the man was obliged to return home, to his great regret, without them. On the following day, and on several succeeding ones, he made every search for the dogs, which were valuable favourites of his royal highness, without learning any tidings of them, although he had sought after them for miles round. They were given over for lost, when, on the seventeenth day after their unexpected exit, the same gamekeeper was going his rounds in a remote part of the forest, when he heard a low moaning noise, the cry of some animal in distress. Upon proceeding to a declivity close at hand, and looking down, he perceived at the bottom of the pit or cavern naturally formed by rocks, something resembling the lost dogs, but they were so reduced by privation as scarcely to be recognisable. They, however, knew the voice of their master, who lost no time in rescuing them. It is concluded that the dogs, in the heat of their pursuit of the hare, and from the darkness at the time, precipitated themselves over the precipice which suddenly presented itself into the hollow beneath, from which they were unable to extricate themselves. They must have been full sixteen entire days without tasting food, and exposed to the late inclemency of the weather. They were, in appearance, mere shadows when found, but now, with care, are doing well.—*French Paper.*

ADELAIDE WHARF, LONDON BRIDGE.

within the category of "Miles's Boy's" desirables, he jostled his way on board the *Flora*, whereon, surrounded by Brides, Bridegrooms, Myrtles, Roses, and Lilies—and a little below bridge, by Rubies, Diamonds, Stars, Planets, and Meteors—he made one in the grand *ploughing match* that day performed on the "bosom," as the Poets call it, of "Father Thames;" who, if he had been at all tender-hearted, would have found himself pretty considerably ex-coriated by his loving children's engineering contrivances.

## THE VOYAGE.

But hark! the warning bell! and see how yon peripatetic newsvender scrambles from on board. "Here, boy! *Punch!*" "Yes, sir!" "And a 'Sporting World!'" "Here, sir; threehalfpence." "There's twopence!" "Thank'ee, sir!" And the river-bank *litterateur* slips from the gangway. "Sh-sh-sh, plish-plash, shosh-shosh-shosh-shosh," and the rapid paddles churn the yeasty tide. The white slender pipe ceases to pour out its tiny wreath, and the huge throat of its monster brother belches forth its volumes of black vapour. We are off! The channel of the "silent highway"—silent no longer—expands as we approach the Pool.

The Custom House and "the Towers of Julius" flit by; and now the steam is on—cranks, pistons, and wheels revolve swiftly and fearfully around us, the engines stretch their long shoulder-joints vigorously up and down, and a tingling, hissing noise, gives promise of confusion to uninitiated ears; yet the engineer perambulates his iron kingdom at his ease, and the brawny, naked arms of the machinists below betray no symptoms of trembling vibration, at the dangers by which they are surrounded.

The Tunnel—Brunel's vast monument—is overpassed, and—

"O'er the brown waters of the muddy Thames,"

we go proudly.

But there is an object as we near Greenwich, which I must not skip in my anxiety to arrive at the terminus of the *watercourse* I have resolved on, as a sort of *water-cure* for the blue devils of myself and readers. It is the DREADNOUGHT; its huge bulk frowning into comparative insignificance the hulls of the vessels near it. Formerly a ship of war, it has changed destroying for healing, and in its old age benevolently ministers to the sick seamen of all nations. She formerly carried 98 guns, she now accommodates 400 suffering destitute seamen. Her history is interesting, and among former services those at Trafalgar must not be forgotten. In that action she took a most active part, under the command of Captain John Conn. She captured the Spanish three-decker, the *San Juan*. The Dreadnought had her masts cut with shot, but none carried away. The *San Juan* was much shattered in her hull, and is said to have sustained a loss, in killed and wounded, of nearly three hundred; among the former

was her commander. As a hospital, the Dreadnought is supported by voluntary contributions. There are four decks or wards: each ward contains 100 beds. The medical staff is numerous. Patients are admitted at all times—the wards are heated with hot air.

And yonder, see, in the river's curve, smiling in the sunlight, rises the noble building depicted in our first page; the towers of the Palace-Hospital, which caused a French ambassador, after going in state to a levee, beneath the gloomy portal of St. James's unintentionally to compliment us—and these are the proudest compliments—by saying, that we were "a strange people: our hospitals were palaces, and our palaces hospitals;" long may we deserve the Frenchman's sneer.

"But, Miles's Boy, have you forgot you are going to the Fair?" "No, indeed, I have not; but he is wise who mingles the *utile et dulce*; and having done with these things—which he must have no heart who feels not—we deliver up our slip of blue, green, or yellow paper, and rush from the crowded deck; glad to escape the infliction of an asthmatic clarinet, an afflicted cornet-a-piston, and a trombone, we much fear, disordered in its bowels from excessive flatulency, which have been persecuting us for half an hour with 273 variations (by mistake) of the oldest of the 999 sets of Jullien's original Polkas.

And here we are ashore! Shall I tell you, gentle reader, on the authority of Old Miles, who remembers as far back as the Wandering Jew himself, all about Greenwich, when "bluff Harry," or "pious Edward," or "sanguinary Mary," or "glorious Bess," or—

"Visions of dulness spare my aching sight!"

THE DREADNOUGHT.

knave; if sincere, a bigot and a fool. The suppressionist has his choice under which category he will fall.

And now for the Fair! Nay, not so fast! There is yet a scene, not far distant, upon the slope of the Hill, whereon towers yon Observatory, that you must not miss. And now we toil its steep ascent. "Ha! ha! ha!" sounds of mirthful laughter break around, and the busy hum and

"Miles's Boy," came not to Greenwich to inflict upon his readers any such pilferings from the county history. First, therefore, he will walk into the park, where in front of the Naval School, some such picture as this presents itself to the eyes of those who delight in seeing their fellow-creatures happy. The sons of "carking care" in this working-day world can snatch but brief and far-between intervals from the grand struggle for subsistence in this money-grubbing land, and they who would seek to abridge the few relaxations of the pale artisan, his hardworked wife, and pent-up children, is, if insincere in motive, a narrow cynic, a pharisee, a tyrant, a hypocrite, and

HOSPITAL GATE-WAY.

THE NAVAL SCHOOL.

pleasing murmur of voices fills the balmy air of spring. See, we have reached its top. "Here you aire—the reele right sort! twelve a penny! an' all warranted to roll down hill—if they're chucked!" cries a facetious vender of specked apples and mysteriously compounded cakes of so bright yellow, that if owing to an admixture of eggs, the fowls which laid them must have died of disease akin to yellow jaundice. Eggs! psha! I wonder if they taste of mustard? suggests a friend; no their colour is owing to the same dye as that bilious old East Indian yonder—saffron or turmeric. But we are getting cake-ish ourselves, so we buy a pennorth and send 'em skiving like round shot, into the head of that disorderly column of "the fourth guards," which stands midway down the slope in expectation of these waifs and strays. Another and another penn'orth follow. What is so cheap as bestowing happiness? And you turn towards the southern gate along the magnificent avenue of beeches and chestnuts on to

## BLACKHEATH.

Emerging from the doorway in the park wall, and entering the wild waste so celebrated for its indigenous breed of long-eared lions, MILES's Boy chuckled inwardly at the scene before him. Many a revolving Easter-tide (for he is an old boy) hath he rolled his inquisitive optics over that animated plain, under which old women and cockneys devoutly believe lie vast treasures of coal, "vich they (rather a mysterious personage that Mister They) don't allow no vun to dig for, cos it 'ud injer the shippin';" though, if we may judge from the excavations, sand and gravel are not within the prohibition.

But, "Halloo there! you sir!—you with the lily ti-i-le and the malaccer!" "God bless us, why that's ourself!" (Hop-skip-jump.) "Ah! would yer?" and with marvellous agility Miles's Boy performed several steps, untaught by Baron Nathan, avoiding by each *tour-de-force* a missile in the shape of a hedge stake, about a yard long, and as thick as a child's leg.

"Now, then, sir, three a penny! as long as there's any." "Thank'ee, but we'd rayther be excused;" and to avoid our *snuff-box* being knocked off its *pedestals*, we caper nimbly from the line of shot unscathed. "Now, then, sir, have a shy—three goes for a penny!" 'Tis cheap, thought we, but immoral; and through a crossroad, flanked by gingerbread, slices of pudding with the measles, "ham sandwiches, a penny each," several locomotive gingerbeer fountains of great pretensions, each asserting its own title to being the "original;" and last but not least sundry stacks of save-loys and polonies (which we suspected to be nearly related in blood to the native cattle which cropped the scant herbage of the surrounding heath) we came on to

## THE COURSE.

Shade of Agrippa! Spirit of Vates! Genius of Judex, Pegasus, and Billy Ruff; ye sprites of "the Corner;" booted and breeched urchins of Newmarket

Flat!—hard-mouthed "tykes" of "the North," and heroes of the pigskin at Ascot or Epsom, say how shall Miles's Boy describe that which is indescribable? We take this apostrophe to be a specimen of Iberian bathos; and if the reader should feel at a loss to know what it means, we have only to plead the Sporting Reporters' privilege and practice, which we take to be, that whenever he wishes to write very finely he is entitled to become proportionably unintelligible. But a truce to reflection; here we are upon THE COURSE, and as the ground and company at BLACKHEATH RACES have hitherto been left undescribed (perhaps for want of a describer) we will attempt to supply the deficiency.

The Course is, perhaps, the most level in the kingdom, consisting entirely of "straight running," extending a clear mile from the cross-roads to Lee, "long, lazy, lousy, Lewisham," &c. on the north, to the "Sun in the Sands" on the south. The GRAND STAND, which is the largest in the world, is a somewhat elevated bank on the Greenwich side of the Dover-road, and this was crowded with the elite of the spectators. Among the company we noticed Mr. and Mrs. Neatsfoot, the eminent bone boilers of Nacker's-lane, Bermondsey, with their five lovely children—two of them sucking lollypops, one licking the Dutch gold from a cock in don't whisper 'em, and the eldest boy munching a mysteriously-compounded polony. Mesdames Wiggins, Buggins, Stiggins, Stokes, Nokes, Styles, Tubbs, and Briggs, each escorted by their 'prentice loveyers; seven medical students from "Guy's" and "Thomas's," each provided with penny trumpets and twopenny back-scratchers, with which ever and anon they annoyed the demoiselles and swains aforesaid; five members of the "force," in blue uniform, and eight *en mufti* (i. e. not wearing parade dress, but costumed as private gentlemen); two hundred and eighty mechanics, three hundred and twenty servant girls (we had almost by a lapse of the pen written "maids"), twenty-five costermongers, two gentlemen, one lady, and eleven pickpockets. These were the principal occupants of the "Grand Stand," as estimated for us by a distinguished member of the Statistical Society. But the race,

## THE RACES.

The stewards were the Right Honourable Chisel'em Tool'em, well-known as the driver of a Blackheath fly, and Hedgerow Prig, Esq., a swartly, olive-coloured gentleman, whose

"Eye of darkest hue,

Bespoke his Oriental origin;"

assisted by numerous clerks and course-keepers, who added materially, by their exertions and vigorous applications of their long whips and thick sticks (to the flanks and hocks of the cattle) to the general uproar and confusion. The races were all in "heats," and so far as we could observe (for we could not procure a card of "the names, weights, and colours of the riders") there seemed little attention paid to minor niceties.

\* We believe the phrase was the "Virgin Queen's."

THE OBSERVATORY HILL.

The bell (that of a muffin-dealer) having sounded, we were pleased to observe that the whole of the animals entered for the day's sports were already saddled and standing in front of the Grand Stand, with a punctuality not often attended to at race-courses of higher pretensions. All being ready, the competitors started for

**THE NURSERY-STAKES**, weight for age (i. e., the biggest riders on the youngest and smallest donkeys); once up the road and a distance; 18 subscribers; 16 started (two having paid half forfeit, agreed to run to the top, and there change riders).

Mr. Snooks's Jerusalem pony, Stockstill, by No-go, out of Jibber (a lad). Charley Bates's grey moke, Artful Doger, by Prig out of Green-yard

Leary Joe's brown donkey, Stunner, by Joe Banks, out of Rookery—St. Giles's dam.....(Mr. Robert Sawyer of Guy's). (An old lady).

Mr. Hucker's ns. Cheat'em, by Short-weight—Jerry—Poor-devil's dam.....(Nominator's son).

Mr. William Soames's Pickpocket, by Fakeaway, Policeman—Prig.....(A feather).

\* Job Thwack'em's Rawbones, by Wall-eye—Cripple, out of Half-starved.....(A lady of 17st.).

(\* Not allowed to start—'cos he wouldn't go—animal claimed by Inspector of Royal Society for Prevention, &c.)

#### THE RACE.

Our list is necessarily imperfect for the reasons before stated. A good start was effected, with the exception of Stockstill, who bolted. Artful Dodger, after three or four attempts at swerving, which were prevented by the bystanders, got well off his rider, an eminent sporting surgeon in posse, cutting him up most dreadfully. The Stunner now made strong play, his hide resounding from vigorous thumps of a blackthorn which his spirited owner applied to his flanks and hocks: whether resenting this treatment, or from the timidity of his rider, the Stunner started off across the heath at a slapping pace, in the direction of the inclined plane leading to a gravel-pit—some accident seemed inevitable, when providentially the proprietor of a target (which toxophilites shoot at and miss at seven arrows for tuppence), with great presence of mind came to the rescue, checking the high-couraged animal in mid-career by catching him across the nose with a target-pole. The old lady dismounted, and refusing again to "cross calico," the Stunner's chance was "out." Cheat'em now showed in front, but soon proved an impostor; he couldn't (or wouldn't) stand the pace; Pickpocket forced the running at the Gravelpits, and the Artful Dodger seemed certainly to have the race in hand, when—"Oh, world! thy slippery turns!"—Mr. Bill Allen, a brother sawbones from a rival hospital to that of the distinguished character, who seemed bent this day on "witching the world

With feats of noble ass-manship,"

rushed from the bank at the roadside, and with a large tin-horn, blew

"A blast so loud and dread,

That all the heath resounded!"

The Artful Dodger, doubtless with an instinctive horror of the "true king" of the forest, like

"Stubbs's staring steed

With terror at the lion starting,"

was petrified with affright. His first act was to throw up his muzzle, his second to elevate his crupper to an angle of ninety, and the next moment the leader in that gallant race "bit the dust"—and gravel. Cheat'em and Pickpocket now passed, but although Bob Sawyer's heart was good to remount—indeed he muttered something about having "his tanner's worth"—the owner (who had received beforehand) declared he wouldn't have his "hanimal ruined," and as the brute showed its teeth, and gave several practical demonstrations of its acquirements in the heel-ing art, Esculapius saw two of a trade could not agree, and retired from the field. (In an after part of the day Miles's boy saw the same fearless rider "up" again.) At the turn of the milestone, "the feather," on Pickpocket, cried out piteously (it is supposed from bowel complaint), and Cheat'em came in amid the applauses of the assembled multitude. The gratified parent of the rider lifted his boy from the saddle, and (we understand) promised him a new peg-top, "purvising them rascally ann'yance jewrers didn't git him fined ten bob agin for the penny-piece as would a'ays git under the big scale."

We now come to the sporting event of the day:—

**MARCH** with cobs, for four bottles of "Guinness," twelve "Royal Minors" Havannahs, the fare down per railroad for four, a fancy waistcoat of the "Lytton Bulwer" pattern, a "Napier" stock, and a pair patent leather Wellingtons, with green morocco tops.

Mr. Orlando Dimity ns. Billy Go-cart's Shave-the-ladies, ridden by.....(The sporting young man at "Civil and Cross's").

Mr. Gros-de nap Go-a-head, ns. Tom Thimberlig's Bust-up, by Ringbone, out of Spavin—own brother to Batcher-boy, ridden by.....(Mr. Oliver Out-for-the-day).

This was, indeed, the great "card" of the meeting. We several times heard the winner taken to the tune of "fifties" (in Barcelona), and once we thought we caught, but we might be mistaken, a strong speculator offering three to one (in gingerbread nuts) on Bust-up: so much did the ruling prices momentarily vary. On starting, Shave-the-ladies made play—indeed he seemed of a very playful disposition—

but "the sporting young man" gave him his head (if it had been his own, instead of the horse's, it would not have been of much value), and after going about three hundred yards at a *splitting* pace (for tight trowsers of rotten cloth), Shave-the-ladies took the conceit out of himself as well as his rider. Up to "the Shooter's-hill turn" (or rather the end of the road leading to that far-famed mount), we thought that Shave-the-ladies held his own. The turn, however, varied a little in its position, being merely marked by an official in a red stuff sleeve waistcoat, with a long whip, who, to repress the ardour of furious riders, stood a few yards from the cross road, and by means of the thong, turned round the equestrians and their "terrible highbreds," by hitting them playfully over the noses—or rather seeming about to do so. "The sporting young man," determined to comply with the conditions, and plainly seeing he had not done half of the stipulated distance agreed upon at setting off, resented the interference, and kicking the raw of Shave-the-ladies, dashed by the "Shifting-turn." Bust-up, on the contrary, drew rein, and coming back to the starting (and winning) post in a rocking-horse canter—which heightened the colour, and is said to have seriously injured the fork of his rider—was hailed the winner. Shave-the-ladies nominator entered a protest immediately after the race, and we understand that the subject, which is of some delicacy and difficulty, will be submitted to the "Jockeying Club," sitting at the "Coper's Arms," in Screw-street. We shall duly report their decision, for the edification of the SPORTING WORLD.

N.B.—There is a Derby Club meets at the above house, where the holder of Running Rein sticks to the first prize.—J. H.

But we turn ourselves away from the exciting "Turf," and wending our steps adown the hill, repair to Deptford Creek. "Tea sir; take tea, sir! eight-pence ee-e-ch, sir! eight-pence each!" (Mem. don't tell my wife, but I had met "permiscuously with a young woman," as a tract distributor of my acquaintance confessed to doing); and in we turned to the "Star," a bright luminary which "lured but to betray." Two cups of burnt raspings, mixed with fifty per cent of chicory, made with water thermometrically "temperate," some of Sir Robert Peel's New Tariff "grease," (as yet un-"tarred," according to the charitable prescription of the agricultural protectionists); a loaf of fancy bread of inappreciable ponderosity, two eggs warmed in the reflector of a gas-lamp, and a clumsily jagged "Vauxhall" slice of Hibernian ham—which would have been thick *nowhere*, if the operator had known him to have kept his knife steady—delectated our inwards. "Waiter! what's to pay?" "Three shillings and sixpence!" "Good!" we mean the charge is: but Miles's Boy is a *poco-curante*, and devoted to

#### THE FAIR.

Shall I go over the ninetines trodden ground? Miles's Boy elbowed his way, now the thruster now the thrustee, along the double line of stalls: alas! how are the glories of the fair (not the fair-sex) departed. There was, as the men who "do the markets" say, "the average supply" of dolls, garden-rollers, drums, rattles, carts, horses, battledores, shuttlecocks, whips, whistles, *et hoc genus omne*, but "where, oh! were was the mob of yore, and where were the folks who bought them!" It was not till night that Miles's Boy could muster a grin: he mused over days departed. Let "penny-a-liners" record their impossible thousands, conveyed by steamer, rail, or road, and make another figure to multiply their calculations by ten, while old women and simpletons recall their "numeration table" by reckoning up the "value" of the figures on their fingers—we scorn such stereotype humbug.

The people are wiser than their "best public instructors." They go, and much to their credit too, to Greenwich; because they have a holiday, and because it is a delightful place at all times: but they neglect the fair and its fooleries for the Park, the Hill, and the Heath: honour to the sons and daughters of toil! All praise to their tastes! may it improve; and may park, garden, and healthy out-of-door amusements multiply; but, above all, may public holidays be more frequent, and then, despite of canthers, ranters, domestic tyrants, and petty misanthropes, England shall be "merrie Englande," ay, as "merrie," and yet "wiser," than in the "olden time."

Excuse us, reader, we are subject to these fits. We saw the "Polka" jumped in front of the departed "Richardson's," by two libels on what Jenkins of *The Post* would call the "choreographic art;" we were invited to see "the most wonderfullest collection hever exhibited, oney one penny!"—"Cheap John"—but we have treated of him in another part of our paper—sold us (that is, we bought of him for a penny, a galvanic ring made of soft iron, with which we have already cured an old woman of rheumatism of seventeen years' standing); and lastly, attracted by a harlequin in variegated lamps, Miles's Boy has stepped into Alger's.

P.S. *Half-past ten Monday evening.* I enclose copy. I have just entered into partnership with a young lady (she is, I believe, a *folder* at an eminent bookbinder's in the city), for the next "Original Polka."

MILES'S BOY.

[Note by the Editor. It is with the utmost regret we state that up to the period of our going to press, we have had no further tidings of our erratic correspondent. The Report of the Blackheath Races is by another hand: if the writer (it is signed J. H.) will call at our office, he will be remunerated.—ED. SPORTING WORLD.]

## A FEW WRINKLES IN HORSE BUYING, AND THE TRICKS OF DEALERS.

(Continued from p. 16.)

**B**UT we will see how a knavish dealer can help a brother in iniquity without doing anything *very bad*; merely in fact giving a little quickener to a sale. These fellows, as I have said, always have their eyes open for a chance, and in a moment know what to do on any occasion. We will suppose he sees a Gentleman looking at any one horse in a dealer's lot: he may not have asked any questions about the horse, but our lynx-eyed friend plainly sees he is preparing to do so, or has just done it. Up bustles Rascal to the dealer: "Bob, I want that good horse of yours." Now, by his *good* he means to imply in a general sense superior, and of course this *good* would have been equally applied to any other horse among them that had attracted the Gentleman's notice. This gives the buyer in *prospectu* an idea that he has not made a very bad choice.—Quickener the first: "Well," says Bob, "what d'ye want wi' he?" The at once recognising the horse meant by the term *good* shows that Bob considers him his best horse.—Quickener the second: "Why, I wants to just take him to the gemman what bid you money for him just now; he wants a friend to see him."—"Oh! he's welcome to show *he* to who he likes; but mind I won't take no less."—Quickeners 4, 5, 6, and 7: out comes the horse, the lip-string properly tightened up: no need of ginger—that was right *before*: some need of the spurs; so in they go *now*, and off goes Rascal, making the best show possible.—Quickeners, God knows how many: for the Gentleman, not thinking the horse is being set off to any particular advantage, the intended purchaser not being present (*or anywhere else*), he congratulates himself on having seen the horse *au naturel*, as the Frenchman said of the first potato he ever saw, and consequently ate raw—the only difference being, Monsieur did not like the potato at all, whereas Mr. — likes the horse very much. While the other is gone, Bob shows the Gentleman two or three others; praises them more than he does the one he intends the Gentleman to buy: this shows he is not anxious to sell him. Back comes Rascal; times it to come up just when he has the horse nettled and settled to his best pace: "Now if you like to take a fair price, I have sold him: the Gentleman will give the guineas and no farther trouble."—The quickening is now going on very fast, indeed almost boiling: "I won't take the money, so put him in."—"Why, you'll make three pound clear by him, so let him have him."—"I tell you I won't; I won't stand none of his haggling: he shan't have him at no price now: so there, put him in."—Rascal jumps off in a passion, damns Bob and his horse, and swears "he'll never try to sell a horse for him again." Bob, equally polite, damns Rascal, and tells him "he don't want him to't." Now the Gentleman, having no reason to suspect that Rascal knew anything of his wishes for the horse, really considers he has heard a genuine conversation between the two; and the little gentlemanlike ebullition of temper between them, and Rascal's still sulky looks, confirm it: so he thinks he has got what we may term a little stable information—about as good and as much to be depended upon as some very cunning people sometimes get from racing establishments. The quickening now boils in right earnest: an offer is made; the dealer leads the Gentleman confidentially by the arm a little on one side that no one may hear how *cheap* he sells him the horse; taking care, however, to keep within ear-shot of Rascal, who may be useful if anything goes wrong. The horse is ordered to the Red Lion, or Scarlet Bear, or wherever the Gentleman likes: the dealer takes care never to leave the Gentleman till he has touched the cash; wishes him luck; gets the luck-penny; and then Rascal and Bob go to dinner: so will possibly the Gentleman, after he has seen his horse the next day.—*Mem.* "with what appetite he may." Not that I mean it is *certain* he has bought an unsound one. perhaps not: still I will answer for it, Rascal showed him better in a halter than Gentleman will with a bridle. I have, however, only shown how in *one* way a little quickening may be applied. Of course the game is played in various ways according to circumstances: sometimes a different and the long game has to be played; whereas short whist did in this case.

Now let me explain a little of the by-play that probably escaped Gentleman's notice. I have said the dealer took him by the arm (it's a way they have) a little out of the crowd: Gentleman thinks it very natural the dealer may not wish everybody to know all about his horse (*Mem.* dealers have a great many little *natural* ways with them). Gentleman will, however, find there is more of the *natural* in himself than in the dealer. Now, the Gentleman is quite right in supposing it was not wished that every one should hear the conversation; but the dealer's motive for this was somewhat different from what it was thought to be. It was this: he did not know who might be in the crowd—perhaps some persons well known to his customer; and then, if things went wrong, they might be brought forward as witnesses of what dealer had said about the horse. For this reason he is taken out of the way; and Rascal is kept in the way as a witness on dealer's side: so the Gentleman by these means can bring no witness if he wants one to swear the truth, while the dealer has one to swear any lies he may dictate for him. I will venture to assert, that in nineteen cases out of twenty, where a Gentleman is dealing for a horse in any public place, let him turn round, and he will see some Mr. Rascal-looking fellow on the listen; and he may depend upon it he is there for the purpose I have stated. This is only one of their little *natural* ways of

managing things. I have my little natural ways too; and one of them is, always to get out of the way of one of these gratuitous listeners; and, under such circumstances, my Reader will do well to get into the way of doing the same thing.

Having said something of these sort of gentry's mode of buying and selling, there is another part of their vocation to be spoken of: this is chopping, or swapping. Now, in good round terms, let me give my reader one bit of advice—NEVER SWAP WITH A DEALER. I do not mean to say but that once or twice during a long life (if a *very* long one) a man may get a fair or advantageous exchange, but depend on it, if you take my advice *au pie de la lettre*, you will do by far the best and wisest thing. I must mention an anecdote, where it should seem a man did himself a benefit by tumbling from the top of a high flight of stairs to the bottom; still it is an experiment, that, like swapping with a dealer, I strongly recommend my friends to avoid making.

My father and a friend, sitting in an hotel, were startled by hearing a tremendous fall on the staircase; they rushed out, fearing to find some one with broken bones; but no, it was a French Gentleman, who had come from the top of the house rather faster than he had intended, by tumbling headlong from it. "Monsieur, vous vous êtes fait du mal," said my father. "*Au contraire*, je vous remercie," cried the Frenchman. Another inmate now came and inquired what was the matter. "Oh! nothing," says my father, "but a d—d Frenchman has frightened us to death by tumbling down stairs and says he has done himself a great deal of good by it."

So you may by swapping with a dealer: but *don't try it!* Swapping, I believe, is exchanging one thing for another; and this the dealer perfectly understands. A fair swap should be, if two things are of equal value, the giving one for the other; or, if of unequal value, giving or receiving the fair difference in value: this the dealer does *not* understand; at least, he won't, which is the same thing to you. The first thing dealer does, and will do under almost any circumstances in swapping, is to draw money. In this particular, I care not be he of the highest or lowest grade, the fixed principle is the same. I do not mean to say he would refuse to take a horse worth sixty for one worth twenty without boot; but I will pound him he will try to get it. Let dealers deny it if they can, (and if they were to deny it to me, it would be of no use)—they in a general way expect to get the horse they swap (figuratively speaking) for *nothing*. In fact, you will hardly get one to swap with you at all, if you have known the price of his horse beforehand: he will be sure then to be "quite full"—"expecting a lot from some fair"—"shall have to hire stables for them."—*Mem.* he would have found room if you had *not* known the price of the horse you want. —Now, though I am quite sure you could have done yourself no good by the swap had you made it, you may, without suspecting how, have put yourself in the way of selling, I should say, sacrificing, your horse, by attempting the swap, and I will tell you how. Dealer has seen your horse, likes him, and would buy him at (in his phrase) a *price*. We will say he wants a hundred for his horse, and you a hundred for yours, and, as a supposed case, the one is as well worth it as the other. You would give ten or fifteen pounds for the accommodation of the exchange. Here dealer's faculties become again obtuse: this is one of the exchanges he don't understand. No, "this will never do for Galway," as the song goes. Now, if he could sell you his at a hundred, and get yours at fifty, it would do. He understands this, but you do not, and he would be afraid to try to make you; so, as he would say, "he could not work." But he will, though in another way. Now, if, as I suppose, he likes your horse, and can get him "at a price," and sell you his, too, at *his* price, he won't have made a bad day's work of it; but supposing he does not want your horse, and can only sell you his, depend upon it his time will not have been lost. He knows you will buy his; so the first thing is to get your horse in his way or out of his way as may best suit him.—(*Mem.* this is another little *natural* way he has!)—Now, to do this, our lately neglected Rascal is employed: he calls at your stables, "has heard from (any one but the person he did hear it from) that you have a horse to sell." Now the way he will *work* will depend upon the hints he has got of your habits, temper, and knowledge of horses: he either "does not care about price, will give anything for a *nice-uns*," and then points out fifty things that makes yours a very *nasty* one; or he comes the candid and civil: "does not mislike the horse; is but a poor man; if he can make two or three pounds by him he is satisfied;" and so forth: or, "he wants him for a Gemman what won't buy no horse without him seeing him: will bring the Gemman." He does so: "the Gemman don't like the horse *at all*," he persuades him strongly to buy him. We will say the Gemman does not buy the horse: "Well," says the owner to himself, "the poor man did all he could to sell the horse at any rate:" so Rascal gets something for his trouble. The horse has been tolerably abused by this time, at least, so far as Gemman dare abuse him, and the owner is left to digest this at his leisure. This is only paving the way for another Gemman that Rascal brings; and it rarely happens but the horse is got, and either goes to the dealer's stables who wanted him, or is sold somewhere else. Thus, in point of fact, the swap has been made, not indeed exactly as the Gentleman meant, but very nearly on the same and only terms on which dealer would have swapped in his own yard.

(To be concluded in our next.)

## HOW THEY TRAIN BULL-DOGS AT BILSTON.

A SKETCH FROM REAL LIFE AT BILSTON.

[The following picture of "life" in the mining districts is sketched by a master-hand. Can we doubt the inherent spirit of sport, born within every bosom, growing with the growth, and strengthening with the strength of every denizen of our land, when we thus see it breaking forth, albeit rude, rough, and unrefined, in the most uncultivated part of our population.—Ed.]

## BILSTON AND THE BILSTONIANS.

It was the "wake" day, which falls upon the "feast of St. James," according to the Calendar. In the streets of the town we were hustled, jostled, and at odds with an increasing multitude. Flannel vested colliers, gaudy "Salls," mutilated veterans, Brummagem and Wolverhampton "dilettanti," and the united representatives of the places in the immediate vicinity, viz. Tipton, and Catchem and Wedgesfield, Bentley, Hays, Darlaston, Wedgebury, Moorcroft, Cosely, and the Deep Fields. My friend Sam Smart was no small conjuror of the sight-seeing denomination, and he drew me hastily through the uninteresting assemblage of open-mouthed admirers, who gazed unsatiated upon the animal and mechanical miracles of the "show fair," to more open space, addressing, at the same moment, an old spectacled mummy, whose parchment features were half shrouded by a voluminous kerchief, worn as a hood of defence to the sunbeams.—"Daddy! wheer bin th' bull?" "Who! day me! if oi knoo reetly! Boot he wa'n at

A BILSTON BULL-DOG.

Bull Holes jest noo, an oi reckon yo'-n foind him theer if yo'-n leuk for him, surrih?" "To the 'Bull Hole,' then," said Sam; "I'll take you the short cut." "The parsons of the district," said my companion, "have earnestly exerted themselves to suppress the pugnacious inclinations of their people; but so reckless are the fierce fellows, who receive the exhortation with silent obduracy, that they return the admonition in due season with such contempt, as to lead the fighting bull in triumph round the church or churchyard upon the Sunday evening preceding the Monday's sport. Do anything but preach against the bull or its antagonists!" With the neighbouring mining townships, &c., they are faucifully emulous in the breed of good, thorough-fighting dogs, whose pedigree is an affair of acute investigation, accompanying the favourite in every discussion relating to its prowess or capabilities. "Flannel jacket" considers your two "bright guineas!" small compensation for his small, fair built, subtle, "snub face," standing square upon his four fine-curved limbs, with spacious chest in front, and a brief allowance of slender tail behind. The head alone is "worth all the money!" See how the face projects abruptly, at right angles, from the small, round, knotty head, garnished with distant ears of curtailed projection, but of electrical susceptibility. Admire the two white projecting balls of eight (almost human), streaked upon the paler edge, with radiant, ruby ramifications of blood circulation! What do they speak, would you guess, as they are turned slowly and warily upwards to meet the acknowledgment of the swarthy rude creature who leads it to the encounter!—this only, "Love to one—blood to all beside!" What a preface you shall read to wars and lacerations in the "ivory" disclosed by the half-raised, dimpled upper lip, and in the prepared ferocity of the "under-shot lip," its fellow-workman! Such an one

would probably be "a Darlassun Jimmy's Zottler, a'out o' ode (old!) Cat's-baak, frum Ranter Bailly's bitch." (Show that pedigree to the Jockey Club!) The colliers are said to regard these same creatures, in their love of sport, "more dearly than their own children," and anecdotes are plentiful in illustration of such morbid affection. "I knew a fellow," said Sam Smart, "who unscrupulously administered his hungered and hard-working wife's mees of pottage to one of the invalidated bull-pups; and mothers have been desired, with something more potent than verbal stimulus, to remove the little slumbering, chubby darling from the rude cradle, to form a snug place for the infant bull-pups, shivering on the cold and quarried floor." Dr. Bagnall, a physician residing near to the town, attended gratuitously the daughter of one of his brother's miners who had erroneously been set down as "in a consumption," and he cured the girl. One morning as he returned from the chamber of the invalid, he heard the parents disputing down below upon the absolute necessity of making some gift to "the doctor" by way of recompense. Upon instituting a friendly inquiry, he learned, to his infinite amusement, that the wife had proposed, as the most valuable donation, "a pup!" but the husband inveighed against such illimitable generosity. However, his daughter was, in this instance, more dear to him, and he relented. "Here, doctor," said he, "he's a good'un, tek him!" the kind physician amiably declined the sumptuous sacrifice. One anecdote (authentic of course) runs in this way. Two colliers went to a meadow to train a whelp, which had evinced hereditary ferocity, and a sagacity infinitely staggering for his juvenile years. The one, Phineas (we shall say), it was arranged, should crouch upon "all fours" behind a scrubby hedge, and protect his ugly frontispiece, and "Boo! boo! boo!" as much "like a Darlaston bull" as possible; whilst the comrade, or "Butty," whom we shall designate as "Nobbler," was to set the fervent animal upon his "game." They took their ground. Phin. howled delightfully, and the dog was loosed upon the dubious animal; but very soon the howling abandoned the imitative and exalted itself into an actual shriek of excruciating torment, the whelp having introduced his incisors to each other cleverly through the septum of his (the bull "pro tem.'s") nose. With curses and violent hands he strove to rend and fray the pupil from its instructing diagram, yelling hideously and sincerely. In a less agitated mood it was thus the proprietor of the canine prodigy effused the odours of sympathy. "Doo-ant, Phin; oi see (say)! Dooant blost thee! Let the pup te-aste blud; let'un te-aste blud, oi see (say)! Thee't spile the bitch, gooin' on that 'uns loik a fe-oll! Doo-ant n-ow, Phin, lad." A slapping illustration for the finale by my friend "Samivel."

("Tummy," a regular Bilston chap, returning from the pit with the "pike" and "can" encounters "Nanny Roper," who agitates him by her mysterious behaviour).

Tummy (loquitor). What'n the matter at ao'ur ple-ace na'ow, ee, Nonny?

Nanny. O-a, O-a! Tummy! O-a-Lurd! O! (half weeping).

Tummy. Be ony o' the children smosh'd or burn'd ee?

Nanny. No-a, Tummy, no-a! Na-ow doo-ant bee frekened!

Tummy. Dom thee, speak wut! Is our Bessy bod? or "ould 'un?"

*Nanny.* O-a Tummy, Tummy! nothink a that 'uns.  
*Tummy.* Is Bill died then? or the Shrapshire mon? (the lodger).  
*Nanny.* O-a, Tummy, o-a! I conna tell thee! I never con!  
*Tummy.* Is fayther djed?  
*Nanny.* O-a, wuss thon thot! wuss thon that! O-a Lurd, Tummy!  
*Tummy.* Blost'n thee, wench! I shan drap lolk a stoo-an jist nows! (If thee dunna tell me, I sha'n.) Spe-ak a'out woot! I'll tell thee, if thee doo-ant!  
*Nanny.* O-a, Tummy, the bitch ha'n whelped just nows, and the poops bin every one on 'em djed uns!  
*Tummy* (heaving a big breath and turning his eyes up piously), Well! oi arm smoshed!

### THE LATE MARQUIS OF WESTMINSTER.

By the death of this venerable and much-respected nobleman the turf has been bereft of one of its most sterling, upright, and influential patrons. His lordship was one of the few now left who merely run for honour, not for gain. He was devotedly attached to the sports of the turf, and, taking a great interest both in racing and breeding, his stud was not only one of the largest, but, from the excellence of its blood, attained the highest eminence, as the following enumeration of celebrated racers bred by the noble marquis will testify:—Banter (the dam of Touchstone, Launcelot, &c.), Sarcasm, Retort, Languish, Pantaloon, Maid of Honour, Honoria, Puff, Cardinal Puff, Satirist, Touchstone, Ghuznee, Lampon, Fanny Eden, Sleight of Hand, Launcelot, Maroon, Laura, Auckland, The Controller, Anne Page, Lancet, Ameer, Phryne, Thais, *cum multis aliis*, too numerous to repeat.

His lordship, who was particularly partial to the Camel blood, confined his crosses to that justly-celebrated horse, and of late years to Pantaloon and Touchstone, for both of which, the latter in particular, he entertained the greatest favouritism. Indeed, so partial was he to the latter, that on one occasion when some American gentlemen were at the Eaton Stud Farm, they expressed a wish to become the purchasers of Touchstone, and inquired the price. "The American dominions!" was his lordship's reply. Though comparatively "young" in the harem, Touchstone has already proved himself the most fashionable and best stallion of the day. Besides many others, he is the sire of the following:—Celia, Cotherstone, (whose winnings in 1843 amounted to £12,765), Orlando (winner of the Derby), Blue Bonnet (winner of the St. Leger), Auckland, Fanny Eden, Ithuriel, &c. Touchstone, during his career on the turf, won the Doncaster St. Leger, the Ascot Cup (twice), the Doncaster Cup (twice), and many other rich and valuable prizes. Pantaloon has also proved himself capable of getting first-rate stock, but having until lately had but very few mares, he is comparatively but little known. The following claim him as their sire:—Satirist (winner of the Ascot Vase and Doncaster St. Leger), Sleight of Hand (winner of the Liverpool Cup, &c.), Ghuznee (winner of the Oaks), Cardinal Puff (winner of the Chester Cup, and many other races), Maroon, &c.

The noble marquis, it will be seen, came in for his full share of the "good things" with which the turf is garnished. He won the Oaks, with Ghuznee, in 1841, and the St. Leger, with Touchstone, in 1834; with Launcelot, in 1840; and Satirist, in 1841. Though extremely anxious to win the Derby, he never got further than second, namely, with Launcelot, in 1840, Little Wonder being the winner; and with Van Amburgh, in 1841, when Coronation was the victor. In the following year he ran fourth with Auckland. The Ascot Vase and Cups, Chester, Liverpool, and Doncaster Cups, together with many other valuable prizes, decorate the side-board at Eaton-hall. His lordship, after removing his racing stud from Scott's, lost most of his previous success. For a twelvemonth his horses were trained at Abbott's-moss, Delamere Forest, under the superintendence of John Osborne. In 1842 they were placed under the care of Horsley (formerly trainer to Sir Thomas Stanley). Last year his lordship made a further change, sending his horses to John Day's, at Danebury, where they have been in training up to the present time. William Scott, Job Marson, Sam Darling, Sim. Templeman, Lye, and John Holmes, have, in their time, sported with success the "yellow jacket and black cap."

The following nominations are void by the death of the noble marquis:—

### THREE YEAR OLDS.

Falstaff (late Grotesque), br c by Touchstone, out of Decoy, 3 yrs.—In 1845: At Chester, in the St. Leger; at Epsom, in the Derby; at Ascot, in the Great Produce Stakes; at Liverpool (July), in the St. Leger; at Doncaster, in the St. Leger, Foal Stakes, and 200 Sovs Sweepstakes; and at Wrexham, in a 50 Sovs Sweepstakes.

Colt by Touchstone, out of Morea, 3 yrs.—In 1845: In the Liverpool and Doncaster St. Legers.

Filly by Touchstone, out of Laura, 3 yrs.—In 1845: At Epsom, in the Oaks; at Ascot, in the Great Ascot Produce Stakes; at Manchester, in a 50 Sovs Produce; at Doncaster, in the Park Hill; and at Newton, in the Lyme Park Produce.

Filly by Touchstone, out of Languish, 3 yrs.—In 1845: At Ascot, in the Great Ascot Produce; at Goodwood, in the Gratwicke Stakes; at Doncaster, in the Park Hill; and Produce Stakes, at Chester, Liverpool, and Warwick.

Filly by Pantaloon, out of Retort, 3 yrs.—In 1845: At Ascot, in the Great Ascot Produce; the Gratwicke Stakes, at Goodwood; and Produce Stakes, at Chester and York.

Filly by Camel, out of Sarcasm, 3 yrs.—In 1845: In the Great Ascot Produce, at Ascot; the Gratwicke, at Goodwood; the Park Hill, at Doncaster; and Produce Stakes, at Chester, Liverpool, and York.

### TWO YEAR OLDS.

Filly by Camel, out of Banter, 2 yrs.—In 1846: In a Produce Stake, at Wrexham.

Filly by Pantaloon, out of Languish, 2 yrs.—In 1846: In the Oaks, at Epsom; and Park Hill Stakes, at Doncaster.

Colt by Pantaloon, out of Pasquinade, 2 yrs.—In 1846: In the Chester, Liverpool, and Doncaster St. Legers.

Colt by Touchstone, out of Laura, 2 yrs.—In 1846: In the Derby, Epsom; Great Yorkshire Stakes, at York; Chester Produce; Liverpool Foal; and Chester, Liverpool, and Doncaster St. Legers.

### YEARLINGS.

Colt by Touchstone, out of Languish.—In 1847: In the Great Yorkshire Stakes, at York.

Colt by Touchstone, out of Decoy.—In 1847: In the Great Yorkshire Stakes, at York.

### THE GAME-LAWS.

A CORRESPONDENT of the *Times*, who signs himself "A country squire," makes the following observations on the Game-laws, the result he says of long experience:—"The loud complaints of the farmers against game, and the fearfully increasing evils of poaching, are owing mainly to the vicious taste of the present day for wholesale preserving and monster *battues*, which are as different from legitimate sporting as light from dark, and got up to gratify the morbid taste of a set of exquisites, who know as much of the real pleasures of sporting as I do of the man in the moon. True sportsmen have no share in such doings, which bring discredit on our fine old English rural sports, and set landlords and tenants by the ears, who might jog on happily enough together, if each would only act up to the best rule of life, 'to do as he would be done by,' and this, depend on it, would lead to mutual confidence, mutual good fellowship, and mutual protection. The respectable farmers of England are no enemies to fair sporting, far from it, they encourage it, they know its value as a strong link of attachment between themselves and their superiors in rank and wealth, and, if treated liberally, will never grudge gentlemen the proper enjoyment of their dogs and guns, and be a far better protection to their game than all the keepers and watchers such philosophers as Messrs. Berkeley and friends could bring to the muster. But these irrational *battue* doings, of which the farmers have a just right to complain as unsportsmanlike and most oppressive, must be put an end to. Every day proves the insufficiency of keepers and their tools to prevent poaching; it goes on in the teeth of an army of them—the greater the resistance the more determined the attacks, the harder the struggle the greater the glory of victory; and so it will be as long as starvation stalks about in our villages unheeded, and there is a ready market for the sale of plundered property put temptingly within its reach. What then is to be done? The remedy is obvious—let the baneful system of these monster preserves be broken up. Let noblemen and gentlemen be moderate and reasonable in their pleasures—prohibit the sale of game without a qualification—let it be no longer worth the poacher's while to poach—let landlords cultivate a cordial feeling of co-operation with their tenants—and then, *more than all*, let them both turn their earnest attention to the wants of the poor in their several districts, and, by affording work and good wages to the unemployed, see if there may not be better ways of dealing with the poacher than with blows and bloodshed, and consigning him to the county gaol. Instead of lugging the youngster before 'the justice' for setting wires, and sending him to prison, from whence he will return more hardened than ever, let them try what friendly exhortation and advice will do, with regular employment, and bringing him into contact with honest men. If this don't do, nothing will; at all events, we know, from fatal experience, that the poacher is not to be reclaimed by the fear of keepers, or magistrates either."

MR. JUSTICE BEST'S GREAT MIND.—The demise of Lord Wynford recalls to recollection an anecdote of the style in which his name appears in an index to certain Law Reports. Under the title of "Best," we find "Best, Mr. Justice,—his great mind." (See p. 27.) Turning to the report of the case, p. 27, we find "Mr. Justice Best said he had a great mind—to commit the prisoner." This has been a bright index-maker to discover anything great in his lordship's mind.

THE LATEST NEWS FROM THE EAST.—Everything continues perfectly quiet here. The money-taker at the Wapping side of the Thames Tunnel enjoyed three hours of uninterrupted sleep yesterday, and awoke much refreshed.

## EXTRAORDINARY BADGER HUNT.

In a provincial journal, entitled *L'Audamais*, we find the following strange narrative:—"A most curious, interesting, and extraordinary hunt—a hunt which, in fact, continued without intermission for three days and three nights—took place a few days ago in the neighbourhood of St. Omer. Two young sportsmen, M. Cauvet and Charles d'Hallewyn, were informed by a keeper of the forest that in the course of his rounds in the day he had seen several badgers in the vicinity of the place called the Ermitage. At length some young dogs (terriers) were put on the scent, and they soon traced out the burrows, which they entered with great spirit and ferreted underground until stopped at the hole by the fierce resistance of the badgers. The dogs continued barking underground (although unable to attack their enemy), nor would they leave their prey at the repeated calls of their masters. Thus they continued several hours, when the sportsmen, finding there was no probability of its coming to an end, either by the capture of the badgers or retreat of the dogs, called to their aid some labourers, and immediately set to work in digging away the earth. The entrances to the burrows were by three holes, which formed a species of triangle, joining into one at the bottom, forming a single subterranean passage; the entrance of the dogs had made this fact known. A species of shaft was dug, as for a tunnel, at the mouth of the nearest burrow. It was necessary to dig to the depth of 14 or 16 feet before they could reach the single passage; then they followed the direction taken by the dogs in trace of the badgers, and it was necessary to enlarge the passage to about 4½ feet in height, 3 in breadth. Whilst the men were thus making a mine the badgers were industriously employed filling up the hole, and digging a counter mine. In the course of the three days the intrepid animals had dug through fresh ground, advancing backwards to the extent of 45 feet in their principal burrow, without air or food. It was almost an endless task to trace them, but the dogs proved the most persevering, and showed what may be termed game, for, for the three nights and three entire days, these thoroughbred terriers never left the spot. At length, the men came in sight of three large badgers, which were immediately secured in a sack, though one wounded one of the men seriously in taking him. This affair has created a good deal of talk in the neighbourhood."

## MISTAKEN MARCH.

"March comes in like a lion," they say:  
A sad silly saying that ere;  
For now we all know he comes in  
Much liker a rough polar bear!  
Or rather as most of us think,  
Whate'er he resembled of yore,  
He is now neither greater nor less  
Than a most unendurable bore.  
'Tis said he'll "go out like a lamb,"  
And if so, sirs, to say it I'm bold,  
Unless he soon alters his plan,  
His lamb will indeed be quite cold.  
Now cold lamb without salad is flat,  
But he won't let a salad spring out;  
And so if we eat it at all,  
It must certainly be cold without.

**THE CHANTING HAWK.**—A short time since a gentleman shot, in the neighbourhood of Hasborough, a very curious bird, called the chanting hawk, or *falco musicus*. It is a native of Africa, and is very seldom seen in this country. Cuvier says it is the only bird of prey that sings agreeably. In size it equals the goshawk, its plumage is grey above white, barred with brown on the lower part of the back and on the under parts of the body. It is preserved by Mr. Spinks, hair-dresser, North Walsham, where it may be seen.

**INFALLIBLE TEST.**—As there is a quantity of bad money about, we cannot caution our readers too much against the risk of tendering any suspicious coin. The best way to try its value is to offer it to the LORD MAYOR, and if it is returned to you, you may be sure it is bad.

The testy lodger at Mrs. Tomkin's says that the baby down stairs is a crying nuisance.

**FRENCH POLICY.**—"I cannot imagine," said Lord Aberdeen, "why the war party in France are always putting out their tongues at us." "It is very easily explained," replied Lord Brougham. "It is because they want to lick us."

**WANTED, immediately, Several Clerks,** Town and Country Travellers, Warehousemen, Light and Heavy Porters, Shopmen, also Coachmen, Grooms, Postillions, Ostlers, Gamekeepers, Huntsmen, Whippers-in, likewise Stewards, Butlers, Valets, Couriers, Travelling Servants, Footmen, and Footboys, Bailiffs, Keepers, Gardeners, and Odd men. A few vacancies for Men and their Wives, as in-door and out-door Servants. Apply to-morrow and five following days at the Westminster Concentrating Mart, 17, Hemming's-row, Charing-cross. Registry fee, 3s. Country applications punctually attended to.

**REDUCTION IN WARM BATHING** at the OLD ROYAL BATHS, 11, Bath-street, Newgate-street.

**TERMS OF GOLD BATHING.**—Year, £1 3s. 6d.; Quarter, 10s.; Each time, 1s.; Shower, 1s.; Vapour, 3s.; Eight vapour, £1 1s.  
**TERMS OF SUBSCRIPTION FOR WARM BATHING.**—100 Baths, transferable for twelve months, £5; 16 Baths, £1 1s., or Eight Baths (transferable), 11s.; Three Warm Baths per Week for twelve months, and Cold or Shower Baths at pleasure, not transferable, £3; One Warm Bath per week for six months, £1 10s.; One Warm Bath per week for twelve months, £2 2s.; One Warm Bath or Warm Shower, each, 1s. 6d.; Salt-water Bath, 2s.; Sulphur, 3s.  
Private Warm Baths always ready for Ladies or Gentlemen. An entrance to the Baths through Christopher-court, opposite the Clock of the General Post-office.  
N.B. No Warm Subscription Baths to be taken after Five o'clock on Saturday afternoon.

**A FRIEND OF PUNCH'S.**—The CLOWN of London at all the Theatres, Signs, Pleasures, and Amusements, with Fashions for the Week, with Cuts, humorous, numerous, right and left. Droll things for the Passengers on Rails and Boats, being a Weekly Collection of Locomotive and other Wit, from the Railway Chairman's down to that of the humblest Stoker on the Line; to which is appended Tax Bawl or YARN, or Plenty of Rope; being a Solemn Appeal to the Riches; or, the Genuine Countenance Disturber, suited to all climates, and all kinds of weather, containing all the information necessary to raise a laugh at the shortest notice. Treatises on matters and things not found in any scientific work, with various sovereign appliances for the spleen and hypocondriacs, pictorial drawing plasters for long faces, for the first time arranged and conglomerated for the hard times, and adapted to the use of the sufferers; to which are stitched and appended grave and moral maxims on human vices, which are thrown in for nothing, and are intended for the use of schools.

Out every Week; Sold by Everybody, Everywhere, Price, only Four Farthings.—6d. per dozen to the Trade.

Messrs. R. and L. PERRY and Co., Consulting Surgeons, 19, Berners-street, Oxford-street, London, have just published a New and Important Edition (the Fourth) of the "SILENT FRIEND," on Human Frailty, price 2s. 6d.; free by post, 3s. 6d.

**THE SILENT FRIEND, a Medical Work** on PHYSICAL DECAY, NERVOUS DEBILITY, CONSTITUTIONAL WEAKNESS, &c. With Observations on Marriage, &c. By R. and L. PERRY and Co., Surgeons, London. Published by the Authors, and sold at their residence; also by Strange, 21, Paternoster-row; Noble, 109, Chancery-lane; Gordon, 149, Leadenhall-street; and Purkess, Compton-street, Soho, London.

**OPINIONS OF THE PRESS.**  
"The Authors of THE SILENT FRIEND seemed to be thoroughly conversant with the treatment of a class of complaints which are, we fear, too prevalent in the present day. The perspicuous style in which this book is written, and the valuable hints it conveys to those who are apprehensive of entering the marriage state, cannot fail to recommend it to a careful perusal."—*Ev'n.*

"This work should be read by all who value health, and wish to enjoy life, for the truths therein contained do yield doubt."—*Farmer's Journal.*

**THE CORDIAL BALM OF SYRIACUM** is a stimulant and renovator in all Spasmodic complaints, Nervous Debility, Indigestion, Asthma, and Consumption, are gradually and imperceptibly removed by its use, and the whole system restored to a healthy state of organization. Sold in bottles, price 11s. and 3s. Perry's PURIFYING SPECIFIC PILLS, have long been used as the most certain remedy for Scorbatic Complaints of every description. Eruptions of the Skin, Pimples on the Face, and other disagreeable affections, the result of an impure state of the blood. These Pills are perfectly free from mercury, opium, and other deleterious drugs, and may be taken with safety without interference with, or loss of time from business, and can be relied upon in every instance. Sold in boxes at 2s. 9d., 4s. 6d., and 11s., by all medicine Vendors. Messrs. Perry and Co. may be consulted at their residence daily, from 11 till 2 and 5 till 8. On Sundays, from 10 till 12.

Now Publishing, in an Embellished Wrapper,

Part 3, Price Sixpence, of  
**THE PEOPLE'S EDITION** of the ENTIRE WORKS of M. EUGENE SUE: containing Sixty-four Pages of Large 8vo. closely printed.

**CLARK'S TALES of the WARS, and NAVAL and MILITARY CHRONICLE** is now in progress towards completion to 1844, Number 4 of the continuation of

HALFPENCE.]

COWES, ISLE OF WIGHT. THE RENDEZVOUS OF THE ROYAL YACHT SQUADRON.

## YACHTING.

**W**E propose to give, in an early number, for the edification of some of our non-nautical readers, a series of PORTRAITS of the crack vessels of the Royal Yacht Squadron, for the purpose of illustrating, through them, the various descriptions of rig and build exhibited by these beautiful craft. This, we trust, will stand excused by such of the purchasers of the *SPORTING WORLD*, who, more fortunate in their opportunities of "observing Nature by the wild sea-shore," or "going down to the great sea in ships," may be fully learned on these topics, on which we take it no well-informed Englishman should be ignorant.

The healthful and most delightful recreation of yachting, now so fashionable, is every year increasing in interest and importance. When we consider the construction of the beautiful vessels—which, by modern science, are so improved, as to become almost the perfection of naval architecture—the vast number of active and smart young seamen employed by the members of the yacht clubs, we cannot too highly appreciate the wise policy of fostering and encouraging such sports and amusements, no doubt, mainly the means of making our sailors what they now are—the admiration of the world.

As the season for this truly national recreation will shortly open, it is not intended here to do more than to point out the high claims of yachting, to the support of the affluent and the admiration of all.

During the war, when prime seamen were in great demand, and when a yacht, which might venture on a long trip, ran a considerable risk of being picked up by a privateer, the amusement of yacht sailing was by no means so prevalent as at present. But no sooner did peace spread her balcyon wings over land and sea, than vessels for pleasure began to be fitted out with as much rapidity as men-of-war were laid up in ordinary. Then the Meltonians built themselves yachts, wherein they might take their recreation on the sea, while their hunters were resting in their stalls. And although the scene of their operations was changed from the wide pasture-fields and rasping fences of Northamptonshire and Leicestershire, to the "deep Solent" and rolling Atlantic, Lord Wilton, Sir Bellingham Graham, and Mr. Moore, fully maintained their reputation. Cavalry officers also (among whom we beg to particularise the Marquis of Anglesea, Lords Belmore, Orkney, Clonbrock, Vivian, coupled with Messrs. Kean, Oglander, Sheddon, Harvey, &c.), who had witched the world with noble horsemanship, now entered on a noviciate in another department, and in as short a time became as ex-

pert in managing the ocean steed that is guided by the tail, as they had previously been famed for their management of the noble quadruped that paws the ground in his strength, and rushes forward at the sound of trumpets to the battle. Nor have senators and naval heroes lagged astern. The Hon. Grantley Berkeley, (the Teazer); Mr. Milner Gibson, (the Claude); Hon. Augustin Berkeley, (the Violet); Lord William Lennox, (Helena); Captain Claxton's, (Waterwitch, wherry); and innumerable other "small craft," sparkle like smaller gems among their larger compeers of the wave.

The Royal Yacht Squadron, whose chief rendezvous is at Cowes, was first established, under the title of the "Yacht Club," in 1815. The Prince Regent became a member of the club in 1817; a few months after his accession to the throne, it was honoured with the appellation of "Royal;" and in 1833, it was designated the "Royal Yacht Squadron."

The number of vessels belonging to the club is upwards of 200, of various rig—brigs, schooners, yawls, and cutters. Their size varies from 400 tons to 35, which is the prescribed limit. The ensign of the Royal Yacht Squadron is white with a red cross, and a crown in the centre.

The chief rendezvous of the R. Y. S. is Cowes, (represented in our engraving); the harbour is commodious and beautiful, and one of the safest in the kingdom: and here, during the summer, may be seen by all cruising cockneys, a sight to make their hearts swell with worthy and national pride: to such as have never seen "the Wight," cruised round by vessels of every shape, rig, and size, careering like white-winged gulls, or resting gracefully swanlike on fair Medina's waters, MILLS'S BOY would say betake yourself to the Nine Elms station of the Southampton Railway, get a seat in a first-class, if you can afford it, in a second if you can't; but sooner than not go at all, take your stand in a third, and feast your eyes on the most beautiful sight, which the beauties of nature, endued with "the poetry of motion" by the hand of Art can present—namely, the scenery of Southampton River, the Solent, and the evolutions of the "white-winged" yachts. Then, if his purse be well lined, let him take a trip round the island which lies off the estuary. Thus, by the cold water cure (taken to be sure with salt) may he obliterate all worldly heart-ache for a happy space—air and ocean will seem scarcely more free or expansive than himself. All that is base and trivial, all that is of "the earth, earthy," and that furrows the brow and the temper with distaste of the human dust of which we are made, and with whom we commingle,

(Continued on page 39.)

## A FEW WRINKLES IN HORSE BUYING, AND THE TRICKS OF DEALERS.

BY HARRY HIEOVER.

(Concluded from page 33.)

OST probably, on the gentleman purchasing the horse he wanted to swap for, something is said about the other. Dealer now takes his cue, and says something to this effect: "Why, sir, your horse was certainly a very clever nag, but I tell you very honestly"—(oh! oh!)—"that if I had chopped, I should have wanted to draw fifteen pounds between them. I knew you would think that too much; so, not wishing to offend any customer, I declined altogether." The gentleman, smarting under "the trouble the poor man took to sell the horse," wishes he had known what Mr. — would have taken, which he thinks was very fair indeed, and resolves, if ever he wants to swap again, to come to Mr. —, and leave the deal entirely to him. He may if he likes; but he will then find Mr. —, has some other little *naturel* way of managing the thing that won't give him *quite* the worst of the swap!

I have endeavoured to give some idea how a certain class of dealers work, either in buying, selling, or assisting others in doing so; also the ruling principle of all dealers in swapping. I fear, however, I have not done anything like justice to the talents of our friend Rascal. His ubiquity of presence, universality of information, presence of mind, versatility of invention and manner, with many other virtues all ready at a moment's warning to suit different occasions, are really astonishing, and a good many he does astonish in no small degree. I am quite aware I have not exhibited one-thousandth part of his talents. I did not intend, nor do I intend to attempt to do so; and, what is more, I could not if I did, though I do know something about him. At all events I know enough to keep out of his hands.

But we will now look at him in another cast of character, and acting in one of those precious pieces of rascality that are carried on to a great extent in London. Reader, you have no doubt seen an advertisement something to this effect:—

## "THE PROPERTY OF A LADY,

"To be parted with in consequence of the ill-health of the owner, who is ordered to a warmer climate—

"A pair of splendid grey *bristles* geldings, with full manes and tails, six and seven years old, own brothers, and nearly thorough-bred, match well, with grand action.

"A beautiful brown lady's mare, seven years old, thorough-bred; has been regularly ridden by the owner these last two years.

"Also a particularly handsome dun cob, with flowing white mane and tail, so docile an invalid or child may drive him; has been constantly driven in a low Albert phaeton: invaluable to a timid person.

"The above are all sound; price will not be an object where they will be treated kindly.—N.B. No horse-dealer need apply.—The coachman will shew the horses at the rear of No. —, Street, — Square."

Now, as a prelude, let me advise my reader to first always look with a suspicious eye on a horse advertisement. As coming from a lady, eighteen times out of twenty *it's a do*: if ever it is said that the great object is to sell to a person who will use them kindly, nineteen times out of twenty *it's a do*. But if it is said no horse-dealer need apply the *do* is certain. It only requires a little reflection to convince us such an advertisement is not a genuine one: and to show its absurdity, though it takes in numbers daily, in the first place, a lady, keeping her carriage, saddle-horse, and pony phaeton, must of course also keep a servant's hack: this requires coachman, groom, and helper; the lady probably has two men in the house. Now, is it likely a lady keeping five men-servants would be driven to the necessity of advertising her ill-health and horses? If from that cause she wished to part with such horses as these described, among her numerous acquaintance and their acquaintance she would find plenty to take them off her hands. A beautiful mare, which has carried a lady two years, or a very handsome cob invaluable to a timid person, are not to be had every day, consequently want no advertising. As to finding her horses a comfortable berth, really nice horses seldom get uncomfortable ones. But would a lady suppose any one would bind themselves to her horses for life? If they do not, what would be the use of her sacrificing her money when they might be again sold in a month: and as to no dealer needing to apply—why not? A dealer would not be likely to use her horses ill for his own sake; and as she is not very likely to ask him into her drawing-room, what would it matter to her whether he saw her coachman or not? As to the ill-health, it is astonishing how many ladies are in ill-health and wanting to sell their horses, according to the papers' account. It is really cruel of these papers to wound our feelings by such statements; I don't say *mine*, because I don't believe them: and what is more, I know that, thank God, delicate as the fair creatures are, ladies, like some other things I could name, take a devilish deal of killing: so do their lovers, or else God help them! But should the lady not find a friend to purchase her horses, surely Mr. Tattersall would be a better medium through which they might be disposed of; for no one who knows him could doubt his exertions being used to their utmost extent where ladies are concerned.

But a lady advertising her horses really has something dealing-like in it! So in a future number I will take the reader by the arm, and conduct him to the stable, where these "lady's horses" stand, and show him the game going on there.

Sporting Magazine.

HARRY HIEOVER.

## THE ASTONISHER.

A SKETCH FROM THE STREET.

"This heave came somewhat suddenly into the world before he was sent for."—*Loos*.

PRAY who and what is the Astonisher? may be asked by many inquirers at once. It is a difficult thing to positively define him, owing to the diversity of his pursuits. He is a droll mixture of the *ci-devant* mountebank and the flying newsmen, with here and there an occasional touch of the oostermonger; but, perhaps, he is most legitimate when offering "*brun new* sovereigns for one penny each;" this he generally does with a solemn assurance that he has been engaged "by two noblemen (whose names he cannot divulge on any account whatsoever), who have made a bet of a thousand pounds that one hundred *su'verens* cannot be sold in the space of an hour at one penny each: such," he observes, "is the hapathy of the British public to its hinterest." This he repeats so often, and with an earnestness so delightfully real, that he appears to work himself into a belief that he is telling the honest truth, particularly when he adds, "It's o' no moment to me whether one gen'l'man buys 'em all, or you takes 'em among you; or if so be as you doubts me, stick to your hobstaincy and walk away without grinning at me. I've got my duty to perform, which is to hoffer the lot at one penny each." Thus will he go on in a continuous round, never coming to a full stop, nor even, whilst taking money or giving change, allowing time to his hearers for reflection, but eternally talking for them as well as to them. "The Astonisher" has imitators; no great man was ever without them. But the would-be "Astonishers" are easily detected; they have a sluggish, half-cowed manner of announcing their wondrous; whereas your regular "Astenisher" always makes his appearance in a style of smart assurance, similar to the stage-trap entrance of Wisland. Whenever an imitator may appear, suspicion is immediately excited as to the genuineness of his wares; but the "Astonisher" jumps *flip flop* into public confidence as suddenly as he shows himself.

He is the metropolitan "*cheap Jack*," and his articles of trade are almost as numerous. We see him in this character with a gaping knot who "*stand close and list to him*," whilst he strenuously recommends them to turn their copper into silver by the use of his magic washball, "which, with one application, will convert a halfpenny into a half-crown, or a common candlestick into a silver candelabra;" he is great, too, in his "Extraordinary Grease Extractor," which is a composition made up into little squares of a greyish-brown appearance, and which he "warrants to remove any spot, stain, or sile, whether of candle grease, pitch, tar, resin, or cart grease; red wine or port wine from all sorts of silks, satins, crapes, muslin, or jean, linen-cloths, table cloths, or woollen cloths, calico, cotton, velvet, or velveteen, of any colour or texture, quantity or quality whatsoever." During the full-mouthed recital of this voluminous category, he will manage to barnacle himself to some listening urchin, the dirty collar of whose jacket had caught his eye, as affording him an excellent opportunity for ex'mitting the *modus operandi* with his detestable cake, which he performs with the dexterity of a boots at an inn polishing an old blucher, never omitting the important tag, "whilst the small squares are a penny, the large ones tuppence, or two for threepence halfpenny, or four for sixpence,—which you please."

Thus is "The Astonisher," with inordinate industry, ever catering for the million; not labouring for himself, but for his fellow-man; affording riches to some, and, at least, amusement to others who obstinately refuse his gifts. Like a prime minister, he racks his brains for the public weal alone, gives his substance to fatten and aggrandize his universal brethren, taxes his own benevolence, and becomes a martyr to his unbounded philanthropy. And, though the finger of derision be continually pointed at him by the vulgar unbeliever in his virtues, still, like the Political "Astonisher," he comes smilingly forth to his daily acts of beneficence, and, boon in hand, pursues the course his conscience dictates with unabating firmness.

Of the two "Astonishers" it may be, probably, matter for speculation which should be considered the archetype, the Common or the Political "Astonisher"? Leaving precedence to be settled, each his own way, there can, however, be no difficulty in deciding as to the comparative good or evil issue of their separate existences; the mouse-like nibblings of the Common "Astonisher" on the weakness of his fellows (or that fractional portion of them to which he gains access) being as nothing to the wholesale gorges of the Political "Astonisher," whose peculiar characteristics we may enlarge upon in a future paper when describing some other curious specimens of the family of "The Astonishers."

THE MYSTERIOUS LADY IN PICCADILLY.—This deceptive exemplification of "second sight" is to be conducted by Sir James Graham, who will allow any lady or gentleman to write a letter, seal it, and place it in a box, "secured by Government." Sir James will then, to the great amusement of the writer, repeat the contents of his letter without any person having seen him read it.

fades into its real insignificance. The mind becomes its own again, and something better—

"For the same sound is in mine ears  
Which in 'young' days I heard."

We read in the tablets of the sky, in the unequal mirror of the ocean, that which reduces human life (that small part of our endless being) to its proper level; while the beauty and variety, the grandeur and the majesty, of the universe around us unstiffen the heart and re-awaken the comprehension to the eternal language of nature. The buoyant keel drives on, the full-bosomed sail is set, everything is alive above, beneath, around, and yet all is order, cleanliness, and decorum. There is not a line of that delicate tracery displaced, nor a spot on that polished plank. And ere long he will scent a grateful odour of mingled spices and carnal viands (after a few qualms of sickness for the first six hours); but let him persevere a little, and his appetite will return with threefold vigour, and in the midst of his most ethereal investigations, come when it may, he will find meal-time is not the worst time even afloat.

The members of the R. Y. S. enjoy many privileges denied to members of other clubs, such as being able to carry the St. George's ensign on board their vessels, and to enter foreign ports free from harbour dues, which are very heavy, and which always entailed such an expense on the owners, that very few gentlemen ever visited foreign ports till this obstruction was removed.

The operations of the Yacht Squadron are not confined to the shores of England; in almost every harbour of Europe its flag is to be met with; and affords an example to foreigners, how the wealthy Englishman, instead of nursing himself in the lap of luxury, employs his time. The R. Y. S. Regatta generally takes place about the 20th of August, at Cowes, when her Majesty's Cup, of one hundred guineas' value, is sailed for. If the weather be favourable nothing can surpass the beauty of the scene, when viewed from the heights in the immediate vicinity of Cowes: and an Englishman, we conceive, may well feel proud of his country when looking at the fleet of yachts which the R. Y. S. can now send forth,

spreading their white sails to the summer's breeze, and each taking the course the fancy of their different owners may lead them to. In 1841, an example was set by a gentleman of the Squadron, Benjamin Boyd, Esq., who with his schooner yacht, the *Wanderer*, started on a pleasure voyage round the world! But as we shall have more to say of yachts and yacht-builders, we will here merely observe the principal builders are Mr. Inman, of Lymington; Mr. White, of Cowes; Mr. Michael Ratsey, of West Cowes; and Mr. Camper, of Gosport. Mr. Inman is the fortunate builder of the *Arrow*, *Lulworth*, and *Alarm*, and indeed, of all Mr. Weld's vessels. From Mr. White's dock, the *Waterwitch* (recently returned from slave-capturing, on the coast of Africa, thoroughly repaired by Mr. White, and now off, with others of his build, on experimental cruises), *Medina*, *Ariel*, and many other first-class vessels, have proceeded. Mr. Camper built the *Anonyma*, a splendid brig, for Colonel Greville, and has now three or four vessels in his dock. In conclusion, any gentleman in want of a yacht has only to go down to Cowes, and present himself to the worthy secretary, with a long figured cheque, and in less than seventy-two hours he may find himself going along at the rate of ten knots an hour, to Hong-Kong, or Naples, or wheresoever he lists.

A glance at Cowes and other interesting places adjacent may not be considered out of place here. It is impossible to conceive places more delightfully situated than Cowes, East and West. West Cowes is the most imposing, and is seen to best advantage from the roadstead. As the vessel advances up the harbour, the favourable impression is confirmed, as the eye rests in succession on the Castle, the Marine Parade, and the elegant structure belonging to the Royal Yacht Squadron, given in our engraving. The constant arrival and departure of vessels belonging to the squadron, give the town a most animated appearance. Southward from Cowes, on the extreme point of the island, Black Gang Chine is situated, which figures at the foot of this page. It is a gloomy fissure, penetrating far into the rock, with a stream of crystal water flowing over the upper part of the Chine. In the winter time, after long rains, and sudden thaws, it is no small cataract; but in summer, when the weather is dry, the stream is retained behind the ledge, or merely trickles over the brow. Without this adjunct, however, the Chine is wild, picturesque, and gloomily sublime.

The Needles, which form another principal attraction to visitors to the island, are situated in Alum Bay. They are five in number, though only three of them now stand boldly out of the water. From some points they appear as if united in one broad rugged mass; from others they are seen detached, and looking like old fortresses which had battered each other to pieces, or fallen into one common ruin under the weight of time and the violence of tempests. From the chalky nature of this remarkable group of rocks, and of the coast of the island from which they are detached, continual changes are taking place in their form and disposition. In some places the sea has eaten through them, and formed large and irregular archways; in others, it has so washed away their sides, that they look rather like walls than solid rocks; while deep caverns have been formed in the chalky cliffs of the island, which falling in occasionally, have tended gradually to diminish it in that direction. The beautiful range of cliffs from Freshwater to the Needles have suffered considerable diminution from the same cause; but it is in contemplation to erect a breakwater, which will hinder, at least for a time, the rapid progress to destruction of these delightful cliffs.

**QUITE UNNECESSARY.**—At the late meeting of the Royal Society at Lord Northampton's, a man was exhibited with an artificial steel hand, the invention of Sir George Cayley. We are informed that the worthy Baronet is now engaged in making an iron heart for the Poor Law Commissioners.

**DEAD WEIGHTS.**—There was an advertisement in the *Times*, the other day, for a couple of mill-stones. We understand that Sir R. Peel answered the announcement, offering Sir James Graham and Lord Stanley to the advertiser as a couple of mill-stones which he, Sir R. Peel, would have no objection to part with.

**IMPORTANT TO LADIES.**—We see by an advertisement in the *Times* that a certain *blanchisseuse* "has been in the habit of washing twelve ladies," and wishes to operate upon several more. In the name of the women of London, we would ask if she undertakes to starch her customers and get them up fine, and if, as she tells us, she has a good drying-ground, they are expected to go thither and be dried on the premises.

**DEATH FROM DESTITUTION.**—The last accounts from Hungerford Market convey the melancholy intelligence of the "hanging in chains" of the suspension bridge. A toll is talked of out of respect for its departed worth. We trust this information will relieve the public suspense.

**THEATRICAL.**—We understand that Mr. Snooks, hall-keeper of the Theatre Royal Bullock Smithy, is about to be married to Mrs. Gubbins, dresser in the same establishment. She is the widow of the late Mr. Gubbins, Mr. S.'s predecessor, and who joined with his duties in the hall those of an occasional super. He played the officer in the funeral scene of "Richard III." to Kean's *Gloucester*; and many playgoers have a lively recollection of the effect he produced in the speech, "Stand back, my lord, and let the coffin pass;" to which he invariably imparted such force as to bring down three rounds of applause.

**DISGUSTING VIOLATION OF THE RIGHTS OF PROPERTY.**—The *Times* says—"On the night of Friday, the 27th December, a party of poachers were discovered by four watchers on land of Sir Robert Peel called *TURNABOUT FIELD*." The ruffians were secured, and, it is needless to say, transported. The human mind turns away with horror at the idea of villains trespassing on Sir Robert Peel's own sacred and particular field. What could the scoundrels purpose to do there? Was not the ground already occupied? Could it be in better hands? Their punishment will be a warning to other knaves; and our admirable minister will henceforth be left unmolested on his own especial domain. We hear that Sir Robert is going to build a castle on this property.

## CORRESPONDENCE.

## ZANONI AND THE CHESTER CUP.

Mr. Editor,—Do you or any of your sporting friends want to make money on the forthcoming Chester Cup? If so, I have a process for doing so, which is the next thing to infallible, and which is very heartily at your service. I ought to promise to you that I am a great lover of my kind—that I do everything on *public principle*, and for the welfare of others more than for my own good. This will, I suppose, sufficiently account to you for my present conduct. Now, then, to my process:—You have heard of a horse called “Zanoni,” the once celebrated Running Rein. Lay all the money you can against him until your very fingers tingle, or rather get some convenient friend to do so for you, in order that your own name may not appear. At the eleventh hour, and just before the horses are about to start get another convenient friend (and if you know of one who has chanced not to lay against the horse, so much the better, as then you will stand quite exonerated and free from all suspicion of interest)—get such a friend, I say, to *object* to the horse's pedigree, and to call for proof of his age. Threaten, moreover, every jockey who shall presume to ride this obnoxious animal, and my word for it, you may consider the money you have laid as money found. If the horse loses, why pocket the money quietly; if he wins, refuse to pay on the plea of the objection, and he must be a clever fellow who can get the better of us in a court of justice. This is the plan that I and some of my friends intend to adopt, and I impart it to you that you may not be behindhand in picking up the crumbs which fall from our table. I annex a statement of the case, as we intend to get it up, but that must be a secret between us, as I have promised my friends to keep the matter snug.

Yours, &c. ONE OF THE INITIATED.

## HINTS ON HANDLING GUNS.

At this season of the year, when hosts of juvenile sportsmen will take the field for the first time, a few rules for safely handling a gun may, possibly, be the means of preventing some of those fatal accidents which yearly occur from carelessness or want of knowledge of the various precautions which should ever be adopted by those who use fire-arms, more especially when shooting in company with others.

Perhaps the most frequent source of mischief arises from the mistaken idea that a loaded gun is most safely carried with the hammer let down upon the nipple. Most people imagine that to explode a percussion-cap requires the full force of the hammer released from full-cock by pulling the trigger; and, consequently, prior to pushing their way through a hedge, or jumping a wide drain, let the hammer down upon the cap by way of being *perfectly safe*. No opinion, however, is more erroneous than this, and no position of the lock is fraught with greater danger to the sportsman and his companions. The copper-cap of the present day has been brought to great perfection, and will explode on receiving a very slight blow; hence, if a twig, branch, or any other substance, come in contact with the hammer, and draw it back for a quarter of an inch—or even less, if the lock be strong—the cap will probably be fired and the gun will be discharged. On the contrary, if the hammer be let down to half-cock, and anything should accidentally draw it back, without carrying it sufficiently far to place it at full-cock, it will on its recoil, return to half-cock, and not fall upon the nipple, as many people imagine. Hence, it should be a rule with every one in shooting—whether alone or in company—to carry his gun at half-cock, except when in expectation of obtaining a shot. Many serious accidents have occurred from want of attention to this rule, four of which have happened within my own knowledge, by which two gentlemen lost their hands, and two others their lives. I likewise know of another case where two friends of mine, young in the field, were shooting together, and one of them actually imagined that if he pulled the trigger very gently the hammer would only go as far as half-cock, and the consequence was that, his gun being directed towards his companion, he lodged the charge in his shoulder, and laid him up for more than two months.

The next precaution to be observed, is always to point the gun upwards when cocking, half-cocking, or uncocking it. There are few sportsmen who, in the course of the season, do not involuntarily discharge their piece at least once, and perhaps more frequently. Whatever care be taken in handling the lock, the hammer will, if strong, now and then slip from under the thumb—either from its rough surface having been worn down, or from the hand or glove being slippery from perspiration, butter from a sandwich, or some such cause; but, if the muzzle of the gun be pointed in the air, no danger to any one can possibly arise from the accidental discharge of the piece, and, consequently, every sportsman should early acquire the habit of holding his gun when adjusting the hammer, in such a position as to obviate the possibility of risk to himself or others.

When loading a gun, if the hammer fit closely to the nipple, as it should do, it should be let fully down, *without the cap*, prior to putting in the powder; otherwise, on ramming down the cartridge, if the powder be of fine grain, the whole of it will occasionally be forced out at the aperture in the nipple, if the gun have not been previously fired, and the lock rendered somewhat damp by the discharge.

In this case, the cap that has exploded should be left on the nipple until the gun be completely loaded, when the hammer should be drawn back to half-cock, the old cap removed, and a fresh one put on—provided the powder is to be seen within the nipple; if not, a little more may be dropped upon it from the flask, and what falls upon the sides be blown off after the fresh cap has been fixed on. During the whole of this operation the muzzle of the gun should be pointed upwards, to avoid any possible accident.

When shooting in company with another person, neither party should ever, on any occasion, point his gun in the direction of his companion. Accidents so frequently occur from this circumstance, when the gun is carried at full-cock, according to the practice of many an eager sportsman, that too great stress cannot be laid upon this important rule. To say the least of it, if no mischief ensue, such a habit renders the party covered by the piece somewhat nervous, and spoils his shooting. The very word *accident*, implies an occurrence that might have been avoided; and surely, where weapons so dangerous as fire-arms are concerned, too great care can never be taken to adopt every precaution which foresight, and even fear, can dictate to obviate the possibility of a mishap that may be attended with fatal consequences, or may render the sufferer a cripple, or an invalid for life. Every sportsman, therefore, should early give himself the habit of carrying his gun in such a position as, if accidentally discharged, will ensure its contents passing above the head of any person who may happen to be within its range.

In pushing your way through a fence, hold your gun at half-cock, in one hand, and above your head. Should you make a false step, or meet with any unexpected impediment, you will then have one hand free to assist yourself. If there should happen to be a wide ditch on the other side, keep the muzzle before you, if your companion be behind; or carry it upon your shoulder if he have preceded you. And if it be too wide to jump gun in hand, and you are obliged to entrust your piece to him, stand on one side of the muzzle when he presents it to you. On no account whatever suffer him to hand the butt end to you while he holds the barrel; such an act is extremely dangerous to him, and he is not the game you go out to shoot at.

When shooting in covert, in company with many others, keep your piece as upright as you can, by which method you will avoid coming in contact with branches and boughs to a certain extent, and will likewise run less risk of peppering your comrades.

If you are shooting with a friend, and birds rise on his side, do not allow yourself to be tempted to fire across him, but let him have his shot quietly to himself. This is a hard lesson for a young sportsman, who is as jealous of shots as an old maid of her swain; but as Scirey Gamp says to Betsey Frig—“Whatever you do, Betsey, drink fair!” so, whatever be the temptation—shoot fair! and if your companion kill a bird, do not claim it as yours because you fired at the same time as he did. Many a wrangle have I had with a friend on this account, and oft have I walked off with my dogs, because we could not agree upon our right to the defendant; on which account we usually carried different sized shot, and settled the dispute by dismounting down to the first shot, which being extracted, the bird became the property of the person who had fired it, though the other party never failed to swear he had hit it very hard. Years bring patience under suffering, and I can now bear to have a bird claimed with considerable equanimity.

Carry your powder-flask in your left-hand pocket; it will then be as far as possible from your gun when you fire.

Lastly, before you set out in the morning, always enumerate to yourself the things you shall require, and see that you have them.

Do not go without your walking, and be forced to use paper instead of it.

Do not leave your shot-bag or powder-flask behind, and sad that you have a mile or two to walk, before you can get supplied with ammunition.

Do not fire at your dog if he should be wild, nor whop him with the ramrod of your gun, unless you be exceedingly wrath, and have another to replace it.

Should your gun obstinately hang fire do not damn the nipple-screw for having been left behind: it is so much better to have it in your pocket! The same remark will apply to your caps, chargers, picker, and other matters connected with shooting, to say nothing of a horn of good sherry, and a tin case lined with roast-beef sandwiches, for your own especial comfort, either as enabling you to follow up good sport, or as consoling you for the want of it.

PEREGRINE POP.

“WHAT'S IN A NAME?”—On the occasion of the yachts of the Royal Thames Yacht Club entering the harbour of Dieppe some time back, the authorities of the harbour, as a matter of course, inquired the names of the several boats. This produced a ludicrous altercation, and raised the anger of the Frenchmen to something like fever heat. Monsieur asked Captain M——, the owner of one of the yachts—*Le nom de son vaisseau?* to which that gentleman replied, *c'est la Gnome*, which was strictly the truth. The Frenchman again put the question “*le nom*,” to which *Le Gnome* was again replied, and so on over and over again. The captain at length, as the only way of putting the matter right, wrote down the word “Gnome” on a slip of paper, and this solved the difficulty. Thus the two words, though similar in sound, were proved to represent distinct things, and yet at the same time to be *alter et idem*.

## THE TURF.

## THE CHESTER CUP.

It may seem a rather bold assertion to make, but it is one which I think will meet with little contradiction, that no Handicap has ever excited in the minds of the racing world so general a degree of interest as this year's Chester Cup. This may be attributed to several causes. In the first place, the number of acceptances (seventy-one) is larger by far than was ever before known, not only at Chester, but in any English Handicap, with the single exception of last year's Cambridgeshire stakes, where seventy-five accepted. Its being also the first leading event of the season tends greatly to increase the popularity it has acquired; and a race, some ten years ago scarcely heard of at Tattersall's, and the speculation on which was entirely confined to its own surrounding district, is now renowned far and wide, and the betting on it, not only in Manchester, but in the more distinguished *coterie* at Hyde Park Corner, as extensive and in many respects more animated than on either the Derby or St. Leger.

Immediately on the appearance of the weights, Winesour, with a strong and apparently determined party, at once became the leading favourite, but a few days after was deposed of his position by Semiseria, who for a long time reigned supreme at the head of the list. The Era and Obscurity in attendance upon her, but *longo intervallo*. About the beginning of March, however, Cataract, who had for some time held a menacing appearance, came out in earnest, and his friends, by heavy investments, succeeded in ousting the mare, and establishing their pet in the premiership.

William Scott's lot consists of Cataract, Agriculture, and Maramat, the last named being one of the five-stone three-year-olds. Cataract was a rattling favourite for the Derby 1843, but ran badly during the whole of that season. Last year he came out in a somewhat improved form, and won a plate in the Craven Meeting, beating, amongst others, his old opponent Bourra Tomacha. He afterwards ran fourth for the Suffolk Stakes, won by The Cure, and succumbed, after a fierce struggle, to The Devil-to-pay at Gorhambury, giving 34lbs. to the winner, and beating Robert de Gorham and a large field. He is a neat horse, a good goer, and, considering his blood and his performances, extraordinary well in. Agriculture has several engagements before the day, but, being a remarkably nice-looking animal, must not be lost sight of. Maramat is wholly dark.

Dawson accepts with four, viz., Trueboy, The Cure, T'Auld Squire, and Obscurity. The Cure cannot get the distance, and T'Auld Squire, is too slow for a race like this. Trueboy is a useful horse, with a turn of speed, and always runs best early in the season. I do not say that he will win the Cup, more especially as the stable seem to lean to the mare in preference, but mistakes have been made before now with this nag, and if he come to the post, he will throw dirt in the eyes of some of the "cracks," or I much mistake. Obscurity is own sister to Disclosure (*lucus a non lucendo*), by Muley Moloch out of The Mystery. She has only started twice, winning a heat-race at Richmond, and yielding to Crikey Billy at Northallerton. She is weighted at a feather, and stranger things have happened than her coming out at Chester, *a la* Alice Hawthorn.

The Era gave 5lbs. to Trueboy at Liverpool, and beat him a clever length: here he has only to give him 6lbs.; but it must be remembered that Trueboy had been running all over the country, and had been brought out for and won the Croxteth stakes only the day before, which could not fail to injure his chance for so severe a run race as last year's Liverpool Cup. On the whole, I cannot fancy The Era as a winner, though he may run a good horse.

John Scott pays forfeit with Parthian, Valerian, Bay Momus, and Botanist, and accepts with Semiseria and Ambition. The latter could not win if turned loose, but her companion will not be disposed of so easily. In addition to strong personal recommendations, Mr. Jaques's mare is possessed of great speed, and the only fear entertained by her friends is, that the distance may prove too far for her to manage. She has never yet proved victorious in a two-mile race, it is true; but with John Scott's training, a light weight, and Ned Flatman on her back, if well on the day, I do not expect to see her beaten.

It is a common saying in the Manchester district, that no man can train a Chester Cup nag better than R. Henseltine, and accordingly, accept with what he will, it is pretty sure to become a favourite. The "old mare" is once more under his charge, but so far at least as this event is concerned, she is quite out of the question. To carry off the prize with 10st. on her back is beyond the powers of even an Alice Hawthorn! The hopes of the friends of the stable appear to be bound up in Winesour, and as a good five-year-old is generally in the front rank, his pretensions must be considered formidable. Extremepore's running last season surely cannot have been correct: the space of a month or so was scarcely sufficient to convert one of the best mares at Newmarket into a moderate Plater, or she will prove but a sorry investment for the immense price (800gs.) given for her at the decease of her late owner.

Mr. Irwin's lot is both numerically and intrinsically strong, consisting of Foig-a-Ballagh, Mickey Free, Poliak, Pride of Kildare, Patriot, The Hermit, and Ould Ireland. I do not anticipate that Foig-a-Ballagh

will come to the post, more especially since he is now matched with Cataract on *seven pounds* better terms than the Chester Handicapper has assigned to him. Mickey Free is a good and game little fellow, and will assuredly "beat more than beat him." Poliak, Patriot, and The Hermit have, I fancy, no chance; and the Pride of Kildare cut up so badly at Goodwood that I shall not put my faith in her. Ould Ireland, at a stone more than Red Deer carried last year, with the old horses now better in than on that occasion, can scarcely be good enough to win, though from his running in Ireland he ought to beat all the other three-year-olds.

Neither Corranra, Aristides, nor Gorhambury can be considered well in, though the former, if he have recovered from his knocking about last season, may run in the front rank. There is some dispute again about Zanoni's (late Maccabeus) pedigree, and till it is settled I would recommend my friends not to meddle with him. St. Lawrence is now eight years old, and his day must be nearly gone by. Could he be brought out in his old form, there would be few to beat him, but I fear all John Day's training will not now bring him safely through such a race as the Chester Cup.

Sorella is an uncertain mare, and at 7st. 12lb. is, in comparison with others of her own age, badly in. The same may be said of Ratan, A-la-Mede, Emun-na-Knuck, while Dr. Husband has yet to prove himself worthy of the high price which his present owner, on the strength of his victory at Manchester, was induced to give for him. Seaport is well in, and must be fresh; but neither he nor Prince Royal will be able to manage the distance; while Portrait, who can run for ever, is too slow for hopes to be entertained of his winning this or any other great race.

Taking all things into consideration, Hemp's performance for the Cup at Epsom, over a very severe course for a three-year-old, was a highly creditable one, and ought to entitle him to be backed, if he be fit and well, which, as he has never been out since that occasion, there is naturally some reason to doubt. Of Strathspey and Little John I know little or nothing—the former has never run since she was a two-year-old, and the pedigree of both is good enough to entitle them to some notice at the next to feather-weights affixed to them.

I now come to an animal, whose running throughout her career on the turf has been so contradictory as to baffle all judgment with regard to her capabilities—I allude to Celeste, 4 yrs., 5st. 12lb. This mare, if we are to estimate her pretensions by her most promising performances, should carry off this prize in a common canter. At two years old she won the Prince of Wales's Stakes at York, beating Prince Royal, Infidel, Sorella, Lord Saltoun, and six others, but was unsuccessful in three other races that season. Last year she won the Trial race at Coventry by two lengths, beating Queen of the Gipsies, Ninety-one, Venus, and three others, and carried off a sweepstakes at Catterick, flooring Spinster in a canter. On seven other occasions she, however, sustained defeat, and often by very moderate animals. If brought fit to the post, and meant to win, Celeste must be one of the very first.

No fewer than fifteen three-year-olds have accepted for this race, stimulated, no doubt, by the success of the plucky little Red Deer, but I must candidly confess that I have no expectation of the re-enactment of such a scene as was last year exhibited. Ould Ireland, Mystery, and Pug are my favourites, but of the others seven are dark, never having appeared in public.

It would be premature at present to offer any decided opinion on the result, as the running at Northampton, Catterick, and Croxtton Park will doubtless cause many changes in the betting; so I shall defer till next month the arduous undertaking of making a selection—a task unusually aggravated in the present instance by the excellence of the handicap and the expected largeness of the field.

P. S.—By the last quotations from Tattersall's, I perceive that Semiseria is once more first favourite; the betting on the 17th inst. being 11 to 1 agst. her, 12 to 1 agst. The Era, and 13 to 1 agst. Cataract. *Sporting Magazine.*

Ducks versus Rooks.—It appears that the rooks of Kensington Gardens have been sacrificed to the ducks of that locality. The offence of the rooks, according to a *Times* correspondent, was, that they now and then destroyed the ducks' eggs—now and then too bolted a duckling. He says, "ducks may be replaced, but rooks and magpies are not so easily induced to return when once driven from their colonies." In other words—

"Ducklings and ducks may wither and may fade;  
For ducks may make them, as still ducks have made;  
But a bold rookery, the Gardens' pride,  
When once shot down, can never be supplied."

The habits of the bird, says the correspondent, induce contemplative thoughts in the mind of the wanderer: for "he could leave the din and smoke of London behind him, and reclining under the shade of a wide-spreading tree, see a bright group of parti-coloured magpies strutting before him, while overhead he heard the soothing voices of the rooks." Nevertheless, magpies and rooks are cheats and thieves: love them as we may, we cannot deny them their little peccadilloes. Still we sympathise with the correspondent; and sympathising, bid him take comfort. For though every roguish rook and magpie should be exterminated from Kensington Gardens, does not there still remain for him the consolation of Westminster Hall and the Stock Exchange?

## CORRESPONDENTS.

H. D. R.—We contemplate shortly being able to do something in the way you propose; but at present could not promise anything worth your acceptance. You will observe that we sell at mere "paper and print" price, and it is only by merging the *rédacteur* and the proprietor, that there is even a chance of making "both ends meet;" we cannot explain ourselves more definitely through this medium, but thank you for your kind wishes; and, fostered by success, would gladly avail ourselves of your offer.

J. B. Manchester.—If you send twenty-four postage-stamps, addressed to J. D., at the Office, No. 10, Red Lion-court, Fleet-street, you shall have the No. 1 sent by post; as a person has left a clean copy there for sale.

MILES'S BOY AND THE BLACKHEATH RACES.—Our correspondent is a wag: we do not know the WHITE (or *wight*) he speaks of. The RAILWAY BELL may be a fast bell, but is not a RACING BELL; see Orton's History of the Turf, about the *silver bell* given in olden times, whence our phrase "to bear away the bell." But "Quiz" must remember there are various applications of the *bell*—one of the most popular we take to be the "cap and bells," which, perchance, this *wight* of "the bell" may be most entitled to, from consanguinity to a certain "CLOWN." However that may be, we here present his charger, the winner of the plate (willow pattern) at Blackheath, done *braven* for the edification of the *sporting world*; for

Ah, sure a pair were never seen,  
More justly formed to meet by nature,

than the *wright* and Judean steed. Having the fear of libel before our eyes, however, we give the quadruped only. Had we presented both the ass and its victorious jockey, as the animal is considered a *lion* on its native heath, we might have stretched the metaphor, and written under the long-eared monster and his master, BEL AND THE DRAGON.

\* \* REMEMBER—As we go to press on Thursday, to insure a supply for our numerous country agents, all questions not received by Wednesday morning, will, as a rule, with but few exceptions, be left unanswered till the next week.

OFFICE, 35, HOLYWELL-STREET.

## OUR WEEKLY CALENDAR.

## AN EPHEMERIS IN JEST AND EARNEST.

SUNDAY, April 6.—SECOND SUNDAY AFTER EASTER.—Old Lady Day.—King Richard Cœur-de-Lion killed, 1139.—Stow died, 1605; Death being serious, and wishing to "Stow-it!" Take care of your pockets!

MONDAY 7.—(Adjourned) Warwick Races.—The summer birds of passage now appear, and with them that beautiful little bird the wryneck. The swallow, cuckoo, willow-wren, blackcap, white throat, &c., commence their vernal songs. The nightingale, in Kent and other southern counties, pours out his wild musical strains all the night long. Various insects, chiefly butterflies, are seen.

The Chief Commissioner of City Police, Daniel Whittle Harvey, in a Report, states that losses from common thieves in the City are under £30 a day. Then Daniel Whittle easily earns Daniel's *utilité*.

TUESDAY 8.—Cambridgeshire Steeplechases.—Sir Robert Peel's ministry resigned, 1835: Mr. d'Israeli calls them an "organized hypocrisy," 1845, and gets chaff for his pains.—Among the occurrences in April 1844, we may note: 1. *A Daring Feat*.—A well-known sporting character accepted an invitation from Robert Montgomery, "to tea, and to hear him read the second part of his poem, called 'LUTHER'—the reporter does not state what was his condition at the 'finish.'"—2. An India-rubber pavement placed in front of the Admiralty, that certain young officers may better jump over the heads of veterans.—3. Alderman Gibbs hissed on leaving the Walbrook Vestry. From the force of habit, he pockets the affront.

WEDNESDAY 9.—Nottingham Races.—Fire Insurances expire: the Pelican gives up the ghost; the Britannia melts like a Brummagen teapot; the Hand-in-hand relaxes its grip: the *Albion* turns all sorts of colour; the Sun grows dim; the *Globe* stands still: see, therefore, you lug out your golden ointment to keep 'em alive, or it'll be worse for you, if your crib takes fire.—Battle of Toulouse, 1814: The French under Soult beat Wellington, and then bolted, leaving the city to the defeated enemy!

THURSDAY 10.—Dimdale Spa Steeple chases.—Catholic Emancipation Bill passed 1829.

FRIDAY 11.—Barbel, Dace, and Gudgeon spawn; and about this time Woodcocks quit our shores.—George Canning born, 1770: worried to death, 1829.

SATURDAY 12.—Rodney's Victory, 1782: Count de Grasse moved down awfully, and his *lilies* "cut down in an hour."

# The Sporting World.

FOR THE WEEK ENDING APRIL 12, 1845.

HEERFULLY blithe April, second-born of Spring, herald and forerunner of "Merrie Maye," do we hail thy face of smiles, albeit occasionally thou art in tearful mood. Enlivened by sunshine and refreshed by showers, the earth again gives visible signs of activity. All vegetation welcomes the genial time.

Now the golden morn aloft

Waves her dew-bespangled wing;

With vermeil cheek, and whisper soft,

She woos the tardy Spring;

Till April starts and calls around

The sleeping fragrance from the ground;

And lightly o'er the living scene

Scatters her freshest, tenderest green.

The clear, fresh, and fragrant mornings which occur in fine weather are as cheering as delightful. Now does the SPORTING WORLD awake; and o'er rail and hurdle, by sprouting hedgerow, on the moist carpet of the emerald turf, on the gliding river, or by silver-brook, urge the bounding hunter, and flying race-horse, capture the warbling songster, propel with sinewy arm the darting wherry, or inveigle with baited hook and gaudy fly the scaly tenants of the flood. Coursing and the chase of reynard are at an end, and so is what our Gallic neighbours call the *chasse au fusil*, but do not the race-course, the river, the sea, the stream supply the deficiency. To the true sportsmen, the change of seasons brings but change of amusements. Space, however, forbids us to generalise, and as these engravings of "flies for April" lie before us, which, if not embodied in this article, must inevitably "stand over," we will quit our discursive reflections and begin.

The backward season, by which March in its earlier days might have shamed white-headed December, has past, and we here present the young flyfisher with a few more of our promised representations. The first of the general April flies are the "blue dun and cowdung," figured in our second number, and next to these, as the weather improves, we place the various hackles or palmer flies. A good fly for this month is the hawthorn-fly, here figured.

1. The natural Hawthorn fly. 2. The artificial ditto.

The body is formed of black ostrich herl, or seal's fur dyed deep black, and mixed with light yellow or buff mohair; the wings may be made with horn shavings; but an excellent substitute will be found in the thin membrane where the pips lie in the core of an apple, or the palest feather in a snipe or mallard's wing. The hooks No. 9 and No. 10 are the preferable sizes.

Another good fly for April is the stone-fly, the body dubbed with dark wool, yellow under the wings and tail; or with the dark brown hair of a bear or the darkest parts of a hare's ear, mixed with yellow worsted or mohair. Two or three hairs from the whiskers of a black cat, says an old authority, are also useful in dressing this fly; but if you don't want your face scratched, get black hairs somewhere else. The wings are formed by a strip from the mottled feathers of a pheasant or peahen, and the hackle from a grey cock. The hooks No. 2 and No. 3.

1 The artificial Stone-fly. 2 The natural fly.

Our last pair shall be the well-known granam or greentail fly, the body of which is easily dubbed with fur from a hare's ear, whipped with grey or green silk. The wings are from the penfeathers of a partridge, or a hen-pheasant, and the hackle from a grey cock or hen. The hooks No. 7 and 8 will be found most serviceable for dressing the granam.

The yellow dun, the horseflesh-fly, the little dark brown, the sand fly, gnat fly, and the red fly, may be named among those for April. The gnat fly is an useful one, and should be made with the body thick and short, with a strip from a starling's feather, or a black ostrich one. The hooks 9 and 10.

Granam or Greentail. 1 Artificial fly. 2 Natural fly.

RATHER QUESTIONABLE.—A benevolent lady, lately advertising in the *Times* for a situation for her nurse, states, that the latter "would be glad to obtain a situation where a nurse would be required to finish a child." We hope she does not finish children with Dalby's Carminative.

APPROPRIATE COMMANDER OF THE NEW ANTARCTIC EXPEDITION.

The Polar expedition—since 'tis Captain Crozier braves

All its perils—gives some promise now to make the passage free;

For all Englishmen well know that "Britannia rules the waves;"

And they also are aware how well a Crozier rules a "see."

## THE FISHER'S CREEL.

THE BREAM.

AVING "said a something" on the higher and more elegant branch of the Art Piscatorial, we will now disport ourselves awhile in the calm, sedate, yet, withal, delicate and careful craft of pond or canal, and slow river angling. But before we come to pond angling we must say a few words on the fish whose figure heads this column. And as we must be brief—"brevity's the soul of wit"—we at once begin.

The bream is broad, with a small head, smooth at the top, large eyes, a diminutive mouth (of that sort known as *leather mouths*) and no teeth, in lieu of which it has a lozenge-formed bone to assist its mastication; the palate is soft and fleshy, much resembling that of the carp. It has a hog-back, of a colour between blue and black. The sides of the larger fish are yellowish, and the belly inclining to red, is extremely deep and thin in proportion to its length; the back and sides are covered with curious network scales, on which occasionally appear many whitish excrescences. The tail very large and scooped out rather than forked.

The flesh is soft and clammy; yet declared to be easy of digestion, and more nutritious than the carp—we don't think the flesh of either anything but what that domestic personage, who is usually said to receive a diploma to practise from his Satanic Majesty, may be able to make it, by the powers of good or bad dressing. "The choice parts," says the father of angling, "are the belly and head; but what rendereth him unsightly (and annoying too) for the table, is the multitude of his bones." The French, however, esteem this fish highly, and have a saying, that "he who hath breams in his pond can bid his friend welcome." But anglers are not "pot-hunters," more than other true sportsmen; and the bream as he is a subtle, strong, and shy fish, affords good diversion. The bream is chiefly found in deep slow, running rivers, and in sheltered ponds; where, although it grows slowly, it often attains the weight of three or four pounds, (we have seen them seven or eight) and if the habitation suits them they will get as fat as a hog or an alderman. They are terrible Antimalthusians too, for the male has two melts, and the female two bags of spawn, from which, according to naturalists, about 130,000 ova are deposited. But though Johnny Crapaud, according to the venerable authority quoted, thinks so highly of the bream, (another of the thousand and one proofs that your Frenchman as a sportsman is not "to the manner born") few persons are desirous of stocking waters with them, as they multiply so rapidly as to monopolise all the sweet feed, and to starve other and better fish: we therefore view them only as fit food (in their infancy) for pike, perch, &c.

We will take the BREAM as our example, to prevent repetition when we come to the CARP, &c., and say a few words on taking him under the head of Pond Angling.

The Bream, as well as that shy fish the Carp, are best tempted by a large red worm. Your rod should be long, your line silk, or silk and hair, and your float goose, swan, or porcupine quill. A piece of lead of the form of an upright brass weight, with a hole at the top, is to be fastened to the lower end of your lines; then attach the hook-link also to the lead, allowing a foot between the lead and the hook, which may be a No. 4: observe, your lead should be sufficiently heavy to sink the float to a level with the surface, so as not to lift the lead, which must lie constantly on the ground: hence the worm will crawl up and down so far as the lead will allow, which is a great temptation to the fish. The rest of our directions we shall take from the Rev. Mr. Daniel.

"The line for two yards at bottom should be of strong round gut, and

the link next the hook as small as you dare use, for fear of pike or perch (who will assuredly visit the hooks), and till they are taken, neither carp or bream will come near to bite: this fineness will admit the worm to draw the hook to and fro with less difficulty.

"For the ground-bait, get a peck, or peck and a half, according to the greatness of stream and depth of water, of sweet gross ground malt, or unground wheat, which is thought preferable; boil it very little, and strain it through a bag; when cold, at night, cast in two parts of it squeezed hard between the hands, so that it may rest in the precise spot where you mean to angle; and if this be repeated for two or three times, it will more certainly attract the fish. Recollect in a stream, to throw it at least a yard above the place where you mean your hook to be, or the stream will carry it too far down; some sew worms for the fish to feed on, upon a turf of short grass nearly to cover the turf which is then fastened to a round board, with a hole through that and the turf, where a cord runs, and is tied to a pole to let down to the bottom. Bream generally choose the broadest and deepest part of a river, and in hot weather are easily seen swimming in shoals; there, or thereabouts, with a clear bottom, take the exact depth, making some mark that shall explain if any rise or fall has taken place in consequence of water-mills, &c.

"The ground thus baited, the worms and tackling prepared, by three or four in the morning, with great caution approach the place, so as not to be seen by the fish; some of them are frequently at the top of the water, whilst the rest are feeding beneath. Having baited the hook that the worm can move at bottom, cast it, and by drawing it gently to you, let the lead rest about the middle of the ground bait; a second rod should be a yard or two above, and a third a yard or two below it; retire from the water so far as just to perceive the top of the floats; when there is a bite the top of the float will sink suddenly; remain quiet until the line goes clear away, then creep to the water-side, and give as much line as possible; if it be a good carp or bream it will go to the farther side of the river, strike gently, and hold the rod at the proper bend, that it may tire him; for if both pull together, either line, hook, or hold, will break, and the fish will be lost. The bream is strong, and runs hard when first struck; but after two or three turns, he will fall on his side, which enables you easily to land him: the carp is far stronger and more mettlesome than the bream; it is advisable to use a reel upon the rods for carp, barbel, or bream; the length of line kills the fish with ease, and increases the angler's amusement.

"This sport may be continued from four till eight in the morning, and from four until the same hour in the evening. The following morning, for the same hours, your diversion will be perhaps the best; if it is gloomy and windy, they will bite all day long, especially if the water is a little thick after rains; during the time of fishing, and at that of quitting the water, throw in more of the ground-bait. After two or three days the place should be baited and left quiet; the fish will otherwise get too cunning to touch the hook-bait.

"Another mode of catching the bream, is, after plumbing the depth, put one or more shot a foot below the float, to balance it, which is a way to take the shyest fish; the bait a large red-worm, which must be laid in, and let sink very gradually to the ground-bait. When the fish bites, strike gently that very instant.

"A third is the running line, with a bullet and hole through it, and a small shot to hinder the bullet falling on the hook; let this run on the bottom with the current into holes, and equally as for the bream, it will be found to answer for all other fish that bite at the bottom."

THE BLACKBIRD.—(For article see next page.)

## BRITISH SONG BIRDS.—No. IV.

## THE BLACKBIRD.

S we gave the allied Warblers, the Sky and Woodlark, so we follow the Song Thrush, with its congener, the Black Thrush, commonly known as the Blackbird.

Although the Fieldfare (an unmusical brother) and the mountain Ouzel, nearly approach in form to the subject of the engraving, yet the Blackbird is, to our eye, incomparably their superior in elegance of shape. The Blackbird is not migratory, but a permanent resident in almost all parts of England and Scotland; but, although it prefers the more cultivated districts, it is seldom found in the central or more elevated tracts: nor does it breed in parts destitute of sylvan vegetation, being, properly speaking, an inhabitant of bushy places and woods. In winter it haunts the neighbourhood of towns, gardens, and hedges, generally keeping under shelter of trees or bushes. And, at this period, like the other thrushes, it feeds on snails, which it breaks by dashing against stones with its bill. It also occasionally ingeniously circumvents the garden snail by pecking against the spire of its house, where, if you will take the trouble to examine it, the shell is very much thinner. But though this is its favourite dish, like many other birds it has a large range of food. Earthworms, beetles, seeds of cereal grains, insects, berries, &c., will be found in their stomachs at inclement seasons.

"It is amusing," says Mr. Macgillivray, "to observe a blackbird searching for food on the smooth green of a garden, which one may easily do from the window without being noticed. In December, 1832, I watched one in order to note its motions. After looking quietly at a particular spot for some time, it hopped up, began to peck the ground with great energy, and after some exertion, succeeded in dragging out a worm of moderate size, which it immediately threw on the ground. It then pecked at the worm for nearly a minute, and, beginning at one end, separated by a sudden stroke a small portion, which it swallowed. In this manner it proceeded until it had devoured the whole, not swallowing at any time more than a small fragment. It then hopped about, looking now and then attentively at a certain spot, and at length began to dig vehemently for another worm, which it soon procured. This was the first time that I had closely watched a blackbird while searching for worms; but I have since had repented opportunities of convincing myself that it always proceeds in the same manner, never swallowing an entire worm unless it happens to be extremely small, and cutting the very large ones into a great number of pieces."

The female sits thirteen days, the male singing till the young are hatched, after which he is seldom heard till nestmaking again begins. The female is much less clamorous than the male, who, on being alarmed or irritated, especially in the breeding season, emits a loud, clear, chuckling cry, somewhat similar to the chatter of the magpie, fluttering its wings and staggering forward at the same time. Few persons seek an opportunity of hearing the song of the Blackbird in early morn, ere the first rays of the sun shoot across the eastern sky; but many listen to it with delight in the still evenings of spring and in summer, when the other songsters, except the Thrush and Nightingale are mute, and when its mellow notes come swelling on the ear, shedding a benign influence on every heart, not entirely hardened by an habitual disregard of nature.

"It is not in the wild valley, flanked with birchen slopes, and stretching far away among the craggy hills, that the music of the blackbird floats upon the evening breeze. There you may listen delighted to the gentle song of the thrush; but here, in this plain, covered with corn-fields, and skirted with gardens, sit thee down on the green turf by the gliding brook, and mark the little black speck stuck as it were upon the top twig of that tall poplar. It is a blackbird, for now the sweet strain, loud, but mellowed by distance, comes upon the ear, inspiring pleasant thoughts, and banishing care and sorrow. The bird has evidently learned his part by long practice, for he sings sedately and in the full consciousness of superiority. Ceasing at intervals, he renews the strain, varying it so that although you can trace an occasional repetition of notes, the staves are never precisely the same. You may sit an hour or longer, and yet the song will be continued; and in the neighbouring gardens many rival songsters will sometimes raise their voices at once, or delight you with alternate strains. And now, what is the purpose of all this melody? We can only conjecture that it is the expression of the perfect happiness which the creature is enjoying, when, unalarmed by care, conscious of security, and aware of the presence of his mate, he instinctively pours forth his soul in joy and gratitude and love. He does not sing to amuse his mate, as many have supposed, for he often sings in winter, when he is not yet mated; nor does he sing to beguile his solitude, for now he is not solitary; but he sings because all his wants are satisfied, his whole frame glowing with health, and because his Maker has gifted him with the power of uttering sweet sounds."

The blackbird pairs in February or March, and about the middle of the latter month, or later in the season, according to the temperature or the progress of vegetation, begins to construct its nest, which it places in a bush of any kind, a hawthorn, a laurel, a holly, or a willow, for example, or among ivy, or honeysuckle, or even in a hole in a wall or rock. For the most part however it selects the lower part of a hedge, or a briar or

bramble thicket, or the concealment of a fresh young fir or pine. The nest, which is bulky, is composed externally of stalks of grasses, supported or strengthened by some twigs or stems of herbaceous plants, and interwoven with mosses. This framework, coarsely intertwined, is lined with a thin layer of mud, within which is a more neatly arranged layer of fibrous roots, slender stalks of grasses, decayed leaves, and hypha. The interior is hemispherical, about four inches in breadth at the mouth, and three in depth. The nests however vary considerably as to the materials of which they are composed. Two broods are commonly reared, the first being abroad towards the end of May, the second by the middle of July. It appears, however, that sometimes a greater number of broods is reared. Mr. Blyth states in the *Naturalist*, Vol. III., p. 152, that a pair built four successive nests in 1837 upon the island in St. James's Park, and succeeded in rearing seventeen young ones, the three first broods consisting of five each, the last of two only; and that another pair which he knew of raised three broods in a garden near his residence.

But we have dwelt at some length on this delightful songster in his native wildness, and turn to him as the thule of man.

## MODE OF TAKING THE BLACKBIRD.

Timid and distrustful he will seldom enter the area or the barnfloor trap; nevertheless, it is easily caught with a net or spring in winter, by using service berries as a bait. Occasionally, it is found in the large traps set for tits, when these berries are scattered over the bottom. If a place be cleared from snow, and linned twigs and berries placed about, many may be caught. It will also go into the water-trap, but generally only at nightfall.

## FOOD.

In confinement, the Blackbird will be satisfied with the first *Universal Paste*; but he also eats bread, meat, or bits of apple. More dainty than the Song Thrush, he will not digest mere bran and water. As he delights in bathing, water should be supplied him for so doing.

## BREEDING.

The female lays three times a year, from four to six eggs of a greenish grey, spotted and streaked with light brown; when the young are hatched, the males are always much darker than the females, therefore fanciers need never be mistaken when they take the darker and leave the lighter. White bread, soaked in boiled milk will readily rear them, with a little raw beef and worms dipped in water. It is better to take them from the nest when the quill-feathers are just about to shoot, because it will be found that, as they have as yet not tried their natural song, they will much more readily learn any air you may wish to teach them.

## DISEASES.

With care, and a proper variation of food, this bird will live in captivity ten or twelve years; and if you never neglect to furnish him the means of bathing, his diseases are but few: the most important, is an obstruction in the rump gland. This gland contains the oil necessary for softening and anointing the feathers, and it sometimes becomes hard and inflamed, forming an abscess. In this case, the bird often pierces itself, but it may be softened by applying fresh butter: the best ointment, however, is one of white lead, wax and olive oil, which you may get at any chemist's: or you may cut or lance the hardened gland, which will remove the obstruction.

The memory of the blackbird is so good, that it will retain, without mixing them, several airs at once, and it will even repeat little sentences. It is a great and deserved favourite with the dwellers in suburbs and cities, for its clear, plaintive, and musical song. The price of a well-taught blackbird and a piping bullfinch is about equal.

## THE PUFF POET'S LAMENT.

Alas! for the days that are vanished and gone,

When the troubadour's theme was of bright eyes and roses;

Now, fallen from his glory, his harp's proudest tone

Gives forth but the praises of "Hyams" and "Moses."

Oh, me! I remember that dreamy time well,

When, tired of the world and its hollowness loathing,

I fled to the Muse. 'There's a pull at the bell—

Huzza! for a song about "Cheap Winter Clothing."

Oh! pity my woes, you who've tasted the fount

O'er whose brink the green myrtle and laurel entwine;

When forced from my pegasus thus to dismount,

And rhyme to "stout trousers at 13 and 9."

Ah! when in my visions I rise from this earth,

Through regions of fancy my brilliant course tracking,

How hard 'tis to strangle bright thoughts in their birth,

And stoop to a lay upon "Warren's Jet Blacking."

Farewell, then, farewell! to the dreams of my youth,

When my young hopes were springy as Plunkett or Schefire;

No longer my theme is of virtue and truth—

All my genius is lost on a "D'Orsay" or "Zephyr."

But poets, alas! in these rank-fading days,

Cannot live upon grass, like old Nebuchadnezzar;

Rump steaks are much better for dinner than bays—

So here goes a lyric on "Rowland's Macassar."

## THE EXPERIENCES OF A COMMERCIAL GENT.

"Let us take to the road."—*Old Song.*

## REMINISCENCE I.

I who was named by godmothers and godfathers (I like to give place *sur Dames*) Nathan Orderly, am now an old "stager," I was going to say, which would have been wrong, seeing that I always drove my own trap after fashion compelled me to drop the saddle-bags. A bagman I was then called, and I never blushed at the name, and adhered to it, like the wax on an un-Grahamized letter, until I was threatened to be expelled from "The Travellers," unless I consented to raise the respectability of the society by mounting on wheels. I did consent, and the result was I was no longer a bagman, but a commercial gent. There is something attached to a name, and what I found attached to my new name was an increase in my weekly expenditure, in "pikes" particularly, and a tendency to get fat and catch cold, which I had never experienced whilst I was jotted about the country on pig-sticks.

Of course, as I was "a gent," I was obliged to drop my custom of taking a pint of ale and a pipe after my dinner in what is now called the commercial-room, and call for my pint of port or sherry. I am not allowed to "light up" until seven o'clock, except by special permission, and then I am called a vulgar snob if I do not pay threepence for a rhubarb-leaf cigar instead of a half-penny for a nice clean pipe and a screw of genuine returns. I am expected, too, to take a hand at half-crown points short whilst if we happen to be four "in for the night;" whereas, in the good old days, we made our time out over a rubber of cribbage, for a pint of ale, or a hit at backgammon, or even a game at put or dominoes.

However, respectability must be paid for; and sooner than be turned out of "The Travellers," after having paid in for many years, and being on the point of applying for a retiring pension from its funds, I adopted the new rignaroles one by one, all except one, and that is, I never will be "spicy" enough not to take change in coppers. They may be vulgar, but they are cursed convenient, and threepence in a shilling is five-and-twenty per cent.

My "clients," we were wont of yore to call them customers, may wonder now and then at goods being a little dearer than they had used to be; but how little forethought do they display if they do? Who is to buy and keep in repair a buggy and harness, and pay extra for "pikes and port, if he does not "stick it on a few?" Our "houses" for which we execute commissions won't increase our salaries (wages as used to be) merely because we are "gents." No; we must look after our own interests; and if we are to pluck any one, why not, like the lawyers, take it out of our clients? Eh? Let them take it out of the public, if they please; that is no concern of ours.

Having done business with country clients—I was on the point of writing "travelled for money and orders"—for nearly half a century, you must suppose that I have seen many funny, ay, and serious things too, and met with many adventures. It will amuse me in my olden days, and perhaps, your readers too, if you will admit into your popular pages (not those ridiculous pages you see dogging ladies' heels in a dress meant as a walking advertisement for button-makers) an account of such little "experiences" as recur to my fast-fading memory. Should any of my brother "gents," members of "The Travellers," fancy they see themselves portrayed in any of my characters, all I can say is, as my grandson says, who is at school in Gower-street, *qui cap it, ille face it*; which I take to be good London University Latin, for "if the cap fits, let him wear it."

Here goes to begin the "commencement of the end," as the French say.

One day as four of us, all old roadsters, were just going to sit down to a plain two o'clock dinner at the Lion in Billericay, a gent in a cruelty-van, as we call a huge four-wheel drawn by one horse, drove into the yard. We none of us knew him, so concluded he was not "one of us." Before, however, we had been helped round, a young man was ushered in by the landlord as a commercial "new on the road." We received him with our accustomed urbanity—and perhaps a little more—for we meant to "colt" him after dinner.

He took off two upper coats and a large red shawl, and stood before us in a green cutaway coat with metal buttons, a buff waistcoat, and white-corded trousers, strapped over French polished boots. He wore a black satin stock spangled with gold flowers, and a waterfall front, in which was stuck a huge blue-headed pin as big as a boy's marble. Altogether he was "a swell," without any mistake; and, when he pulled out a highly-scented bandana from his pocket, and flourished it so as to display a large diamond ring on the little finger of his right hand, we looked and winked at one another.

He gave himself great airs at dinner, cursed porter as being vulgar, called porter kitchen drink, and found fault with everything, especially with the forks, which were only plated. At the same time he talked very grandly about the immense weight of business imposed upon him, the number of commissions he had to execute, and the wonderful amounts he had to remit to his house every night.

We pumped him all we could to find out what line he was in, but all to no purpose. He would not let it out. After dinner I, as chairman, suggested to him the usual custom of calling upon a new gent to stand a bottle of wine. He immediately strutted up to the bell-pull and rang it, and, when the waiter appeared, ordered in half-a-dozen of the best claret.

We expostulated, but in vain. "He never drank the nasty hot wines of Portugal."

When he had taken his share, which he did, and told us marvellous tales of his immense and important transactions, he went out to visit his clients.

After we had puzzled ourselves in conjecturing who or what he could be, we sat down to write our letters. We had just concluded when our new member returned. He stuck himself before the fire, spread his coat tails, and took snuff out of a splendid gold box, then handed it to me with, "Do anything in the dust line?" I was about to decline as a single knock was heard at the door.

"Come in," said I; and in answer to my invitation in walked a little girl about six years of age, who, from shyness, put her finger between her lips, held down her head, and whispered, "Please, sir, is Mr. Harrison here?"

"Yes, my little dear, I am Mr. Harrison," said the swell. "What is it—oh? Don't be alarmed—speak out."

"Why then, if you please, sir, you are to bring mother half-a-dozen more of them 'ere little poliparrets as has got whistles in their tails."

The secret was out. The swell travelled in the toy line. He gave the girl a savage look, caught up his two top coats, shawl, and hat, and bolted.

I never met with him again until I saw him sweeping a crossing near Temple-bar.

(To be continued.)

## THE GALVANIC RING.

That lover of science, Lord Brougham, has, like a good judge, given a fair trial to the galvanic ring, and has (the guinea being paid) certified to the effect that the rapid twitching of his nasal organ has much abated since he wore one therein.

Lady Bulwer Lytton has pronounced it to be her opinion that the galvanic ring is powerless in comparison to the wedding ring, asserting that the shock of the latter is felt all one's life, and that, too, so strongly, that once upon the finger, the greatest force and expense are requisite to get rid of it.

Bill Sykes states, that his hand was so swollen from exposure to the weather, that he could not get it into a moderate-sized gentleman's pocket, but since he has worn the ring he has been enabled to insinuate it into a lady's reticule. He does not, however, attribute this to any virtue the ring may possess, or any sympathy between the ring and himself, but thinks the effect may be accounted for—although he cannot account for the possession of the ring—by attributing the abatement of the swelling to the fact of the ring not having been paid for; the priggish of a piece of beef, he assures us, gets rid of warts and hunger, and he does not see why a swelling may not be got rid of by the application of a stolen ring.

A celebrated stay maker at the West is about to take advantage of the principles evolved in the galvanic ring, and stays are forthwith to be lined with copper and zinc, with, for safety sake, a brass tag to the lace as a conductor.

Sheets of copper and zinc must be shortly introduced as bed-furniture, or this new scientific cure for all diseases will have been treated but as a half dose for poor suffering credulity. Why not likewise provide for the inner man! Ostriches have now their galvanized iron, why not man his galvanized sandwich?

THE INNOUENCE OF MAKING MONEY.—A night or two since, Peel quoted with admiration the axiom of Dr. Johnson, that "very few men are more innocently employed than in the accumulation of property." Struck by the profound beauty of this truth, we understand that several tradesmen are about to have it written in letters of gold above their doors. Among those about to adopt it we have heard of the names of Moses and Son; Morrison and Co.; and several distinguished keepers of marine stores.

GROSS CARELESSNESS.—The *Brighton Herald* says, "Incendiary fires are raging to a frightful extent in Beda."—Really servants ought to be more careful with warming-pans.

ANSWER TO AN ADVERTISEMENT.—"To Master Tailors."—(*Times*, March 15.)—"A respectable young man, of good address, would wish to enter a cutting-room." Let him go as a chimney-sweep to a fancy ball.

VERY CONSOLING!—Dr. Rash, in a *Treatise on Sugar*, maintains, that "in those countries where sugar is abundantly eaten, plagues are unknown." So that if sugar were abundantly eaten in England, we should get rid of the Polka.

CAPTURE OF A HAWK.—A little time ago two bird catchers were out in Dunham, catching birds, by placing a bird in the middle of a field in a cage, and using birdlime. While the men were at a distance watching, a hawk, perceiving the bird a prisoner in the cage, made a sudden dart at it. The men, being afraid of the cage being broken, ran and drove off the hawk; but they had no sooner got to their hiding place than the assailant returned to the charge with double energy, darting several times at the cage, in order to break it. The men again drove him off, and placed some larger sticks well lined: in a short time the hawk again appeared, and, while endeavouring to get through the wires of the cage, got his wings so much entangled with the bird-lime that, when the men ran towards him, he found himself caught, instead of his intended prey.

JOHN SMITH (alias Buckhorse), from an original engraving, copied in "The Eccentric Magazine."

## THE HISTORY OF BRITISH BOXING, FROM FIG AND BROUGHTON TO THE PRESENT TIME.

PERIOD II., 1735—1786.

FROM THE TIME OF BROUGHTON TO THE APPEARANCE OF DANIEL MENDOZA.

### CHAPTER I.—(Continued.)

#### BROUGHTON—Concluded.

**B**O Broughton, then, continues Mr. D., "is to be ascribed the credit of two great reforms in the practice of pugilism, namely, the introduction of science and humanity; and by the moral effects these inculcated, more has been done to establish the high character of Englishmen for honour and fair play, than by all the eloquence of the pulpit or the senate. To Broughton also do we owe the introduction of *gloves, or muffers*, for conducting *mock combats or sparring matches*, as they are now called, by which men receive lessons without injury, or display the art of self-defence without those painful consequences to which Captain Godfrey so willingly submitted, and which he so feelingly describes, but which deterred young aspirants from entering those arenas in which, after harmless initiation, they often became distinguished adepts, or were prepared to take their own parts in unavoidable encounters. Broughton thus announces his new invention in the *Daily Advertiser* of February, 1747:—

"Mr. Broughton proposes, with proper assistance, to open an academy at his house in the Haymarket, for the instruction of those who are willing to be initiated in the mystery of boxing, where the whole theory and practice of that truly British art, with all the various stops, blows, cross-buttocks, &c., incident to combatants, will be fully taught and explained: and that persons of quality and distinction may not be debarred from entering into a course of those lectures, they will be given with the utmost tenderness and regard to the delicacy of the frame and constitution of the pupil; for which reason muffers are provided, that will effectually secure them from the inconveniency of black eyes, broken jaws, and bloody noses."

Thus far, Broughton appears to have sailed on the wave of triumph. His patrons were numerous and aristocratic; but the confidence which good fortune begets, was to prove to him a snare, as it has to many before him. *Slack*, a butcher, and a pugilist of some note, but who had already succumbed to *George Taylor* (as we have stated in our last number), had, it appears, a quarrel with Broughton on a race-course, which led to a threat on the part of the champion that he would horsewhip *Slack*. The result was a challenge: *Slack* obtained friends, a match was made for 200*l.* aside, and as the door-money was included in the sum contended for, it was estimated at 600*l.* clear. Although properly falling under the

biography of *Slack*, we here give the battle, for the purpose of rendering as complete as possible, the history of the Father of Scientific Pugilism.

Broughton's overweening confidence proved his ruin: for, as we learn from a contemporary authority, "he refused to take *training preparation*," although "he had not fought for a long time." Let others take warning by his fall.

On the evening previous to the battle (Tuesday, April 10, 1750), Broughton, who had invited his patrons and numerous friends to witness the battle, was rather apprehensive that *Slack* would not fight, and, for fear any disappointment should take place, made the latter a present of ten guineas not to break his engagement.

For the first five minutes, Broughton's superiority over *Slack* was so evident, that the odds were ten to one in his favour. When *Slack*, recovering a little from the effects of his antagonist's blows, made a sudden and unexpected jump, planting a desperate hit between the champion's eyes, which immediately closed them up. Broughton now appeared stupefied; and as it was two or three minutes before the effects of this fatal blow were manifest, the spectators were at a loss to account for the unusual movements of Broughton, who appeared to *feel* for, instead of boldly facing and attacking his man: at length, his patron, the Duke of Cumberland, exclaimed: "What are you about, Broughton?—you can't fight!—you're beat!" To which Broughton instantly replied: "I can't see my man, your highness—I'm blind, but not beat; only let me see my man, and he shall not gain the day yet." Broughton's situation was truly distressing, and *Slack*, following up this singular advantage, obtained a victory in *fourteen minutes*!

The Duke appears to have been most unworthily angered at his loss, which has been (we suspect extravagantly) stated to have amounted to £10,000. The door-money produced near £150, besides a great number of tickets at a guinea and a half each; and as the conqueror was to have the produce of the house, it is supposed that *Slack* got nearly £600.

Thus, in the short space of *fourteen minutes*, was the CHAMPION deprived of his laurels. The defeat proved his ruin. The Duke of Cumberland could never speak of this contest with any degree of temper, and turned his back on the beaten man. The legislature interfered, the Amphitheatre was closed, and Broughton never fought more. Previous to this battle, it is said he had grown plethoric; if so, it requires no great acumen to opine the cause of the sudden swelling which temporarily blinded him. Broughton was exceedingly dejected at the injurious suspicions of his royal patron. He retired into private life, and died January 8th,

1789, at his residence, in Walcot-place, Lambeth, at the mature age of eighty-five years. He lies buried in Lambeth churchyard.

## CHAPTER II.

SLACK—JEM STEVENS—BUCKHORSE.

SLACK by the fortunate triumph recorded at the close of the last chapter, was raised to the pinnacle of fistic fame, yet his victory proved the downfall of regular pugilism in the metropolis for a period of four years. Slack, who was a native of Bristol, was a man of considerable strength, much endurance, and determined courage, and was the grandfather of those stars of the ring (and belt) JEM BUCKHORN and his brother THOMAS.

We have already noted his defeat in 1750 by George Taylor, but in 1754, public prize-fighting being suppressed in the metropolis, Slack met one Pettit a Frenchman, at Harleston in Norfolk, for a subscription-purse. Pettit was a man of enormous strength, and the contest proved as singular a one as the annals of pugilism present. At first setting-to the Frenchman darted with amazing fury at Slack, and catching him by the throat, held him for half a minute tight against the rails of the stage, until he was well nigh strangled: with some difficulty, however, he released himself from this awkward situation. For the next ten minutes the Frenchman rushed in, hammering away at Slack, and driving him all over the stage with such fierce impetuosity, that all the spectators stood aghast: at length Slack closed in upon him with a one-two, and gave him three desperate falls. Nevertheless, during these rounds he twice canted Slack off the stage. Monsieur now seemed to get averse to trying for a throw, but running in on Slack, he seized him with both hands by the hams, by which he laid himself open to a "little-un or so," while Slack fell softly. After eighteen minutes fighting any odds were offered against Slack, who had been the favourite before the fight began. Slack now changed his tactics and followed the Frenchman up so close, that he had no opportunity of running in at him, but was compelled to stand up and fight: and by this he quickly turned the tide of battle, closed one of his eyes, and disfigured his face terribly. Pettit's wind now began to fail, while Slack was fast recovering his strength. Pettit once more got a little advantage, and threw Slack over the rails; but in going over, Slack put in a desperate blow under the ribs of the Frenchman, that made him cry *peccavi*. Slack was not long in repenting; but Monsieur was so panic-struck, that he bolted with all imaginable haste, never stopping to look behind him. It was the opinion of the spectators, that Pettit was full strong when he bolted. The battle lasted twenty-five minutes, perfectly ridiculous, and equally dreadful by turns. The Frenchman not returning to finish the contest, Slack was declared the conqueror, and drew the first ten guineas out of the box.

About a twelvemonth after this fight, one Cornelius Harris, a collier, from Bristol, challenged Slack for one hundred guineas. Harris proved himself a good bit of stuff, teased the champion a great deal, and disputed the ground manfully; but Slack's experience was too much for him, and, after a severe set-to for twenty minutes, Harris gave in.

Slack now laid by in peace for upwards of four years, till one Moreton had the temerity to call the champion out to the field of honour, for fifty pounds. Slack accepted the challenge with alacrity, and the fight came off at Acton Wells, on the 20th of October, 1759. Moreton showed himself a good man, and kept the game alive for thirty-five minutes, in a style of great excellence. Slack had his work to do; but ultimately was declared the victor.

Ten years had now elapsed since Slack had vanquished the renowned Broughton, and held the title of champion—but the honour was dazzling, and another hero put in his claim for the towering prize. Slack's fame was well established; and here royalty once more appeared on the pugilistic scene; for Broughton's old patron, the Duke of Cumberland, stepped forward and backed him for one hundred pounds against one Jem Stevens, whom the Duke of York took under his patronage. The Haymarket was the scene of action, and a stage was erected in the Tennis-court, James-street, and the day, the 17th of June, 1760, Slack entered the field with all the confidence of a veteran, and was acknowledged to have the advantage in the first part of the battle; but the nailer, with an arm like iron, received the ponderous blows of his antagonist on his left with ease, while with his right arm he so punished the champion's nob, that he knocked off the title—picked it up, and wore it. Thus fell the hitherto mighty Slack. This battle, in "Boxiana," is erroneously attributed to Bill Stevens, the Nailer, who beat Taplin and McGuire, in 1768 and 1769, and was subsequently defeated by Summers.

Slack now returned to his business as a butcher, and opened a shop near Covent-garden; and, being a public man, the curiosity of the people in going to see a great fighter, brought him considerable custom. Slack died in 1778.

## BUCKHORSE.

There was one pugilist of this period, whose name and portrait we rather introduce as a remarkable *lunus natura*, than for his merit or skill as an opponent of the "noble art" in its best sense. This individual was John Smith, more commonly known as Buckhorse, an exhibitor in numerous "battles royal" at the booths of Taylor and Broughton, as well as elsewhere.

"Buckhorse, whose real name is said to have been John Smith, first saw the light in the house of a sinner, in that part of London known by the

name of Lewkner's-lane—a place notorious in the extreme for the eccentricity of characters it contained: here the disciples of Bamfylde Moore Carew were to be found in crowds, and cadgers of all descriptions resorted to regale themselves upon the good things of this life, laughing at the credulity of the public in being so easily duped by their impositions; and here the juvenile prig was soon taught to become and adept in the profession, by taking out a handkerchief or a snuff-box, from the pocket of a coat covered with bells, without ringing any of them—here the finished thief roosted from the prying eyes of society, and laid plans for his future depredations."

It appears, then, that few places could boast of more originality of character than that from which Buckhorse sprang; and, from the variety of talents here displayed, there is little doubt he did not remain long a novice. As we have never been troubled with any account—to what good-natured personage he owed his origin, we cannot determine; but suffice to observe, that little Buckhorse and his mother were turned out upon the wide world long before he knew its slippery qualities, by the cruel publican, their landlord; which inhuman circumstance took place about the year 1720.

This freak of nature, it should seem, was indebted to his mother for what little instruction he received, the principal of which was an extraordinary volubility of speech; and from his early acquaintance with the streets he picked up the rest of his qualifications.

Buckhorse's composition, however rude and unsightly, was not without harmony; and although his fist might not appear musical to his antagonist by its potent touch, yet when applied to his own chin, was capable of producing a variety of popular tunes, to the astonishment of all those who heard and saw him, and by which peculiar trait he mostly subsisted, added to selling little switches for a halfpenny a-piece; his cry of which was so singular, that Shuter, the celebrated comedian, among his other imitations, was more than successful in his attempts of Buckhorse, and which was repeatedly called for a second time.

As a pugilist, Buckhorse ranked high for courage and strength among the boxers of his day, and displayed great muscular powers in the battles he contested.

There is something Hogarthian in the style of the portrait handed down to us, and it would seem from several contemporary writers that "Buckhorse" was a favourite, nay, almost a proverbial name for a remarkably ugly man. This singular being was in the habit of allowing himself to be knocked down by any person who might choose to do so, for a very trifling gratuity. In our next we shall devote a chapter to miscellaneous pugilism, as an introduction to TOM JOHNSON, the CHAMPION.

(To be continued in our next.)

## MOVING THE QUESTION.

NOTHING can be more erroneous than to suppose that finesse and deep policy are exclusively the property of a minister or political diplomatist, or that the admirable manner in which a minister will shift and wriggle, and ultimately emancipate himself from some crooked dilemma, by ingeniously starting fresh matter for debate and speculation; to suppose, we say, that such ability is not evinced in other grades of society is completely erroneous, as the following scene, taken, as painters say, on the spot, will sufficiently demonstrate:—

Boy. If you please, Mrs. Dooley, I've come from Mr. Smith for three shillings which you've owed him now these four months; and master says—

Mrs. D. God bless my soul, Tommy Green, is Mr. Smith your master? Why, how long have you lived with him?

Boy. Pretty nigh six weeks.

Mrs. D. You don't say so! Well, bless me, how you've grown, boy; and (turning him round) where have you been to get in such a mess; you're splashed up to the back-bone; and how's your dear mother?

Boy. She's very ill.

Mrs. D. You don't say so! Ill enough for a doctor? Who attends her?

Boy. Doctor Sarjent.

Mrs. D. Doctor Sarjent! You don't say so? Why, he shouldn't give physic to a cat of mine: he was the death of poor old Mrs. Leosemore, at the hardbake-shop opposite—he's the wrong sort for your mother. Run home directly, and tell her from me not to touch another drop of Doctor Sarjent's filth—run, boy, as hard as you can; the poor blessed creatur' may be just agoing to take her death draught—run, run.

With these hastily uttered exclamations Mrs. Dooley closed her door, and Tommy Green dutifully hastened to his mother to stay the dreadful effects of the doctor.

"But what about the three shillings due to Mr. Smith?" inquires the reader. Ah! don't you perceive there lay the diplomacy of Mrs. Dooley's ingenious moving of the question from the debt to the doctor? The debt remained, but Mrs. Dooley did not—having "gone away, not known where," upon the next application.

ASTONISHING "COOLNESS."—During the recent terrific conflagration near Greenwich, some firemen were actually observed seated in the midst of the blazing manufactory coolly mending their hose.

## THE CHIVALRY OF MODERN GAUL.

BY THE EDITOR OF "THE SPORTING REVIEW."

Gaming their nights: their mornings steeds employ—  
 Coursers as wooden as the horse of Troy.—*Editor's Translation.*

HAVE seen the aldermen of London essay equitation in a royal procession, eastward from Temple-bar—also Jack on the outside of a quadruped at Portdown-fair; but never anything in imitation of humanity bestrode pig's skin like Young France! It must be a source of great congratulation to Christendom that this matter is likely to be reformed. The court, as at present constituted, is not popular with "legitimacy," and the Tuilleries is a "tabooed" spot with the "*gens comme il faut*." The youthful nobility eschew the camp, as their sires the court; and with the aristocratic professions shut against them—holding it derogatory to be the courtier, or soldier, or statesman of the house of Orleans—nothing is left them but to "affect the shade," as the poet calls living remote from cities. It was but the other day that, returning from an investigation of the *Great Britain*, at Blackwall (the most uncomely barque that ever swam), I fell in with a peer of France, who embarked at Greenwich with a couple of colossal hounds he had picked up in the neighbourhood. These he was taking into *Touraine*, for the purpose of hunting the boars, and stags, and wolves, and so forth, as they came in his way. From him I learnt that woodcraft was fast advancing in popularity among his countrymen, and the turf making rapid strides. As he had been down to Lincolnshire and Melton to purchase hunters for his own stud, I look upon him as good authority touching the matter of sporting.

"Our men of condition," he said, "rarely go to Paris now; and what can you do in the country to kill time, unless you kill the wild beasts or the game? In the south, hunting is the rage; every landed proprietor turns his attention to it, and begins to breed both horses and dogs. Your foxhound blood crossed with our —," some indigenous race, of which I forget the name, "produces a breed suited peculiarly to the chase of the boar—an animal at three years old, when its tusks are perfect, as dangerous as a lion or tiger. During the present season, I have already lost thirty couples of hounds by the boars—ripped up as if by a charge of lancers. The English dog goes in upon them without any precaution, and, of course, gets the worst of it. The cross that I speak of is more careful; probably the instinct of the native cooling down its impetuosity. We never shoot now (that was a good symptom), whether wolf, or boar, or stag. The riding is very spirited; for after a ring or so, our boars go right away; and you must be near your hounds in our forests, or you lose them altogether, literally; for a hound left behind in them, is left for ever; the wolves soon make an end of him. To be sure, the fencing is easy; but the galloping, especially in cover, quite the reverse. I am indebted for the possession of the little brains I have, to my cap, which has so far preserved my skull whole." Not the least remarkable part of this conversation was the language in which the foreigner expressed himself. Except a very slight accent, and a thickness when the *r*, or other harsh consonant came athwart him, it would have been difficult to distinguish his parts of speech from those of a true Saxon.

I never see a Frenchman and a French horse without discovering another example of my favourite doctrine of compensation. John Bull is solemn and phlegmatic—his steed capers and kicks up his heels; with Jack Frenchman and his quadruped, it is the reverse; which gives the balance of equality. When you detect a Parisian *beau* on his native piece of Tunbridge ware, you are never astonished that he carries a pair of spurs at his heels as long as toasting-forks. Quite the contrary—your surprise is only that he does not substitute a red-hot poker for his riding-whip! Gallia is the land of gay cavaliers and grave cavalry.

When I die, should it be my fortune to sojourn for a space in purgatory, any "leg" that may have the luck to put up at the same half way house, won't feel altogether at his ease till I go on another stage. Not that the fraternity hate me: on the contrary, they look on me with good will—seeing that I'm candid, at all events. But there's an instinct that forbids our being comfortable when in *rapproch*, as the mesmerists call it, with an antagonist spirit. For this reason, should I overtake, when passing Apsey House, a member of the profession pursuing his way to Tattersall's, by the side of the Green-park railing, he is sure to look anxiously around

"Like one that on some lonesome road  
 Doth walk, with fear and dread,  
 And having once turned round, walks on  
 And turns no more his head,  
 Because he knows a fearful fiend  
 Doth close behind him tread."

On this principle was it—or without any principle—that "Leatherlungs, the leg" (who was teaching riding in France), espied me, as he was going on his way evidently rejoicing. Fascinated—as a bird-fancier might say—he reined up, and rode towards me on the *grand pas*.

"Good morrow to you, sir," he opened; and then halted, because, like all his tribe, he had misgivings of his reception.

"Good day," I answered. "Fine scenting weather—got your game afoot betimes, I see; at it early or late—industry must prosper."

"Only a lot from Green-street," he said confidentially; "half-fledged

*faneurs*, the spooniest brutes in creation, in the matter of horseflesh: don't know a chesnut-horse from a roasted chesnut. They are trying a few chargers I have for sale on commission."

"Since 'Ferdinand Count Fathom' was written," I observed, "we have turned the tables on our continental friends rather considerably. When the French 'Maccaroni' led the English fine gentlemen by the nose to the *faro* bank, or the *rouge-et-noir* table, the mysteries of Paris were at a premium; but now that we have inoculated him with the art and mystery of the odds, hedging, handicapping, and the like arcana and cabala of the turf—to say nothing of blind-hokey, and a few other passages of polite play, it's Lombard-street to Pennsylvania or May-fair against the Italian Boulevards."

"They've begun their rigs already for the next Derby," remarked Leatherlungs, as a commentary, probably, on my theory of sharp practice; "something is to be made of irresponsible nominations. That's to be the next move!"

I always eschew generalities with miscellaneous people, and therefore turned the conversation from the channel it was taking, and myself from the spring of it. "Your friends are anxious at your halt, by the way," I said. "To-night I'm engaged; but to-morrow night, if the simple flower, and the facility for moistening it, will serve your fastidiousness, by ten of the post meridian I shall be happy to see and hear you."

"Book'd, and no error," said the leg, in the vernacular of the "gent." "I'll be with you as safe as seven's the main. I'm not particular, but is there any difficulty about Roman punch in your hotel?"

(To be concluded in our next.)

**BOARD, AND LODGING EXTRAORDINARY.**—In a recent advertisement in a morning paper, headed "Grouse Shooting," a gentleman "renting some of the best moors in Scotland," notifies that he "wishes to meet with two or three guns to board and lodge in his house." We wish he may get the guns, and we hope they may pay their shot.

**THE CENTRIFUGAL RAILWAY.**—This ingenious mechanical contrivance is intended to illustrate the designs put forth in the *circulars* of some of the new railway projectors, which are by no means straightforward. The exhibition has been appropriately placed in Windmill-street, to indicate the necessity which exists for raising the wind in the first instance. Individuals entering this line may be done to a *turn* in an inconceivably short space of time. A *share* may be taken in the entertainment at the low price of one shilling.

**THE BELL OF THE BAZAAR.**—Sir Peter Laurie requests us to state that he is not the "Great Peter" intended for suspension in the tower of York Cathedral, and now exhibited at the Bazaar in Baker-street. A striking similarity, however, exists between the monster bell and the civic knight—both carry a very long tongue in a very empty head.

**WANTED—AN EXPLANATION.**—In the window of a shoemaker's shop in Holborn, the following mysterious inscription in large letters was lately appended to a pair of those ambiguous articles which are more than a shoe and less than a boot:—"MISS FITS CLARENCE—ONLY 6s. 6d."—Can anybody tell us what it means?

**NOVEL SYSTEM OF DOG-STEALING.**—(From a Correspondent.)—For several days past extensive robberies of valuable dogs have been committed in the Regent's and Hyde Parks, also Regent-street and Portland-place. It appears that, generally, two well-attired elderly females, dressed in handsome cloaks, walk in company in the interior of the parks, and are followed by two men having the appearance of mechanics, each carrying a market basket. When a lady passes who has a favourite dog running on the gravel-walks, it is picked up by one of the women and placed under her cloak, and though at the moment close to the person they have stolen the dog from, such is the respectable appearance of the females that no suspicion is attached to them. As soon as opportunity offers, they carry the prize to one of the men, who quickly walks off with the animal, which is kept until a handsome reward is offered.

A FEW CONSEQUENCES OF TAKING THE DUTY OFF GLASS.

After being very industrious in our inquiries on this important subject, we have much pleasure in being able to present our commercial and general readers with an accurate catalogue of the most conspicuous changes which have been effected by the alteration of the tax upon glass. They are as follows:—

1. Mr. Batty has been enabled to increase the number of "tumblers" on his establishment.
2. The authorities of Brighton have entered into arrangements for introducing several *pier*-glasses on their splendid jetty.
3. Some enterprising hat-manufacturers have undertaken to produce a novel description of cut-glass "castors."

There is, however, one improvement which unfortunately remains to be effected, namely, the reduction of the window-tax, which we earnestly recommend Sir Robert Peel to carry into operation as the most effectual means a philanthropist could adopt for relieving the "panes" of the people.

# The Sporting World

OR  
LIFE IN LONDON,  
& THE  
COUNTRY.

No. 5.]

FOR THE WEEK ENDING APRIL 19, 1845.

[THREE  
HALF-PENCE.]

JUSTICE DYOTT'S HOUSE, GEORGE-STREET, ST. GILES'S.

THE SCENE OF THE LATE APPALLING MURDER.

## A RAMBLE IN THE ROOKERY.

BY MILES'S BOY.

AGREEABLY to the promise made in our prospectus, that we would sketch "Life's" many-coloured scenes in Town as well as Country, Miles's Boy, this week, takes a ramble through the ruined regions of "The Rookery." How changed, how happily changed is much of this weltering, unsavoury dunghill of filth, misery, and crime, from its rank and fetid squalidity, but a few years since. The innovating hand of improvement has been indeed busy, and wretched alleys, plague-spreading closes, and human kennels, with filth-strewn pavements, have disappeared, to make way before long for broad avenues, fair dwellings, and level carriage-ways.

But to our task. From the time of Elizabeth the parish of St. Giles seems to have been colonised by the Irish, who nearly possessed themselves of it. Hence its titles of "Little Ireland," "The Holy Land," &c., and the name of "St. Giles's Greek," as applied to its slang. The St. Giles's of the present age, however, even when its "Rookery," and "Rat's Castle" were in their glory, formed but a portion of this ancient domain of cadgers, thieves, and prostitutes. Stacey-street, Lewkner's-lane, the Coal-yard, and Drury-lane itself, are continually spoken of under the title of "Little Sodom," in books published in the 18th century: a proof of the *morals* of the district. But we will eschew the antiquary and confine ourselves to the "Rookery" as known to the present generation, but now daily sinking among "the things that were."

"The Rookery" comprehended the whole of the back slums, from the

corner of Meux's brewhouse, to the site of the old "Maidenhead Inn." The pursuits of the inhabitants of this vicinity have been always of that mixed character which renders men equally willing to turn an honest penny on "the square," or find a silver spoon, "purwided" it falls in their way, and "no von is fly to the fake." That such pursuits have been handed down, a sort of heir-loom from father to son, in regular succession, in this neighbourhood, there can be little doubt. Some idea of the early depravity of the vicinity may be gathered from the following lyric of the time of Charles II.:-

"When on Newgate steps a kid I was found,  
All my learning I got at St. Giles's pound;  
Where the nut-hook they taught me to handle soon,  
And roar with the blades who laugh out with the moon!  
So 'twixt frolic and giggling,  
And boozing\* and niggling,†  
And priggig‡ and higgling,§  
O'er goose, fowl, or pig-ling,  
I toddle through life, with my Bet for my badge,  
And her ruffledum, puffedum, frizzledum, madge!

\* Drinking.

† Slowly abstracting articles from the bulk-heads, or projecting fronts of shops, which at that period were open.

‡ Thieving.

§ Cheapening.

But when prime summer comes, and the evenings are bright,  
And no one "to speak to" to make it all right;  
When danger and death track the crape and the mask,  
I sounce in the wine-house and stick to the flask.

When the road is no go,  
And purses come slow,  
And cash is so so,  
I depend on my Doe;

Who, a garden-stuff draper, trulls out on the cadge,  
With her ruffledum, puffedum, frizzledum, madge!

Your arm, courteous reader, and, at the same time, do us the favour to imagine we are standing directly opposite the spot where formerly frowned in darkened majesty the ancient gallows, the site of which is now occupied by an edifice dedicated to the "Crown," the gin-palace at the corner. Inclining a little to the left, we find ourselves at the Posts, in High-street, which still stand at the end of Lawrence-street; a small remaining specimen of Buckeridge-steet, to which it once formed the avenue. Pass by these barriers and you are in the heart of St. Giles's, surrounded by men and women, suffering nearly all the ills that flesh is heir to, occasionally quickened into the ferocity of madness by the stimulating potations which cheat its poor and wretched inhabitants into a momentary forgetfulness of their misery; yet doth mirth gleam through this misery, nor is their wretchedness unmixed with racy humour. A few yards further once stood the Hare and Hounds, whilom the hostelry of Joe Banks, "the stunner," who has now succeeded, by the good offices of the Lords of the Woods and Forests, to the "Caown," in Cranbourn-passage, where the ponderous Joe blows his regalia in regal state, "vice," as the Gazette says, "the duceen, superseded."

The city of the cadgers is indeed degenerated; with the secession of the Stunner its glory departed, and Ichabod is written on its fast-falling walls. In times of old its boundaries were lawless, like Alsatia, so graphically described by Scott in "The Fortunes of Nigel." It was a city of refuge for the desperate, the thief, and the cadger; it now scarcely affords a home for the latter class. The introduction of a police station in George-street, in what was the heart of this district, was the first severe blow to the lawless misrule of the classic ground. The operations of the Mendicity Society have naturally decreased the number of beggars in the metropolis. These and other multiplied causes have had the effect of reducing the population of St. Giles's; as well as altering for the better the character of its inhabitants. Workpeople employed in selling fruit and other things in the streets, and labourers in the markets, are the principal occupants of the tenements of the Rookery at present. This class, although a shade above them, mix with the cadgers in the elegant pastimes of dancing, singing, and getting drunk.

But Church-lane yet remains, a "sweet bit!" just left as a sample of the former whole, and let's step in. The evening wears on, and if you would look at the "last fading traces" of the once-famed Rookery, now's your time. "There, this is the turning, just above the house of the murdered woman, which heads this slight sketch. Take care, my good fellow, and keep your feet out of the plug-holes. Are you hungry? Come with me to Mother Conroy's cellar in Church-lane, where you may get supper, tobacco, lashings of beer, while you have money to pay for it, and a roaring boy to help it off more freely. Gently there! Take care! the stairs are rickety; and don't tread in the pail at the bottom."

"Good evening! Have you a bed, Mother Conroy?"

"No, your honour, but you'll get one in Rat's Castle; or maybe you would content yourself in my own stuffed chair by the fire, and your fri'nd make himself aisy on the settle, with my cloak for a coverlid. O, bathershin; don't sit on that chair. The leg's gone, and that husband of mine (devil's cure to him!) has been talking of *dootherin'* it these three year. Wait awhile now, till I empty the pail above stairs, and I'll engage you'll have elegant sitting accommodation in a jiffy." And, in the twinkling of an eye, the pail, disembodying of its contents, becomes the prop of one, certainly, in the present instance, not within the pale of society.

One of the most characteristic features of this memorable locality are the cellars; the chief of these subterranean apartments or caves was Dowling's, situate in Buckeridge-street, opposite the Hare and Hounds; where nightly were wont to congregate from forty to fifty Irish tailors, who carouse deeply in a description of small beer called *swanky*, rolling away the mists in their upper stories with reiterated pinches of brown rappee commixed with Scotch snuff. The plebeian debauch was kept up all night, or until leaden sleep overcomes the inhabitants, who lay sprawling in all directions; in this place a supper might be obtained for threehalfpence, consisting of a pennyworth of mahogany (pig's head, nearly resembling that wood in colour), cabbage, and soup. Opposite to Dowling's was a celebrated cavern called the Nunnery, in which females assembled. These are chiefly ladies of the *pave* of the lowest order. No male was permitted to enter. The place was full of beds, by no means of a costly description. And here it may be as well to describe the general order of couch patronised in the Rookery: it is of the turn-up genus, with room for two adults, at whose feet the younger children

are transversely laid; underneath the bed, children of a larger growth are deposited upon old rags, mats, &c.

In former times the Rookery was famous for affrays between the Irish of different provinces, and occasionally lives were lost in the contests; the new police has, however, put a stop to this order of diversion.

This way, courteous reader. We must progress through Church-lane into Dyott-street, by Ivy-lane, and taking the first on the left into Rat's Castle, alike the sanctum sanctorum of proud poverty and vicious debasement, where each casual companion of the shabby-gentle order is afraid to become an intimate of a brother in distress, lest by the turn of fortune's fickle wheel he should again be placed in a situation in which it would be painful to his feelings to be recognised by his fellows in mishap.

In this colony of the poor we shall find, for the sum of threepence per night per head, the accommodation of a flock-bed, covering, a good fire, and a frying-pan, in which at times one mutton chop is pursued by a hundred hungry eyes and a thousand unavailing wishes. Is this wonderful, when the greater part of the company by whom we find ourselves surrounded have been wandering through the streets by day, some in quest of labour, others pursuing the uncertain calling of mendicancy, while others of the more ancient devotees to the Cytherean goddess, grown too old to afford delight, are cast aside to beg a few halfpence for the gin necessary to allay the inward gnawings of their nature, and the bed which enables them to sleep off the painful sense of hunger? The sense of degradation has long been dead within them; still the snarling waspishness with which they repel a wanton or unprovoked observation on their forlorn and miserable condition, will tell the philosophic mind of the workings of former pride and present abasement.

In the Rookery formerly resided a species of malefactor denominated a *router*. This order of personage was, in the main, a seedy, broken-down gentleman, of good classical education, of the family of those numerous unfortunate people who, in attic slang, are the victims of circumstances over which they have no control. These routers, who have greatly become thinned by transportation, were wont to forge the names of parsons, magistrates, churchwardens, and overseers, in order to enable impostors to be passed from one parish to another. This procedure required great skill and address, involving artful disguises. The women would change their bonnets and dresses a dozen times a day, and with the same identical borrowed habes, cheat some twelve parishes per diem. The perpetrators of these frauds would frequently clear 2*l.* a day in the form of pass-money, at the rate of so much a mile. The evil had so greatly increased, that the vigilance of the police was brought into active operation, so that this predatory accomplishment is well nigh extinct. Another order of professional men in the Holy Land is also vastly on the wane—we allude to the scribe, the letter writer, petition composer, will drawer, and make-himself-generally-useful sort of personage with his pen. Yes, these are nearly gone; of the few that remain, however, Captain Roeb may be said to be the most eminent. The ballad composers and last dying speech fabricators, are also few and far between. This order of literary biped confine themselves now chiefly to composing advertisements for underselling tailors and blacking-makers, writers of sorry stanzas, for a sorry price—the Miltonian doom.

Marriage, in the Rookery, is a ceremonial not often resorted to; constancy however prevails to an admirable extent; it will however happen, in the best regulated dynasties, that at times mutual distrusts, family feuds, and out-lived-my-liking-ism will occur; in such cases, in the locale in question, fierce warfare is succeeded by pacific recognition over a glass of wrath-dispelling gin. Eternal constancy in these counterfeiters of marriage is, however, secured by the symbol of a tobacco-pipe, broken over the heads of allied parties into numberless pieces, and who are to remain inexorably indissoluble until the fractured parts are conjoined.

Look at that being, his eyes fixed on us with a brutal stare of intoxication. He has been a gentleman, till, disgusted by his habits, his friends now allow him a weekly stipend, which he spends in liquor. His neighbour is of that devious character of which nothing can be safely affirmed, sometimes getting a living by street traffic, and at others picking up a "fogle." The three scavengers at the table, feasting on liver and bacon, look as proudly on the surrounding supperless as if they were the Roman triumvirate themselves; while the chimney-sweep at the further end, who dares not climb, and is, withal, too poor to buy "a machine," sits in melancholy contrast, his heart broken by "act of parliament." But we will hasten from the purlieu of Church-lane and Rat's-castle, and passing into Dyott-street, breathe—thanks to the improvements—a purer atmosphere. Here is indeed a glorious opening—and see the sun shines gaily on the ruins, the fragments of levelled walls, and rising masonry of new and handsome buildings at a short distance.

But stay, here is a large house yet standing immediately on our right, of some pretensions to bygone respectability. True, that is—THE HOUSE OF MURDER! That house gave name to Dyott-street (now George-street), and is called Dyott House.

It was the residence of, and is supposed to have been built by, Richard Dyott, Esq., before the year 1665. This gentleman served as overseer of the parish in the above year, and was also chosen vestryman, 1699. He was of the firm of Whetstone, Dyott, and Pargiter; and the partners have all transmitted their names to posterity; viz., Whetstone-park, and

\* Rob.

Pargiter's-rents, running out of the same into Holborn. Dyott-house is now condemned to a common fate with the rest of this doomed neighbourhood. The name of the street has long since disappeared; yet, before the last memorial of its founder shall have been sacrificed, we earnestly recommend our readers to take a trip thither, were it only to view the solid, carved, and cumbersome oaken staircase, whose twisted balustrades will give him some idea of the taste of by-gone times. The memento of former art he will find on the staircase, in the medallion of Miss Dyott, together with the wreath of carved flowers by which it is surrounded, may furnish matter for reflection or speculation; while the elaborately carved mantelpieces, and profusely ornamented ceilings, may afford a silent lesson on the riches of its founder. It was in the back parlour of the ground-floor of the right hand division of this house that the unfortunate woman was so barbarously assassinated.

This house, as well as others in the neighbourhood, belongs to a person of the name of Grout, who formerly made up from 500 to 600 beds nightly. Grout is very wealthy, having derived fortunes from his ancestors, who followed the same line of business as himself. This man is the king of lodging-house keepers, swaying his sceptre twenty miles round the metropolis; the chief seats of his enterprise are Romford, Brentford, the Mint, Whitechapel, and the Rookery. Grout is the owner of innumerable houses, and cannot be worth less than 100,000; his habits are parsimonious, and his equipage particularly unaristocratic. All the lodging-houses are provided, as we have before said, with a fire and a gridiron. The supper-houses are very numerous; the charges in which are uniform, viz. threepence. The viands consist of cabbage, pig's head, soup, and red-herrings; and, in season, a peculiar sort of sea-weed eaten raw, but which when cleaned and properly cooked, is a luxury.

At the top of George-street (formerly Dyott-street) stood till lately a substantial sort of house, of modern appearance, formerly kept by a Mrs. Cummings, vulgarly called Mother Cummings. This mansion is celebrated for the quality of the persons who in days of yore visited it. It was the theatre of innumerable freaks, performed not unfrequently by those loose-fish, George the Fourth and Colonel Hanger, who have given it as deathless a name as the hostelry in Wapping once had, when the merry Monarch Charles II. and the voluptuous Rochester made its walls to vibrate with their carousals. Report ascribes the cost of the rebuilding of the house we discourse of to the munificence of George the Fourth. It is now, and has been for a century at least, a house of ill-fame.

We retraced our steps southward, leaving George-street, the left-hand side of which does not date further back than some twenty years, while on its right palatial residences for commerce are already planned or rising. Crossing High-street we entered Endell-street (late Belton-street) and sauntered along, musing on mundane mutations, when we spied in a window a written bill bearing these words:—

"QUEEN ANNE'S BATHS MAY BE SEEN WITHIN,  
CHARGE THREEPENCE."

Now as Miles's Boy is, in his way, a bit of an antiquary, he entered a dirty boarded passage, and having groped to the farther end, came upon a house-carpenter sawing at a plank, "Where are these baths?" asked we. "Knock three times at that there door," replied he, "and the old 'oman 'ill show 'em yer." How are the mighty fallen, thought we; "here is Miles's Boy about to penetrate the sanctum where the good old Tory Queen unveiled her charms, attended by the intriguing Abigail Hill, the Brydges, and the imperious Sarah Churchill, and a bread-and-cheese carpenter desires him to 'ax an old 'oman' the whereabouts! Thrice

AN INTERIOR IN THE ROOKERY.

did we knock at a paintless door, and were quickly ushered, having deposited threepence in her withered palm, down a dark, steep, flight of rickety stairs, into a small, but lofty bathing-room, the basin of which was paved with tessellated marble, and the walls neatly inlaid in the Dutch taste of William the Third's time, with those highly-glazed blue-and-white tiles representing scripture subjects, from which the great Dr. Watts first received his religious bias. "The water's gone away, sir, since they sunk the new sewer across the street," said the decayed priestess of this deserted temple of Hygeia; "but though the bath's empty, there's some in the pump; it's reckoned very wonderful water, sir, for—." We spare the reader the catalogue of ailments, for which Queen Anne, of scrofulous memory, visited and made celebrated this spot. Everything hereabouts seems for a century past to have been progressing towards dirt, disease, filthiness, and neglect, and, the tide having now turned, all seems to be losing the picturesque irregularity of the antique, for the spruce smartness of modern improvement. Let us hope, as the habitations improve, a corresponding advance may be made in the physical as well as moral condition of the denizens of St. Giles's.

## CRICKET.

### HINTS TO CRICKETERS.

BY NED RUE.

THE season for this manly and truly healthful game being close at hand, the following hints from an old admirer and follower of the sport may not be ill-timed or unnecessary, especially when we consider that during the last season or two many thousands have joined the ranks, and cannot, of course, be expected to be so *au fait* in the minutiae of the game, as those who have had more experience, and are, as it were, "to the manner born."

It is now high time that committees, secretaries, and other gentlemen who are entrusted with the active management of clubs, should overhaul the contents of their club-boxes, and see that everything is in order for the ensuing campaign; that all sprung handles have been replaced, and that stumps and balls, both for practice and matches, are in serviceable order. Let not the four-rod measuring chain, or the frame, now in common use for pitching wickets, escape their scrutiny, and, in particular, let them see that all the club-bats are in serviceable order; for it too often happens that at the close of a season they are hurriedly put by, without any scrutiny as to their disabled or inefficient state; and being general property, they are not so well attended to as private bats. Care should be taken that the handle has not shrunk from over dryness; in which case they ought by all means to be re-strung, or they will not offer a comfortable, or even secure hold for the hand, and must eventually unwind. This is so trifling an operation in the lathe, and so inexpensive, being accomplished in about three minutes, that there can be no reasonable excuse for its omission. Another important point is to see that all bats needing it be well hammered, and brought to a good face, for nothing adds more to the wear, appearance, and utility of a bat, than a frequent and well applied beating, which, doubt not, in skillful hands, it will return threefold on the ball.

All young players should look well to their spikes; see that the rivets have not given; and if the points be somewhat blunt, seek the aid of a good rough file. Be careful also to cleanse them from the green mould and damp which they may have accumulated in their winter's seclusion, and get them in order for active service. Look also to your Guernsey shirts, jackets, and flannel continuations. Let them not lie in your box (where carelessly thrown at the close of last season) until you again don them on your first practice-day; but as you would eschew rheumatism and lumbago, hand them over at once to the supervision of those who honour you by looking after your necessities and comforts—your health and happiness. A prosperous season, and health to enjoy it, to all lovers of cricket. We may probably throw out a few more useful hints in our next.

**MALICIOUS REPORT.**—A report has been circulated, that the Irish members are absenting themselves from Parliament to evade the Income Tax. A gentleman, who sends us his name, declares this report to be a shameful calumny. He assures us that the Income Tax would be the last thing in the world to trouble an Irish member.

**A THOROUGH-BRED JOCKEY.**—At Chester races, for the Maiden Plate, some years since, the horses had not run the second mile before one of the jockeys, named William Peert, who rode the Duke of Hamilton's colt, was thrown into the most embarrassing and dangerous situation, by the saddle slipping from under him. In this dilemma, the poor fellow, anxious to win, his feet having quitted the stirrups, actually supported the saddle with one hand for more than two miles, and in this perilous state won the heat. His exertions were rewarded by a liberal subscription purse.

**THE SHARE MARKET.**—Large investments in Bath buns were made by several young gentlemen at Wallview Academy, Camberwell, on last Monday morning. Shares were at a high premium in the afternoon, but holders did not appear disposed to meet the demand. In the agricultural districts ploughshares are generally heavy.

## GLANCE AT THE LATE SHOOTING SEASON, WITH A FEW WORDS ON THE GAME LAWS.

BY DETONATOR.

HE season 1844-5 has proved an unusually good one for birds: the sport has been excellent from one end of "Merrie England" to the other, and in some favoured counties extraordinary.

Of pheasants the show has been scanty enough, and in some localities they have fallen far short of the average number. The long drought must answer for this. In the north-eastern corner of Devonshire, where I was rusticated, we had not a tea-cup full of rain from the 19th of March to the end of August! This lack of indispensable moisture was felt in more counties than one; for an old and valued friend, the owner of some of the best-stocked preserves in Berkshire, told me the other day, that out of every nest of eleven or more eggs not more than five or six birds were hatched: the long-continued heat and protracted parching weather dried and hardened the shell so effectually that the young ones, though perfectly formed and arrived at maturity (which fact was subsequently ascertained on breaking the eggs), had not strength sufficient to chip their way out. An almost irreparable loss has been the consequence, for he is *minus* several hundred birds.

The manor over which I had the privilege of shooting is hemmed in on all sides by several distinct properties, so that it is a toss-up which of the owners gets the greater portion of game on his land. Luck has some share in the distribution; and as the seasons vary, the several localities will hold, each in their turn, a preponderating quantity. For instance: during the commencement of the season the low and swampy lands carried the day; and as the coverts and coppices I had permission to beat unfortunately were on the high and hilly grounds, the pheasants betook themselves to the lowlands, where the rills afforded them that which was denied them in the uplands. My sum total of long tails is, therefore, insignificant; but I should still, in spite of the dry season, have bagged a respectable number, had it not been for the depredations of the lawless night-hunters who infest this part of the country. These fellows are by many degrees more destructive than your regular poacher; for, in addition to snares, pits, fumigation, air-guns, and cross-bows, they have confederates placed at the gates of every field, where nets are so appended as to catch every hare within it, while, with a clever and cunning furcher trained to the business, poor pussy is driven to its toil. What chance has the shooter in a country so devastated? It is to be hoped that some revision and modification of the Game-Laws as at present constituted will occupy the serious attention of Parliament during the present session. We daily read of the most brutal and savage outrages having been committed on the persons of keepers, and murders of the most revolting nature are of nightly occurrence.

The temptation held out to the idle and dissolute as well as lazy vagabonds of irredeemably bad character by the unrestricted sale of game of every description is the root of all the evil, and until some stringent regulations are adopted, and carried into effect with the utmost severity, and heavy punishment visited on the offenders indiscriminately, blood must continue to be shed. If such powerful and wealthy landholders as his grace of Buckingham would grant a little more indulgence to their tenants in the way of affording them a few days shooting occasionally; and were a greater proportion of the thousands of head of game slaughtered on their estates distributed with a less sparing hand amongst the smaller farmers and higher class of labourers, much of the existing mischief would be averted. The farmers complain, and with a just show of reason, of the ravages committed by the game of the landlord: but such is human nature, that if the tenants were themselves permitted occasionally to knock over for their own amusement, as well as profit, the furred and feathered pilferers of their corn, I will be sworn that not a murmur would be heard. It is, I have reason to know, the worst policy on the part of an owner of well-stocked preserves to be too chary of his game whether living or dead; and I would exunge from every lease granted on an estate by the proprietor to his tenant that selfish clause (nine times out of ten inserted in the covenant) which precludes the latter from carrying a gun over the very land he pays for and cultivates. Such a proceeding savours too much of exclusiveness, and is as offensive to the honest English yeoman himself as it is degrading to the highly respectable class of which he is a member. The yeomanry form the connecting link of the chain which should bind the wealthy landlord to the labourers who till his fertile acres, and if this connecting link be severed by any impolitic or oppressive measure, disunion as well as disunion must be the inevitable result. As an old and enthusiastic sportsman, I wish to see the Game-Laws established on a more solid and judicious foundation: for the sake of humanity I devoutly trust that this will be done; and if re-modelled—which they must be—I most unfeignedly trust that they may be so framed as to confer a benefit upon all classes of the community. So long as the lawless depredator finds a ready market for his ill-gotten booty, so long will poaching be practised: for it does not require the aid of a microscope to be convinced, on inspecting the game exposed to view in the numerous dealers' shops which abound in almost every street of the metropolis, that two-thirds of the pheasants, hares, rabbits, and partridges have never been shot. The late atrocious

and murderous attack on the keepers of Lord Coventry in his preserves at Croomer Hill, it is to be hoped, from the fatal result, will attract the attention of Government; and that member of the house will deserve the thanks of every true-hearted sportsman who may bring this important subject before Parliament. At the inquest held on the bodies of the victims sacrificed in the defence of their noble employer's property, the jury, in pronouncing their verdict, accompanied it by the following observations, which are deserving the consideration of all reasonable men:—here is their appendix, and it should be printed in letters of gold:—*"That the jury cannot but deplore the continuance of laws so immoral in their tendency—so fruitful in crime—and so destructive to human life as the Game-Laws have proved, after long experience, throughout the length and breadth of the country, and they strongly recommend their abrogation."*—Nothing can more emphatically show the sense entertained by the community at large of the existing evil: and as this respectable body of gentlemen have thus fearlessly expressed their sentiments, it is to be inferred that they conveyed the opinions of the inhabitants of the county where this lamentable occurrence took place.

The injudicious course pursued in Buckinghamshire has brought other landlords in the neighbouring counties into "*mauvaise odeur*;" and symptoms of insubordination have lately been exhibited on more than one estate. Some few of the old country gentlemen, however, have, by their liberality and courteous bearing, established a friendly footing between landlord and tenant; and one of these rare specimens of British growth, an "old English squire," whom it is my greatest pride to call my friend, and who is beloved and respected from one end of his county to the other, has not only escaped the slightest manifestation of ill-feeling on the part of his tenantry towards himself, but has received their cordial co-operation in suppressing all marauders of game in general, and night-poachers in particular. This is as it should be; but the good-will thus evinced so unequivocally is the result of liberality in the distribution of the squire's game, and maintaining an uninterrupted and friendly intercourse with the respectable yeomen renting under him. Not very long ago, and when dissatisfaction was rife in that part of the country, a meeting of all the principal landed proprietors, as well as their tenants and the farmers of the neighbourhood, was held, to take into consideration the causes giving rise to the discontent, as well as to discuss the expediency of framing a memorial praying for an alteration in the existing Game-Laws. This influential meeting ended, as all meetings in England invariably do, in a dinner. Nothing can be done—at least no country-business transacted—without eating and drinking. After dinner all the pith of the subject-matter is canvassed, and more real truth elicited over the bottle than can be extracted from "John Bull" during a whole morning's speechifying when his stomach is empty. The party met at five o'clock—punished the fare—talked of the object of the meeting—drank their wine—and as the glass circulated, anecdote took the place of dry discussion. Many a one was related, and some few cases were cited which would have led to the belief that distress and starving families drove the offenders to the commission of an indefensible crime.

Far be it from me to condemn *en masse* as irreclaimable every unfortunate man who is tempted, or rather driven by misfortune and the neglect and oppression of parochial authorities, to unlawful pursuits. I know of more than one reformed and repentant offender, who fulfil with strictness and probity the duties of their present callings; but it cannot be denied that the very outcasts of society, and the idlest and most dissolute vagabonds let loose from our gaols, are to be numbered amongst the land depredators who carry on this nefarious traffic. To show that I pin some faith on a fellow who evinces a sincere wish to turn from the evil path and shake off bad habits, I would to-morrow, if in want of a gamekeeper, give such a "black sheep" a trial, upon the old principle of setting a thief to catch a thief; for experience and observation have convinced me that a *really reformed* poacher is the very best preserver of game that the owner of a well-stocked manor can hope to find. Who, let me ask, so cognizant of the dodges practised by the nightly marauder and the snarer? Who knows so well where to look for "gins" and "single-bows"? Who, in short, but the man who by practice has made himself master of the "ways and means" of poachers can exercise the strategic requisite to counteract and render void the manoeuvres called into operation to destroy the game he is appointed to guard and cherish for his employer's benefit and amusement?

As I never, I hope, advance an opinion without some show of reason, I have only to state that my old and valued friend "The Squire" to whom I have alluded has at this moment in his service, as "head-keeper," a *ci-devant* poacher, who was not only the most notorious craftsman that ever thinned a covert or covert, but the most cunning and clever "workman" that ever wired a pheasant, set a "gin," or snared a hare. He was twice tried at the assizes held in the county town, and by a miracle escaped being sent across the "herring-pond," as the "cognoscenti" in such matters term it. Whether it was gratitude for his narrow escape, or the dread of an eternal separation from his wife and children, I am not prepared to say; but from the hour of his last acquittal he became an altered man. But how was he to obtain a respectable situation with a tainted name and a blasted character? He sought in vain, during many months of severe probation for employment. At last, a good Samaritan, with whom I have the pleasure of being acquainted, and who is ever the foremost in

the performance of kind and charitable acts, heard of the poor fellow's destitute situation: he had known him for many years—long before he was driven by distress to earn the bread of dishonesty. This man had borne an irreproachable character prior to the cruel reverses which befel him, and had striven to bring up his family respectably: he contended with pinching poverty, misery, and privation until human forbearance could hold out no longer. He turned poacher, and narrowly escaped a dreadful doom. The kind-hearted gentleman of whom I have made mention, having heard that "The Squire," with whom he was on terms of great intimacy, was in want of a trust-worthy head-keeper, waited upon him, and, strange to say, not only recommended this celebrated character, but interceded for him in the strongest manner, backing his earnest solicitations by an assurance that he would prove an honest, zealous, and faithful servant; and the humane pleader went the length of answering for his integrity. Many will think this going too far, and that the intercessor ran no inconsiderable risk in recommending so notorious an offender. Be this as it may, the conviction of the man's repentance and reformation was so strong that it overpowered the caution and reserve which the generality of persons under similar circumstances would doubtless have exercised. To cut a long story short, the rhetoric of my benevolent acquaintance prevailed: my old friend "The Squire" banished all scruples from his mind—engaged the ex-poacher at a liberal salary—gave him a neat little lodge as a residence for himself and his family on the outskirts of his beautiful park; and so satisfied is he now with his bargain, that he would not part with his keeper for double the value of his estate—and that's no trifle. A better, more conscientious, honest, grateful, and faithful servant never served a good master. The squire and his keeper have been together now for upwards of seven years; and in proof of my assertion that old poachers make the best guardians of game, I have only to state that in less than three years from the time this excellent fellow's former peccadilloes were overlooked, and a place of trust conferred upon him, the squire's preserves were swarming with game of every description, where previously but a few head were found: his number of pheasants was trebled at least; and now there is more game on the estate than ever was remembered by that very respectable and frequently quoted individual, "the oldest inhabitant."

It will be seen, therefore, that amongst the decried race of poachers some honesty is to be found; and I have no doubt but many of the fraternity would reform had they the opportunity. In the instance I have narrated it was afforded to a fallen creature, and with the happiest result.

I have given an example of a noted poacher having proved himself to be an honest trustworthy keeper. Custom exacts that we should be scrupulously particular in our inquiries as to the character of all servants. A timid old lady, for instance, who keeps her carriage, sets her heart upon having a sober coachman: a teetotaler might suit her; but, as far as I am concerned, I would rather hire a Jehu who had a *hard head*, and could drink two gallons of strong beer without winking. Your sober fellows may perchance get a drop too much sometimes, and be taken "unawares," as they call it, and then go to the panels of your carriage and the knees of not limbs of your horses! to say nothing of the jeopardy your own neck is in as the sober gentleman whisks you round the corners on your retreating home from the opera: so that, in hiring a coachman (as a connexion of mine, a distinguished general officer, and an "old soldier" of course, invariably does), the question should be, not "How little do you drink?" but "How much double X can you stand?"

The end of '44 and commencement of '45 gave promise of plenty of wild-fowl shooting. We have had several flights of swans, ducks, and teal up the valley of the Axe, and the river was lined during the frosts by shooters of high and low degree, night and morning. The countrymen did great execution while the fun lasted—blazed away at all distances, and, with the exception of the occasional loss of a finger or an eye by the explosion of their rusty old fowling-pieces, and putting the shot in before the powder, they have every reason to be satisfied, for they filled their game-bags as well as the bellies of their wives and families. As I have no particular affection for this kind of popping, and prefer walking in search of my game to standing still by the side of a frozen river when the thermometer is on its demon towards zero, I left the ducks, geese, and hoopers to their fate, and betook myself to the snipe bogs, where I had abundance of sport: the longbills were plentiful, and as I prefer this kind of shooting to any other, my time has passed pleasantly enough since the frost set in. Woodcocks arrived early: before the end of September several were killed: amongst the luckiest of our Devonshire sportsmen were, Mr. Cohan, the well-known owner of the celebrated pack of fox-hounds, and the Rev. Mr. Mitchell, of Colleigh—the former having killed 18½ couples out of 23 shots, and the latter 11 or 12 couple a few days afterwards.—*The Sporting Magazine*.

**A BUTCHER REWARDED.**—The French papers tell us that Queen Victoria has sent, through our ambassador in Paris, a handsome gold snuff-box, and a letter to the French butcher, M. Rolland, thanking him for the present *barf gras*! After him, it would not surprise us if even some of our English poets, in the hope of royal reward, turned butchers.—*Punch*.

**BALLAST.**—There is a man in Alnwick so tall and slim, that he is obliged to wear lead in his boots for fear of capsizing.

## AN ODE-LET TO MASTER IZAAK WALTON.

BY JOHN HAMILTON.

"Faulstich as thy Mac."—*Pere*.

Oh! pleasant are the green banks of the Lea—  
And pleasant are its waters, silver sweet;  
It thirsteth me, on May-day morn, to be  
Clad in an angler's simple garments meet—  
Treading with gentle Izaak's spirit—there  
By the pike's hollow lair;  
And near the shallow where the minnow twinkles  
His little tail, and wrinkles  
The restless waters—and beside the place  
Where darts the dace!

How clear the sun is shining in the sky!  
How innocent the silent meadows lie!  
How freshly comes the miller from his mill,  
And looks about at will!  
The water glideth with a sleepy sound,  
O'er coiling despolets, and by grassy ground;  
And busy fish rise up to watch who be  
So early at the Lea;  
Then leave the surface, amid silvery rings,  
Like water-sprites on wings!

Good Master Walton! What a heart was thine!  
(Simplicity knelt at it like a shrine!)  
How well thy fisher-muse could cast the line!  
How daintily she threw  
Her song across the dew!

When the soft low came from the distant kine.  
And when, in comely inn, on Amwell hill,  
A pilgrim from the stream, thou sattest still,  
Taking a dream of quiet at thy mill,  
Over the soft mist of a silent pipe.  
On old man's nothings contemplation-ripe—  
How would'st thy heart gladden, when Madge drew nigh!  
The stainless wench that never knew a sigh!—  
But knew a song, and sang it at thy call—  
A grass-green pastoral!

The cold Lea missest thee—and seemeth now  
To flow with memory's wrinkles on its brow;  
The steep of Tottenham feels thine antique loss,  
And sadness gloometh upon Waltham's cross.  
The pike rush boldly by—  
Thou art not nigh!

Large yellow herbal at the bottom lie,  
And gaze upon the bait without a sigh!  
The armed perch starts its red fin—and cares  
Nought for the minnow, or the brandling snarls;  
Sport comes not with the day;  
Thou art away!

And we, poor things, with landing-net, and line,  
And rod, and bait, but prowl, and poke, and pine.  
How; ('tis beneath me, and beneath the joys  
Of a true angler—prone to be envy free!)

How I do envy those two tiny boys,  
Frankt up with hazel rod and corduroys,  
Who stealing all along the grassy ledge,  
Are simple fishers of the lazy Lea!  
I am not fit to seek this quiet sedge—  
The natural Walton faileth all in me!  
I shy the stranger, and the idler!—I!—  
I court to see the gazer pass me by!

I shun to bait  
When passing labourers wait!  
I long to cross and find some friendly gate,  
Or hedge.  
I pause—and fret—and drain my leathern cup,  
And put my tackle up!  
How is't that all thy simple arts and joys  
Descend upon these boys?  
Do—make me, Walton, like the meek and mild—  
Pure as a man, and happy as a child.

**A POPULAR DESIRE.**—It is an actual fact that the Government has sent out a ship called "*The Graham*" to Sydney. "*The Graham*" carries Letters. Of course they will open themselves on the way. Every well-constituted mind would wish not only that this, but that other *Grahams* should go to Sydney—and the longer they stayed the better.

**INSTANTANEOUS REMEDY.**—A new machine has been exhibited at the Polytechnic Institution, called "*The Fire Annihilator*," which, it is described, will extinguish the fiercest fire immediately. The machine, we have been told, is very simple, it being nothing more than a coalscuttle filled with Talacre coal.

## CORRESPONDENTS.

OPODELDOC.—We give the recipe promised in No. 3:—

*Liquid opodeldoc; or, soap liniment.*—Soft soap, 4 oz.; water 8 oz.; mix. Then add one pint of rectified spirit of wine, in which there has been previously dissolved camphor 2 oz.; oil of rosemary, 1 oz. Of course these are only given for the proportions, you can make a smaller quantity if you like. The most popular is that known as

*Steers' opodeldoc.*—Hard soap ... 1 oz.  
Spirit of wine ... 8 oz.  
Camphor ... ½ oz.  
Oil of rosemary and oil  
of lavender ... 2 dr. each.  
Spirit of ammonia ... 4 oz.

Digest in a moderate heat; cutting the soap into thin shavings.

A COCKNEY.—A "stiff country" means having a heavy soil, or much enclosed; and therefore difficult to ride over or pass through.

CHEETHAM, Manchester.—Jack Carter died in your town in 1844; couldn't any one down there tell you the particulars?

BILLY BUTTON, Cheam.—Barney Aaron is yet living. The stuff you have been reading called an "Anatomy of Pugilism," is a miserable, dastardly hash-up of lies, libels, scandal, mis-statements, and cowardly and ignorant misrepresentations—not worth the space of refuting. The "Star of the East" as he was once called, was beaten by Arthur Mathewson, of Birmingham, (who died in 1840), on June 21, 1824: the fight lasted an hour and ten minutes, and 58 rounds.

WHIST.—Can a card be withdrawn after it is once played to prevent a revoke, before the trick is turned, the card being already covered?—Yes; but your adversary can call it.

RING.—Caunt's height is 6 feet 2½ inches. He was beaten by Nick Ward, inasmuch as bets go with the battle-money: but to call such a curriish exhibition as brother Nick's *fight* is absurd. Caunt, in the conventional sense of the term, was about as much beaten by Nick Ward as by his last child.

CURIOUS CHARLEY.—It was an ancient custom to gallop horses on St. Stephen's Day, Dec. 26, until they perspired, and then bleed them, to prevent their having any disorders during the ensuing year. This practice is supposed to have been introduced by the Danes. Blessings were also implored upon pastures.

REBUS.—Hunton, the Quaker linendraper, who was executed, was an acquaintance and business connexion (we cannot state whether he was a friend) of the miserable wretch who met his deserved fate at Aylesbury. Three men were executed at the same time as Hunton—namely, Daniel Mahoney, John Abbott, and John James.

R. B.—Your horses are not worth any price—take what you can get for Pam; and as to buying Old England—pshaw! his chance for the Derby isn't worth an old razor.

M. S.—Leeds.—We feel grateful for your good wishes; but really you are one of the persons typified in the old song of "Gaffer Grist and his son, and their little jackass." We have begun a *History of Pugilism*, and in regular succession shall give a detailed memoir of every eminent pugilist. Our history will not be a mere catalogue of names; which, however useful as a book of reference, is no more readable than Johnson's Dictionary; and that, though very serviceable, is as the bo'sen who had spelt it through said, "D—d dry reading." Joking apart, M. S., upon second thoughts, will see that his complaint is unreasonable, and that with many tastes to cater for, we must be allowed to be best judges of what is the just proportion of space we can devote to each. Perhaps M. S. will be surprised to hear that we have just counted six letters, each complaining of the *prominence* given to the very subject which he so much admires. He will therefore see that his strictures arise from not having been fully informed upon the subject on he writes, and losing sight of the tastes of others in his own. A mere list of fights (without remarks) would occupy about fifty pages of this journal in close type.

TOUCHSTONE, Manchester.—We shall give the cups and plates of the principal races for 1845, as stated in our prospectus. Those of 1844 would not be worth engraving now, as they have lost their novelty.

YOUNG PISCATOR, Manchester.—Thanks for your communication. The flies—which are suitable for May, and therefore will keep a while—are in the hands of our engraver; as also are the ROACH and the DACE, with which our correspondent's letter shall appear.

E. H., Dublin.—You may obtain the SPORTING WORLD, by ordering it, or upon application to Mr. Clancy, 8, Bedford-row, Dublin.

A YOUNG ANGLER.—We will make an inquiry, and answer you in our next number.

## OUR WEEKLY CALENDAR.]

AN EPHEMERIS IN JEST AND EARNEST.

SUNDAY, April 13.—THIRD SUNDAY AFTER EASTER.

GARDENER'S CALENDAR.—Sow whatever was omitted last month, and plant out such of the pot-herbs as are ready for that purpose. Continue to sow and plant out rhubarb, artichokes, asparagus, nasturtiums, sea-kale, Dutch turnips, German greens, and small saladings. Earth up peas, tie up lettuces, and in very dry weather water seedling beds. Finish the grafting of fruit trees, and train and clean walks and edgings. Sow annuals, biennials, and perennials. Plant evergreens, and propagate by cutting jasmines, lavender, sage, rosemary, rue, &c., and all the woody kitchen shrubs, inarch exotics, &c., and plant cuttings of heaths and such greenhouse plants as have the young wood ripe. Sow dahlias, carnations, pinks, hollyhocks, Cape, Brompton, and German stocks, China asters, and all kinds of hardy annuals. Destroy the green-fly in the roses, and preserve the bloom of stage-auriculas from sun and rain. Top-dress all flowers in pots, removing withered leaves, and put in fresh earth.

MONDAY 14.—Newmarket Craven Meeting.—Stratford-on-Avon Steeplechases.—Father Mathew promises to visit Scotland, 1842: The *Macintoches* pass a resolution not to imbibe water.—Otway the poet died, 1685.

TUESDAY 15.—Easter Term Begins.—Munster Grand National (Irish) Steeplechase.—Judge Jeffries died 1608:—

When he went below,  
Where such knaves do go,  
He was welcomed with *clat*;  
And Nick he rose  
And blew his nose,  
And cried, "Jeff, gie's yer paw!"

The public sustain a loss of £150,000 by the proclamation against light sovereigns, 1842. Nothing new, for John Bull has always paid a heavy tax upon the light.—Clock with Sun.—*Caution*.—Never undertake to get a lady's watch repaired, or you will be held responsible for its defects ever after.

WEDNESDAY 16.—Great encroachments made in Windsor Forest, 1803.—Her Majesty's Commissioners of Woods and Forests being particularly anxious to amputate their timber.—A SINGULAR FACT.—It has been calculated that the united ages of the workmen lately employed on the Nelson Monument, amount to 32 years and 6 months.—Battle of Culloden, 1746.

THURSDAY 17.—Castle Howard (Yorkshire) Steeple Chases.—Durham Races.—Dr. Franklin died, 1790.—The Emperor and Empress of Austria washed the feet of twelve venerable men and women at Vienna. After the performance of this salutary *feet*, a good "foretelling" was administered, of which operation the crowned heads *watched their hands*.

FRIDAY 18.—Luton Fair.—The miscreant Sean, who had been very properly imprisoned, has liberty to stalk abroad, 1842.

SATURDAY 19.—Brackley and Fenny Stratford Fairs.—An eagle descends in the streets of Paris and carries off a puppy—being clear that the Imperial Eagle has gone to the dogs.—Lord Byron died 1824; and his statue not yet in Poet's Corner, 1845.—The American War commenced 1775.—a righteous contest for liberty, and successful: perhaps the next war, if 1845 should produce any, will give Brother Jonathan a "guese" of the Shaksperian truth:—  
"Thrice is he armed," &c

1844: Miss S. Haynes married at St. Martins to Not-enn-a-akm, the "Strong Wind." It is erroneously reported that he blows up his bride.

## The Sporting World.

FOR THE WEEK ENDING APRIL 19, 1845.

It should be indeed ungrateful did we leave unacknowledged the gratifying support accorded to this journal, and the various suggestions, as well as contributions, which we have received. Such of these as will improve the utility, or enhance the entertaining character of this publication shall receive deliberate consideration, and where advisable be acted upon with promptitude.

A word to several who have tendered us advice. They appear each of them to desire a paper exclusively to themselves. Four numbers are, however, we would submit, too few for them to form anything like an estimate of our intentions. Besides, seasons must be observed: Angling is now in its blossoming, and as each several department of sport develops itself in succession, it shall severally assume the prominence to which it is seasonally entitled.

THE TURF will soon claim precedence, while BOXING will keep on the even tenor of its way through every period of the year; thus much to those who complain of not receiving larger instalments of pugilism. Again, this is the breeding time for many birds; that series of articles is therefore kept as much as possible *au courant*, while the Horse and the Hound, the Beasts and Birds of Chase, together with Cards and in-door amusements, are placed for a short period in abeyance.

## BRITISH SONG BIRDS.—No. V.

THE CANARY.

**ALTHOUGH** this delightful songster is not, strictly speaking, a denizen of these islands, a series of BARRISH songbirds, would be indeed incomplete wherefrom it was omitted. The "venerable Joe" which records the representation of Hamlet, with the omission of the part of "the Prince of Denmark, by particular desire," would be its only parallel: we shall, therefore, make no apology for this lengthy article, feeling convinced that all admirers of the feathered race will excuse the introduction in consideration of the merit of the subject.

The canary, originally a native of the pleasant climate of the islands of which it bears the name, is now acclimated and admired throughout Europe, Asia, and even in northern Siberia. For beauty of form, docility, plumage, song, and almost adaptation for the companionship of luxury and refinement, this attractive bird stands unrivalled. The most magnificent mansions and the humblest cottages are its abodes, and the fairest hands delight in ministering to its moderate wants. It was introduced to Europe as early as the year 1520; and the tradition of its arrival is thus related:—

"A barque, laden with merchandise, bound for Leghorn, had on board a number of these birds, being wrecked on the coast of Italy, opposite to the island of Elba, these little songsters, being set at liberty, dispersed themselves in the thickets. The spot, in climate and other circumstances, proving favourable, they multiplied, and would no doubt have become permanent inhabitants, had not the desire to obtain them become so great, that they were pursued so actively, that in a few years they were extirpated. From this accident Italy was the first country in which they were reared. As the proper mode of managing them was not known, their rearing proved difficult, and though well inclined to cross in breeding, as males only were brought over, they soon became valuable scarce."

The original colour of the canary is grey, darker on the back and greener on the belly; but the bird has undergone so many changes from climate, domestication, and crossing, that we have canaries of every colour. Indeed so various are the commixtures from the citril finch, the goldfinch, the siskin, &c., that if we had not good proof that the Fortunate Isles were their original abode, we might almost suppose them sprung from the stock of some race of our own birds.

This is not the place, nor have we scope to remark on the singular phenomenon, presented by various domesticated animals, of sporting into a variety of markings and colours, while in a wild state an uniform and somewhat sober garb is retained: yet we may observe, that it is a mistaken idea, that canaries change their colour from a difference of food.

Those canaries which have the upper part of the body of a dusky grey, or a linnet brown, and the under part of the yellowish green of the greenfinch, with dark brown eyes, are the strongest, and most closely resemble the original race. The yellow and the white, have often red eyes, and these are the most delicate. The chesnut are most seldom met with, and seem to hold a duration of life between the two. The value of the birds depends upon the regular manner in which they are marked; and the most-prized canary, has the body white or yellow, the head (especially if tufted), wings and tail of a yellowish dun colour: next to this ranks a golden yellow, with the head, wings, and tail, black, or dusky grey. Then follow those with a grey or blackish body, and yellow head and collar; the yellow birds with a black or green tuft are much valued.

The female canary is not easily distinguishable from the male; but the latter has usually brighter and deeper colours, a longer and larger head, a longer body, not quite so short a neck, higher shanks, and altogether a more elegant shape. There is a bean-shaped feather, too, under the bill, placed lower than the rest, and the temples and circle round the eyes are of a deeper yellow in the male than the rest of the body.

The following is a general list of the MULES obtained from the various canaries:—

1. MULES BETWEEN A CANARY AND A GOLDFINCH.—These exhibit an agreeable mixture of the colours of their parents. The prettiest have a grey-ash colour in the centre of their crests, and a silvery white on the rest of its head and nape: a broad orange border surrounds the beak, and the neck has a white collar; the back is dusky grey with black streaks, the rump white, and the under part of the body of a snowy whiteness; the white tail has a black spot on the sides, and the white beak is tipped with black—the feet also are white. This is a most beautiful variety.

2. MULES BETWEEN A CANARY AND A SISKIN.—If the mother be a green canary, the mules will resemble a female siskin; but if she is white or yellow, their colours are lighter, yet without differing greatly from those of the siskin, which they always resemble in shape.

3. MULES BETWEEN A CANARY AND A GREEN-BIRD, OR A CITRIL FINCH.—If the hen canary is neither white nor yellow, the mules differ little from the common grey or green canary, except in being more slender, and having the beak shorter and thicker.

4. MULES BETWEEN A CANARY AND A LINNET will be speckled if the mother is white or yellow, but if she is grey they will be like her, except that the tail will be longer.

The other mules we shall notice when we come to treat of BREEDING. As this pretty bird is unknown among us in its wild state we shall speak of it here merely as a captive.

#### FOOD.

In proportion as it is simple and natural, it will be wholesome; and, on

the contrary, the more it is mixed and rare, the more injurious and productive of disease will it be. The best is summer rape-seed; that which is sown at the end of spring, small and brown, which is easily distinguishable from the winter rape-seed, which is sown in the autumn, and which is large and black. This seed alone agrees with canaries as well as with linnets: but to give them variety, a little bruised hemp or canary, or poppy seed, is added to it, especially in the spring, when they are intended to breed. Indeed a mixture of summer rape-seed, oatmeal and millet, or canary-seed, may be given them as a great treat. Remember, however, whatever seeds they may have, they require green food; such as chickweed in spring, lettuce and radish leaves in summer, endive, watercress, and slices of sweet apple, in winter. As to that whimsical and complicated mixture, prescribed and used by many people, of rape, millet, hemp, canary seed, whole oats and oatmeal, poppy, lettuce, plantain, potentilla, and pink seeds, maize, sugar, cake, hard biscuit, cracknels, buns, and the like, so far from being wholesome, it injures the birds in every respect. It spoils their taste, weakens their stomachs, renders them feeble, sickly, and incapable of bearing moulting, under which they most frequently die. It is true, they may be accustomed to eat of everything which comes to table, but to teach this habit is also to prepare a poison for them, which though slow, is not the less sure, and brings them to a premature death; whilst every day we see bird-fanciers who are poor, who hardly know the names of these delicacies, rear, on the simplest food, a considerable number of the healthiest, cleverest, and strongest canaries. We must, however, be guided in a great measure by the constitutions of the birds. They should be daily supplied with fresh water, as well for drinking as bathing, in which they delight. In the moulting season, a nail or bit of iron should be put into the water, in order to strengthen the stomach. Saffron and liquorice are in this case more hurtful than useful. Grains of the sand, with which the bottom of the cage is strewn, afford the birds a help to digestion. What has been said above, refers solely to the food of full-grown canaries; the young, which cannot feed themselves, require a different diet.

#### BREEDING.

A male of from two to five years of age should be chosen for pairing; for experience has taught, that if a young male is placed among older females, they will produce more males than females. A bird is known to be old by the blackish and rough scales of his feet, and by his long and strong claws. Good males are scarce and valuable. Some are dull and melancholy, always sad, and seldom singing; indifferent to their mates, which are equally so to them: others are so passionate, that they beat or even kill their mates and their young; others are too ardent, and pursue their mates while they are sitting, tear the nest, destroy the eggs, or excite the females so much that they voluntarily abandon them. The females have also their defects. Some, too ardent, only lay without sitting; others neglect to feed their young, beat them, and pick out their feathers, so that the wretched little creatures die miserably; to others, laying is so painful that they are too much fatigued to sit, or they lay each egg only after a long interval. Quacks (for we find them on this subject as on others) pretend to have specifics for the cure of these defects; but their pretended remedies are mere deceptions, and the use of them causes much trouble. The best plan is to remove the vicious birds, and to retain only those which have none of the above-named bad qualities.

To obtain the most brilliant colours, those birds which have them clear, and whose spots are distinct and regular, are paired together. This, of course, can only be done in separate cages. In aviaries, where the birds pair by choice, the offspring are generally mixed and blotched. A greenish or brownish bird, placed with a bright yellow one, often produces dim white, or other admired colours. It is better never to place together two crested birds, because the offspring is apt to have a part of the head bald or otherwise disfigured. The best time for pairing canaries is the middle of April. Either one male, and one or two females, are placed in a large cage, or many of both sexes are united in a room or aviary, having the advantage of a south aspect. Nests made of turned wood, or osiers, are given them, as straw ones are too easily torn. It is a good plan to place in the room or aviary slips of pine, which being cut in February do not lose their leaves. If a little enclosure of wire-gauze can be fixed over the window, where the birds can enjoy the fresh air, nothing will more effectually contribute to render the young healthy and robust.

(To be concluded in our next.)

**HUNGRY AS A HORSE.**—The following extraordinary accident happened last month to an old brood mare belonging to the Comte de Croi, at the stable near St. Cloud. The animal during the night slipped her head-stall off, and ascended a very small ladder into the hay-loft, above the other horses. With her weight the flooring gave way, and she remained suspended "between wind and water," as the sailors say. In this awkward position she was found early in the morning, having wounded herself, in her struggles to get free, so dreadfully that it was found necessary to kill her on the spot. The mare had her usual feed the over night, but is supposed to have felt a desire for a "second course." The most extraordinary part of the story is, that the ladder leading to the loft was extremely narrow and steep, just sufficient for one man to pass up at a time.

## THE FISHER'S CREEL.

*A Table of the Fish usually Angled for in the Waters of Great Britain, with the Places, Seasons, Time of Day, Depth from the Ground, and Baits suited to their Habits.*

	Where generally found.	Season.	Proper time to angle.	Depth from ground.	Worms.	Flies.	Pastes.	Fish. Insects.
BARREL ...	Rapid and shallow streams, gravelly banks, under bridges in currents.	April to August.	From sunrise till 10 a.m.; 4 p.m. till sunset.	Touch ground.	Gentles had from peatrid flesh, lobworms from gardens, brandlings from dung-hills.		Old grated cheese worked up with rusty bacon, or butter stained by saffron; some say steeped in honey.	
BLAK.....	Deep rivers, sandy bottoms, in eddies and at ship's sterns.	May to October.	All day.	Six inches; always below mid-water.	Gentles, caddis-worms, found under stones in shallow streams, covered with small pieces of wood or rushes, kept moist in flannel bags; brandlings.	Stone-fly, found under hollow stones, sides of streams; green-drake, found among stones by river sides; black fly on hawthorns after budding.	White new bread, worked in the hand to a consistency, coloured with vermillion, like salmon's roe, or as above.	
BREAM ...	Slow rivers or mill-ponds, near weeds, and in clay or muddy bottoms. Some say rough streams.	April to December.	Sunrise to 9; 3 to sunset.	Touch ground.	Gentles, flag-worms, found among flags, kept like caddis-worms; lob-worms.	Green-drake, under water.	Red paste as for bleak; or new brown bread mixed with honey, and worked to a consistency like the red. Some add sheep's blood.	Grasshoppers, in June or July
BULLHEAD, OR MILLER'S THUMB.	Rivers and brooks, in strong and gravelly beds.	May to October.	All day.	Near the bottom.	Small red worm.			
CARP .....	Still, deep ponds or rivers, (particularly ponds) muddy bottoms.	April to August.	Very early and very late.	Three inches from bottom; hot weather in mid-water.	Earth-bobs, found in sandy ground, kept in mould; gentles, flag-worms, wasp-grubs, found in the nest, hardened over the fire; marsh-worms, found in marshes.		Blood of sheep's heart mixed with honey and flour, worked up; chewed bread, worked stiff with honey or sugar and gum water.	
CHUB, OR CHEVIN.	Still, deep waters, under boughs, gravelly bottoms.	May to December.	Very early and very late.	Three inches from bottom; hot weather in mid-water.	Earth-bobs, gentles, flag-worms, wasp-grubs, cow-dung-bobs, caddis-worms.	Stone-fly, green-drake, oak-fly, found in oaks or ash; ant-fly, found on ant-hills.	Red and brown pastes, made from white and brown bread, as above.	Snail slit, grasshopper, beetle.
DACE, OR DARN.	Sandy bottoms, deep rivers, eddies and ship's sterns.	May to October.	All day; particularly cloudy weather.	Three to nine inches from bottom, or near the top.	Earth-bobs, gentles, flag-worms, brandlings.	Stone-fly, green-drake, oak-fly, palmer-fly, found on plants; ant-fly, May-fly, black-fly.	Chewed bread worked in the hand till stiff; bread crumbs worked with honey and sugar, moistened with gum ivy water.	
EEL .....	Among weeds, roots, banks, and mills, over holes and stoney bottoms.	May to September.	All day; when the stream is thickened by rains.	Touch ground.	Wasp-grubs, lob-worms.			Minnow, Gudgeon.
FINNOCK, OR HIRLING.	Clear deep stream.	May to September.	8 to 9; 3 to 6.	Near the bottom, or hot weather near the top.		Any gaudy or artificial flies.		
GRAYLING, OR UMBER.	Clear and quick streams, clayey bottom.	September to January.	All day; in cloudy weather.	Three inches from bottom in cold weather; in hot, mid-water.	Earth-bobs, gentles, flag-worms, wasp-grubs, cow-dung bobs, caddis-worms, marsh-worms, brandlings.	All flies.		
GUDGEON ..	Gentle streams, with a gravelly bottom.	May to October.	All day.	Close to the ground.	Gentles, brandlings.		Red and brown pastes, made from white and brown bread, as above.	
LOACH, OR GROUND-LING.	Rough clear streams, with a gravelly bottom.	May to October.	Noon.	Close to the ground.	Brandlings or any small common worm.			
MINNOW, OR MINIM.	Shallow rivers and brooks.	All parts of the year.	All day.	All parts of the water.	Brandlings or any small common worm.		Brown paste, as above.	
MULLET ...	Ebbing tides, and in arms of seas.	March to Michaelmas.	Morning and evening.	Near the bottom or top.	Brandlings, earth-bobs, caddis-worms.	Small gaudy coloured flies.		

	Where generally found.	Season.	Proper time to angle.	Depth from ground.	Worms.	Flies.	Pastes.	Fish, Insects.
PAR, OR SAMLET.	Large deep rivers, towards the middle.	March to Michaelmas.	Morning and evening.	Mid-water.	Lob-worms.	Small gandy coloured flies.		
PERCH.....	Deep rivers, and ponds, holes, weeds, gravelly bottoms.	August to May.	Midday, cloudy weather, light south wind.	Six inches from bottom or mid-water.	Red-worms, brandlings, flag and caddis-worms.		Red and brown pastes, as above.	Minnow, yellow frog.
PIKE .....	Clay banks, slow streams, gravelly or weedy bottoms.	May to August, winter and windy weather.	All day.	Mid-water.		The largest and most gandy flies tempt pike in spring.		Minnow, yellow frog, roach, dace.
POPP, OR RUFF.	Deep ponds and still rivers, over holes.	May to October.	All day.	Six inches from bottom.	Brandlings, red-worms, caddis-worms.			
ROACH.....	Sandy bottom, shady holes, gentle deep streams.	All parts of the year.	Midday, in mild cloudy weather; hot days, morn and eve.	Below mid-water.	Earth-bobs, gentles, flag-worms, wasp - grubs, cow-dung bobs, caddis-worms, &c.	Stone fly, green-drake, palmer-fly, ant-fly, black fly.	Chewed bread, worked in the hand till stiff; bread crumbs worked with honey and sugar, moistened with gum-ivy water.	Grasshopper.
RUD, OR FINSKALE.	In a few northern lakes of England, and in Oxfordshire.	All parts of the year.	Morning and evening.	All parts of water.	Earth-bobs, gentles, flag-worms, wasp - grubs, cow-dung bobs, caddis-worms.	Stone-fly, green-drake, palmer-fly, ant-fly, black fly.		
SALMON ....	Large deep rivers, in the middle.	March to September.	8 to 9; 3 to 6.	Mid-water.	Lob-worms, earth-bobs, &c. &c.	All large and gandy flies.		Minnow, samlet.
SMELT, OR SPURLING.	Docks and sterns of ships.	April to October.	All day.	Mid-water.	Earth-bobs, gentles, caddis-worms, &c.	All small flies.		Bits of shrimps, raw.
STICKLE-BACK .....	Rivers, brooks of all descriptions.	June to October.	All day.		Brandling or any small worm.			
TENCH.....	Ponds, rivers, weeds, muddy bottoms.	All the year.	Early and late as possible.	Six inches from bottom; mid-water in hot weather.	Earth-bobs, gentles, wasp-grubs, brandlings, caddis-worms.		Chewed bread, worked in the hand till stiff; bread crumbs worked with honey and sugar, moistened with gum-ivy water.	
TROUT.....	Rapid cool stream, clear and pebbly.	March to Michaelmas.	All day.	Cold weather, six inches from bottom; — in hot, with fly at top water.	Earth-bob, &c., &c.	All flies.		Minnow, beetle, grasshopper

After all the directions that can be given with regard to natural and artificial flies, the Angler will do well to ascertain what flies appear to be most in season, and which are most common in the place where he angles, by beating about the bushes and hedges of the neighbourhood; and with regard to baits in general, great labour may be saved by trying when small fish of the same kind or of similar habits, preserved in jars, refuse to receive food; as also by cutting fish open when caught, and observing what food is contained in the intestines.

**EXCHEQUER MONOMANIACS.**—Every other day the Chancellor of the Exchequer acknowledges the receipt of various sums of money, from unknown benefactors, "for the revenue of the country." We would advise Madame Tussaud to employ the Forrester to find these extraordinary people out. When discovered, Madame might then model them for her show: and as she now displays a batch of Notorious Criminals, she might, by way of contrast, exhibit a group of Celebrated Simpletons!

**THE HEIGHT OF IMPUDENCE.**—Alderman Gibbs has elected himself again as churchwarden of St. Stephen's, Walbrook! We should not be at all surprised to hear of his going down to Westminster Abbey some fine morning, and crowning himself King of England.—*Punch.*

**GRAHAM'S PARLIAMENTARY MISTAKE.**—Sir James Graham has brought one good Bill into the House: namely, the Bill to abolish the payment of fees to clerks of the peace and magistrates' clerks. This Bill is the one white spot in Graham's official life! and, like one white hair in a black cat, spoils what would otherwise be all of one colour.

**JOINING THE UNION.**—A person advertises in the *Times* that he "has discovered a most wonderful cement, and would wish some one to join him." The advertiser, then, should certainly have stated his height, because, if he is only four feet two, it will be rather awkward for him to be joined to a partner who happened to be six feet three, without his stockings; especially if it be true, as he declares in the advertisement, that the cement, once applied, is of such an adhesive nature, that he will warrant it to keep good for ten years in the warmest climate.

**SLEEPERS WANTED.**—The Chester and Holyhead Railway have advertised for a large number of railway sleepers. We advise them to apply to the House of Lords.

**GAVE IT A NAME.**—*DIsraeli* says he merely meant the simile of Sir Robert Peel stealing the clothes of the Whigs while bathing as a joke. Why not honestly say it was meant as a *jeu-d'esprit*? (*Jew-desperate.*) Oh, dear! isn't this shocking?

**THE BATTERSEA BANK.**—The Red House at Battersea was thrown into the most dreadful state of excitement, upon the breaking up of the fleet (the inhabitants having during his inclement majesty's visit been in a state of the most perfect dormancy), to find that another house had, as if by magic, sprung up at its elbow. Upon rushing round the corner, the melancholy fact was ascertained that the new comers was an opposition tavern, already baptised by Father Thames, and christened the White House, in contradistinction to the Red. The Red House "imputes the anticipated mischief consequent upon such a novel introduction" to several noble lords who have been but recently created; but whether the new peers have been the cause of it or otherwise does not appear. The opposition house must, however, have been built somewhere else, and brought to its present location, or it must have arisen during one night. If the latter, all its apartments may be considered mausoleums, despite the fact of the Red House looking down upon it as a toad-stool.

**VERY NECESSARY.**—Sir James Graham has it in contemplation to recommend the appointment of a chaplain to the Post-office, whose duty it shall be to pray for the safe delivery of all letters committed to that establishment.

**THE PRESIDENT'S OATH.**—It is not generally known—and the touching circumstance ought to be published to the whole world—that the Bible on which Mr. Polk took the Presidential oath, was very handsomely bound for the purpose in the skin of a negro.

GEORGE TAYLOR—THE RIVAL OF BROUGHTON.

## THE HISTORY OF BRITISH BOXING, FROM FIG AND BROUGHTON TO THE PRESENT TIME.

PERIOD II., 1735—1786.

FROM THE TIME OF BROUGHTON TO THE APPEARANCE OF DANIEL MENDOZA.

### CHAPTER III.

**I**N order to render the HISTORY of PUGILISM as perfect as practicable, without rendering it too diffuse, we have here preferred to throw into a short CHRONOLOGY the public battles from 1740 to 1783, the year of the appearance of Tom JOHNSON, whose pugilistic doings will form the subject of the fourth chapter.

The more eminent boxers we have already treated in detail, and to the minor we have appended a few paragraphs to relieve the dryness of a mere catalogue of names and dates. And as many of the battles took place in the booth of George Taylor, under his superintendence, we have placed his manly portrait at the head of this list.

[The figures before the names denote the successive recorded battles of each principal pugilist: and the CHAMPIONS' names are printed, on their first appearance, in capital letters.]

1740.

GEORGE TAYLOR (*Champion*) erected his "Great Booth" in Tottenham Court-road.

["GEORGE TAYLOR (known by the name of George the Barber) sprung up surprisingly. He has beaten *all* the chief boxers but Broughton. He, I think injudiciously, fought him one of the first, but was obliged very soon to give out. Doubtless it was a wrong step in him to commence boxer by fighting the standing champion; for GEORGE was *not then* [1740] *twenty*, and Broughton in the zienth of his age and art." This will show the error of *all* former Chronologies (Jon Bee's included), in placing TAYLOR as the successor of Fie in 1734, and that period as the date of his, G. T.'s, opening the Tottenham-court Booth. "Since *that* he has greatly distinguished himself with others; but has never engaged Broughton more."—*Godfrey*, p. 62.]

DR. JOHNSON (the Great Lexicographer) beat Tom Osborn (the Bibliopole), 1 sec., 1 r., Gray's-inn.

[This was a knock-down blow which settled the business.]

DR. JOHNSON beat the Big Drayman, 6r. [Dark ogle: "Sir, I can use my fists too!"] Fleet-street.

JACK BROUGHTON (*Champion*) (Waterman) beat GEORGE TAYLOR, 20m. Tottenham Court-road Booth.

["Advance, brave Broughton! Thee I pronounce Captain of the Boxers! As far as I can look back, I think I ought to open the "Characters" with him: I know none so fit, so able, to lead up the van. \* \* \* What can be stronger than to say that for seventeen or eighteen years, he has fought every able boxer that appeared against him, and has never yet been beaten! But

not to conclude on this alone, let us examine further into his merits. What is it that he wants? Has he not all that others want, and the best can have? Strength equal to what is human, skill and judgment equal to what can be acquired, undebauched wind, and a bottom spirit never to pronounce the word ENOUGH!

\* \* \* He stops regularly as the swordsman, and carries his blows truly in the line: he steps not back, distrusting of himself to stop a blow, and piddle in return, with an arm unaided by his body; producing but a kind of fly-flap blows, such as the pastry-cooks use to beat flies from their tarts and cheesecakes. No! Broughton steps boldly and firmly in, bidding welcome to the coming blow; receives it with his guardian arm; then, with a general summons of his swelling muscles, and his firm body seconding his arm, and supplying it with all its weight, pours the pile-driving force upon his man." The Captain adds a prophetic warning, which Broughton, as well as many of his successors, would have done well to profit by. "That I may not be thought particular in thus dwelling on Broughton, I leave him with this assertion, as I believe he will scarce *trust* a battle to a *warning* age, I never shall think he is to be beaten till I see him beat."—p. 56. By an unaccountable oversight, Broughton is totally omitted in "Fistiana."']

1741.

April 24. BROUGHTON beat Stevenson (a Jarvey), 39m., 100l., Tottenham Court-road Booth.

["I will name the two men together whom I take to be the best bottom men of the modern boxers. They are Smallwood, and George Stevenson, the Coachman."—*Godfrey*, 63, 64.]

May Dimmocks beat Tom Smallwood, 50m., ditto.

June 16. G. TAYLOR beat Prince Boswell (Gipsy), ditto.

July 16. Jack James beat Dick Harris (Chicken), ditto.

Nov. 23. Smallwood beat Harris, 60m., 50l., ditto.

— Buckhorse (Jack Smith) beat Harry Gray, the clogmaker, ditto.

1742.

April 28. Smallwood beat Will Willis (the Fighting Quaker), 100l., Tottenham Court-road Booth.

["Smallwood wants but weight to stand against any man; I never knew him beat since his fighting Dimmock (which was in his infancy of boxing, and when he was a perfect stripling in years. \* \* \* If I were to choose a boxer for my money, and could purchase him strength equal to his resolution, Smallwood should be the man."—*Godfrey*, 65. This fight between Smallwood and Willis was publicly announced in the *Daily Advertiser* of April 26th, 1742. Shortly after which the booth is first called "George Taylor's Booth," in the announcements.]

May 24. Pat Henley (I.) beat J. Francis (the Jumping Soldier), ditto.

1743.

Mar. 10. BROUGHTON opened his Amphitheatre in Oxford-street, where the Pantheon now stands, with a battle-royal of Evans, Sweep, Belas, Glover, Roger, Allen, Robert Spikes, and Harry Gray.

\* \* \* The GLOVES introduced. All the boxers were yclept "champions" now about.

[August 10. "Broughton's Seven Rules" (written by Captain Godfrey), established by the Amateurs: regular fighting weekly, Amphitheatre, Oxford-street.]

1746.

Jan. 11. Ned Hunt beat Hawkesley (Life-guardsman), 10m. (10 stone against 16), Oxford-street.

King (the Butcher) beat Tom Smallwood, Slash Green.

1747.

[Captain Godfrey published the "Art of Self-defence," being the first publication on the subject.]

1750.

Jan. 31. G. TAYLOR beat (1) JACK SLACK, 25m., purse, Oxford-street.

April 10. (2) JACK SLACK (*Champion*) beat BROUGHTON, 14m., 600l. clear, Oxford-street.

[William, Duke of Cumberland, lost 10,000l. "What are you at, Broughton?" Ans. "I can't see, your royal highness."—This defeat of Broughton by SLACK, is erroneously attributed to GEORGE TAYLOR, in FISTIANA; see George Taylor in "Chronology."—Act of Parliament against boxing passed. Four years *interregnum* in the ring after this royal mistake.]

1754.

(3) JACK SLACK beat Petit, a Frenchman, 25m., 10 gs., Harleston, Norfolk.

1755.

Mar. 13. (4) SLACK beat Cornelius Harris (Navigator), 20m., 100 gs., Bristol.

1757.

June 14. Smallwood beat Hunt, 50m., 150 gs. (two veterans), Hounslow. [Broughton opened "the Court," introduced "regular mufflers," and taught the Art Pugilistic scientifically, Tennis-court, James-street, near the Haymarket. This Tennis-court, which dates back

as far as the time of Charles II., still subsists (1845), under the management of Mr. Cox.]

1758.

May 17. Dick Mills (the Onion Boy) beat Hunt, 60m., Islington.

Aug. 5. Faulkner beat Taylor (One-eye), 75m., 300 ga. and door, St. Alban's.

1759.

April 8. Faulkner beat Joe James, 10m., 100l., Putney.

Oct. 20. (5) JACK SLACK beat Moreton, 35m., 50l., Acton Wells.

1760.

Feb. Stevens (the Nailer) beat Taplin (the Coalheaver), Marylebone Basin.

June 17. (1) STEVENS (JEM) (Champion) beat (6) SLACK, 100l. (manœuvring), Tennis-court, James-street, Haymarket.

1761.

March 2. (1) G. MEGGS (Champion) beat (2) STEVENS, 17m., 300l., ditto.

1762.

July (1) G. MILLSOM (Champion) beat (2) GEORGE MEGGS, 40m., 100l., Calne, Wilts.

[GEORGE MILLSOM is omitted in the list of Champions given in FIETIANA.]

Aug. 10. (2) G. MILLSOM beat (3) MEGGS, Lansdown, 2nd fight.

1763.

(3) G. MILLSOM beat Parfit Meggs, brother of George, near Beckhampton.

1764.

June 20. Tom Juchau beat Charley Coant, 47 m., Guildford.

(1) BILL DARTS (Champion) beat Parfit Meggs, near Shepton Mallet, Somersetshire.

1765.

April 9. Warren beat Phil. Juchau, 10l. (fatal), on the stones, Moorfields.

Aug. 27. Tom Juchau beat GEORGE MILLSOM, 70m., Colney Bridge, near St. Alban's, thereby obtaining the Championship.

1766.

May (2) BILL DARTS beat Tom Juchau, 40m., 500 ga., Guildford.

1767.

July (3) BILL DARTS beat Doggett (West-countryman), 60m., 100l., near Melksham, Wilts.

Oct. 13. (4) BILL DARTS beat Swansey (the Butcher), Epping Forest.

1768.

March Jack Lamb beat Paine (a Carpenter), 20l., Islington Fields.

Aug. 3. Jack Lamb and Jemmy (the Fighting Postboy), drawn battle, 48m., Moorfields-stones.

1769.

Jack Lamb beat Simpson (J), at Bethnal Green, and Da Costa (J), Moorfields.

— beat Mousha (another Jew), Stepney.

June 27. A. LYONS, the Waterman (Champion), beat (5) DARTS, 45m., Kingston.

[Hereby Bill Darts lost the Championship, and it wandered unsettled till Johnson's time, 1784: unless Sellers, by defeating Stevens, Hood, and Corcoran, obtained it in 1777, which we opine, and have marked it accordingly. The date of Lyons's Championship (by a typographical error) in FIETIANA is given as 1796.]

July 4. Bill Stevens (the Nailer) beat M'Guire (I.), Bloomsbury Fields.

Sept. 24. Turner beat Peter Corcoran (I.), 20l., same place.

Peter Corcoran beat two customers, Davis and Dalton (I.), same place.

— fought Smiler, a Bricklayer (parted), Moorfields.

1770.

March 25. (6) BILL DARTS beat Stephen Oliver, or Death, Putney.

July 13. Nicholls beat Joyce (I.), one round, Mill-hill, near Hendon.

1771.

Feb. Jack Sheppard beat Coant, 35m., Barnet.

April 15. — beat Lamb, 44m., 50l. to 30l., Islington.

May 10. Corcoran beat Darts, 1 round, 100l. (cross), Epsom Races.

June 7. Trainer Jack (I.) beat Sam Peters, 37m., 20l., Epping Forest.

July 13. Rossemus Gregory (I.) beat Peters, Epping.

Sept. 1. Peters beat Rossemus Gregory, 30m., Hat's Riding-house, Islington.

1773.

May 11. Pearce and White (two Crispins) 10l., interrupted. Same place.

Nov. 9. Hood beat Parrot, 36m., 20l., White Conduit-fields.

1774.

Peter Corcoran beat Sam. Peters, 13m., Waltham Abbey.

(1) BIG BEN (BRYAN) (Champion) beat Clayton and Spaniard Harris. Near Bristol.

1775.

Mar. 31. Hood beat Dennis Kellyhorn (I.), 50l., Chingford, Essex.

1776.

July 3. Oliver beat Small, 20l., Barnet.

Aug. 20. Peter Beth, (or Jemmy the Fighting Postboy) beat Allen, Barnet.

Sept. 2. White beat Pearce, Plaistow, Essex.

Oct. 16. (1) HARRY SELLERS (Champion in 1777) beat Peter Corcoran, 38m., 100 ga., Crown Inn, Staines.

Dec. 4. Hood beat Macdonald, 53m., 10l.

George Maddox beat another Westminster cove, seconded by his sister, Grace.

1777.

June 4. (2) HARRY SELLERS beat Hood, 50l., Ascot Races.

July 2. (3) Same two men, with same result, near Ipswich.

1778.

Summer. (4) HARRY SELLERS beat Stevens, the Nailer, 25l.

July 23. Hood beat Biggins.

Sept. 8. Bath (the Bristol Boy) beat Hood, 20m., 50l.

1779.

Sept. 4. Bill Day beat Hood, Smithfield.

Sept. 25. Duggan Fearn beat (5) SELLERS, 1½m., Crown Inn, Slough. A glaring cross.

1781.

Bill Perdue beat Ben Hamilton, 30m., 10 ga., Barnet.

Aug. 2. George Ring (Navigator) beat Edwards, 80m., Kilburn.

Perdue beat Minton, 20m., 10 ga., Barnet.

1783.

Sept. 29. TOM JOHNSON (Champion) or Jackling, (of Derby) beat Jarvis, Lock's Fields, Southwark.

Oct. 11. Allen beat M'Gee, alias Pug, 130m., 50 ga., Hounslow.

1784.

Tom Brummage and Hood (drawn) 38m., Islington Fields.

Oct. . . DICK HUMPHRIES beat Bentley, 40m., Enfield.

Nov. 22. Bill Towers beat Day, 33m., 100 ga., Barnet.

(2) Tom JOHNSON beat the Croydon Drover, Kennington.

(3) — beat Oliver, or Death, Blackheath.

[Although Johnson was open to fight any man, yet the Championship was denied him for four years.]

March 1. (1) Tom Jones (long after known as Paddington Jones) beat Ned Holmes (the Barber) for half-a-crown, Paddington.

May . . (2) Tom Jones beat Dick Norton, 40m., 20 ga., Hyde-park.

June 7. Harvey beat SELLERS, 20m., 4l. to 9l., Helywell-mount.

In our next chapter we shall briefly notice BEE BEE, and a few of the more prominent men named in this summary.

(To be continued in our next.)

## PUFFING TESTIMONIALS.

(From Punch.)

THE following testimonials to the virtues of various quack medicines were written by a literary gentleman of some celebrity in the advertising columns of the newspapers. The style is unexceptionable, but the literary gentleman appears to have fallen into some trifling errors as to the nature of the specifics to which he ought to have referred the various prodigies he has been employed to chronicle.

"SIR,—I was afflicted for some years with corns, when a friend advised me to try your Macassar Oil. I used to take a bottle of it overnight, and another in the morning, until I have become quite another creature; and therefore you will scarcely believe me when I say that I remain,

"Your obedient servant, &c., &c., &c."

"SIR,—My hair had been dropping off at the rate of six handful a day, when an old friend of the family recommended me to try your Mineral Succedaneum, in the hope of stepping the further progress of the malady. I feel, sir, that I owe you more than I can ever repay, and beg of you to send me a dozen boxes, which you will be pleased to add to the account. You have saved me, sir, from all the horrors of a bald head, and you have gladdened the hearts of a doting wife and eleven anxious children. Go on, sir, in your excellent path; and believe me ever,

"Your grateful, humble servant, &c., &c., &c."

"GENTLEMEN,—I had been many years a victim to bunions of the most alarming magnitude, when accident threw into my mouth a box of your Parr's Life Pills. I swallowed them with great satisfaction, but felt no particular effects from them, till a friend called my attention to a sudden giving way of the upper-leather of my boot, which sank down almost flat; and on examining the cause, I found my bunions were rapidly disappearing. Thanks to you, sir, and your Parr's Life Pills, I can now dance the Polka half-a-dozen times before breakfast, and kick an impudent creditor down stairs, which I formerly was unable to do, on account of my bunions.

"Yours, &c., &c., &c."

"Miss Laura King presents her compliments, and begs to say that she suffered very severely from freckles, which kept her confined to her bed for nearly ten years. Miss Laura King was at last recommended by her maid—who received the suggestion from the sweep—to try a respirator. Miss Laura King begs to add that she has tried one of the respirators, and her freckles have so far disappeared that she is enabled to take gentle walking exercise once a day, and to play two short tunes on the piano in the evening. Mr. —, the proprietor of the respirator, is at liberty to make any use of this communication which he thinks proper."

## THE CHIVALRY OF MODERN GAUL.

(Concluded.)

There are various styles of composition fit for works of amusement and information combined. There is the epistolary, the narrative, the colloquial; but to render them effective, these should be kept distinct. Therefore, at the loss of some very good situations, and much descriptive matter, I keep this portion of my history of Leatherlungs in as entire a ring fence of conversation as possible. As Sir Walter Scott says, "perhaps I have a design in this," as haply the reader shall see. In the meantime, with his permission, I continue my vocabulary of astute and professional *persiflage*. He will imagine it the evening of the penultimate day, and that my valet (I wish he hadn't done himself to death with his own handicraft) has laid out a store of that Roman compound whereof the leg spoke with so liquorish speech in our last *rencontre*. Then there are those dainty devices for the incendiaryism of tobacco lately invented, and altogether such arrangement for a symposium, as my Lord —, a sublime authority in such matters, would have permitted to pass muster. No need to premise that the expected guest was true to his trust. It was just the time when he had nothing to do—"entre chien et loup," as the French say; too late to continue dining, and too soon to begin substantive rascality. This being the case, and a dressing gown, slippers, and an easy chair—mine—down we sat to converse sweet, which means such a *fusillade* of scandal as idle fellows off guard are wont to indulge in: in capacity of philosopher and friend, the host *loquitur*.

"Do you meerschaum?" This is the twin leaf inhaled by the Sultan. That tippie Wilkinson himself achieved—a youth without his equal on this side paradise for harmonising the discordant elements. So! alight! We are athirst for knowledge, let us hear you forthwith. Remember, when a man takes a thing in hand, *that* let him do. And this is the very land for such comings to the point. If it is not too delicate an investigation, may I inquire the nature of your association of yesterday morning? It was nothing very secret or confidential? Was it profitable, or a combination of the *utile dulci*?"

"Merely mercantile," replied my symposiate. "Simply speculative. I was introduced to the young people you saw me with, as one calculated to be of service to them; and I was laying out how best I should redeem the pledge. This is a wicked world; and if I didn't pluck them, somebody else would—for their fledgling is too luxuriant to escape the curious in ornithology. How best was it to be accomplished? This I was contriving when I met you; and to put them in training for my design, I elevated them to the pig's skin. There's hardly any other way for an Englishman to beat a Frenchman at beggar-my-neighbour!"

"But it's an ancient scheme," I observed; and I had a loftier opinion of you than to expect to find you following the common suit of the —s."

"Great genius clashes with brother talent," rejoined Leatherlungs, who must have borrowed or stolen this from somebody else—"great geniuses clash: comets have their orbits as well as the household stars!"

"Which means, in plain thievery, that one system of sharp practice has prevailed ever since the affair of Esau's —."

"Just so, despite the antediluvians who gave their virtuous evidences before the late committees of Parliament. I wonder nobody was kind enough to send those over-excellent men the volumes of the 'Life of Beau Brummel,' which I have been reading this last day or two. How they would have served to disperse their prejudices and enlighten their ignorance! Hear how his biographer speaks of the Beau and those of his cycle of society:—'Lamentable, indeed, are the specimens of disgraceful folly displayed by that section of it which may be designated the aristocracy of pleasure, now so frequently exposed in the public prints. By such evidence—unfortunately, no idle slander—who do we find made 'the Turf' a bye-word for infamy of the lowest description? Whose jockey threw himself off, to avoid winning a race that his master had backed himself to lose? (Who on earth does Captain Jesse allude to here?—Leatherlungs aside.) Who clean lads out, and then excuse themselves on the plea that when young they were treated in a similar manner? Who marks the cards? Who becomes the stakeholder of a woman's seduction? Who is the prosecutor of his own strumpet, and by that means becomes the herald of his own gross tastes? And who are the fashionable bill-brokers, the jackals of eldest sons and the willing instruments of their vices? Who? Unworthy members of the second estate, fashionable commoners, their dependents and toadies, and men who, having been enabled by money or interest to enter the profession of arms, have subsequently thought fit to engraft upon it the dirty occupations of 'usurers.' Now, that's what I call plain writing, whether it be true or false. But it's true—point blank fact—in all its worst features, without as much of the leaven of professional 'leg-ism' as would go to the *matériel* of a favourite at Hampton races."

"Are you not talking of something you know nothing about, my honourable friend on the left?" I asked, with a perfectly inoffensive approach to the inquisitive. "Do you quote the biographer of the Beau as an authority? Do you read works of a similar class and think them gospel? Do you believe in Cecil (Mrs. Gore), and Pucker Muskau, and Amedée Pichot, and ladies and gentlemen of their school? Is Lister an artist who draws from nature? Is Bulwer, d'Israeli, or even Dickens, save from such foul and filthy scenes as are begotten of sin and vice, and which taste turns from in disgust, while pity shudders and deplores?"

Taste, in all cases, shuns too strong relief: it is urged by those of a bad school, that the modern style of dress is defective in comparison with that of pantaloons and leather breeches, into which the victims were compelled by machinery. Somebody says trowers have ruined our legs, and Mackintosh has done nearly the same for our bodies. All this is a flavour of the ancient barbarity. When Praxiteles cut out his gentlemen, and sent them into the world *sans culottes*, it was because there did not exist the idea how the extremities should be clothed. If he were at his chisel in London in our days, he would encase his Apollos in trowers, after the cut of our friend Cooke, of Poland-street."

"It's not for me," observed the artist of the corner, "to offer any opposition to your remarks; but I may as well let you save them for another opportunity and listener, to whom they may be of service. They are likely to do about as much in my case, as whistling a jig to a milestone. My present business, I apprehend, is to blow this cloud, engulf this liquid, and expound the routine of a sporting gentleman's occupation in Paris, in the middle of the nineteenth century. You observe that the natural secretions of *rouge-et-noir*, *roulette*, and such ducts of excitability, have been closed against the French constitution of recent years, by the French constitution of the present dynasty. You take a Frenchman's life, when you take the means whereby he plays. He *must* gamble—for *livres* in the Palais Royal, or for lives in the low counties: each the especial *mise en scene*, as *Mademoiselle Pas-de-Zéphyr* says, of his contests social and military. The rage for play, at the present moment, is at *delirium tremens* height. The effect of abolishing the *maisons de jeu* upon the thirst for speculation, is similar to that which cutting off the possibility of moisture would have upon the drought of the palate. The folks are crazy for it. It's my conviction, if the thimble men, that Sir James Graham has brought to poverty and ruin, were to come over here, in a gentlemanly condition, with nice little rosewood tables, clean shirts, and discretion enough to hold their tongues, they might make their fortunes between Christmas and Midsummer. I have a strong notion of getting up a company to carry out the plan. In the meantime, it's finding money to operate in horse schemes here just now. The *Société de Jockeys* (that's what they call themselves, I think), are as mad as Bedlam about the turf, and racing, and Tattersall's, and the like. Only talk to a member about the odds, and he'll thank you to put him into your book at any price. Don't imagine I'm romancing. Just let me prime and load with this Turkish tobacco again, and I'll tell you how to circumvent the chivalry of France upon a scale that would astonish the governor of Moscow!"—*Sporting Review* for March, 1845.

## IMPROMPTU ON THE REMOVAL OF KING'S CROSS.

ALL Somers' Town seems gloomy and forlorn,  
Since fam'd King's Cross and George the Fourth are gone,  
Yet why regret, since kings must pass away,  
And *Crosses* we've enough of every day,  
And though the statue high enough was placed  
It never graced it, but in fact *disgraced*.  
They say that bricks composed the statue's part,  
If so, you'll own he was a *brick* at heart,  
Unlike King George, of whom it has been said,  
He had no heart, and very little head.  
The pride of royalty no doubt it goads,  
To think they've sent a king to *mend the roads*,  
But 'twould be worthy of our highest praise,  
Had he in life been made to *mend his ways*.—NED RUB.

BAGSHOT PARK.—It is generally asserted that the purchase of this estate as a royal demesne for the use of the infant royal family, is made preliminary to and in contemplation of an application to Parliament for a grant for the support of the Prince of Wales and the other scions of royalty. It is singular enough that this same estate should have formerly belonged to another Prince of Wales—the last of that title, afterwards George IV. He purchased it of a former Earl of Albemarle, and subsequently it passed from the prince to the late Earl Harcourt, from whom it was purchased by the late Duke of Gloucester. The mansion, in which there is nothing striking, stands in the centre of a park, about three miles in circumference. Bagshot was anciently a lordship of the Kings of England, who had here a palace and park, adjoining to which, James I. and Charles I., who were both much addicted to the chase, often resorted to enjoy that diversion. During the civil commotions, however, in the reign of the latter, it was disparked. The park forming the present royal purchase, lies to the westward of the village of Bagshot. The adjoining heath takes its name from the village, and was formerly of very great, and is now of some extent. This spot, in the olden time was notorious for highwaymen and footpads, so much so that Bagshot and a thief was almost synonymous. Farquhar, in his *Beaux Stratagem* (we believe) names one of his robbers Bagshot. At the present day it is better known for its excellent mutton. The heath affords food to a great number of sheep, which are in general small, but, as just observed, remarkable for the sweetness and fine flavour of their mutton.

HALF-PENCE.

## THE CLOSE OF THE SEASON.

THE LAST FOX.

**F**AREWELL to the season, farewell! The sound of the huntsman's horn, the cry of the noble hound will soon be silent, and from the "man in pink" down to the urchin who bestrides his grandfather's stick, the country will have lost one of its most spirit-stirring sights. Like the fiddle of the little cobbler in the nursery tale, the music of the chase touches a chord that sets us going *volens volens*. Boys and men, horses and dogs, aye, and old cows with their tails on end, confess its influence, and run like mad over the meadows. But "hold hard," the season is near its close, and is not there a melancholy in the word "farewell?" Yet remember, though the animal whose "who-whoop" is now sounding, and whose last bitter bite is pourtrayed by our artist, is only the "last of the season, and that fox-hunting, despite the croakers, has proved too strong even for iron rail-ing.

Like every other social institution, fox-hunting has been, and will continue to be, acted upon by the march of refinement, or "over-civilization," as some persons have been pleased to call it. Our great grandfathers went a hunting at six o'clock in the morning, and at two p.m. to a comedy in five acts. If Roscius and Garrick were announced for the same piece, would any one go to see them now-a-days before sunset? Undoubtedly a heavy blow was given to the chase by those with whom originated the system of making a hunting establishment five times as expensive an affair as there was any necessity for. The pace at Melton was quite good enough, Dian knows, from the commencement of the present century; but when Lord Suffield took the reins he put a steam-engine before the bars.

A stable of fifty hunters and twenty hacks—a kennel with ninety couples of hounds, and a servant's hall with a hundred pair of jaws at

work, are all very well here and there; but because one man in a million can afford it, is that any reason that another should ape it, not being that ten-hundred-thousandth? It is this passion for taking the field *en prince* that is fast making the field so select. It is bad enough that a man, to do the thing in a Christian style, must go out six days a-week, upon two horses on each occasion; but it is a thousand times worse it should be a sort of tacit understanding that if he takes to a country for the purpose of promoting its enjoyment and good fellowship, he does it with a contingent flight to the continent as a part of his compact.

Why should the chase be the only one of our rural sports towards which the wise indifference to show an idle ostentation, that the present era is so honourably distinguished for, should not apply? On our turf there are now no matches for thousands as in former days: this is one of the modern features of promise in racing. So soon as heavy betting shall cease to be a portion of its economy—a result we shall not long wait for—its prosperity will be insured. Look at the fashion of modern equipage; we no longer see the extravagant display common to the early part of the present century: Hyde Park is not now a raree-show of gilded panels, gorgeous trappings, and human nature hired by the yard to exhibit embroidery, silks, satins, and *bouquets* upon. People are content, if their ease and comfort are administered to, that the appliances should be such as become the gentle, and not on the scale adopted by eastern monarchs. The fashion of equipage in our time is the perfection of that most pure and true taste, the "*simplex munditiis*."

So let it be with the *materiel* of hunting. Let the man who intends hunting three days a week—and few rural districts, in England, will now conveniently allow of more—provide an establishment fitted for such a demand. If he hunt his own hounds he will require five horses for him-

self, to allow for casualties, and three a-piece for his whips. If he employ a huntsman, three hunters for himself, and four for his huntsman, will be enough. I cannot but regard the custom of keeping up two packs, one of dogs and another of bitches, as a useless as well as an unwise extravagance. Thirty couples of hunting hounds are enough for the majority of countries, at three days a week. Eighteen couples are a fair average to take into the field. Let those eighteen be selected from the whole, the soundest and most fit for hunting being drafted, without any reference to sex. I am so satisfied that dogs and bitches run closer and faster to the head, together, than when they are separated, that I will lay the odds on the mixed pack against the plain, with any master of foxhounds who chooses to try the experiment; of course, allowing me an honest average of good hunters.

But we are losing sight of the picture that heads our article in this lengthy digression.

They are the right sort, those hounds, who are running in on the snarling varmint, crosses with dissimilar races for the purpose of improving the fox-hound, are now at an end in the sporting world, and let us but continue thus, for a few more generations, improving all the original properties of the hound, till, in fact, a new creature is created, as it were—or, at least, the old one so remodelled as both in symmetry, power, speed, endurance, and sagacity, to surpass, fifty-fold, the stock from which he descended; while the animals pursued by him remain as they came from the hands of Nature, and the result is obvious enough. That the speed and strength of the modern race-horse were wholly unknown to the turf in the last century is susceptible of easy proof, the greatly superior fleetness and faculty of lasting in the staghounds of the present day, over those of twenty years ago. The hound of the last century could go as fast as him of the present, for a short distance; but the lasting capabilities of modern packs, and the head they carry, ensure a killing speed; which, should it continue to advance, no animal in a state of nature will be in a condition to cope with. Pace is the passion of our time. Sober citizens fly from London to New York in a shorter space than their grandsires passed from the Ward of Cheap, to Dublin or Edinburgh; and their aspiring sons race after the Quorn, or the Pytchley, upon coursers once only to be met with at Newmarket, or York. This propensity the rising bands of Nimrods find administered to by stag-hunting more than any other branch of the chase; and, already, Leicestershire possesses three packs of staghounds. But a truce with sombre theories; what though,

"Venit summa dies, et ineluctabile tempus,"

the "noble science" flourishes, at all events, in our day. Let us enjoy the goods the gods give us, and be grateful—posterity must shift for itself; and though our artist has "drawn" it, we have not yet seen "the last fox!"

#### NEW IRISH MELODY.

Air—"Grasshopper Molloy."

THE cap that once on Tara's hill  
Was stuck on Daniel's head,  
Now hangs as dull as Derryanna,  
As if its Dan were dead!  
So sleeps the pride of former days,  
So glory's thrill is o'er,  
And heart's that once sung out "Repale!"  
Now sing "Repale" no more!  
No more that cap can raise delight  
As when it first came forth;  
The peg alone on which it hangs  
Is conscious of its worth.  
And Daniel now so seldom wakes,  
He will not spare a wink,  
Save when some honest boy comes in,  
And makes his halpence chink.

**TURKISH HORSES.**—"Extremes meet" is exemplified in the contrary practice of the English and Turks respecting horses, the result of each being the same—excellence. Large apertures in the walls near the roof constantly admit the air, it being a principle with the Osmanleys to keep their stables cool, covering the horses with thick cloths. And as no country presents more variety of climate than Turkey in Europe, no horses at the same time being so healthy as Turkish horses, it follows that the mode adopted by them is good—spacious, well-ventilated stabling, with plenty of body-cloths. Horses in Turkey never stand on straw, but on the earth or sand, kept very clean, and are always tethered. The practice of tethering is worthy of imitation everywhere; it does not distress the animal, and it prevents his kicking. Nothing is more unpleasant than being between two rows of loose heels—English stables are hot, Turkish stables are cold—English horses are high fed, Turkish horses get little else than chopped straw. It requires hours to dress an English horse, as many minutes suffice for a Turkish horse. The English snaffle would scarcely hurt a deer's mouth; the Turkish bit would break a tiger's jaw. The hoof in England is pared to fit the shoe; the shoe in Turkey is fashioned to the hoof.

Query?—Which are the firmest holders?—The owners of Pennsylvanian bonds, or the pocketeer of the Walbrook funds?

## CRICKET.

### HINTS TO CRICKETERS.—No. 2.

#### ON THE CHOICE OF A BAT.

IN the first place, be careful that you select from those of one of the two best makers, namely, Caldecourt or Dark; and the best reason we can give you for so doing is, that they having always a large stock of material on hand, are enabled to use well seasoned wood, without which a bat, however well made, would never render anything like efficient service. Add to this, that the models of these two makers are as much superior to the clubs of most others, as a Cremona is to a Dutch toy fiddle; and that for lightness, combined with fullness of wood in its proper place, and toughness of texture, they are unrivalled,—and I have no doubt that your experience will bear me out in the recommendation. The long experience of Caldecourt, as a player, is also a guarantee of his ability to judge of what is most desirable in a bat, and, of course, his own interest induces him to use it to the utmost.

In making your choice, do not be misled by what is termed a "crinkly face," or waved markings of any description, for from the nature of that part of the tree, they must be too heavy for efficient use; but prefer a whitish, or white and saffron face, such being invariably found to stand the best, and bear the test of the hammer, that is, provided the wood be properly seasoned.

As regards the handle, its fullness must depend upon your grasp, but be careful not to have it too fine, or it may soon part company with the blade. Should such an accident occur, however, and the blade be worth it, the maker will, at a moderate charge, let another handle into it; and as these new handles are made from picked wood, they can generally be depended upon, and render the bat of more value than before: indeed, instances are of frequent recurrence of gentlemen purchasing one with a blade to suit their fancy, and purposely snapping off the handle to have it renewed. It is also a practice in new handling bats, to insert a slip of whalebone, about a quarter of an inch thick, down the whole length of the handle, and some five or six inches into the blade of the bat, thus forming a handle of three distinct pieces. Some have an idea (but a very erroneous one), that this gives a springiness to it; but how that can be the case when the action of the whalebone is curbed by a piece of tough ash on each side, I cannot well conceive; but, doubtless, it must add materially to the strength of the handle. Be careful, also, that the face of your bat be not in either of the two extremes, too flat or too round; if the former, you will not be able to slip the ball with any certainty or effect, and if the latter, you cannot place it with anything like precision, and are liable to put many a chance into the hands of the slips, point, &c. However, the best makers are not likely to turn out anything very objectionable in this respect.

As to weight, much depends upon use; but we should say, from 2lb. to 2lb. 6oz. was quite sufficient, provided the wood be light and well seasoned, thereby affording a sufficiency of wood where it is most wanted. We have frequently seen bats of Caldecourt's make, weighing only 1lb. 14oz., in the hands of a competent player, hit the ball away for fives, sixes, and sevens, especially to the leg; clearly proving that not weight in the bat, but judgment in the striker, is the one thing needful.

Our forefathers played with bats, or rather clubs, of a scimitar shape, made of beech, ash, and other heavy woods, and weighing upwards of 7lbs! but of what utility could they be if applied against the modern fast and scientific style of bowling? One of these ancient maces, once the property of the Earl of Winchilsea, is now in the possession of — Denison, Esq., whose excellent Treatise on Cricket deserves, and has our warmest approbation. Of the use of the bat, illustrated with correct diagrams we shall discourse in an early number. NEW RUN.

**FRAMING HIS CALCULATIONS.**—We can guess Sir Robert Peel's motive for taking the duty off glass. He wishes to try the experiment whether the revenue cannot be raised, like a cucumber, by means of that material.

**THE COMING MAN.**—Before the Fleet Prison is disposed of, we propose that it be prepared for the reception of President Tyler, that great apostle of Liberty, who is coming to England, we believe, next month. It is not likely he will bring any of his slaves with him, as the freedom of each would make the journey rather too expensive; but he can visit our principle factories, two or three of our largest workhouses, and slop-shops, just to remind him of his "home." What a treat, to be sure, a poor-law union will be to the heart—the eyes, we mean—of a large slave-owner!

**GALVANIC ABSURDITIES.**—A celebrated professor, of Brunswick-square, who may be called the champion of the galvanic ring, declares that the circulation of the starry system is altogether so perfect, that the rings of Saturn must be "galvanic rings!" Bravo! We shall next be told that the "ring at Astley's" is galvanic; or we suppose this professor, in his ardour to reduce everything to galvanism, would, if he were assaulted, call it "an assault and galvanic battery."

**GIBBS IN TRAINING.**—The Lord Mayor is taking lessons from Tom Spring, his chief motive being to ascertain the best mode of getting his head out of Chancery. Charles Pearson has only been giving a (printed) specimen of self-defence,

## THE FISHER'S CREEL.

THE BARBEL.

**B**ARBEL-FISHING, so much delighted in by our Thames Anglers, is a proof that *sport*, and not *pot-hunting*, is the aim of the true fisherman, for it is indeed little worth as a table delicacy, though from its obstinacy and strength it gives the angler that trouble which constitutes his chief pleasure.

The angling season begins in May, and continues to September: and the most approved hours are from daylight till ten in the morning, and from four in the afternoon till sunset. The line should be strong and rather heavily leaded, so that the bait may float about half an inch from the ground. The rod also should be strong, for as old Beak observes, he is "a lusty and a cunning fish," often making, when struck, a violent run towards some favourite strong hold, and thereby breaking both rod and line. The line should be of silk, with a shot and bullet, and the closer you fish to the ground without touching it the better your sport is likely to be. Being leather-mouthed, however, he seldom breaks his hold when once fairly hooked.

If the reader should be curious in barbel fishing, he cannot do better than give a look in at our friend Little's, the tackle-maker in Fetter-lane, Fleet-street, who himself, a "right honest angler," will edify him on this head, and show him a pair of these "pig-headed" fish of goodly magnitude, the fruits of his cunning in this gentle craft: the one weighing nine and a half, the other eleven pounds, and taken from the piles near Hampton-bridge in 1844; they are indeed a noble pair.

The barbel is somewhat dainty and curious in his baits, which must be kept clean and sweet, and untainted by musty moss. A well-ground lobworm is attractive, especially if a night or two before you fish you bait the spot with the ground-bait mentioned below, or (as Walton recommends) with "big worms cut in pieces. And note," continues he, "that none did ever over-bait the place, nor fish too early, nor too late, for a barbel." In fact, he seems as well inclined for an early breakfast as a late supper. Green gentles, cheese kept a day or two in a wet cloth, the young brood of wasps, hornets, or humble bees, may also be enumerated among his dainties. The following paste for barbel may also be recommended. Dip the crumb of new white bread in the liquor in which chandler's greaves have been boiled, and knead it up till it is stiff—a little of the greaves will improve it—and with this use greaves boiled and mixed with clay into balls as a ground bait.

It will sometimes occur that when angling for fish of less resolution as well as pugnacity, the angler may often hook the barbel, and if he should prove anything like a foot long, he is a clever fellow if he land this dogged and sullen fish.

Never throw in the bait farther than can be done by a gentle cast of the rod, letting your lead fall into the water with the least possible noise. It is an error to suppose the largest fish are in the middle of the river, experience teaches the error of this opinion. They instinctively seek their food near the banks or the shelter of piles, and disturbing the water by an injudicious throwing of the plumb line is almost certain to scare them away.

The barbel takes its name from the wattels or barbs with which its nether jaw is furnished. It is gregarious, and decidedly a handsome fish: and another of the examples, that it is unsafe to trust to appearances, for though he looks big and solid, he is almost worthless. The barbel delights in the swiftest runs of the river, which it begins to run up in March and April. When they spawn they keep in companies, routing holes in the gravel to deposit their ova. The roe of the barbel

is noxious, often proving both emetic and purgative. Sir James Hawkins says, "a servant of mine who had eaten part of a barbel in September, though, as I cautioned him, he abstained from the spawn, was seized by such a violent vomiting and purging as nearly cost him his life." This seems true of many sea-fish also, at certain seasons, though the reason has never yet been satisfactorily given.

The head of the barbel is smooth; the nostrils are near the eyes, and its mouth is placed low in the head. Its scales are beautifully and regularly set, and under its nether jaw it has a single beard, or barb, at each corner, and another on each side of its nose. Its dorsal fin has a very strong spine, sharply toothed, and with which it can do severe injury to the incautious handler, and do much damage to the net. The side fin is straight, the belly white, the tail forked, and of a deep purple. It grows quickly, is very tenacious of life, and attains a great age.

Thus much of the barbel, in which we have sought rather to give instruction to the juvenile angler by a collection of facts, than to indite a pleasing and smartly written article.

**TROUT FISHING IN THE THAMES.**—Although, legally speaking, trout fishing commenced in the Thames on the 25th of January last, yet by a resolution adopted at the general meeting of the subscribers to the Thames Angling Preservation Society in 1842, it was agreed it should be postponed until the 1st of April. This has been since annually adhered to, and on Monday last several gentlemen commenced the season. One named Wall took at Sunbury two fish, weighing 11lb., in very fair condition. Lord Gage and his honourable brother, fishing from Maidenhead downward to Shepperton, took seven fish, and while it is pleasing to hear of such excellent sport by such warm and liberal supporters of the above society, it is to be regretted the severity of the winter has been such that the fish were far from being in good condition, not having had sufficient time to recover from the effect of the spawning season; in fact, it is a sin to take them until the following month. It will be gratifying to the trout fishermen to hear there is every prospect of a successful and abundant season.

**RIVER TWEED.**—We understand that the commissioners of the Tweed have caused a great number of par to be marked, with the view of ascertaining whether at a future period they become salmon smelts, and if so, what length of time is required to effect the change. As it is of considerable importance that this question should be set at rest, it is hoped that angling this year will be suspended until the 1st of June, in order to prevent the destruction of the marked fish.

## REHEARSAL OF THE TRAFALGAR FOUNTAINS.

(By our own Correspondent.)

A select circle attended a private rehearsal of the fountains, which took place at an early hour in the morning, when the press were invited to be present. We were received at the centre plug-hole by the principal turncock, who, at a given signal, turned on the water, when the dolphins, evidently affected with hydrophobia by long abstinence, began foaming at the mouth in the most fearful manner, and a gurgling noise was heard in their throats which spread consternation among the bystanders. The turncock, with considerable presence of mind, assured the lookers-on, in a neat speech, that they "needn't be afeard, it was only the newness of the pipes;" and we were then enabled to survey the scene with that calmness which our critical capacity required. The water shot up with considerable buoyancy, to the height of nearly a foot, when the enthusiasm of the spectators found vent in repeated cries of "Hear, hear," till a gust of wind blowing the spray towards the assembled crowd, a vigorous shout of "Shame" was immediately set up, and there were fears that the populace, in their indignation, would have torn up the balustrades by the roots from the soil of stucco they are imbedded in. The turncock, with singular tact, suddenly lowered the supply, and the company being requested to keep back, the fountain was soon brought into full play again.

On the whole, we cannot say much for the exhibition; but as it is now open to the public, we recommend our readers to form their own opinions. In our eye—and a good deal came into both of our eyes—the water is rather muddy, and we recommend a filter being placed on the top of the dumb waiter, an arrangement that would be quite in keeping with the present design, and would greatly add to its utility. The fountains in Trafalgar-square have not the gentle softness of the one in the Temple, but they certainly surpass it slightly in volume. They remind us of a good-sized garden-engine, but we decline passing a definitive sentence until we have become better acquainted with their powers. We think it very likely that the fountains will have a tolerably long run, but there should be a little spirit thrown into the water if the permanent approbation of the public is looked for.

**CONNUBIAL COMPLIMENT.**—A theatrical amateur went for the first time to see the pretty Mrs. ——. A critic, but no friend to the lady, asked the gentleman's opinion of the actress. "Charming," was the reply; "she beats everything." "I don't doubt it," replied Aristarchus; "I've heard her husband say as much."

## CORRESPONDENCE.

(To the Editor of THE SPORTING WORLD.)

16th April (Newmarket F.S. Meeting), 1846.

SIR,—When I bade adieu in November last I felt a desire for repose, and was not loathe to enjoy it. For some months now have I utterly discarded pen and paper, although I was sadly out of temper at reading the errors and mis-statements of some of your persevering contemporaries. The Turf, I admit to be an exciting and interesting subject, and may fairly claim its column; but, it is rather too bad to keep the pot boiling after the present fashion; this overstraining may work an evil in accomplishing its own cure, and bring racing and racers to a crisis, not unlike that which befel the ring. I trust it may not prove so; but I think a little discretion is the most likely thing to prevent it.

I have found in the columns I have referred to a continual clatter about "Zanoni;" and, what with the remarks of editors, letters of correspondents, and ebullitions of inquirers, I defy any one to make head or tail of the business. The horse has been so much before the public, and so much has been said about him, that he may not be incorrectly described as, "Laconic, *alias* Running Rein, *alias* Maccabeus, *alias* the Dead'un-alive, *alias* the Colt by Gladiator, his dam by Capsicum."—A word or two may suffice to set these things right.

The party who entered him for the Chester cup has done so under much disadvantage, for there are two points concerned by the way the entry has been made:—First, The horse is entered as late "Maccabeus." Now there are, or were, two horses of that name; or, at least, one horse ran in that name in 1843, in lieu of the horse really called so: the trick succeeded, and Goodman was the author of it. The present owner, therefore, has, to contend against that fact, which Maccabeus is he, or was the present horse ever Maccabeus, and when? Second, Goodman has been known to say, that the colt he bought of Sir C. Ibotsen died; that colt was by the Gladiator, his dam by Capsicum: this is denied by others, who say that Zanoni (now alive) is that colt; but, whatever little value may be attached to Goodman's word, it will be found to be, if I mistake not, a point against the present owner.

In strictness, there need not have been any entry of pedigree at all. The handicapper might have been told what the horse had done, and parties prepared to show that the entered horse, simply as "Zanoni," was the horse which ran at the last Derby, and there an end on't—for myself, I believe it to be the same horse. As regards your readers, I cannot advise them to bet on him. Zanoni is a good horse; he ran the Derby course (a mile and a half) very fast (presuming he is the same horse), and won easy: it is true he had a year in his favour, but I look at the time of his going over the ground alone; still I say, bet not on him, and they who take my advice may have reason to thank

SOOTHSAYER.

## TRAINERS' AND JOCKEYS' ASSOCIATION.

[The object of the writer of the following letter is so benevolent and so easy of attainment that we at once enter cordially and earnestly into his views, and shall, to the utmost of our power, aid him in the accomplishment of a plan which we are surprised has not hitherto been set on foot by the patrons and members of the turf. It is, indeed, most strange that while the members of almost every trade and profession in this country have formed themselves into provident and benevolent associations for the maintenance of individuals of their body who, by age, infirmity, or misfortune, have fallen into distress, the trainers and jockeys of the English turf should have neglected so important a duty. Now here is a feasible proposition for the formation of a fund, which would be amply adequate for the purpose, and which we hope to see adopted and carried out by some influential friends and patrons of the turf. Our correspondent's letter is addressed to the patrons of the horse-racing. He says:—]

"I am induced, from a thorough knowledge of your benevolence, to trespass on your attention in behalf of a set of men who, during the greater part of their lives, have contributed in no small degree to your recreation and amusement; I allude to trainers and jockeys in decayed circumstances, and, in so doing, there is no need to impress upon you that many of them are found in deep distress, and but too frequently in absolute destitution.

"It is suggested that a society be formed to raise funds for the purpose of affording a certain annuity to those whom you may deem deserving objects of your liberality, and of providing some assistance for such of their families as may be left without any adequate means of subsistence. The way by which sufficient funds may be easily and readily procured is, I conceive, two-fold:—

"First—By donations and annual subscriptions, a method which is proved by experience to be the best and most safely to be relied upon for carrying into execution the intentions of any benevolent society, and is, therefore, strongly to be recommended.

"Second—By a deduction of 11. per cent from all stakes won that amount to or exceed 100l.; from this source I confidently anticipate the receipt of 1000l. per annum, as I find in the year 1841 the total winnings amounted to 155,000l., of which 112,000l. consisted of stakes of 100l. and upwards.

"In closing this letter, I beg respectfully to apologise for my intrusion on your notice, but having long felt that some such institution as the one proposed was greatly needed, I have ventured to submit this to your consideration, assuring you that I have no selfish view to serve, and should be equally happy to find any other better plan carried into effect."

[The foregoing plan is so exceedingly plain, simple, and unoppressive, that we feel assured that no sincere supporter of the generous sports of the turf can object to it. The vast confidence that owners of race-horses must place in their trainers and jockeys entitle them to extraordinary consideration; jockeys especially, whose dangerous occupation exposes them to a thousand casualties, which may incapacitate them from pursuing their business for a length of time, or, frequently, for the remainder of their lives, should, in such cases, have some security for their future provision. The majority of them are, we fear, not over provident, but the establishment of an association of this kind, would be an inducement to them to exercise a trifling degree of prudence, in contributing to a fund from whence such important and beneficial results would flow. It would, moreover, be the means of bringing the employer and employed into a kind of union—it would inspire confidence on the one hand, and gratitude on the other—and would give a position and respectability to a body of men, who exercise a very marked influence amongst a large class of the community, but who have hitherto had no definite name or place in society. The inducements for the actual "operatives," as we may term the jockeys, to lend their energies in the formation of such an association is so manifest that we need not dwell upon them. Prosperous trainers may, perhaps, feel that such an institution is not required for their class, but every day's experience proves that there is no one so high as to be above the reach of misfortune; besides, if a man be independent, a greater obligation is imposed upon him to assist those who are poor and helpless. The example which the Job and Post Master's Association, the Drury-Lane and Covent Garden Theatrical Funds, The Haberdashers' and Silk Mercers', and numerous other respectable provident and benevolent societies have set, will, we trust, induce the trainers and jockeys to follow their praiseworthy example.]

## THE COMIC COOKERY-BOOK.

RECIPT THE FIRST.—"HOW TO MAKE A MATCH."

AIR—"Gallopade."

ALL you who love feasts, at which Hyemen is cook,  
A receipt take from "Cupid's Own Cookery-book!"  
If a match you would make, you will find this the plan—  
Catch a young gent and lady, as fresh as you can;  
Let the young gent be raw and soft, though the male gender,  
And take care the young lady is equally tender;  
To dinner the gentleman set down to table,  
And pour as much wine in as ever you're able;  
And, whilst he is soaking, attend, pray, to this,  
Every now and then pop in a word about miss;  
But do it with care, or the match you may spoil,  
And you'll find he'll be very soon ready to boil.  
The moment your gent in the gills becomes red,  
See, poor fellow, he's into the drawing-room led:  
Set him down by the lady, though shy he may be,  
And sop them both equally well with green tea;  
Lead them to the piano, the handiest of things,  
And blow up the flame till the young lady sings;  
But the first sigh you hear the young gentleman puff,  
Take them off, for they then will be both warm enough;  
Put them then by themselves, they'll not think you presume,  
In the most retired corner there is in the room;  
Or else on a sofa, *tete-a-tete*, the pair leave,  
And there let them simmer the rest of the eve.  
Two or three times successive this plan must be tried,  
Taking care that the parties are placed side by side;  
And you'll find this a truth is, deny it you can't—  
They'll be ready for marriage whenever you want;  
After marriage, more care you must take than before,  
As 'tis known they are very apt, then, to turn sour;  
The honeymoon o'er, and departed the zest,  
How'er well and tasty they both may be dress'd!  
Attend to these hints, and a match you may make,  
Whenever to make one the pains you may take;  
A receipt for which vain you'll in Mrs. Glass look,  
As 'tis copied from "Cupid's Own Cookery-book."

FACT FOR ORNITHOLOGISTS.—Some time since a large owl was shot by Lord Lovat's gamekeeper, under circumstances somewhat singular. The place which the bird had chosen for the construction of its nest was a rabbit's hole in a high bank adjoining the burn which meanders through the mains of Beaufort Castle; and when fired at, it was sitting over four eggs, which in due time would have produced as many birds, in a situation where probably a similar occurrence has hitherto been unheard of.

## CORRESPONDENTS.

**K. H. C.**—The question is one for a medical man. Have you tried electricity?—we don't mean the Galvanic Ring, which is a mere hoax, except that being an *imaginary* remedy it may cure *imaginary* complaints.

**GEORGE S.**—Depend upon it, if we should have been safe in so doing, we should have given the information you desire. But are you not aware that it would fall under the Stamp Act as "News"? and then we should be liable to a penalty of £10 for every copy of our publication? These penalties are seldom if ever inflicted to their full extent; but the consequences of a wilful infringement of the law are ruinous. Therefore we would scarcely pay for this publication, if stamped, stamped as, in addition to the penny per sheet paid beforehand to government for the stamp (making it 5d.) the vendor, in consideration of the enhanced price, would expect another halfpenny of profit, which would raise this miscellany to 3d. to the general purchaser.

**AN OLD PEDIESTRIAN.**—We do not know of any other preparation than that known by the North American Indians, and the inhabitants of the Oregon Territory, by the name of pemmican. This is prepared by them by drying in the sun, lean slices of beef, then pounding them with wild currants, and a quantity of the fat melted down. Venison is stated in Hunter's Journal of a Residence among the North American Indians, as being similarly prepared with maple sugar and aromatic root (which must be a poor substitute for our spices); so to the pemmican that an ounce a day will support a man in robust health, a mere knowledge of the amount of nutriment contained in the most eligible alimentary substance, seems to be a traveller's "Mnemonic." connected to make simple stay-at-home folks stare; it is clean contrary to every fact in physiology and dietetics. Dr. John Peacock Holmes, prepared a quantity of pemmican in this country, for the use of the party on Sir John Franklin's polar expedition, which was packed in skins, in the Indian fashion, for convenience of carriage: it is portable, and tolerably nutritious, when nothing better is to be had; but deserves no such character as that attributed to it by our correspondent.

**JOSEPH BOWLAND.**—You will see that the *CAMARU* has made its appearance; it will be finished next week, and be followed by the *LARK* or the *GOLDENWING*, we have not yet decided which. *JERRY ANANAW* will appear as soon as arrangements are made for that purpose, in weekly numbers, at 1d., and proceed regularly until completed. The *T. S.* is a deceased publication, and this paper is not entirely under the same control, we cannot, therefore, answer your other question. With respect to Dr. Sykes, we have not the file of papers handy, but we will look to it, and the *Racing Calendar*, and let you know the result.

**GEORGE AUSTIN, JUNIOR.**—Your communication being merely narrative, and not throwing new light by conjecture or otherwise on any moot point, is hardly sufficiently interesting to occupy space in our "Author's corner." But do not despair at the first "cock," try again.

Was Cooke, who was executed for the murder of Mr. Pam, at Leicester, hung in chains after execution?—Yes; but owing to the indecent conduct of the crowd who assembled under his gibbet, he was taken down shortly after.

**SOOTHAYER.**—Our best thanks; you will find us punctiliously particular in what we undertake in this periodical.

**T. H. SHALTON.**—We are obliged for your offer: our paper being unexpunged, cannot be forwarded to you through the post, it can be obtained, however, of any publication dealer in Southampton.

**GEORGE COOK.**—There are many professions who would induce you for a reasonable remuneration. Try *Johnny Shaw*, Inspector at Mr. May's, the *Leam*, *Stamford-street*, *Chancery-market*; we cannot state terms without being subject to the advertisement duty.—We will give you some fishing localities in a week or two, with particulars.

**DUNCHURCH.**—Courtesier was executed for the murder of Lord William Russell, July 6th, 1840.

**DIMMAL DUMMY.**—A leads (first lead) the queen of trumps, the king being turned up on his right; B (his partner) has ace, ten, and three others. Should he play the ace upon the queen?—Yes.

**NEMO.**—How many horses started for the Derby in Coronation's year, and in what year was it run?—In 1841; 29 started.

**W. SIMPSON and H. B.**—W. S. tells B. B. that he will carry him home in 15 minutes, when B. B. refuses to take his clothes off, though W. S. states his readiness to carry him. Which wins?—It is a bubble bet, common enough among *would-be* sharps, but ought not to be paid: W. S. should win a fool's cap and bells for his conceit and ignorance.

**S. JONES, Birmingham.**—The 1st Victoria, caps. 84, 85, &c., which came into operation on the 1st October, 1837, abolished capital punishment in all cases except the following:—Murder; arson, where the house is inhabited, even though the parties may not have been injured; burglary, accompanied with assault with intent to murder; and administering poison to any person with intent to murder. The punishment, by the same act, for forging a will is transportation for life, or for any term not less than seven years, or imprisonment for any term not exceeding four or less than two years, with or without hard labour.

**IMPUGNOR, Lambeth Marsh.**—What is the exact number of horses entered for the forthcoming Derby and Oaks?—As also the Chester Cup?—There were originally 150 subscribers to the Derby, and 138 to the Oaks, but the former number is reduced by death to 140, and the latter to 139. For the Chester Cup 123 horses were entered.

**M. G.**—Four two's and a nine count twenty.

**E. B.**—Caunt lost his first fight with Bendigo, by a foul blow: their second "tourney" lasted 75 minutes, and 80 rounds: Bendigo was this time the loser: he having gone down without a blow. It is six years since.

**SANDERSON.**—The crime of rape is not now punishable with death. The capital consequences arising from the commission of this offence were abolished in 1841.

**C. D.**—In the event of a person guilty of murder, and afterwards hanged, his property is confiscated to the Crown. An assignment of the property to a relative or any other person, between the commission of the crime and the execution of the culprit, is not valid in law, as the forfeiture of the right over the property has a retrospective operation to the time when the offence was committed. This, however, is one of those cases in which the law may be said to be a dead letter.

**PAM.**—We will treat at length of *CARD-PLAYING* and other in-door recreations, when the time comes round.

**J. THETTON, Sheffield.**—There is a difference of opinion among farriers as to whether a thrush constitutes unsoundness; but if a horse is sold without warranty, it cannot be returned on thrush being discovered.

**THOMSON.**—The stake for which Broomie and Bungaree fought was £300 a-side.

**RAFFLES.**—E. L. S.—A had a right to sell his own chance, and throw off for S.

**W. POSTLETHWAITE, Stevenage.**—Eleven did win; nothing higher was thrown, and in throwing off the tie, one of the elevens becomes entitled to the prize.

**LEWIS.**—Our correspondent must apply to Messrs. Wetherby, publishers of the *Racing Calendar*, Oxendon-street, Haymarket, London.

**SIMPSON.**—Which is the best treatise on short hunt, and where can it be purchased?—That called "Short Hunt," by Major A. S. is the pleasantest and best book we know on the subject. It is published by Longman, and Co.

**N. B. JERRY.**—Pay your postage. We have refused several similar "favours."

**B. SIMPSON.**—A ball is challenged on the 7 hole; another ball is struck, which touches the challenged ball, yet does not remove it from its original position, but it afterwards falls in. Is the ball on the 7 hole free after having been struck, not having been afterwards challenged?—Yes.

**AN AFTER-DINNER DREAMER.**—Your idea is droll, but not sufficiently well expressed. *Improvisus* carefully polished, and duly considered, tell generally the best in print. The talent of improvising, or making extemporaneous verses, is a very rare one, and decidedly a natural gift; although, like all other gifts, it may be improved by practice and diligence. The late Theodore Hook was an improviser. Within our personal knowledge the only man who possesses this peculiar faculty, is Mr. Charles Blom, the writer and composer of the "Maid of Juteh." "No more shall the Children of Juteh sing," &c., &c. he is decidedly a talented man, and composes songs, as the dearest composed minstrels, *pro re nata*. If you wish his services, he is to be found per post letter, at No. 15, Craven-buildings, Drury-lane.

**R. BRIMMON, Esq.**—The question is a moot one: perhaps the following extract from a standard work, entitled, "Caricatures of Heraldry," will clear up your doubts:—Real esquires are of seven sorts:—1. Esquires of the king's body, whose number is limited to

four. 2. The eldest sons of knights, and their eldest sons born during their lifetime. It would seem that, in the days of ancient warfare, the knight often took his eldest son into the wars for the purpose of giving him a practical military education, employing him meanwhile as his esquire. 3. The eldest sons of the younger sons of peers of the realm. 4. Such as the king invests with the collar of SS, including the kings of arms, heralds, &c. The dignity of esquire was conferred by Henry IV. and his successors, by the investiture of the collar and the gift of a pair of silver spurs. Gower, the poet, was such an esquire by creation. 5. Esquires to the knights of the Bath, for life, and their eldest sons. 6. Sheriffs of counties, for life, coroners and justices of the peace, and gentlemen of the royal household, while they continue in their respective offices. 7. Bachelors-at-law, doctors of divinity, law, and medicine, mayors of towns, and some others are said to be of esquirely dignity, but not actual esquires. Supposing this enumeration to comprise all who are entitled to esquireship, it will be evident that thousands of persons styled esquires are not so in reality. It is a prevailing error that persons possessed of £200 a-year in land are esquires, but an estate of £30,000 would not confer the dignity. Nothing but one or other of the conditions above-mentioned is sufficient.

Numbers three and four of this paper are in the press reprinting. We shall keep the back numbers in print, but in a short time must raise the price of them, when more than four weeks back, to TWO-PENCE, to cover the expense of the reprinting.

## OUR WEEKLY CALENDAR.

AN EPHEMERIS IN JEST AND earnest.

**SUNDAY, April 30.**—FOURTH SUNDAY AFTER EASTER.—*Appropriate Birth-Day Gifts*:—The most appropriate birth-day gifts are such things as nobody wants, or nobody would use. Velvet breeches lined with satin, and embroidered with butterflies, are the best adapted for any relative engaged in a high-fancy business, as a South Sea whaler, &c. Painted French gardens will do well for a grandfather with one leg in the grave; a silver-mounted riding-whip is likely to suit an uncle in the Navy; and a cooked-hat is just the thing for a Friend who is a Quaker.

**MONDAY 21.**—*Belford Fair.*—The Quadrant-Bandle appointed 1844—"Where he sits in a gold lace band, like perfidious Albion, watching the movements of the Foreigner."—*Le National.*—The Obibbeways, flying-gull and tobacco, swim a match at the Holborn Baths. 2 to one on the Gull, but Tobacco has no backer.

**TUESDAY 22.**—*Bath Races.*—Total Eclipse of Sun, 1743; Young England slipped down a plug-hole.—*Medical.*—*Certain Cure for a Cold in a Prima Donna.*—Stop her salary, or put a rising vocalist in her part.—Henry Fielding, the novelist born, 1707.

**WEDNESDAY 23.**—*St. GEORGE'S DAY.*—Shakespeare born, 1564; emigrated to France, 1844; retired to Islington, 1845, finding both his homes in Westminster in "possession" of the "creditors," the other of "Velvet Breeches," and a gang of French demireps, castratos, and continental fiddlers!—A meeting called to establish an Agricultural College; so that the *Plough-boys* may be as learned as the *Harrow-boys*.—Concert given in aid of the Distressed Needle Women—"They see, but do not reap."

**THURSDAY 24.**—*Lincoln fair.*—Remains of a Roman wall discovered in Houndsditch, 1843; doubtless the property of the late *Jen-Hus* Caesar.—Prince Albert goes to the Isle of Wight to take Osborne-house, 1844: a steady young man used to farming, and no objection to look after *Cowes*.—Actors at a penny theatre taken into custody while playing Hamlet, 1840: the King fined a crown, and the *Ghost* "doomed for a certain term to walk" the mill.—Oliver Cromwell born, 1599.—Daniel Defoe, the writer of Robinson Crusoe, died, 1731.

**FRIDAY 25.**—*Epsom Spring Races.*—Morpeth ditto.—*Guide to the Race-course.*—Young ladies are recommended to take plenty of gloves with them to races, as the Jockey Club rigidly enforces the payment of all bets. Berlin is the cheapest. Last season's gloves, however, can be cleaned at 3d. a pair, and this is a capital opportunity to get them off your hands. Settling-day takes place at Tattersall's three days after the race, when you must pay up your kids, or else be published as a defaulter.—Princess Alice born, 1843: she will prove herself, no doubt dear to the nation.

**SATURDAY 26.**—*Settle sheep-fair.*—The Marquis of Waterford born, 1811.—Wonderful sagacity in a dog: a Newfoundland dog finding a cheque, takes it to the Bank. On being asked "How he will have it?" answers, "In paunches."—*Meteorological.*—A simple method of ascertaining the quantity of rain fallen, is to remove a tile from the roof of your house. A basin on the floor of your bedroom will catch all that comes, and the quantity may be ascertained.

**ABSENCE OF MIND.**—In a state of mental absence, a young man demanded the hand of a young lady, and only perceived his error when he got her father's foot in his rear.

**A HOME TRUTH.**—At the grand banquet given a few days ago in Paris to Marshal Bugeaud, by the mercantile interest, the Duc de Nemours, in reply to a toast, observed, "Algeria will ever be dear to us." This must have been very consolatory to the assembly. Nevertheless, we think the prince never uttered a greater truth; for the African conquest has cost France more than it will ever repay.

## The Sporting World.

FOR THE WEEK ENDING APRIL 26, 1845.

Our leading article has this week found its way into the first page (in consequence of the imperative necessity imposed on us of placing the engravings symmetrically), the DEVIL has just appeared to us, and with black visage and a woe-begone voice, thus delivered himself:—

"Please, sir, the Printer says he's got no Leader."

EDITOR.—There's the "Last Fox of the Season?"

DEVIL.—He's put it under the cut it belongs to, in the first page.

EDITOR.—There's "The Welcome to May," and there's the account of your own "Sweet Home." PANDEMONIUM.

DEVIL.—Please, sir, "The Welcome's" too long, becos "Pandemonium" begins a'-top of the 6th page, and Frank Redmond's crib is on the twelfth, while "Boxing" makes up ten and eleven.

EDITOR (Counting his fingers).—One, two, three, four, five, six engravings this week. There's your leader—vanish!

[Exit DIABOLUS.—Turn over.]

## PANDEMONIUM.

**L**AST week we conducted the reader into the backslums of poverty and crime in the purlieus of fast-decaying St. Giles's, soon we hope to start from its ruins improved in cleanliness and beauty. This number we step into St. James's to portray the deserted shrine of avarice and ruin, which still rears its head though its guests have departed and its owner has gone to his last reckoning.

As this article is intended to include not only a description of this magnificent temple of play, but a brief memoir of the public life of its founder and proprietor, we shall waste no space in any preliminary remarks upon the war which has of late been carried on by the police and the parish of St. James's against the various hells of the vicinity, but at once proceed to describe the origin, and trace the history of this interesting building, wherein have been enacted some of the most exciting scenes of LONDON LIFE.

This mansion or pandemonium, as it has been termed, stands on the site whereon formerly stood three or four very substantial dwellings, the leases of which were purchased by the late Mr. Crockford, with a view to the erection of the present stately structure. He had been previously connected with certain parties in other establishments of play, and latterly had been associated with Josiah Taylor, Austin Aldridge, Sutton, and others, at the celebrated aristocratic club, known as Watier's, in Piccadilly, in which place a very large sum of money was realised by the respective proprietors. The game of French Hazard was first introduced at this club, and it is related of Crockford (and we have reason to believe the truth of the report) that in his last season at Watier's, there had been for weeks a continued and uninterrupted run of ill-fortune against the bank, so much so, that it was difficult for the proprietors (although originally considerable capitalists) to raise the funds necessary to make good the repeated losses. Lords Leveson Gower (now Earl Granville) and Foley, Messrs. Bull, Hughes, Kaitho, and others of large fortune and bold adventure, were the parties who nightly entered the field of hazardous speculation, and to whom Crockford and his party lost upwards of 40,000*l.*, without the slightest change in the tide of fortune. Under such unlooked-for reverses, every resource had been resorted to to increase the supplies, and a last effort was made to form the required bank of 5,000*l.*, which was, however, with the utmost difficulty accomplished and put down, as may be imagined, under no very sanguine expectations.

The hour of operation arrived; Crockford was, as usual, in attendance. Play commenced as on former nights, and little adverse fortune was in the first instance apparent. More than 4,000*l.* had actually disappeared out of the 5,000*l.* The most fearful apprehensions were on all, but mostly

so on Crockford, whose nerves were unequal to any other further contemplation of the ruin that appeared inevitable; in a state of the most hopeless despair, he hastily quitted the house, leaving the wind-up of the contest to Taylor, Aldridge, and the croupiers. The freaks of fortune are strange and unaccountable. Scarcely had he left the place, brooding over the ill of poverty, which he believed from thenceforth to be his fate, than the tide of chance took a sudden and determined change; not only were the losses of the evening recovered, but there resulted to the bank, on the night's play, an absolute gain of 20,000*l.* The unexpected news was not communicated to Crockford until the following morning, and it was some time before he could be brought to believe the possibility, much less the truth and reality of the event. From this night the current of fortune was with the bank, and the wind-up of the season is said to have realised to the respective partners, in cash and securities (which at that time of day were of value), the enormous gain of from 150,000*l.* to 200,000*l.* Before the period of another London season arrived, however, Crockford, and his firm adherent Austin, determined on seceding from Watier's. The reason assigned for this apparently impolitic withdrawal from a partnership which had been so largely productive of benefit, was that Josiah Taylor having recently purchased the lease of the club-house over the heads of his partners or associates had avariciously attempted to impose terms on his colleagues at variance with all former arrangements. These Crockford and Austin resisted, and as the former was gifted with a shrewd perception and a bold speculative mind, he knew "what's what," and that, saith the author of Hudibras, is

"as high  
As metaphysic wit can fly."

Crocky, therefore, was convinced that to risk the large capital he had acquired without the chance of a proportionate return of profit, was not the way to augment it; so he separated, and with his *fidus Achates*, Austin resolved to open a bank on his own responsibility. Acting upon this reasonable conclusion, he with peculiar promptitude purchased the lease of a large house in St. James-street, fitted it up in a style of superior accommodation, and before the rival establishment of Josiah opened for the season, the new "St. James Club" had begun operations. The situation was certainly superior to the old one of Watier's, which stood in Bolton-street, and this advantage, together with Crockford's improved arrangements, secured him the patronage of most of the noblemen and gentlemen who had known him at Watier's, to the great discomfiture of his quondam partner, Josiah. Business increased, members multiplied, and the fishmonger subsequently took two adjoining houses, and shortly after a fourth mansion for the daily augmentation of "friends," who required

further elbow-room. He now resolved on the bold step of pulling down the whole premises, and erecting on their site a magnificent structure, which in beauty, capacity, and style of arrangement, should surpass everything of the kind, and be suited to the wants, wishes, convenience, and accommodation of the aristocracy and gentry of the kingdom.

During the progress of this superb building, to accelerate the completion of which, a large number of workmen were nightly as well as daily employed, St. James's-street presented a singular spectacle.

Nearly the whole of the upper end of the street from Bennet-street to Piccadilly was in a state of excavation for the arrangement of laying down pipes, forming and perfecting drains, &c., but principally for the object of making a most capacious ice-house. Great was the alarm that such extensive underground operations would endanger the foundations of the adjoining and neighbouring houses, and this alarm, as things turned out, was not without cause; for, while the work of excavation was proceeding,

one entire side of the Guards' Club House (situate at the northern adjoining end of Mr. Crockford's premises) fell in with a fearful crash, leaving the complete interior of the house, with the beds and furniture of the different apartments in rather a ludicrous state of exposure, and in a most perilous position.

The nocturnal operations of the numerous workmen by torchlight gave to the scene an extraordinary appearance, causing it to resemble more the locality of a manufacturing district than the main fashionable lounge of London, and the chief thoroughfare to the palace of the sovereign. The whole affair, by the magnitude of the project, and the known and somewhat unpopular purpose for which it was intended, caused great and general excitement, and gave rise to daily moral comment and sarcastic witticism in most of the journals and periodicals of the day. The following samples, having reference to the fall of the Guards' Club House, are accredited to the pen of the brilliant T. Moore:—

“What can the workmen be about?

Do, Crockford, let the secret out

Why thus our houses fall.’

Quoth he, ‘Since folks are out of town,  
I find it better to pull down

Than have no pull at all.’”

“See, passenger, at Crockford's high behest,  
Red coats by black legs ousted from their nest;  
The arts of peace o'ermatching reckless war,  
And gallant Rouge outdone by wily Noir.”

During the time occupied in the erection of the building, Mr. Crockford engaged a spacious house in Pall-Mall as a temporary place of business. To have let one season pass in idleness would have been to endanger the pockets of the sporting members of the Club to the disease of plethora, or to subject them to vacuity from causes non-productive of effects to himself; the entertainments of dice were therefore carried on, and with good result, at the house in Pall Mall in aid of the building fund for the rising mansion or *Pandemonium* (for such was the classic title already bestowed on the progressing structure) which was hereafter to astonish the world, and to stand the great privileged gaming-house of the metropolis. The year 1827 (the period alluded to) is said to have been most successful to Crockford, and to have surpassed in gain all subsequent seasons, excepting the first two of operation in his new establishment.

On the opening of the superb mansion in 1828, the whole fashionable world, male and female, crowded with eager curiosity, under cards of admission from the great proprietor and the old and privileged members of the Club, to view it. The newspapers were lavish of praise, and elaborate in description of its splendour and magnificence, and the population of London thronged to its exterior survey under much greater excitement than was apparent on the day of opening that splendid national edifice, the Royal Exchange. Already had the most distinguished members of the aristocracy formed themselves into a committee of management; the most wealthy of the land had enrolled themselves members, and every sprig and stripling of fashion fed on the hope of sooner or later becoming one of the elect. The number of members completing the club was from 1000 to 1200, exclusive of the privilege or right of *entrée* permitted to ambassadors and foreigners of distinction during their diplomatic sojourn or temporary visit to this country.

We shall now proceed to a description of the house, and of the engravings with which we here illustrate it.

We this week present a view of the gorgeous saloon, and our next number will contain that and two or three minor sketches taken from the gaming-tables of the metropolis.

STAIRCASE AT CROCKFORD'S.

The exterior of this celebrated mansion is extremely plain, exhibiting three compartments, the chief of which is ornamented with four Roman Corinthian pilasters, which spring from the base, sustaining a regular entablature and attic. The space between the pilasters is perforated, on the first story, with three enormous windows, lighting the state drawing-room.

Your arm reader, and let us enter. A magnificent vestibule and staircase break upon the eye. To the right and left of the hall are reading-rooms and dining-rooms, used chiefly in the day time. The staircase (see engraving) is of a sinuous form, sustained on its landing by four columns of Doric example, above which are a series of columns of the Ionic order, forming a quadrangle, with apertures to the chief apartments. Above these pillars is a coved ceiling, perforated with luminous

panels of stained glass, from which springs a dome of surpassing beauty. From the dome depends a lantern, containing a magnificent chandelier.

The *State Drawing Room* next claims our attention. This noble apartment is decorated in a style that baffles description: it is in the most florid style of the school denominated *Louis Quatorze*. This room presents a series of panels, or macarons, containing subjects *a la Watteau*, from the pencil of Mr. Martin, a relative of the celebrated historical painter of that name. These panels are alternated with splendid mirrors. A chandelier of exquisite workmanship hangs from the centre of the ceiling. Three tables, beautifully carved and gilded, are in this apartment, covered with blue and crimson velvet. The upholstery and decorative adjuncts are imitative of the gorgeous taste of George IV.: indeed it is doubtful whether royalty itself can vie with the consummate

glories of this magnificent chamber. The three windows to which we before alluded, astonish the beholder on entering the room, from their colossal dimensions. The other apartments in this costly edifice have few claims to distinguished notice. It is quite obvious that the architect, Sir Geoffrey Wyattville, determined to throw all his genius into the staircase and the room above described. That determination has been most felicitously carried out.

The lofty and capacious dining-room, supported by marble pillars, and furnished in the most substantial and aristocratic style of comfort, is equal to any arrangement of the kind in the most lordly mansions. The ascent to the upper apartments is by a magnificent staircase, and the drawing-room is allowed to be one of the most elegant and splendid apartments in England.

The *Sanctum Sanctorum*, or *Play Room*, is comparatively small, though handsomely furnished; in the centre of which is the table on which it may be said Crockford's fortune was manufactured, and for which he had doubtless a greater veneration than for the most costly communion-table that ever graced a church. It is oval in form, covered with green cloth, and marked by yellow lines, denoting the different departments of speculation; that is to say, for betting on or against the hand of the caster, or person throwing. Around these compartments are double lines, within which also are deposited the odds, or proportion between the *main* called and the chance to be thrown by the caster against such *main*. In the centre, on each side of the table, sat a croupier, whose duty it was to call and mark the *main* and chance, and to draw and pay the bets, as they lost or gained on each event. Happy are we to write these things in the past tense, for though hot and inconsiderate, may, at the gaming-table, become the prey of cold-blooded criminal avarice, *gaming* in its established form, and as a pursuit, is no more *sporting*, in any legitimate sense of the word, than highway-robbery is fox-hunting, or *vice versa*. Yet dirty "legs" are but too apt to endeavour to confound a love of manly amusements and active recreations with the vilest pursuits of dirty, dishonest avarice. But to return. Little or no money appeared on the occasion of play; the swags risked being represented by counters, of different amount in value, varying from £1 to £200, and the advantage of the table against the player being about 1½ per cent., which, taken on the continual and continued repetition of roll through the night, must have realised an immense amount; were it otherwise, the expense of this princely mansion could never have been supported in the extravagance of its expenditure.

Such was the St. James's Club, or great gaming-house of the metropolis, which in classical allusion has been likened to Pandemonium. It is a lamentable truth, and pregnant with most serious and melancholy feeling and reflection, that, within the narrow limit of the *Sanctum*, or play-room, described, the ruin has been wholly or partially effected, and the doom sealed, of many noble, high-minded, and opulent men, once proud in position of rank, station, and circumstance, and happy in all the social blessings and relations of life. Many such, fallen from their elevated and envied estate, by the direful infatuation of, and indulgence in play, unable to bear up against the ruin that has overtaken them, have died by their own hands. To such distressing cause, and the fatal influence of the hazard-table, may be ascribed the lamentable suicidal acts of the late highly respected nobleman, Lord R—, and the no less esteemed gentleman, the late Henry B—. Others of like grade and character have, owing to the same afflicting cause, become beggars in means, and outcasts alike from society and their country. To what other cause is to be attributed the impaired patrimony of the present Lord F—, who (worthy son of a scrupulously honourable sire) has nobly sacrificed a portion of his inheritance to redeem the late lord's extensive gaming liabilities and engagements. What can account for the reduced fortunes and incumbered estates of Lords Teynham, C—, H—, L—, A—, S—, Sir V. C—, and that untitled nobleman and worthy specimen of an English gentleman, George F—, but their unfortunate and devoted passion for play? What effected the ruin and expatriation of Ball Hughes, B—, L—, and some scores of others, whose names have been carefully hidden from public sympathy and whom fortune and commercial wealth and credit seemed at one time to have placed beyond the reach of reverse? What but the fascinations of the gaming table—a cause to which may be ascribed the constrained and pauper condition of half the fashionables and scions of nobility about town? Where, on the other hand, is to be discovered that wonder of a man, who by indulgence in play has benefited his estate, increased his means, or added one jot to his reputation, or to the peace and happiness of those connected with him? Echo answers—"Where?" One of the most steady, temperate, and prudent speculators at Crockford's was the late Lord S—; but with all his calm and imperturbable disposition and bold enterprise, the game conquered him, and he could no more control or defeat the certain pull or per-centage against him than he could have accelerated or retarded the earth's revolutionary motion. He was passionately fond of French hazard; but he had the prudence, and with it, the resolution, to confine his risk within legitimate bounds, and yet he contributed annually to increase the mound of Crockford's profits. The late Marquis of Hertford, who was deeply and practically skilled in the speculative science of play, and who had little love of any game that afforded not advantage to those best acquainted with its principles, was once or twice induced to try his hand at

French hazard, but very soon discovered that the only certainty it embraced was *loss to the player, and profit to the banker*. He himself was a loser on the occasion alluded to, an event so unusual in his lordship's practice, that it gave rise to the following couplet:—

"Say, holy prophet, who can hope to win,  
Where men like Hertford can be taken in?"

The establishment in St. James's-street being complete in its erection, was opened for the season 1828, in a style of great and costly splendour in its arrangements. Its general direction was under the control of Mr. Crockford, influenced, however, to a certain degree, and in particular respects, by the noblemen and gentlemen forming his committee, some of whom were confidently spoken of as possessing an interest in one department of the club, beyond their position as committee-men,—in plain terms, at having a partnership in the bank. The annual subscription was twenty-five pounds for each member, which gave to the subscribers every kind of first-rate and luxurious accommodation and attendance. Amongst other advantages, it secured the convenience and option of dining, at a low price, from the bill of fare of the unrivalled artist, *Ude*, whose chemical and culinary services were rated at no less a sum than twelve hundred pounds per annum! Crockford's experience and judgment told him that, to keep his patrons and friends in happy mood, their appetites must be consulted, their palates tickled:

"He therefore turned his conjuring book  
For a spell to raise a cook;  
Thrice invoked, an artist came,  
Not unworthy of the name."

(To be concluded in our next.)

## REVIEW.

THE ILLUSTRATED FAMILY JOURNAL. Part I. London: Sherwood and Co.

Shades of the Jacob Tonsons, Lintots, Dodsleys, and Murrys! ye who published your guinea quartos and ten shilling duodecimos, dedicated to high and mighty lords; and ye more modern Sharpes, Whites, Mawmans, Robinsons, and Murrys, who did the emblematical and the illustrated in the days of Corbould, Stothard, and Westall, at no cheaper rate, how would your high-priced souls tremble could "ye revisit the glimpses of the moon," or rather the sun's beams, and see the sort of thing, both artistic and literary, here weekly thrown before the million at what the showman would call "the small charge of twopence." Such a magazine, monthly, at 2s. 6d., or 3s. 6d., as this "Illustrated Family Journal," would have commanded the patronage of the aristocracy twenty years since; but now, thanks to the progress of the taste for reading and the improvements in arts of design and engraving, it is attainable by the slenderest purse. We hail the "Illustrated Family Journal" as the first in the field of a better class of publications, than our cheap literature has hitherto produced. The arsenicated and cut-throat school of romance-run-mad, with which we have been drugged, *usque ad nauseam*, will, we trust, find an antidote in this praiseworthy publication.

The engravings are admirable, the typography correspondent; the antiquarian and topographical papers lively and instructive (a combination rarely met with), and the series of popular flowers, and British birds, with their faithful and neatly executed illustrations, are alone worth the twopence charged for each number. The "ballad" illustrations, too, must tend to diffuse a higher appreciation of imaginative art among classes to whom such designs must, from their high price, have been hitherto inaccessible.

THESE; OR, THE MANOR-HOUSE OF TREFF-HARTLOG. By Eugène Sue. Cleave, Shoe-lane, 1844.

We have here another of those singular productions of the inexhaustible genius of the author of the "Mysteries of Paris," and the "Wandering Jew," which seem to have of late taken the English reading public by storm. It is neatly got up, with spirited embellishments; and when we add that it is freely and well translated, we may spare space by omitting criticism on the work of an author so well known and universally approved as M. Eugène Sue. Its price must recommend it: the whole three volumes of the original, neatly done up, being offered for 1s. 6d.

## TO A TEE-TOTALLER,

ON HIS ASKING WHAT PLEASURE I FOUND IN A GLASS.

Some in a glass find comfort, and a friend,  
But others use it to a baser end;  
For me, I think it neither crime or treason,  
To take a social glass in proper season.  
Tee-total nonsense is but fit for fools,  
Whose beastial habits know not reason's rules;  
But men of sense, who moderation use,  
Know when to drink, and when they should refuse:  
Nor need that curb placed on them by a priest,  
But fit to check the drunkard and the beast. NED KUB.

What is a "fixed" principle?—The adherence of Sir Robert Peel to the sliding scale.

## BRITISH SONG BIRDS.—No. V.

THE CANARY.—(Continued.)

**R**ESUMING the subject of BREEDING at the point where we broke off last week, we may remark that:—Birds, which are to be paired for the first time, should be previously placed in the same cage for seven or eight days, in order to become acquainted and accustomed to live together. If two females are to be caged with one male, it is especially necessary that they should be together long enough to leave off quarrelling, and the pairing cage should be divided into two equal parts, communicating by a sliding door. This being done, a lively male and one of the females should be placed in the first division; as soon as she has laid, the male should be moved into the other division, the door of separation being shut; but as soon as the other has also laid, the door may be left open: the male will then visit the females alternately, and they will not trouble themselves about each other; but without these precautions jealousy would incline them to fight, and destroy each other's eggs. When it is intended to place a great many females, double or treble the number of males, in a room or aviary, the latter should always be first paired with a single female, which will ever after remain the favourite; and it will only be when she is about to sit that he will pair with the others, and this is all the notice he will take of them, for afterwards he will only notice their young. It is from these mothers, however, that the most and the best birds are generally procured.

Beckstein says if the floor of the room or aviary is well covered with moss, little else need be added for making the nests, otherwise they should be supplied with the hair of cows and deer, hogs' bristles, fine hay, lint, wool cut two or three inches long, paper shavings, and the like. That which is coarsest serves for the outside, and the softest and finest for the inside. If they have shrubs, traces of the natural instinct of the canary are soon observed in the nests which they construct without the help of the turner or basket weaver; but they are of an inelegant form, and the outside is not very carefully finished. The females alone, as is usual among birds, are the builders, the males only choosing the situation and bringing the materials. It is in the nest, where the female is in continual motion, that the pairing takes place; she invites the male by constant little chirpings, repeated more quickly the nearer she is to laying. Seven or eight days are generally reckoned from the first pairing to the laying of the first egg; the other eggs, whose number varies: without exceeding six, are laid successively every following day, and often at the same hour. The laying ended, pairing continues during the first days of incubation.

"If the pairs agree, they must be left entirely to themselves, without endeavouring to use art to help nature, as many do. It is usual to take away the first egg and substitute an ivory one, which is repeated with the others to the last, preserving them in the mean time in a box filled with fine dry sand; they are afterwards restored all together to the nest to be hatched."

The females lay three or four times a year, from April till September; there are some even so prolific that moulting does not stop them. The eggs, of a sea-green colour, are at one end more or less spotted or marked with maroon or violet. The period of incubation is thirteen days. If, owing to the weakness of the male or female, it is suspected that some of the eggs are barren, they should on the eighth day be examined by holding them lightly between the fingers in the sunshine or before a candle; the good ones will be already filled with blood-vessels, while the bad will continue clear, or even be already added: these must be thrown away. It is rare for the male to sit in his turn during some hours of the day, the female seldom allowing it, for as soon as she has eaten she flies back to the nest. If the male gives up his place readily, so much the better; if not, she drives him away by force and by pecking him. She appears to know his want of skill in his employment.

The near discharge of a gun, a door slammed with violence, and other similar noises, will often kill the young in the shell; but their death happens generally through the fault of a bad sitter.

As soon as the young are hatched, a small jar is placed beside the usual feeding trough, which contains a quarter of a hard egg minced very fine, white and yellow together, with a bit of white bread steeped in water, and afterwards well pressed; another jar should contain rape seed which has been boiled, and then washed in fresh water, to remove all its acrimony. Some persons, instead of white bread, use biscuit, but this is unnecessary; what, on the contrary, is very essential, is to take care that this food does not turn sour, for it would then infallibly destroy the young nurslings. This food I find by experience to be the best.

Now is the time when the male assumes his important duties of nursing-father. These he fulfils indeed almost alone, in order to give his mate time to rest before a new sitting. When it is necessary to bring up the young by hand, a bit of white bread, or some biscuit, should be pounded very fine, and this powder should be mixed with well-braised rape seed. This composition serves, with a little yolk of egg and water, to make a paste, which is given to the young birds on a quill cut like a spoon; each nursing requires for a meal four beakfuls, well piled upon the quill, and these meals must not be fewer than ten or twelve a day.

\* This is the German method, which we have here taken from Beckstein. We do not recommend it, as contrary to nature.—EDDOR.

The young should remain warmly covered by the mother as long as they continue unfledged; that is to say, generally for twelve days: on the thirteenth day they begin to eat alone. In four weeks they may be placed in other cages of a sufficient size; but they must still for some weeks be fed with the above-mentioned paste, conjointly with the food of full-grown birds; for the sudden privation of this nourishment often occasions death, especially when moulting.

Those canaries which are hatched in a large garden aviary, where they enjoy fresh air, and considerable space for the exercise of their wings, are generally more healthy, and more robust than those bred in rooms, of which we need not seek for the cause.

I must not omit to mention here an important observation, which has been often made, that if two females are given to one male, and one of them happens to die, the other immediately takes charge of the abandoned eggs, and assumes so completely the duties of foster-mother, that in order rigorously to fulfil them she avoids and even repulses the caresses of her mate.

Canaries pair not only among themselves in our aviaries and cages, they also form connexions foreign to their species, and, provided the analogy is not too remote, produce fruitful mules. Serins, citril finches, siskins, goldfinches, or linnets, are the species which succeed best.\* To succeed, however, it is necessary that the birds should have been brought up from the nest. The custom is to give an old male of one of the above-named species to a female canary, the principal reason being that an old female of one of those species, though she would not object to the union, could never be induced to lay in an artificial nest, like a female canary. The offspring of these mixtures combine the colours of the father and mother, learn well enough if they descend from a linnet or goldfinch, but sing badly if they come from a siskin or lesser redpole.

They are easily brought up with the paste mentioned in our second number. It is asserted that the mules of serins, citril finches, and goldfinches, are fruitful. It is remarked, however, that their first eggs are very small, and the young hatched from them very weak; but the next year the eggs become larger, and the young stronger and more robust.

No sooner can the young canaries eat alone, which happens on the thirteenth or fourteenth day, and sometimes even before they leave the nest, than the males begin to warble, and some females also, but in a less connected manner, which serves to point them out. As these pretty birds are so docile as to neglect entirely their natural song and imitate the harmony of our instruments, it is necessary immediately to separate from his companions and from every other bird the young one which is to be instructed, by putting him aside in a cage which is at first to be covered with a piece of linen, and afterwards with a darker cover. The air which is to be taught should be performed five or six times a day, especially in the evening and morning, either by whistling, or on a flageolet, or bird-organ; he will acquire it more or less readily, in from two to six months, according to his abilities and memory; if his separation from the other birds is delayed beyond the fourteenth day, he will retain some part of his father's song, which he will always intermingle with his acquired air, and consequently never perform it perfectly. The opinion of some, that the greyish canaries have more facility in learning than the yellow or the white, is unfounded, their only advantage over those of a different hue being that they are generally more robust and vigorous. I have not either found that the true No. 3 suits them better than No. 1 or No. 2; these latter, on the contrary, have appeared to me to please them best.

There is too much trouble and risk in allowing canaries to go in and out of their cages for it to be worth the trouble of teaching them this. Notwithstanding all my attention, and the care which I have taken to follow exactly the prescribed rules, I have never succeeded; and the cleverest bird-fanciers have assured me that it should never be attempted but when they have young ones, and above all, there must be no canaries in the neighbouring houses, which might entice them away. Indeed, it is no easy matter to accustom a bird to go and come. There, as in many other cases, conclusions in regard to the species have been drawn from individuals. It is certain that very few tame birds easily acquire this trick.

\* "Green birds, bullfinches, and even chaffinches, yellowhammers, and the like, have been tried; but the difficulty augments with the difference of species and food: for example, I have never seen a male canary very fond of a female yellowhammer, nor a male of the latter kind of a female canary, though the plumage may be selected so as to offer a striking resemblance. An ardent bullfinch will sometimes yield to the allurements of a very ardent hen canary. I have myself witnessed it; but with every care, it is seldom that the eggs prove fruitful, and produce young. Dr. Jansy, however, writes from Frankfurt, that he has obtained males of a bullfinch and canary, by making other canaries sit on the eggs and bring up the young; and that this plan is pursued in Bohemia. A tufted or crested female should never be chosen, because this ornament is very unbecoming to the large head of a mule. "My bullfinch," he adds, "is so attached to the female canary that he mourns all the time they are separated, and cannot bear any other bird."

"I possess a nightingale which, having been for a long time shut up with a female canary, lives very sociably with her, and sings as usual; indeed, he was so ardent in the spring, that he paired with her in my presence, but the eggs were unproductive. I shall try next spring, if the same thing happens, to give the eggs to another sitter."—BECKSTEIN.

(To be concluded in our next.)

STEVENSON, THE COACHMAN,

THE ANTAGONIST OF BROUGHTON.

## THE HISTORY OF BRITISH BOXING, FROM FIG AND BROUGHTON TO THE PRESENT TIME.

PERIOD II, 1735—1786.

FROM THE TIME OF BROUGHTON TO THE APPEARANCE OF DANIEL MENDOZA.

## CHAPTER IV.

TOM JOHNSON AND BENJAMIN BRAIN (OR BRIAN—BIG BEN), CHAMPION.

**T**OM JOHNSON, whose real name was Jackling, was a native of Derby, although a general claim of Yorkshire extraction has been made for him, and Boxians so state it; however, as he signs himself Thomas Jackling of Derby, in a printed letter yet in existence, the point is not worth disputing: as he surely could himself have no motive for such a misrepresentation.

Johnson, for we shall retain his popular name, was certainly a hero among heroes; and if Tom was inferior to Broughton in science, he came certainly nearest of any man that had hitherto appeared to that phoenix of pugilistic skill. Nature had endowed him with unusual strength of body, and he was universally admitted to possess a careful and precise style of hitting. His courage was of the highest order, and he possessed a constitutional coolness of disposition and temper. Johnson was born in 1750, the very year that Jack Slack defeated his prototype, the champion Broughton, and at an early age he repaired to London, where he followed the laborious occupation of a corn-porter, on a wharf near Old Swan Stairs. His surprising strength was paralleled by his kindness of heart; and while in this employment an anecdote is recorded of him which deserves preservation. Johnson's fellow-porter was taken ill, and being burdened with a wife and a numerous family, dependant on his labour for support, were likely to be reduced to want, had not Johnson immediately undertook (unknown to them) to do his fellow-porter's work, as well as his own. The warehouses where the corn was deposited were situated at some trifling distance from the wharf, upon a hill, denominated, from its steepness, "Labour-in-vain-hill," and to which place Tom carried every journey two sacks of corn instead of one, and gave the money to his family, till the porter was able to return to his work. We would recommend this anecdote for extract to the next number of the *Evangelical Magazine*; it can be much better authenticated than most of the "lose-nothing" benevolences of their portrait-loving "labourers in the vineyard."

Johnson's first set-to, as will be seen by our Chronology, in last week's number, was with a carman, of the name of Jarvis; and though Tom was looked upon as a mere novice, he displayed so much superiority over the

carman, that his fame soon spread. Jarvis had milled a few commoners, and stood well with his friends; but in the hands of Johnson he got dreadfully beaten.

The Croydon drover, of pugilistic notoriety, next fought Johnson upon Kennington-common; but was quickly polished off.

Steven Oliver, the noted Death, a decided ould-un, entered the lists with Tom Johnson; but his day was gone by—and Johnson obtained the victory in eighteen minutes. Some thousands of spectators assembled upon Blackheath to witness this battle.

Bill Love, a butcher, next challenged Johnson for fifty guineas, and the affair came off at Barnet; but the knight of the cleaver was, in five minutes, completely cut up.

Jack Towers, who had overcome Death, thought he had little more to fear, and therefore, without hesitation, agreed to fight Johnson. The fixture was at the same place in the following month: but Tom had also got the better of Death, and, in a very short time, Towers was completely satisfied that he stood no chance, and so gave in.

Fry, a big, heavy, and powerful man, next challenged Johnson for fifty guineas, at Kingston, in June, 1786; but in less than half an hour, Fry got so much broiled, as to be very glad to put an end to the contest; and Tom walked off the ground, almost without a scratch.

Johnson, about this period (1787), beat every one that was opposed to him: and the sporting world was almost nonplussed to find a man who might stand something like a chance with him. As the metropolis could produce no such character, Bristol was searched (the *parley-bed* of pugilists), when Bill Warr was selected as an article that could be depended upon. He was backed to fight Johnson for two hundred guineas, on a stage, at Oakhampton, in Berkshire, on January 18, 1787.

In the first round Warr found out that he had got a trump to deal with, by receiving a doubler from Johnson, and he immediately assumed the defensive. In fact, it was scarcely worthy of being called a fight, and the amateurs were not only disappointed but much displeased. Warr was convinced that he could not beat Johnson by standing up to him, and therefore determined to try whether he could not tire him out by shifting and falling; accordingly, whenever Tom seemed likely to make a blow, Bill Warr was on his knees praying for pluck, *a la* Tass Parker and Nick Ward, of more modern days. This humbugging

asted for nearly an hour and a half, Johnson's intentions being continually frustrated by Warr's dropping; at length an ugly hit nailed him as he was falling; he insisted on a "foul!" which not being admitted, he instantly bolted, notwithstanding the remonstrances of his seconds to come back and finish the fight. Johnson was now firmly established as the champion; his fame ran before him, and it was some months before any person could be found hardy enough to dispute his well-earned title: at length a brave Hibernian chief, who, like Tom Johnson, had milled all his opponents, came forward, and soon foud backers.

This was Michael Ryan, the Irish champion, whose well-known skill and bottom stood so high, that the odds were six to four before the fight, which took place at Wradisbury, in Buckinghamshire, on December 19, 1787. The seconds were chosen from the first-rate pugilists, Humphries\* for Johnson, and Dunn for Ryan; and even the bottle-holders were of fistic eminence, being Triag for the latter, and Mendoza for the former. The spectators were numerous. The late celebrated Mr. Wyndham, General Fitzpatrick, &c., &c., were more than spectators on this occasion.

The contest long hung doubtful, though, at the commencement, the odds were in favour of Ryan. After the fight had continued nearly twenty minutes, and at the close of a most tremendous round, Ryan put in a dreadful blow upon Johnson's temple, which so completely stunned him that his arms fell by his side, and was following up this advantage with another hit, which must have decided the contest, when Humphries ran in to save Johnson, and caught Ryan in his arms. Cries of "foul! foul!" now resounded from all parts, and the friends of Ryan instantly demanded the money, by observing that, as long as Johnson had not fallen, it was perfectly fair on the part of Ryan to strike him, and that the latter had won the battle. Here a general clamour took place, during which Ryan, with the warmth peculiar to his country, indignantly told his second, Dunn, that he had not done his duty by him as a man, in suffering such conduct to take place without resenting it, and, had he not been prevented, he would have milled Dunn upon the spot, his rage was so great. Considerable time having now elapsed, Johnson was perfectly recovered, and challenged Ryan to renew the combat: the latter, like a man, notwithstanding it was considered there was no necessity for so doing, agreed to it, thinking he could beat Johnson.

The battle was at length renewed; but it was soon perceived that Ryan's strength was exhausted by passion, and he now, in about ten minutes, became an easy conquest to Johnson, by giving away the chance. Ryan's conduct in the battle was so noble, and his manly courage and science so truly apparent, that the amateurs were still left in doubt to decide accurately which was the best man.

In consequence of this opinion, a second battle was determined upon, and fought upon a stage near Rickmansworth, in Hertfordshire, in a park, for three hundred guineas aside, on February 11, 1789. This was a contest of great anxiety, and the whole sporting world was there, from the Corinthian to the cootermonger!

Johnson was his second, Humphries and Jackson as his bottle-holder, mounted the stage at three o'clock, and were immediately followed by Ryan, who was seconded by a Mr. Rolfe, a baker, and Nowlan his bottle-holder. The set-to was one of the finest ever witnessed and much science was displayed; the parries and feints eliciting general admiration. At length Ryan put in a severe blow on Johnson's chest, which felled him.

The second round, which continued about two minutes, was terrible beyond description—science seemed forgotten—and they appeared like two blacksmiths at an anvil, when Ryan received a knock-down blow. The battle was well sustained on both sides for some time; but Ryan's passion getting the better of him, he began to lose ground. Ryan's head and eyes made a dreadful appearance, and Johnson was severely punished. The contest lasted for thirty-three minutes, when Ryan gave in. A hat, ornamented with blue ribbons, was placed upon the conqueror's head; and Johnson gained a considerable sum of money, independent of twenty pounds per annum, which was settled upon him by his master, who won some thousands in backing Tom. The door-money, amounting to a considerable sum, was divided between the combatants.

Brain, better known as Big Ben, was now considered the only man capable of meeting Johnson, and a match was made for one thousand pounds; but Ben, being taken ill at the appointed time, forfeited the deposit, which was one hundred pounds.

Johnson's fame was now so considerably heightened, that he was challenged in a few months afterwards, by Isaac Perrins of Birmingham, one of the strongest men in the kingdom, and who had lifted into a waggon eight hundred weight of iron without difficulty. Few men ever stood up to him more than five minutes, and he had beaten all the heroes of Warwickshire, Worcestershire, Staffordshire, &c. He had won numerous battles with ease, was not destitute of science, and for bottom unequalled. He had "crept into favour with himself" a little, by sending forth a public advertisement, challenging all England for five hundred guineas. Perrins was six feet two inches and a half without his shoes, and weighed

close upon seventeen stone, which was three heavier than Johnson, add to this he was extremely active, cheerful, and good-tempered. This interesting battle of which we have given an engraving in the second number of this publication, took place at Banbury, in Oxfordshire, on a turf-stage, twenty-four feet square, railed in, and raised about five feet from the ground, on October 22nd, 1489. Bill and Joe Ward were seconds to Johnson, and his umpire was Colonel Tarleton: Perrins was seconded by Pickard, and his brother officiated as bottle-holder, and Mr. Meadows, of Birmingham, as his umpire. The combat commenced at one o'clock.

On stripping, Perrins looked, in comparison, like a Hercules, and Johnson, who, in other fights, appeared as a big man, by the side of Perrins now looked a boy; the spectators were struck with the difference, and even Johnson's friends began to shake. The awful set-to at length commenced, and anxiety was upon the utmost stretch, Johnson steadfastly viewing his mighty opponent; considerable skill was manifested by both the combatants at the end of five minutes. Perrins then made a desperate lunge: which, had he not missed his aim, might have decided the contest; but Tom was awake to his kind intent, eluded it, and in return put in a hit, which could be of no trifling nature, for it felled a man of seventeen stone. This advantage he followed up for three more rounds, and his science appeared to sorely puzzle his antagonist. Out-fighting was clearly a losing game, so Perrins went into Johnson, regardless of all danger, knocked him down without ceremony, and continued punishing him for several rounds. Tom, finding he was overmatched, was obliged, for the first time in his life, to have recourse to shifting, to prevent being beat straight forward; which conduct occasioned some murmuring from the spectators, and Perrins began to treat him with contempt, by exclaiming, "Why, what have you brought me here, is this the valiant Johnson, the Champion of England, he's a regular impostor!" Tom felt this sarcasm bitterly, and bursting with indignation, cried out, "By G—d! you shall soon know Tom Johnson is here!" and making a spring at Perrins, he caught him a plunger over the left eye that closed it up in a twinkling. The big-un's wind, too, seemed getting bad; but nought dismayed, he rallied in fine style, went into Johnson, and closed his right eye in return. The odds began to waver immediately, and the Birmingham men offered to lay it on thick. Forty rounds and upwards had now taken place, and the combatants still gane.

Johnson began to be extremely careful, and to make the best use of his one eye, finding that it was still up-hill work, shortly after he dealt Perrins a desperate blow on the nose, which slit it down completely.

The manly fortitude of Perrins astonished all present; his heart was still undismayed; he went into Johnson, and endeavoured, by a terrible hit, to close his other eye. Perrins's friends began to revive, and in a few more rounds claimed the victory, as Johnson fell without a blow; but the umpires allowed it fair, as the articles of agreement did not mention falling.

Perrins's frame now began to fail him, but his mind was still cool and collected, and he had recourse to another method of attacking his antagonist, which proved rather successful, till Tom became down to it. Johnson's knowledge of the science was here displayed in fine style, in warding off the chopper and back-handed strokes of his adversary, by which means Tom recruited his strength. Perrins appeared much the worse for every round, and fell repeatedly from his exhausted state. Johnson had it nearly his own way, hit where he liked, and put in several tremendous facers, that Perrins's head had scarcely the traces left of a human being! Still his courage never forsook him, and, had not his friends interfered and prevented him from fighting any longer, it was the general opinion that he would have continued the contest till he died! Perrins positively refused to give in, and was literally forced from the stage. Sixty-two such rounds of fighting, for an hour and a quarter, were scarcely, if ever, before witnessed in the annals of pugilism. The disproportion between the combatants was too great; and notwithstanding Johnson performed prodigies of valour, by beating so uncommonly large a man, and was entitled to every praise, yet still there were parts of the fight that the amateur could not approve of, and the spectators disliked. It was reported among the sporting men, that Mr. Bullock made Johnson a present of one thousand pounds, and that he had gained, by the vast odds he had betted upon Tom, £20,000. The door-money amounted to nearly £800, out of which Johnson received £533. Tom called upon Perrins, previous to his quitting Banbury.

(To be continued in our next).

AN ILL WIND THAT BLOWS NOBODY GOOD.—The Victoria and Albert yacht has been sent out in company with some other vessels on a trial cruise; the orders being that they are "to look for a gale." We understand that Dr. Reid offered to attend on board with his ventilating apparatus, to be ready in the event of Boreas making a default. The doctor's anxiety to raise the wind cannot be for a moment doubted, though his ability to do so is quite another question.

THE DANCE OF DEATH.—It appears that on the day of Tawell's execution a large booth was erected close to the Chandos Arms, near the Aylesbury station, for dancing in the evening. Considering the growing moral influence that hanging has upon the masses, we would advise M. Jullien immediately to compose a set of Gallows Quadrilles. He might fitly dedicate them to Mr. Calcraft.

\* Humphries had beaten Mendoza in a turn-up fight, the previous September, at the Cook, at Epping.

THE SWISS COTTAGE—FRANK REDMOND'S.

As this pretty little suburban sporting crib, has within these few weeks attracted no small share of public attention, from its fortuitous vicinity to the dastardly and atrocious deed of which the detestable Hocker has just been convicted. It is not, however, for the adventitious interest, (for we are no ponderers to the depraved appetite for horrors, on which many of our contemporaries seem to batten and thrive) which this revolting circumstance has accidentally invested it, that we engrave and notice the hostelry of Frank Redmond, of canine and fistic fame.

The locale of the Swiss Cottage is within a short distance of the Alpha Cottages, and near the intersection of four roads, viz.: the Finchley and London roads, Bellsizes-lane, and the curved continuation of the same which crosses the railroad towards Primrose-hill. Thanks to the competition of omnibuses and Conveyance Associations, the small charge of a "tanner" will deposit your corpus at the Swiss Cottage, unless you prefer the "marrowbone stage" or tool your own "Smiffeld." This house is a delightful summer retreat, and

"A merrier, nor a wiser man,  
To spend an hour withal,"

if it be on sporting subjects, and the moves being made on "the fancy" board, than the worthy host, it would be hard to name: nor is there a better conducted house within the bills of mortality. It is, in every sense of the word, a snug, complete crib, replete with comfort and convenience; and to those who are fond of sports of every description, it will be found a very desirable house to obtain information of the best kind, the worthy host generally possessing the earliest intelligence of every event which is on the *tapis*. Frank's pugilistic career was not a brilliant one, although at one period he was esteemed so highly as to be matched against the "star of the east," Barney Aaron, with whom he contended on two several occasions; but the flag of the "Hebrew race," (there is another citation for the author of "Coningsby,") floated in the ascendant. Frank, although victory but once smiled on him in his pitched contests within the P.R. ropes, was, and is far from a smatterer, theoretically or practically in the "noble art of self-defence:" although mellowing years have rolled by since he fought "in his hot blood of youth." Frank was born on the 26th of Feb., 1803, and therefore now numbers forty-one summers.

Well versed, then, in all sporting matters is Frank Redmond; and behind a yard of clay, and over a glass of the best Cognac, the proprietor of this hostelry will discuss with you the merits of a Derby nag, the pluck, game, bravery, and stamina of the aspirant for fistic fame, the construction and merits of a prize-wherry, the skill of a batsman and cricket-bowler, or detail to you the speed and breeding of a crack greyhound. On this last theme Frank will become a monopolist: you have touched the chord that will vibrate, for on the subject of the canine species he will become as learned as England's ermined chief justice on a knotty point of law, or as eloquent as Demosthenes himself. A better judge of the merits, breeding, and qualities of the dog does not exist, and Frank is reputed to be the best dog-fancier in the kingdom, and on that point, is generally consulted by the aristocracy and Corinthians of the first water. Thus much for

the in-door and creature comforts of the Swiss Cottage; of the out-door we may say that the grounds and gardens are immensely attractive to visitors, and the neighbourhood the scene of frequent trials of pedestrian rivalry.

Such are a few of the many inducements, and we own they are no small ones, which prompt us to notice "the Cottage." We say nothing about the accommodation offered to the guests, for it were a libel on Frank's administration to assert that they are not of the first-rate order; and he must be an epicure, indeed, who could find fault with the *cuisine* of the establishment. Had the Swiss Cottage existed in Shakspeare's days, we should have been inclined to assert that it was from some such a house as this, that the "fat-ribbed knight" first acquired his idea of the comfort a man feels in taking "mine ease at mine inn."

What is the "voluntary" principle?—Playing the organ when the congregation are leaving church.

NEWSPAPER STAMPS.—A return was on Tuesday issued by the order of the House of Commons, showing the number of stamps issued for newspapers in Great Britain from Jan. 1, 1842, to Jan. 1, 1845. In 1842, in England, there were issued 50,145,912 newspaper stamps at one penny, and 1,473,664 supplement stamps at one halfpenny; in 1843, 51,282,900 stamps at one penny, and 1,893,682 at a halfpenny; and in 1844, 53,933,848 penny stamps, and 3,738,128 halfpenny stamps. In Scotland, in 1842, the number of penny stamps issued was 4,977,344, and at a halfpenny 443,550; in 1843, 5,293,726 penny, and 243,150 halfpenny stamps; and in 1844, 5,727,585 penny, and 317,620 halfpenny stamps. In Wales the number in 1842 was 440,200 penny, and 10,830 halfpenny stamps; in 1843, 456,925 penny, and 2000 halfpenny stamps; and in 1844, 472,700 penny, and 7000 halfpenny stamps. In Ireland, in 1842, there were issued 6,099,656 stamps at one penny and one halfpenny; in 1843, 6,594,652 stamps; and in 1844, 7,018,617 stamps.

WILD GESE IN LANCASHIRE.—Amongst the signs of the departure of winter is the passage of flocks of wild geese northwards. During the last fortnight several detachments have halted to rest on the Lancashire mosses, on their way to their feeding and breeding grounds in Norway, Sweden, and Lapland. The great Lancashire mosses serve them as resting places and feeding grounds in their long flights from the Scandinavian wilds and marshes, where they breed and spend their summer months, to their winter quarters on the banks of the Po and the Lower Danube, where the moist plains of Lombardy and Hungary, swarming with frogs, lizards, and other aquatic reptiles, and seldom hardened by the frost, afford them food during the winter months. These powerful birds begin to arrive with us, on their flight southward, about the 20th of October, and generally begin to return northwards in the middle of March.

HALF-PENCE.]

## HAMPTON—THE CELEBRATED STAG OF THE ROYAL HUNT.

**H** S, when some well-graced actor leaves the scene, the eyes of men are idly bent on him who enters next; so when any object of interest disappears, be it merely a well-known pile of bricks and mortar, stone and lime, straightway, in the hope that printed rags will prove less perishable and transitory than the original, is it recorded by pen or pencil as a thing, the memory of which "men would not willingly let die." If this be done by your prosy antiquary or diligent topographer for a gateway, a dilapidated dwelling, or a ruined arch, we shall surely earn thanks for the portrait of HAMPTON, which heads this first page, a stag for ten years hunted by the royal buck-hounds, and whose long career terminated on the 24th of January in the present year, of disease. Hampton was fourteen years' old, and celebrated for the famous runs he had given to dog, man, and horse, during his long career, and we trust his portrait will form a fitting companion to the "last fox" of our preceding number.

We need scarcely observe, that in the picture, the ordinary criterion of the stag's age—the antlers—are absent: the animals hunted being humanely deprived of these cumbersome appendages, so useful, offensively or defensively, in a state of nature.

During the first year the stag has no horns, but a horny excrescence, which is short and rough, and covered with a thin hairy skin; the next year the horns are single and straight; in the third they have two antlers, three the fourth, four the fifth, and five the sixth year; but this number is not always certain, for sometimes they are more, and often less. After the sixth year the antlers do not always increase, and although in number they may amount six or seven on each side, yet the animal's age is then estimated rather from the size of the antlers, and the thickness of the branch which sustains them, than from their variety. These horns, large as they seem, are, notwithstanding, shed every year, and new ones assume their place. The old horns are of a firm solid tex-

ture, and are extensively employed in making handles for knives and other instruments. But, while young, nothing can be more soft or tender, and the animal, as if conscious of his own imbecility, at those times, instantly upon shedding his former horns, retires from the rest of his species, and hides himself in solitudes and thickets, never venturing out to pasture except by night. During this time, which most usually happens in the spring, the new horns are very tender, and have a quick sensibility of any external impression. When the old horn has fallen off, the new one does not begin to appear immediately, but the bones of the skull are seen covered only with a transparent periosteum or skin, which covers the bones of all animals. After a short time, however, the skin begins to swell, and to form a sort of tumour, which contains a great deal of blood, and then it is covered with a downy substance, that to the touch resembles velvet, and which appears of nearly the same colour with the rest of the animal's hair. This tumour daily increases from the point, like the graft of a tree, and, rising by degrees from the head, shoots out the antlers from either side, so that in a short time, in proportion as the animal is in condition, the entire horns are completed; but it should be observed, that the substance of which the horns are composed, begins to harden at the bottom, while the upper part remains soft, and still continues growing; whence it appears that the horns of deer grow differently from those of sheep or cows, which latter always are seen to increase from the bottom.

It would be a vain task to inquire into the cause of the annual production of these horns; it is sufficient to observe, that if a stag be emasculated when the horns are fallen off, they will never grow again; and, on the contrary, if the same operation is performed when they are on they will never fall off. If only one side is emasculated, he will want the horn on that side.

The old stags usually shed their horns first, which generally happens towards the latter end of February or the beginning of March.

Such as are between five or six years old shed their horns about the middle or latter end of March; those still younger in the month of April; and the youngest of all not till the middle or latter end of May.

They generally shed them in pools of water, whither they retire from the heat, and this has given rise to the opinion of their always hiding their horns. These rules, though true, in general, are yet subject to many variations, and it is well known that a severe winter retards the shedding of the horns. A short time after they have gained their horns, they begin to feel the impression of the rut.

Thus much of the natural history part of the question, when the revolving seasons shall bring back again the season of the chase, the reader shall see much pictorial and literary on this interesting animal, for the present we conclude by a rhythmical wish of—

#### SUCCESS TO THE CHASE.

Here's success to the chase; it can never decline,  
While the sons of old England are men;  
The cloud may obscure it, but soon will it shine  
In gladness and glory again!

Let the stern or the careless remember the morn,  
That they first heard the wild woodland cheer;  
When their hearts were aroused by the mellow-toned horn,  
And leap'd with their courser's career.

Bid them pause, and then tell us, though Fortune has crown'd  
Their dreams of ambition and power,  
In the train of her pageant, one joy have they found,  
Like the bliss of that first sylvan hour.

Oh! my life on the chase, it can never decline,  
While the sons of Old England are men;  
The cloud may obscure it, but soon will it shine  
In gladness and glory again.

#### REVIEW.

THE SOUTHERN JOCKIES OF ENGLAND; from a Painting by Mr. Anson A. Martin. London, 1845.

"The Southern Jockies of England" is a fitting accompaniment to, and partner of, "The Northern Riders," and a praiseworthy sample of the taste and tact of the talented artist, Mr. Anson A. Martin. The south most assuredly cannot cede to the north for elegance of arrangement, or fidelity of likeness, and as we look upon the spirits incarnate,

"Who guide the whirlwind, and direct the storm," we fancy that we view them in the future saddle, dispensing the destinies of untold thousands. They are charming "vis à vis" for any sportsman's sanctum, replete with anecdote and association. The "Old Screw," Sam Chifney, is the centre-piece, the pivot, around which, and above and beneath "Our Jem," the accomplished Robinson, and honest John, who has let lots of day-light into the dark caverns of expectancy. Nat, the natty, the antipodes of a flat man, with Butler, who, we hope, will get into the right trim again, are here, with young John Day, whose fine riding is not half appreciated, and George Edwards;

"Tis over; the trick for the thousands is done,  
George Edwards the Derby, on Phosphorus, has won,"

as Vates wrote when he slept with both his eyes open. Clustering offshoots of fame and immortality are pendent in every direction, from the veteran Wheatley to the enlarged cabinet curiosity Bell, and the tiny Kitchener who looked as big as "The Duke" when he played the Sussex *Pastorals* to such perfection. Gentlemen—Jockies; far sweeter to us than gentlemen-riders; rife with the breezes of the balmy South, ye shall hang by the side of your hardier brethren of the North; and whatever may have been, or be doomed to be, your race of competition, yet has our impartial limner, Mr. Martin, in point of graphic skill, made it a dead heat. If the Northern group made a splendid start, so has the Southern nucleus proved as consummate a rider at the finish.

#### IMPORTANT NEWS.

BY THE ELECTRIC TELEGRAPH.

THE following interchange of civilities took place last night by means of the electric telegraph between the superintendents of the railway stations at Gosport and Nine Elms, Vauxhall. The colloquy was begun by the Gosport gent. thus:—

Gosport. Hello there!

Nine Elms. Now then—what's the row?

Gosport. I'm a going out to have a drop of summut warm.

Nine Elms. So am I.

Gosport. Then I mean to go home to bed.

Nine Elms. So do I. Good night.

We are indebted to the politeness of the railway porter No. 24, for furnishing us with this important communication, which only occupied three and a half minutes in the transmission.

A MODEST MAN.—There is a young man in Cincinnati who is so modest that he will not "embrace an opportunity." He would make a good mate for the lady who fainted when she heard of the naked truth.

#### PANDEMONIUM.—(Continued from page 68).

CROCKFORD AND THE CROCKFORDIANS.

We cannot but feel that the subject illustrated in our sixth number, has grown under our hands; we had at first hoped that another weekly instalment would have completed the interesting detail, we now find that a third will leave us "cabined, cribbed, confined," in the scope we had purposed to ourselves on this extensive theme.

We left the fortunate Fishmonger supplied with a cook that might alone have commanded a club,—the unrivalled *Ude*; and we may add, that in the catalogue of luxury at command of each member, were wines too of the finest quality and choicest kind, at a most reasonable rate, with a supply of every other want that reason or even luxury could suggest or fastidious taste require, the whole being conducted upon a scale of splendour and liberality unheard of in club arrangements.

By the terms of Mr. Crockford's agreement with his committee as to play proceedings, he was bound to put down a bank or capital of £5000 nightly during the sitting of Parliament,—a rather remarkable specification as to time, and one which seemed to imply, that the members of the legislature were not expected to confine their great capacities to the mere voting of supplies in the Committee of Ways and Means at St. Stephen's, but that they should here practically illustrate the principle of such votes,—indeed there was great similitude of proceeding in the business of Parliament and Pandemonium. At Crockford's, as in the senate,

"Large money bills and loans they tried to raise;  
King Crockford took their means, and praised their ways."

The whole and sole direction and control of the department and operations of play were under the experienced professorship of the proprietor, aided by his steward, agent, and factotum, Guy (a person who had before been most serviceable to Crockford, when indicted), and other operatives, each of whom received a large weekly salary for their services and secrecy. Guy had been originally a groom-porter at an inferior hazard-table in Jermyn-street, frequented by Crockford in his less palmy days, and having in such capacity been serviceable to him, was now appointed to the principal post in the new establishment. Some notion of the lucrative nature of this appointment may be entertained from the fact that, in the course of ten or twelve years, Guy had realized and saved from his salary and emoluments nearly 30,000: possessed of which, he suddenly, after the example of his master, became a betting man on the Turf; and availing himself of his position at the club, and of the facilities thereby afforded to bet with its members, he gave offence to his employer (who considered the ground exclusively his own), and words ensuing, he was dismissed. He subsequently took to building speculations in his native town, in Essex; failing in which, he returned to London, tried his hand at divers pursuits, and latterly at the establishment of a club in St. James's-street: in all he proved unsuccessful. Impaired health yielding to paralysis, he became helpless, and ultimately died a pauper in the workhouse of his native place, where it is said he had been much respected for acts of charity in his days of prosperity. Crockford is reported to have been unforgiving in his feeling of resentment towards his quondam friend and associate, and to have been deaf to all entreaty and solicitation made on his behalf in his last days of poverty and distress: this is not to be wondered at, 'tis a sample of the gambler's heart. The successor of Guy was Dasking, another vulgar specimen of Crockford's former associates. This person had also presided in the capacity of groom-porter at the English hazard-table kept by O'Hara, in Oxendon-street, where, as before noticed, Crockford used nightly to pick up his crumbs by all the advantageous pulls that opportunity presented, the secret of which had been no mystery to Dasking, whose countenance of, and silent co-operation in, the profitable method of playing on score with a large note, were in some degree necessary to the success of such a system of ingenious bye-play. Roulette, too, was no mystery; of the tables for which we may say a word or two anon. Such services, doubtless, raised him to the vacant seat at Pandemonium. This man, nearly penniless at the time of his appointment, died, after a few years' service therein, leaving behind him £10,000. These facts are related to show how immense a profit must have been open to Crockford himself, when his servants and subordinates could thus rapidly rise to fortune from the mere wages of their nocturnal occupations. Some notion may be formed, also, of the extent of business in the department of play, from the fact that the item of expenditure for dice alone (at about a guinea per pair) amounted to £2000 per annum; three new pairs being provided for the opening play each night, and very frequently as many more called for by players, or put down by Crockford himself, with a view to change luck under any marked and determined reverse.

For the accommodation of those who patronised the hazard-table splendour suppers were nightly provided, which, with wines of choice and exciting quality, were at command *ad libitum*, and gratuitously. In fact, no stimulus was wanting to increase the natural propensity for play, and to render men desperate under ill-fortune. During the first two seasons, the business of the hazard-table was tremendous, and the resulting profits immense. Above £300,000 is said to have been transferred in its owner-

ship during this short period, the principal portion of which enormous amount found its way into the coffers of Mr. Crockford. Counts and commoners, peers and professionals, senators and stock-jobbers, were plucked bare as pigeons for a pasty to swell the enormous gains of the great Demon of Pandemonium.

ROULETTE.

Subsequent seasons, although not realising such abundant harvests, continued nevertheless to bring fair grist to the great metropolitan mill. Each succeeding year brought out some newly-fledged pigeons to be plucked at the grand poultry, some recent inheritors of title and fortune to be initiated in the pleasing mysteries of French hazard, and to be charmed out of wealth's superfluity. Crockford was a walking Domesday Book, in which were registered the day and hour of birth of each rising expectant of fortune; he could tell with the nicest exactitude the rent-rolls of property in perspective, to what extent such rent-rolls had been anticipated by apparent heirs, and what further incumbrance they would reasonably and securely bear; and his favourable report to the committee seldom failed to ensure the election of so qualified an applicant for admission to all the rights, privileges, and immunities of the club, and to the distinguished honour of contributing his quota.

By continued successes and constant drafts on the nightly decreasing resources of the infatuated, Mr. Crockford had now become a large capitalist, and, in all reasonable calculation, above the reach of danger from any sudden reverse. Not only had he levied execution on the ready funds of his community, but he held, under lock and key, dishonoured drafts, bills, L.O.U.'s, with the more solid securities of mortgagees, assignments, deposits, &c., all resulting from the one grand and certain profitable source of speculation. All doubtful debts were, of course available as sets-off against any future successes by the parties indebted, and who, during the continuation of their unsettled accounts, were reduced to the necessity of finding ready cash for all further indulgence in play. Mr. Crockford's betting accounts dovetailed, also, most admirably in such respect, with the business and accounts of the hazard-table, the losses of the one being brought into reckoning with the gains of the other, and vice versa. It must be considered, also, that, in spite of the numerous parties who had risen up to oppose his influence at Tattersall's, he had still immense advantages in betting by reason of his connexion with the club. This was his own exclusive and privileged sphere of action, within which few of the Leg fraternity (save and except a few titled and non-titled scamps who of late years had qualified for the class and degree) could possibly trespass.

In the arrangements of the game, Mr. Crockford was not permitted, under the non-success of the bank, to terminate the play until a stated hour, so long as any portion of the nightly capital of £5000 remained: on the other hand, although not compelled to put down any further sum, he was at liberty so to do if he thought it advisable; and he was frequently accustomed to try the result of a second and even a third bank, when there was hope and prospect of recovery; he was, however, always regulated in the policy of such further venture by consideration of the parties to whom his bank was opposed, for he was too wary to risk any unnecessary amount against bold and determined hands, that were likely to re-risk only a small portion of their gains. It has, however, on several occasions, happened, that in his attempts to recover a first loss, he has increased that loss to an amount of fifteen or twenty thousand pounds in one night; a circumstance not at all surprising, when it is known that the player could stake as large a sum as £200 on a main, and could subsequently bet the odds, in proportion to such sum, between the main called and the chance to be thrown in opposition to such main—technical points of the game well known to its amateurs and professors. This extent of stake would in reality admit £1000 to depend upon one event; that is to say, such amount would be the difference between winning and losing the event, as thus exemplified. Suppose the castor to put down £200 in the

first instance; he then calls the main of seven, and throws the number or chance of four: the odds or probabilities then become two to one (or £400 to £200, in proportion to the £200 originally staked) against his throwing the number four (the winning chance) in opposition to the number seven, the main called: he thus risks, in fair proportion, £400 against £600; the difference, therefore, between winning the £600 and losing the £400, will clearly appear to be £1000. It may, with reason, be imagined, that so apparently small a capital or bank as £5000 would be very inadequate to meet the speculations of bold and enterprising players, under favourable fortune; but it must be recollected, that at the game of hazard there are generally two distinct and opposing interests operating at the table amongst the players: some are betting on the hand of the caster, or person throwing the dice; others are risking their money against such hand; and these respective and opposite fancies frequently cause an equalization of stake for and against, which is the great desideratum of the banker; for in such case he derives the full calculated per-centage of the game, which is taken at about twenty-five shillings in every hundred pounds. It must be taken into consideration, also, that players, with very rare exceptions, seldom risk so large an amount on one event, until they have become desperate by frequent previous loss of capital, which has gone to augment the bank's original fund, and which, consequently, betters the bank's condition to meet the larger demand.

Mr. Crockford, now elevated beyond all former fortune, took a splendid house in the Regent's Park, where for a time he resided with his family in comparative tranquillity; but his love of money, and his restless anxiety to be still adding to his great wealth, permitted him not long to enjoy the *otium* which fortune usually favours. He entered into many and various speculations, promising, as he thought, large return. He was a man of business, and acquainted with most matters favouring success therein. He was cognizant of the value of, and knew the best markets for, everything, from an eel to an earldom, or, as Hudibras hath it,

"He by geometric scale  
Could tell the size of pots of ale;  
Resolve by sines and tangents straight,  
If bread and butter wanted weight."

His ventures, therefore, generally speaking, were based on the good grounds of knowledge and experience; but, 'tis not in mortals to command success; and latterly he met with some check to his hitherto almost invariably profitable outlay of capital. One of the most prominent instances and examples of failure was the erection of the extensive building originally designed for a bazaar, at the corner of King-street and St. James's-street, a vicinity that had, as already shown, been most favourable to his speculations as a *rouge-et-noir* banker. The cost of this building, notwithstanding the fact that every brick, plank, and other material was bought at the best market, and every hour's work paid for under the advantageous terms of contract, was immense. The structure was handsome in its exterior, and complete in its proposed arrangements. It was opened as a bazaar, under very favourable auspices, in the full fashionable season. For a time its novelty attracted, and crowds of visitors gave it patronage and support; but, the novelty over, and curiosity subsiding, traffic fell again into its ordinary channels, and the business of the St. James's bazaar became inadequate to the high rents demanded for the counters or standings in it. From this cause it became a total

THE HAZARD TABLE.

failure in its original design. It was afterwards adapted to the temporary purpose of an exhibition-room, where (with the somewhat curious fact having reference to Mr. Crockford's immediate professional occupation and pursuit,) that wonderfully dextrous artist, the Wizard of the North, undertook to expose, and actually did enlighten the public in respect to the frauds and sleight-of-hand tricks that could be practised,

and were, in fact, daily made available to cheating and robbery by cards and dice. His performance was wonderful, and must have effectually opened the eyes of many dupes, and called up in them some unpleasant reminiscences of the practical skill by which they had been mulcted of their material. The lower and under-ground departments of the building are now used as counting-houses and cellaring connected with the late Mr. Crockford's business as a wine-merchant, a speculation which is believed to have turned to very fair account.

About three years ago, Mr. Crockford signified his desire to retire from the proprietorship of the Club, and intimated at the same time a wish to dispose of the extensive mansion and premises in St. James's Street, with all its valuable furniture and property; the reason assigned for such proposed secession was, that he felt his health declining and his energies unequal to the constant labour and anxiety attendant on the proper direction and management of so large an establishment. The real cause, however, was not only suspected, but known to be his determination no longer to be controlled by the arbitrary power of his committee: his term of agreement with them had expired, and he had no inclination to renew it upon like conditions. He well knew that a capitalist of sufficient experience was not easily to be met with, who could or would speculate in all the extravagant outlay of so immense an undertaking, and that consequently there was no very immediate prospect or probability of a successor; he was aware also, that before such a one should appear, the committee, tired out in the search, would, rather than risk the complete break-up of so commodious an establishment, fall into his more reasonable views to continue its direction under terms less restrictive and imposing;—and he was not far out in his reckoning. On the first announcement of his intention to retire, a sensation was created throughout the Club. Meetings were held, and schemes devised for continuing the arrangements under a new proprietor; and, with this view, estimates were made and particulars put forth of the capital required to purchase the existing interest; flattering representations were also held out of the great and certain fortune to be derived from the source of the French hazard bank; but all to no purpose,—no millionaire was forthcoming; the only offers made were by divers members of the gaming fraternity in the vicinity to provide a hazard bank for the accommodation of the Club, but under no such restrictions as to amount of capital or stake as had been imposed on Mr. Crockford. Such offers, coming not within the contemplated arrangements of the proprietor or the committee, were declined; and the ultimatum of the whole business was, that Mr. Crockford *ostensibly* withdrew from all play speculations, still continuing his proprietorship of the Club. He had now gained his object, which was in reality to avoid the provision of so large a capital nightly, and the compulsory condition to play so high a stake as £200 and its proportions on a single event; the real secret of which was, that both players and money had of late been less abundant, partly because he had too heavily taxed the resources of the members, and further that rival establishments had recently been in the ascendant: for it not unfrequently happened that, under the opportunity afforded by the large stakes permitted at Crockford's, a bold and enterprising player would, on a good hand, win a large sum, which he would subsequently (perhaps on the very same night) lose to some rival bank; whereas no equal chance of benefit was afforded to Crockford in such respect, for the reason that the other clubs alluded to restricted their stakes on a single event to the limit of £25 and its proportions.

Out of the necessity occasioned by Mr. Crockford's ostensible retirement from the bank, the committee, good easy men, ceded to a proposal made by Page and Dasking (since dead) *employes* under the old system, to provide a smaller capital under a more moderate rate of risk; and, in pursuance of this agreement, a bank of £2000 only was put down, and the stakes limited to £25. Although the persons named were the ostensible principals and capitalists under the new arrangement, they were but partially and slightly interested in the resulting advantages: the real parties were the former bankers, who had thus freed themselves from their disadvantageous position, and became responsible only through their operatives and representatives. A new man was added to the direction of the table—one of different mould and manners altogether from his own predecessors,—in fact, a man of education and gentlemanly habits and address, and of former good and respectable position in life. The commencement of business under the new regime was not very auspicious; for a certain sporting baronet (one of the many victims sacrificed on the altar of Crockford's wealth, and now more distinguished for his bold and dashing style of play than for any very large capital remaining to him to lose) paid his early respects to the new firm, and under favour of a good hand, which he never failed to turn to the best account, speedily relieved them of the night's capital,—an obligation which he repeated within a week or two. Loss of fortune has too late taught the lesson of prudence to this gentleman, as it has to many others: he now risks but little, and that seldom; but when the ruling passion prompts to the old sport, he dashes at it with a bold energy and determination based on that perfect knowledge of the game which sad experience has given. His meaning on such occasions is mischief to a bank; and, if fair opportunity present itself, he is not very tardy in making a transfer of a bank's resources.

(To be concluded in our next.)

## CORRESPONDENCE.

### HORSE-TAMING.

"Managing a fiery steed  
Whose stubbornness had foiled the strength and skill  
Of every rider."—DOUGLAS.

MR. EDITOR,—Some of your readers have probably read Mr. Catlin's account of the method by which the North American Indians tame the wild horse of the Prairie by breathing in his nostrils: others have heard of the miracles performed by the Irish Whisperer; and a few may have met with a pamphlet published by Mr. Ellis, of Trinity College, Cambridge, in 1842, where he gives two very striking instances of the wonderful effect produced upon an unbroken filly and an obstinate cart colt, which were severally subjected to this very simple operation. I lately bought a well-bred three-year-old colt, which had, from the day he was foaled, been left entirely to nature and chance, and which was perfectly unacquainted with grooming or handling of any sort; and having a spice of temper into the bargain, was not a very easy one to deal with.

This morning, April 4th, I had him brought into a loose box, and after a good deal of manoeuvring and patience, I managed to get hold of a head-stall which I had put on him: he backed immediately away from me until he got his quarters into the corner of the stable, and of course was then stationary. I then told my groom to cover one eye with his hand, and succeeded in covering the other with mine. I own I was rather shy of putting my mouth very near his, as I have a regard for my teeth, which might be in some danger from his tossing his head about and struggling to get away. At last, during a lull, I got a chance, and breathed gently in his nostrils: from the very first inspiration which he took of my breath he never moved; and I even took my hand from his halter, and allowed him to stand as he chose. The only movement he ever made during the (perhaps) five minutes that I continued breathing upon him, was gently to advance his head as if he enjoyed the sensation: and when we removed our hands from his eyes, he still stood perfectly calm and quiet. I was in hopes to be able to finish the first lesson by catching him again; but at this he rebelled, and I did not choose to tire or worry him; therefore I let him alone for the time, with the intention of renewing the experiment tomorrow.

April 5th.—The colt was again brought into the loose box, and the same process was gone through: he evidently enjoyed the breathing, which was to-day continued for ten minutes, and never stirred during the operation: but he was in the first instance just as unwilling to be caught as yesterday, and, after it was over, again refused his head precisely in the same manner.

April 6th.—The same proceedings with the same results: therefore leaving the breathing-system to those who have more time and clearer wind than myself, the old lunging-rein, mouthing-bit, surcingle, and cavesson of former years have resumed their occupation; and "Outlaw" has had his first lesson in walking along a turnpike-road, which he performed very much after the usual manner of all colts who have had the breath of life in their nostrils since the days of Adam.

Here then I close my experiment, and I confess with much disappointment. If I were to proceed constantly in the same method of haltering, coaxing, and breathing, I have no doubt of its ultimate success; but then I think I may fairly expect the same result to arise from the two former modes of rendering a wild colt docile by degrees, without any advantage being gained by the latter. The plan may, and no doubt has succeeded with some. I only give a plain statement of its entire failure with me: and I cannot help thinking that Mr. Catlin, who witnessed the adventure of Beattie taming his wild horse through a telescope, after a chase of two or three miles, was a little too much prejudiced in favour of the breathing or "puff" system, from the recollection of the wonders he had himself achieved in domesticating a bull-calf; and forgot the more cogent arguments of the lasso, the fall, the hobbles, the noose under the jaw, and, lastly, the brute courage and long spurs of the Wild Indian. No—Jumper and Sullivan are no more; and until a second Jumper or a Whisperer Redivivus shall re-appear, we have lost the art of breaking a wild colt by a charm.

I am, sir, although no longer boasting the "Tassel" of Cambridge, or the "Scarlet" of the hunting-field, your Correspondent,

A PRETTY OLD HORSEMASTER.

### TO A LADY,

WHO STATED THAT, AS REGARDED CONSTANCY, MAN WAS BUT A BUTTERFLY.

You bid me mark yon gaudy thing,  
With plumaged head and painted wing;  
No type in that can I descry,  
Of man and his inconstancy.

'Tis true he flutters but a day,  
Kisses the flower, then fades away;  
Think not with other loves he's rife,—  
Lady, that day is—all his life!

NED RUB.

## BRITISH SONG BIRDS.—No. V.

THE CANARY.—(Concluded.)

## THE CAGE.

WITH the exception of the breeding season, the male canaries are kept alone in separate cages, to which fancy has assigned a variety of forms, but whatever shape may be preferred they ought to be never less than a foot in height and eight inches in breadth, with two sticks or perches. If you have a convenience, the females may range the room with one wing clipped, or, what is better, kept in very large cages, where they will have plenty of healthy exercise. In the smaller cages, where the bird has but little room, the glasses should be placed outside at the end of the lower stick or perch, one for food the other for water, if not hood-shaped or fountain glass, they should have a cap of tin to prevent the scattering of the seed, &c. It is for this reason that the large seed drawers in an aviary are covered with iron wire-work, leaving only sufficient spaces for the heads of the birds to pass through. Cleanliness being a great preservative against most of their disorders, the bottom of the cage should be made to draw out, that it may the easier be cleaned and covered with sand. This should be done every day, or at least several times a week.

These tender birds, being natives of a warm climate, and becoming more delicate instead of hardier from being kept in the house, require a temperature analogous to that of their native climate. They must be protected from the cold, and never allowed to remain in winter in a cold room, which would occasion many diseases, or even death. But, in summer, it is proper to place them in the open air, and they enjoy it very much. Never do they sing so gaily as on fine days, and their cages should therefore be placed at the open window, that they may have the advantage of the light and heat of the sun, which is particularly serviceable to them whilst bathing.

We shall conclude this lengthy chapter on the CANARY with a notice of its DISEASES and their TREATMENT.

## DISEASES.

We now proceed to the consideration of the more prevalent diseases; in treating of which we shall say much which the judicious birdfancier will be able to apply to other feathered captives.

Birds which seldom enjoy the benefits of pure and fresh country air, or those of free exercise, are not only subject to the ordinary diseases of a state of nature, but acquire peculiar ones from their artificial habits and food. The following will be found a pretty copious list of the diseases to which the caged canary is subject.

1. *Rupture*.—This is by no means uncommon in young birds, and proceeds from a sort of plethora or distension, which is followed by inflammation of the bowels. The symptoms of this disease are, thinness, the skin of the belly transparent and distended, covered with little red veins surcharged with blood, the bowels are black and knotted, and descend to the extremity of the body; there are no feathers on the diseased part; the invalid does not eat, and dies in a few days. Too nutritious, or too much food, being the cause of the disease, the only remedy is a very severe regimen, and even then it can be cured only in its first stages. The diseased birds must be immediately removed, and fed with nothing but lettuce or rape-seed, in very small quantities. A bit of iron should also be put in the water, and everything be done to invigorate and purify them.

2. *Lice*.—The parasite insects by which these little prisoners are often tormented, are generally produced by slovenliness. Besides frequent bathing, the cages must be cleaned with much care and vigilance, and have plenty of very dry sand strewed over the bottom. These lice, like bugs, retire during the day to cracks and crevices, which accounts for old wooden cages being often infested. To get rid of them, hollow sticks or stalks of rushes are used, which must be examined and changed every day. The plan is good, but by using only tin cages, which may, more easily than any others, be passed through boiling water, the object is more certainly attained.

3. *Asthma, or hard breathing*, which arises from an oppressed stomach, generally yields to plantain and rape seeds moistened with water as the sole food.

4. *The yellow gall in the head and eyes*, arises from over heat; a cooling diet is therefore the only remedy. If the tumour has grown to the size of a grain of hemp-seed, it must be cut off, and the wound be annointed with a little fresh butter, or bathed with urine.

5. *Sweating*.—There are some females which, during the time of incubation, or while they are on their young, are subject to profuse perspiration; the feathers of the belly are in consequence so wet as to destroy the brood: as soon as this indisposition is perceived the invalid must be washed with salt-water, and after a few minutes be plunged into pure water, to wash off the salt, and be dried in the sun as quickly as possible. This operation is to be repeated once or twice a day till recovery; but as relapses are frequent, it is better to separate the female, and not allow her to sit.

6. *Epilepsy*, which is common among many kinds of birds, may be produced in canaries by particular causes, as great delicacy and timidity.

We should therefore avoid alarming them, either by catching them too suddenly or violently, or by tormenting them in any way.

7. *Sneezing*, produced by an obstruction in the nostrils, is removed by passing a very small quill up to clear them.

8. *Loss of voice*.—It sometimes happens that after moulting a male suffers the loss of its voice; it must then be fed with the same paste as is prepared for young birds, adding some lettuce-seed, and, according to some bird-fanciers, a bit of bacon should be hung to the cage for it to peck.

9. *Constipation*.—The remedy for this is plenty of green food, as lettuce leaves, watercress, &c., not forgetting bread and milk.

10. *Overgrown claws and beak*.—When the claws or beak want paring, sharp scissors must be used, and care taken to avoid drawing blood, lest the bird should be maimed. They often injure themselves when their claws are too long, and get hooked in the wires of the cage, and continue thus hanging. The females, in the same way, get entangled in their nests.

It is rare for canaries which are kept for breeding to live longer than from seven to ten years; while others if well used, may be preserved for eighteen or twenty years.

## GENERAL OBSERVATIONS.

Those which introduce into their melody some passages of the nightingale's song are the most esteemed of all canaries; they are called Tyrolean canaries, because they are considered natives of the Tyrol, where they breed many of these birds. The second are the English canaries, which imitate the song of the woodlark. But in Thuringia the preference is generally given to those which, instead of a succession of noisy bursts, know how, with a silvery sonorous voice, to descend regularly through all the tones of the octave, introducing from time to time the sound of a trumpet. There are some males which, especially in the pairing season, sing with so much strength and ardour that they burst the delicate vessels of the lungs and die suddenly.

The female, particularly in the spring, sings also, but only a few unconnected and unmusical sounds. Old ones, which have done breeding, often sing in this way at all seasons.

I shall conclude this article on canaries by pointing out the best rules for obtaining and preserving good singers. The most essential is to choose from among the young that which promises a fine tone, and to seclude it from all other birds, that it may learn and remember nothing bad. The same precaution is necessary during the first and second moulting; for being likely to re-learn (if I may say so) its song, it would introduce into it with equal ease foreign parts. It must be observed whether the bird likes to sing alone, or in company with others, for there are some which appear to have such whims, liking to hear only themselves, and which pour for whole years if they are not humoured on this point. Others sing faintly, and display their powers only when they can try their strength against a rival. It is very important to distribute regularly to singing birds the simple allowance of fresh food which is intended for the day. By this means they will sing every day equally, because they will eat uniformly, and not pick the best one day, and be obliged to put up with the refuse the next.

The LARKNET will form the next of our series.

METEOROLOGICAL SOCIETY.—A very interesting paper was read at the Meteorological Society a few days ago, on the influence of the opening of Vauxhall on the weather of the metropolis. It was stated as a well-known and perfectly-established fact, that the actual opening of the gardens occasioned invariably a long continuation of wet, which only terminated with the closing of the season; and if an after-season was attempted—though the weather had in the interval been dry—there was sure to be a return of wet till the final close of the establishment. There had, however, been some doubt as to whether a mere announcement would have the same effect as actually opening the gardens, and a singular experiment had consequently been tried. A bill had been put out, promising to open the gardens at Whitsuntide, in order to ascertain the fact, and it turned out that the weather became very lowering. This, however, was only a temporary effect, and arose from the influence produced at once by the anticipation of the opening of Vauxhall; but as the bill began to take its proper effect—as a mere announcement at a long date—the weather, which had begun to threaten, became more settled. This was the substance of the paper, which was received with tumultuous applause by a crowded meeting.

LITERARY SUPPERS.—G—, the indefatigable *litterateur*, lately invited a select party to supper. "Confound the fellow," said S—; "instead of champagne and claret, he gave us a mess of mull'd port." "Don't be surprised," replied K—; "you know he mulls everything."

PLOUGHING AND HARROWING.—A country newspaper seriously proclaims that several persons mustered 107 ploughs in a gentleman's field, near Thorverton, for the purpose of "giving him a day's ploughing, as a tribute of respect." This singular compliment was probably selected as a sort of antithesis to *harrowing* a man's feelings.

LIVING ON AIR.—A querist asks us whether we think it impossible that chameleons lived on air. We think not, as something of the same sort constantly takes place in the poor-law unions.

## CORRESPONDENTS.

**RING.**—J. SHOTTER.—FIATIANA, which you can procure for half-a-crown, should be kept in your house, if, as you say, "there are continually questions about dates of battles, and other things relating to boxing." It is a compendious accurate work, in the shape of an alphabetical index of names, and it strikes you have never seen the book, or you could not have remarked that "one can't go reading all through a book to find what you want, to decide a wager." Are you confounding BOXIANA (in five volumes) with FIATIANA, in one vol. or two parts? If so, you had better apply to your bookseller for the latter, and you will not be at a loss on such questions as those to which we now proceed to reply.—Owen Swift has not fought since 1838; and that year he fought three times; on the last two occasions, in France. Harry Jones, the Sailor Boy, will, of course, appear in the HISTORY OF BOXING, with a detail of all his most noted fights; he died in 1835. We recollect that, in his later days, he still retained a remarkably fine arm and bust, and that he earned "a something" by exhibiting his "proportions" to the students in the Anatomical School of Drawing, at Somerset House.

**QUOTAS.**—A. and B. play at quoits. A's quoit rings, but no part of it touches the peg. B. throws, and his quoit falls upon that of A. and touches the peg. Which is entitled to count, A. or B.? According to the general practice in playing the game of quoits, I believe, the person ringing the peg is entitled to one extra in counting, but we do not observe that practice here, and hence arises the above question, whether or not the quoit nearest the peg is entitled to one in preference to the one which rings, but does not touch, the peg.—In some few counties a "ringer" takes precedence in the score, but, generally, the quoit that touches the peg scores.

**THE CAPTAIN OF THE YORK JUVENILE ARCHERS** shall find his "flapper" has awakened us to the melody of "twanging bow" and "whizzing, clothe-yerde-shafte." We will give, in a few weeks, some illustrated papers on the art of the green-coated "merrie men all."

**X. Y. Z.**—There are far more nests of the birds of the finches, warblers, and passerine (sparrow tribe) in the latter end of April, than in the latter end of May: though a forward or a backward spring will make two or three weeks' difference in the pairing of the male and female, and, of course, the hatching of the brood. Many birds produce two broods in the season. Thus, the chaffinch has one set of young ones about early May, another in July; the common house-sparrow produces a succession of small families during the season. The LINNET, which we next week notice, is rather a late breeding bird (as compared with several of our warblers), yet its young are abroad usually before the end of May; while the redpoll (another of the late breeders, also of the linnet tribe), is not abroad till June or July. The most prevalent birds of the district, and its exposed or sheltered character, must be known in order to determine the question as to which month (April or May) there are most nests to be found. As a general remark, B. is very wrong; there are three in latter April, for one in latter May. The BULLFINCH, (not a very common bird anywhere in its wild state) does not build till early May, as we shall notice when we come to it, in our series of BRITISH SONG BIRDS.

**RED RUB.**—Will you take the field with an article on "Batting," and we will illustrate it? **JUVENES.**—A single walk won't make a naturalist; though, doubtless, a student may learn more in one day in the fields, than in a week in the closet; but this is with the important proviso that he is blest with the power of observation, and the faculty of comparison. In studying ornithology, it is necessary to have recourse to books and preparations, as well as to the objects alive, or recently killed. Access to a museum will facilitate your progress wonderfully. Your letter is in a good spirit; but there is nothing in the observations, which we could not refer to in print—and that, at least, twenty years old. Turn to Colonel Montagu's book, or White's Selborne, and you will find the truth of this.

**BROOKLYN.**—Our modest correspondent is not such as his signature would express him, and we refuse, even on his own showing, to "write him down an ass." The lines,

"Cheerful, at morn, he wakes from short repose,  
Breathes the keen air, and carols as he goes;  
With patient eagle trolle the finny deep,  
Or drives his venturesous ploughshare on the steep,  
Or seeks the deer where snowdrifts mark the way,  
And drags the struggling savage into day."

are Goldsmith's, and are to be found in his description of Switzerland, in "The Traveller." Any opinion upon the literary merit of the production, would indeed be unprofitable drivel. The fame of the "Deserted Village," and "The Traveller," is fixed.

**A YOUNG ANGLER.**—We do not know any good trout-streams within twenty miles of London, which are free, or where a "daily subscription" is taken. If any of our correspondents will "throw" us "a line" on this point, we shall feel obliged. The Darent, near Dartford, Footscray (Kent), the Colne in Middlesex, and the Mole in Surrey, near Leatherhead, are, we think, free. If you don't mind going farther afield, we can recommend free fishing to be had near Fairford in Gloucestershire, or the sporting vicinity of Stockbridge, where, at Higgs's the Grosvenor Arms, you will find pleasant quarters and good fishing free, *probatum est*.

**YOUNG FLY.**—Part of the Wandle at Carshelton is subscription water, and preserved. Apply in the neighbourhood. There are plenty of fish to be seen in the water, but you must have a good hand before you take them.

**R. W. D.**—It is Bendigo (Wm. Thompson).

**A DOUBTER.**—A and B against C and D, at Short Whist. A wins a trick, and turns it; but before he leads again, C, thinking it was his trick, leads off, and B follows with a card of the same suit. Can B's card be called as well as C's?—No; B had a right to play after C, though C played out of his turn.

**BENJAMIN WELLS.**—We must decline giving advice upon such a subject.

**D. WILSON.**—St. Leger, 1843.—The race was run under the following conditions: The owner of the second horse to receive 200 sovs. out of the stakes, and the third horse to save his stake. The winner to pay £30 to the Judge.

**BILLY BARLOW.**—The Catholic Bill was a Government measure, and introduced to the House of Commons by Sir R. Peel: with regard to the Maynooth Grant, we do not give political opinions, nor discuss such subjects. Read the daily or weekly papers.

**BILLIARDS.**—"HAZARD."—The white ball being on the spot, the red must be placed in the centre of the table.

**SAMPSON.**—No: the editor is a gentleman long known in sporting literature as "Valea." We would wish to repeat the suggestion thrown out in our prospectus. Will any of our angling friends send us accounts (with views, if possible) of various popular fishing localities, with particulars of their present state, &c., and we will have them engraved. Or, if the places are well known, will ourselves cause drawings to be made of them, and insert the particulars furnished. In this mode we might, by weekly instalments, form a series of "Fishing Localities," full of amusement and information, and of immense utility to anglers in general.

## OUR WEEKLY CALENDAR.

AN EPHEMERIS IN JEST AND EARNEST.

**SUNDAY APRIL 27.—ROGATION SUNDAY.**—Sir James Graham resigns (or ought to do so): To all the virtues of exalted station.

He adds the greater one of resignation:—  
The Court of Common Council votes a piece of plate, value 150*l.*, to each of the martyr-sheriffs, (1840) for going to quod for a fortnight, under sentence of "good living and as much good company as they chose to see," in a gentleman's drawing-room at Westminster!

**MONDAY 28.**—Newmarket 1st Spring Meeting.—Catholic Peers took their seats in the House of Lords, 1839.—Prince Albert presents a silver model of himself to the Royal Hussars. Oh! we see; he gave the poor fellows half a sovereign in silver!

**TUESDAY 29.**—THE 3000 GUINEAS STAKES.—King Charles II. restored, 1660.—"Heavy rains," says Murphy; but in spite of that, John Brown takes his family in "a light spring wain" to "Ampton Vlek."

The "rain of terror's" come—the horse to go  
At a smart pace has made himself to smart;  
Tis bad enough to bear the shafts of woe,  
But who would bear the shafts of such a cart!

What a nice party—twelve inside—to drag,  
Each fat and full, and heavy as a dunce,  
And all, besides the master and the nag,  
Holding the reins to hold their reign at once.  
The horse is urged—most urgently, half-dead;  
"Come up," they cry—when shall we get to town?  
Pierce pours the shower—their pores are stopped instead,  
The more they cry come up, the more the rain comes down!  
Now, you may see by every sorry face,  
The water party walls its wretched doom,  
And in that cart—that wends with lingering pace,  
Altho' there's little room, there's lots of rhum!

India-Rubber Pavement placed in front of the Admiralty, that certain young officers may better jump over the heads of veterans.

**WEDNESDAY 30.**—Plymouth Spring Races.—Meeting in Finsbury against the Master and Servants' Bill. Mr. Duncombe comes out in the House as the "Cook's oracle."—"The Directors of the East India Company read Lord Ellenbro'. Quite correct: his Lordship never was fit for that 'Company'."

**THURSDAY, May 1.**—ASCENSION DAY.—Duke of Wellington born, 1769.—*Flowers.*—The trees begin to unfold their leaves, and various flowers decorate our gardens. The primrose, pilewort, wood anemone, and several other wild plants are in blow.—May is a spawning month with many fish. Gudgeons are not fairly on the feed in many rivers till June.—*Things to be remembered in May.*—That Ascension Day is on the 1st Easter Term ends on the 8th, and Trinity Term begins on the 22nd. The Queen's birthday on the 24th. Holiday at Custom and Excise. In this month the Royal Academy's annual exhibition is opened. Whitsuntide and Martinmas Terms are those alone regarded for the leasing of all kinds of property, paying rents, and engaging of servants in Scotland.

**FRIDAY 2.**—Ollerton Races.—*Blessings of the Police Force.*—Policemen are public instructors. They're all lettered to teach maid-servants their alphabet. That's the reason they haunt people's areas. They're paid to be well-informed, and so should know all the cooks on board-wages, and every housemaid that finds her own tea and sugar. Policemen are now known, in common with the "Patent easy shining black-lead," as the "Housemaid's best friend."

**SATURDAY 3.**—Trafalgar-square opened, 1844; the commissioners have this year redeemed their credit as to the fountains by putting the water up the spout.—Byron swam the Hellespont, 1810.—Columbus discovered Jamaica, 1492; captured by the English, 1665.

**ERRATA.**—In No. 6, page 71, in Chapter IV. of the HISTORY OF BRITISH BOXING, several typographical errors have occurred, in consequence of the Editor not having seen the proof sheet until too late for correction. Paragraph 5, 1st column, should read thus, "Johnson, with his second, Humphries, and Jackson as his bottleholder," &c.; and in line six of the second column, the date, 1489, should be 1789. These mechanical errors we hope to avoid in future by a strict supervision.

## The Sporting World.

FOR THE WEEK ENDING MAY 3, 1845.

## THE SPORTSMAN'S DIRECTORY.

MAY.

It is usual, at the close of the hunting season, to administer three doses of physic to the noble animal who has performed so conspicuous a part in the business of the chase—as if some extraordinary or supernatural effect were confidently anticipated from the magical number. However, let reason and common sense be substituted for an obstinate adherence to ignorant and injurious custom, and then physic will be given according to the constitution of the animal, since it will appear sufficiently obvious, on the slightest reflection, that some horses will require more physic than others. Physicking the horse should never be resorted to but when absolutely necessary, since it causes the animal to suffer very considerably, and about a week must elapse from the time of its administration before he becomes what may be called convalescent. If the season be forward, and the spring grass can be procured at or near the close of the hunting season, little physic will be necessary: and if this be not obtainable the potato may be substituted for it.

If the weather be remarkably fine during the month of May, the hunter may be turned into the paddock, for several hours during the heat of the day, and allowed to crop the grass for himself: provided the fence is sufficiently secure, and there appear no probability that he can stake or otherwise injure himself. At this time (May) the flies have not made their appearance, or at least have acquired no strength; but as the summer advances, he should not be exposed to the attacks of these troublesome and tormenting insects.

If the hunter has suffered in his feet, if he be tender before or afflicted with corns, his feet should be placed in warm water every morning; from which he will derive the utmost benefit; and, in regard to corns, if they

be frequently pared, and relieved from the pressure of the shoe, they will disappear.

The hunter, from being strung to the top of his system, and kept on the stretch throughout the season, should now be gradually let down, but not so low as to render the muscle flabby, and on this account the grazing system (summering the hunter in the fields) is decidedly objectionable.—Early or spring grass may be regarded as the natural physic of the horse, and he may receive it freely in the stable, without however reducing his corn below a reasonable quantity.

Hounds may perhaps require physic after the severe exertions of the season; but physicking hounds is a simple process and soon accomplished.

Neither pointers nor any other kind of dogs should now be allowed to ramble in the fields, as the partridge and the pheasant deposit their eggs during this month, while more leverets are brought forth in May than at any other time. In consequence, keepers and those who have the care of game entrusted to them, should be vigilant, and particularly on their guard against the depredations of those quadrupedal and winged vermin who are for ever on the look-out for the nests of the birds mentioned above, and also for those pretty interesting little animals (generally two in number) which the doe hare conceals beneath branches of faded grass or similar cover. Of all the creatures whose manners and habits are injurious to the hopes of the shooter, none is to be more dreaded than the rook. This bird, in most places what may be called a privileged marauder, seeks the nest of the partridge and the pheasant, and voraciously devours the eggs. As an equivalent, it may be urged, that rooks are of essential service to the agriculturist from the quantity of grubs they devour: this must be admitted; they follow the plough in search of grubs, and make free also with newly sown oats and barley, newly planted potatoes, &c. Further, they afford the shooter an apology for diversion from the middle to the end of this month, perhaps at the beginning of the next.

### THE FISHER'S CREEL.

THE ROACH.

**CORRESPONDENT**, whose letter we give below, having forwarded a few plain and sensible remarks on Roach-fishing, precludes the necessity for further notice of this well-known fish, than a mere description, and the mention of one or two points left untouched by him.

The ROACH is a handsome fish, either fresh caught or in his native element. It inhabits many of our deep, still rivers, affecting, like most other fish of the *carp* genus, quiet waters. It is gregarious, swimming usually in shoals; it has a smallish head, a leather-mouth, (which is round), and the teeth are placed in the throat. The circles round its large eyes are of a gold colour, and the iris is red. It is a deep, but thin fish, with the back elevated; its scales are thin, and easily fall off. While in perfection, the fins are red; and, as remarked by our correspondent, another indication of its condition may be obtained from its scales, which, when out of season, give to the touch a sensation very closely resembling the rough side of an oyster shell. The side line bends much towards the belly in the middle, and the tail is forked. It is considered a very silly fish; and has acquired accordingly the name of the *water-sleep*, according to old Izaak Walton, the carp ranking as the *water-far*. Although pond roach are the largest, the river roach is a superior fish, Walton erroneously supposed the rud to be produced by a cross of the roach and bream, but it is now well known as a distinct and prolific fish, and not a *mule*; a thing which, though common among quadrupeds and birds, is unknown among fishes. The season for roach-fishing in the Thames begins about the latter end of August, and continues much longer

than it is pleasant to fish. Sir James Hawkins says "the Thames, as well above as below London-bridge, was formerly much resorted to by London anglers; and, which is strange to think on, considering the unpleasantness of the station, they were used to fish near the starlings of the bridge. This will account for the many fishing tackle shops that were formerly in Crooked-lane, which leads to the bridge. In the memory of a person not long since living, a waterman that plied at Easex stairs, his name John Reeves, got a comfortable living by attending anglers with his boat: his method was, to watch when the shoals of roach came down from the country, and when he had found them, to go round to his customers and give them notice. Sometimes they settled opposite the Temple; at others, at Blackfriars or Queenhithe; but most frequently about the Chalk hills, near London bridge. His hire was two shillings a tide. A certain number of persons, who were accustomed thus to employ him, raised a sum sufficient to buy him a waterman's coat and silver badge, the impress whereof was, *Himself, with an Angler, in his boat*, and he had annually a new coat, to the time of his death, which might be about the year 1730."

Shepperton and Hampton are the places chiefly resorted to by the Londoners, who angle there in boats: at each there is a large deep, to which roach are attracted by constant baiting. That at Hampton is opposite the churchyard; and in that cemetery lies an angler, upon whose gravestone is an inscription, now nearly effaced, consisting of these homely lines:

In memory of Mr. Thomas Tombs, goldsmith, of London, who departed this life, Aug. 12th 1758, aged 53 years.

Each brother Bob, that sportive passes here,  
Pause at this stone, and drop the silent tear  
For him who loved your harmless sport,  
Who to this pitch\* did oft resort,  
Who in free converse oft would please,  
With native humour, mirth, and ease,  
His actions formed upon so just a plan:  
He lived a worthy, died an honest man."

We shall here close our editorial remarks, leaving the ROACH in the hands of YOUNG PISCATOR, who thus speaks in a letter—

To the Editor of THE SPORTING WORLD.

SIR,—Having been an attentive reader of your pages, especially those under the title of the FISHER'S CREEL; I, with your permission, lay before the public a few hints and notions that my travelling by the river-side has learned me. My first subjects shall be the ROACH and the DACE, Dare, or as it is sometimes called, the Showler.

The Roach spawns in May, and it is easy to distinguish whether it be in season or not; for if the scales upon the back be rough to the touch, it is out of season; if they lie flat and smooth, the contrary.

The Dace is a longer and narrower fish, and has smaller scales than the roach, and spawns in March, which constitutes the principal difference between them, as their haunts and manners are the same, and they are generally found together, each delighting in the deepest part of rivers, where there is sand or gravel. And now, under correction, I would deliver a few plain observations upon roach-fishing, for the edification of the tyro: promising that the *matter* of my plain unvarnished directions, will prove a valid apology for their manner.

They may either be caught with a fly on the top, or a bait under water. Bait-fishing, for either roach or dace, is very diverting, from their avidity to take the bait. The rod for bottom-fishing should be from twelve to eighteen feet, with line proportioned to the rod. Many persons fish with a gut line; but in this, I consider, they greatly err. The single-hair fisher will always have the precedence over those that fish with gut. You should have a small hook, and a few small shot about a foot from the hook; the float should also be very small, so that it might sink at the slightest touch. Roach and dace being fish that bite very tenderly, the bait should drag lightly on the bottom: for your baits, use gentles well-scoured in any fine sand, caddis, or stock baits, which is to be found by the side of brooks, under stones. These may be scoured by putting them in moss. Small red-worms, cowdung-bait, commonly called a cockspur, from its resembling in shape a shell of that name, wasp-grubs, and dock-grubs, found at the roots of dock-plants. Of paste, common white bread, well mixed together, to make it tough, which is a very excellent bait, and so much for bottom-fishing.

For fly-fishing, you should have a fly-rod, about three to three and a half yards, with about ten yards of line, well tapered, having about three yards of single hair at the bottom. For your flies, use

1. Natural. Artificial.

1. *The Black Gnat*.—Body to be made of black ostrich harle, and must be dressed thick and short; the wings, a pale starling's feather, or, it is equally killing, if dressed as a hackle, for which purpose, I consider, a blue hen's feather the best.

\* A particular spot, called a Pitch, from the act of pitching or fastening the boat there.

2, 3. Natural.

Artificial.

2. *The Black Ant.*—Body, about three turns of black ostrich harle at the tail; wings, feather from under the snipe's wing; legs, a brown cock's hackle.

3. *The Red Ant.*—Body, in same manner as described for the black ant, of copper-coloured peacock harle; wings, from under a starling's wing, with a ginger hackle for legs. Or, lastly,

4. Natural.

Artificial.

4. *The Blue Gnat.*—Body, of dark mole-skin, wrapped with bright purple silk, hackled by means of a bluish and coloured feather.

They will also take little red and black hackles, decorated with gold and silver twist. The house-fly, and the flesh-fly, too, are great favourites. This set of flies will last you all the year round; indeed, they are quite sufficient for them.

I will close this little chapter on fishing, by saying that, I have often thought the amusement of angling has been too much despised by those who are not anglers themselves. If all the pleasure of the pursuit consisted in dragging a fish, or in watching a float, to see it go under water, we should, in some sense, merit it. The pleasure of angling, however, takes a much wider range. The enjoyment of air and exercise, as the angler pursues his course through flowery meadows and fields, covered with herds and flocks, listening to the unseen lark, or watching the varied movements of the swallows, as they glide around him in every direction, have charms which add a relish to his walk, and harmonise with every kindly feeling of his heart. Nor is this all. A reflective angler will derive many useful lessons from the visible objects of creation which surround him; all of which serve to prove the infinite perfection and unbounded benevolence of the great Creator.

YOUNG PISCATOR.

Manchester, April 10, 1845.

## THE EXPERIENCES OF A COMMERCIAL GENT.

(Continued from page 45.)

### REMINISCENCE II.

It was on the afternoon of a miserably dripping day, a *Fry-day*, by-the-by, that I, Nathan Orderly, was toddling slowly along, as is my wont—or, rather, *was*, before I went into *training*—from a town in Sussex, of which I will not give the name, to another in the same fair county, where I expected to meet many of my clients who had been *advised* by letter of my arrival. I never feared rain or wind, heat or cold, cloudiness or sunshine. I carried with me a suit suitable for all weathers, and doffed my light coat for a heavy one if I felt chilly, or donned a summer's garb for a winter's suit if the sun's warmth gave me a hint that such a change was necessary. As to weather-coats, although *male-olent* macintoshes were not invented, I had such a collection, formed of stout, well-seasoned broad-clothes, and provided with such a series of capes, one overlapping the other, like statues on a house roof, that I could bid defiance to a rain of some hours' duration. My head, too, was always well protected by a hat whose brims might stand in competition with the most rigid Pennsylvanian friend that ever repudiated.

Thus armed, *cap-a-pie*, I jogged quietly along, not doubting in the least that I should arrive at the place of my destination at the appointed hour. I knew it was raining, and heavily, but I was not fully aware *how* heavily until my quiet buggy horse came to a stand-still, shook his head, and refused to wag another step forward. On lifting up my face, which had been buried in the folds of my shawl-handkerchief nearly up to my eyes, I was greeted by such a dash of rain and hail as convinced me my horse had good reasons for drawing (instead of me and the gig) my attention to the inconvenience to which his bare face was subjected.

What was to be done? I was seven miles from the end of my journey. The road lay over bleak and barren hills, and was unprotected by hedges. About half a mile to my right I knew that there was an inn, although I had never put up at it, as it stood by itself, and was used as a posting-house by the *nobs*, and not resorted to by commercial gents. I, with difficulty, *disarranged* my old horse into a walk, which was willingly exchanged for a rapid trot, when I turned his head down the lane that led to the house which I will call "The George," begging King George's pardon for taking such a liberty. I drove into, and pulled up under the gateway, and naturally expected to be greeted by somebody—but no; no one came near me. I shouted, "Hostler!" no one answered me. I looked about me, and saw a win-

dow evidently belonging to the bar within a few yards of me. A very spruce young lady with rouged cheeks and curly ringlets peeped out at me, and then disappeared. In her place came a "regular swell," a male in a slap-up green coat and brass buttons, a buff waistcoat, a sort of grey-checked shawl round his neck, with buckskins and topped-boots for belows. He looked hard at me, gave his nose a Broughamical twist, and turned away. I heard this little bit of dialogue pass between the male swell and the female dandy, as plainly as if I had been in the room with them.

"D'ye know him, Charles?" said ringlets.

"Cuss me if I do, Jene," replied the male.

"What cawn he wasnt?" asked ringlets.

"Cuss me if I knows or cares, Jene," said the male. "Is dinner ready?"

"The cabbage is just put in the pot, Charles, and will be done in an instant," said ringlets.

"Hang me if I stand this," said I. "Hilly-oh! you, sir, in the green and yellows, and you, miss, with the sausages about your face, is this a public-house, or is it not?"

"Dear me, Charles, the man is getting noisy. Do go out and speak to him," said the female.

"Cuss me if I do—ring for the boots," said the male, taking up a steel and whetting his carving-knife upon it.

A bell was rung, and in about five minutes a man almost as spruce as his master demanded what I wanted.

"The hostler immediately—then show me a room, and let me know what I can have for dinner."

In another five minutes the hostler, looking more like a nobleman's coachman than a servant at an inn, sauntered up the yard, and after he had coolly surveyed me and my old horse, and turned up his nose at both of us, condescended to lead him down the yard; and when I told him to rub him dry, and that I would come and see him fed myself, gave a most impudent wink at boots, who, after he had replied to it, showed me into a small ill-furnished parlour without a fire in it.

"Send your master here, boots," said I.

"Him and missus is just sot down to dinner, and I maunt disturb 'em," said boots.

"Well, never mind, I want to sit down to dinner myself; so, if the waiter is out, act for him, and let me know what I can have to eat, and bring me a lighted candle at the same time."

Boots returned with the candle, and a message from his master, that as soon as he had done dinner I might have the joint—a prime piece of sirloin of beef—or the cook could get me anything I wished.

"The beef," said I, "and the sooner the better, and bring in a bottle of the oldest port in the cellar."

When he was gone I lighted the fire, which was already laid; but just as I had finished my job, in walked, or rather strutted, Charles. He made me a most magnificent bow, and begged me ten thousand pardons, and said dinner should be served *instantly*.

It was served—semi-cold beef, with gloshales of fat in the gravy, quite cold vegetables, and a half-eaten apple-tart "to follow."

I always take things easy. I made a meal, and then applied to the port. After a glass or two, which proved the wine to be anything but good, I ordered hot water and sugar, and, whilst they were being prepared, went to see my *hassled*.

"He's had his oats," said the hostler, eyeing me from top to toe.

"Has he?" said I, seeing the manger clean; "then bring him another quatern and threepence-orth of split beans."

"You're a downy cove, I can see," said the hostler; "but I like a trump as won't suffer his horse to be gammoned."

Having thus provided for my horse's comforts, I returned to take care of myself. I drank two tumblers of negus, and, seeing that the rain had abated considerably, I ordered my buggy and the bill, and resolved to push on for — before it was quite dark.

The bill was brought; here it is:—

	£	s.	d.
Dinner	0	5	0
Beer	0	1	0
Tart	0	1	0
Cheese, &c.	0	1	0
Fire	0	2	6
Port	0	7	0
Sugar and water	0	1	0
Horse	0	3	0
Gig standing	0	1	6

£1 3 0

"Just give my compliments to your master, and say I wish to speak to him," said I.

In came Charles, and to my gentle expostulations he replied, "It was the usual charges—I might have eaten the whole joint, burnt a fire all day, and given my horse a bushel of oats, and it would have made no difference."

I paid the bill, and tipped the servants handsomely, meaning to take it out of Charles, at "The George," some other day.

I did, and thus it was. I kept the bill, and showed it to several brother coms. We went, nine of us, to "The George." We ordered half-

a-dozen heavy joints, and gave our horses as much as they could cram themselves with.

"Well, when dinner came in we ate all we wished for. Then we threw up the window, and, summoning some labourers who were at work in a field opposite, we gave them the remains of the joints. We then rung for the waiter (having replaced the dish covers) and bade him take away. I never shall forget the fellow's look, when, on lifting up what he fancied was a round of beef, the dish went up far above his head. We all roared, and, when our laugh was over, ordered, each, sixpennyworth of brandy and water, our horses, and the bill.

The bill came in, and with it Charles. I looked it over, and found that he had charged just as before, dinner five shillings each, &c., &c., and horses three shillings each.

"You are a man of your word, I see, landlord; but, as we mean to visit you often, you had better change your system," said I.

"Never," said Charles, "I want no one but gentlemen here. It is not a *bagman's* house."

"Confound your impudence," said Jones, who travelled in—I beg pardon—did business in the grocery department; "I'll advertise you and your house, and tell the world what a cheat you are."

"Thank'ye, sir," said Charles; "you'll save me seven shillings if you'll add, 'N.B. The landlord, having made his fortune by these excessive charges, is about to retire upon his estate in the neighbourhood.'"

I confess we were fairly beaten. It was no foolish boast on Charles's part. In less than three months "The George" was advertised: "to be let."

(To be continued.)

## THE LATE FIGHT BETWEEN THE PREMIER AND YOUNG BEN.

(From Punch.)

WITHOUT a doubt the gallant "mill," which came off on the floor of old St. Stephen's, between these two heroes, has had a duration unprecedented in the annals of the P.R.; though not, perhaps, in those of the Parliamentary Ring. It lasted three weeks and four days; and we are not certain that it has ended yet. Indeed, we should have sooner published its particulars, if we had not been waiting for its termination. But "better late than never" is a good maxim; and on the strength of it proceed we to business, beginning with

### THE MEN.

The Premier, whose patronymic is Peel, is otherwise known as Sir Robert, *alias* Fawky Bob. He is an old hand, having won various laurels, and now and then caught a Tartar. He fought in 1830 with Russell, and Johnny was the victor; but in '42 he in turn beat the Bedford Pet. It is said that much of his success has been owing to adopting the latter's tactics. Probably the Premier, who is a bit of a "scollard," thinks that "*fit out et ubi hunc doceri*," as the poet says. His style of fighting is cautious and wary, abounding in crafty dodges, and his dexterity in parrying is quite an example to youth. Instead of taking off his coat for action, he has a peculiar custom of turning it, which has given a new meaning to the verb "*to Peel*." He stands several inches higher in his own opinion than in that of any one else, but in this respect is much on a par with his opponent.

Young Ben, surnamed d'Israeli, has lately earned the cognomen of the Shrewsbury Slasher, as also that of "Coningsby" and the "Young Englander;" whilst by some he is called the "Coming Man." In one sense of the word he has been long known to "the Fancy;" namely, as a writer of fiction. But his fame on the boards of St. Stephen's is of recent growth. It is said that he aims at the Championship of Young England, which we wish he may get. He was formerly hand-and-glove with the Premier, though he has now declared war against his *quondam* crony. In this he has certainly evinced pluck, as he was always classed among the light-weights, whereas Peel is one of the heavy ones. But let us now come to

### THE FIGHT;

Which may be described as a stand-up business, as it arose out of a dispute in the old house, on Tom Duncombe's calling Jemmy Graham to account for letter-opening. The men did not appear in good condition, but, on the contrary, decidedly ill-conditioned. They did not shake hands on meeting, but fists, in a manner the reverse of cordial. The Premier was attended by Sussex Darby; whilst Canterbury Smythe did the needful for boy Benjamin.

FIRST ROUND, Feb. 20.—Hostilities were commenced by Young Ben, who coming boldly up to the scratch, and after making some little play, gave a smart hit at Sir Robert, as "the choleric gentleman," which told on the Premier's phiz, the latter instantly assuming the scarlet dye. After inflicting various other teasers on his adversary, he aimed a vicious left-hander at him in the shape of a charge, which was cheered as a regular smasher, but which, hitting an unoffending gentleman named Benham over his shoulder, turned out to be "no go." Luckily it did not hurt Mr. Benham. Peel's monkey was evidently up; but this round he reserved his powder.

SECOND ROUND, Feb. 21.—Counters neatly put in by Peel, who came down with a topper on the nob of his "candid friend." He also gave

it him right and left, in return for the Bonham blow, which so far stopped his potato-trap. Ben dropped on his knee, crying *peccavi*. This round the Premier had decidedly the best of it, and the odds were two to one on Robert.

THIRD ROUND, Feb. 28.—Ben again on his legs, having recovered his wind and senses. He let drive at his opponent right and left as the "political martinet," in a style which was very much applauded. The Premier affected to receive these hits as flea-bites, but evidently winced at the punishment, delivering but a few feeble counters in return. Ben, regularly going in for mischief, planted a stunner on his *os frontia*, with an allusion to the Whigs' bathing toggery. Peel floored. The Young Englander followed up his advantage with a lunge on the breadbasket, with reference to the Premier's friend Canning, which completely doubled him up. Peel piping, and obviously distressed. Betting ten to one on Benjamin.

FOURTH ROUND, March 17.—Ben hard upon poor Sir Robert, whom he got into chancery and fibbed for nearly twenty minutes, to universal satisfaction; as a trimmer; dismissing him finally with a tremendous stunner, as the head of an "organised hypocrisy." Peel did not make a single hit, or even parry, but went down before every blow like a ninepin. His eyes, proboscis, and the rest of his facial region, exhibited severe marks of punishment, and the odds were now twenty to one against him.—Time had not been called when our reporter left.

### REMARKS.

Young Ben, during the greater part of the fight, evidently had it all his own way. He first drew the purple fluid, and won most of the falls. He displays but few symptoms of punishment, and declares himself ready to renew the engagement any day. He has proved himself a hard hitter, if not a match for his opponent's science—of which, however, this time the latter displayed but little. The general opinion is, that the Premier is dead-beat; and the knowing ones suspect that if he comes up to the scratch again—which is doubtful—he will come off second best.

### ANOTHER REPORT.

[We extract the following graphic and humorous report of this "Mill Extraordinary," from the pages of *The Great Gun*. Rather curiously this witty periodical draws on its fertile authors and engravers for sketches of the political fracas, or series of fracas, between the representative of the Tariff and the Cynosure of Young England. In the dearth, too, of *bona fide* Prize Ring intelligence, the accompanying is doubly grateful. It will no doubt operate as a stimulus to Ben Caunt and Bendigo to have an ingo for the champion's belt.]

Prime was this fight! Our artist this week, whom we took with us down the road, has nobly done his duty; be it ours to pursue with the pen that which he has immortalized with the "burin."

"On venturous wing in quest of praise we go,

Leaving the gazing multitude below."

The lads of "The Fancy" invoke us (shades of Fig, Broughton, and Slack—incarnations of Cribb, Spring, Ward, and Caunt, belted with more than the glories of Saturn—can we be dead to the appeal?)—and we will essay, in "words that breathe and thoughts that burn," to play the limner in language on behalf of the noble science of "self-defence," placed again upon a pinnacle by the celebrity of the combatants whose deeds we are about to commemorate.

(To be concluded in our next.)

A ROYAL SPORTSMAN.—The late King Ferdinand of Naples, so well known as the Lazaroni monarch, and as one of the most indolent and careless men of Europe, was, all his life, so devoted to the pleasures of the chase, that he can hardly be said to have thought of anything else. When the French armies were a second time approaching his frontiers to drive him a second time from his beautiful kingdom, a grand council was assembled at Portici to deliberate on what was to be done in so tremendous a crisis. His Queen, Caroline of Austria (sister to the unfortunate Marie-Antoinette of France), who was as active as her consort was indolent, always presided at the council table. This day, as might be expected in face of such danger, the deliberations were serious and long. The King became impatient, and after looking several times out of the window at the weather, which was favourable for some sport, he rose and said, "Caroline, what are we to do? If we are to run away, let us run; but if we are to stay, tell me, that I may go shooting!"

A young gentleman was asked the other day if his father was not giving him a liberal education. "No," he indignantly replied, "my father is giving me a *Conservative* education, sir."

UNAMIALE DISPOSITION.—It is a most extraordinary thing that the House of Commons should, night after night, betray so much anxiety to proceed to a division. One would naturally suppose that the ruling wish of that body would be "unanimity." Another strange circumstance is, the great disproportion between those members who demand information and those who furnish it. For instance, there are dozens of interrogators, but only four tellers!

There are only three ways to get out of a quarrel—write out, fight out, or back out; but the best way is to keep out.

\* Bishop, the noted gunsmith in Bead-street, a synonym for pistol.

TOM JOHNSON, CHAMPION.

## THE HISTORY OF BRITISH BOXING, FROM FIG AND BROUGHTON TO THE PRESENT TIME.

PERIOD II., 1735—1786.

FROM THE TIME OF BROUGHTON TO THE APPEARANCE OF DANIEL MENDOZA.

## CHAPTER IV.—Continued.

TOM JOHNSON AND BENJAMIN BRAIN (OR BRIAN—BIG BEN), CHAMPIONS

## JOHNSON—concluded.

**B**T length Ben Brain, of Bristol, better known as Big Ben, was matched against the champion; but as this battle will fall more properly under the notice of the victor, we postpone it to that place. Johnson never fought afterwards, but became a Boniface, taking the Grapes, in Duke-street, Lincoln's-inn-fields. Here he failed in business, from, it is said, his gambling propensities, which caused the loss of his license. He then migrated to Dublin, and died at Cork, January 21st, 1797, aged 47 years. Johnson's own imprudence appears to have been the cause of the misfortunes of his latter days.

Johnson's appearance indicated, when stripped, more of strength than beauty of form. He was in height nearly five feet nine inches, and about fourteen stone in weight; a remarkably round-made man, with very fine chest and shoulders, and displaying immensely strong loins. He was by no means a showy fighter, and his guard was generally considered inelegant; and his attitudes more defensive than otherwise. In the fight he was peculiarly steady, watching every movement of his antagonist with a coolness unequalled; receiving the attack unappalled; and scarcely ever failing in the return of planting a most desperate hit. The head was his favourite object, and if his adversary did not possess considerable science, he was in extreme danger of being put in the dark. Johnson worked round his antagonist in a way peculiar to himself, that so puzzled his adversary to find out his intent, that he was frequently thrown off his guard, by which manœuvring Johnson often gained the most important advantages. Tom was thorough game, and showed the utmost contempt for retreating; at the same time careful to avoid exposing his person too much to the attacks of his antagonist.

## BENJAMIN BRAIN (BIG BEN), CHAMPION OF ENGLAND.

Benjamin Brain (whose name in the Chronologies appears as Ben Bryan, or Brian), was a native of Bristol; and became gloriously distinguished in fistic annals by his conquest of the brave and scientific Johnson. Ben

was a powerful pugilist—remarkable for his straight and tremendous right-handed “services,” but could well use both his mauleys.

Although of an athletic build, Ben does not appear to have pre-eminently merited the appellation of “Big” so inseparably allied to his name, for his height (5 feet 10 inches) was not much more than an inch superior to that of Johnson. He was born in 1753, and passed his early years as a collier at Kingswood, near his native place: and it was here that Ben first signalled himself by a battle with Clayton, “the Shropshire Champion.” A fellow-collier, also of Kingswood, of the name of Harris, who had earned a provincial reputation in that nursery for pugilists, Bristol, also succumbed to Ben, after a game and determined contest, as noticed in the Chronology in Number 5 of this Journal.

BRAIN arrived in London in 1774, shortly after these battles, and passed several years as a coal-porter, at a wharf in the Strand. He was a good-looking man, and when out of his business always appeared clean and respectable; mild and sociable in his demeanour, and never ridiculously presuming upon his qualities as a boxer.

Ben's first set-to in London was with the Fighting Grenadier, in the Long-fields, on October 31, 1786, in which, had it not been for the assistance of a medical man, who witnessed the contest, Ben must have been defeated. The soldier was a first-rate *punisher*, and Ben's eyes were so swelled, from the heavy blows he received, that he could not see; when just at this juncture the ring was broken: during which accident the swellings were skilfully lanced by a surgeon, and Ben restored to perfect vision. A fresh ring was made, and the combat renewed; and in the course of a few minutes the Grenadier gave in.

Corbally, an Irish chairman, fought Ben, upon a stage, twenty-five feet square, at Knavestock, in Essex, on December 31, 1738. Notwithstanding the weather was extremely severe, the combatants stripped with the most perfect indifference, and the fight was carried on with determined courage on both sides; Corbally was eventually defeated.

Ben fought a most desperate battle with Tring, at Dartford, in Kent. The latter was defeated in nineteen minutes.

In 1789 he forfeited 100*l.* to Johnson, as already noticed, which sum was deposited in part of 500*l.*, Brain being in a bad state of health.

Ben received a challenge from Jacombs, a Birmingham pugilist, which he accepted, and the battle came off at Banbury, in Oxfordshire, on a twenty-four feet square stage, October 23, 1789. Jacombs was a stout-

made man, of high courage, and not without science. In the early part of the combat, Jacobs exhibited determined resolution, and went into Brain in a style that would take no denial. Whether Ben felt any doubt about the battle, he did not conduct himself after his accustomed method, but fought on the retreat, shifting often, to avoid Jacobs' blows, and fell frequently. Jacobs, on the contrary, received Ben's attacks undauntedly. Considerable disapprobation was expressed by the spectators, particularly the Warwickshire men, who were getting outrageous at Ben's manœuvring. Brain at length stood to his adversary, and showed what he was capable of performing, by putting in a tremendous floorer, which quickly convinced the spectators of his quality. First-rate courage was displayed upon both sides; but after a most dreadful battle of one hour and twenty-six minutes, the brave Jacobs was conquered.

Hooper, the tinman, was next backed to fight Ben. A more ridiculous match never took place in the annals of pugilism: a fight it could not be called. Hooper was over-matched, and Ben treated him with sovereign contempt. The first round was well-contested; but Ben caught his opponent so heavily on the body, that Hooper could not again be induced to come to close quarters. Hooper fell every round without a blow, ran all over the stage, squirted water in Ben's face, and called him by the most opprobrious epithets, thinking that by such acts Ben might be provoked, and put off his guard. Ben received several severe facers from the activity of Hooper; and had little opportunity of making a return, as his antagonist, after striking, was upon the ground. However, Ben adopted a plan that all the stratagems of the Tinman could not divert him from. He stood like a rock in the middle of the stage, and there waited till Hooper thought proper to come up to him. This piece of diversion took place on August 30, 1790, at Chapel-row-revel, near Newbury, in Berkshire, and continued for three hours and a half: the night coming on fast, several of the amateurs asked Ben if he should be able to finish the battle that day? He jocularly replied, "That it entirely depended upon his antagonist;" and, observed, "they had better begin the next morning at six o'clock, and have the whole day before them." The fancy were completely disgusted at such treatment. After what was termed one hundred and eighty rounds having taken place, and it being nearly dark, it was declared a drawn battle, and Ben walked off without receiving any particular hurt.

A match was at length made between Brain and Johnson for five hundred guineas. The former was under the patronage of the Duke of Hamilton. This battle, which had long been expected, excited intense interest in the sporting world, and bets to the amount of several thousands were laid upon its decision. The characters of the combatants stood high; Johnson, from what he had done, was surrounded by friends, and the odds were seven to four in his favour. Ben was well known for thorough game; he was a most powerful hitter, and both hands of equal use to him; he had also given ample proofs in town and country that he might be depended upon, and was not without a host of supporters.

At Wrotham, in Kent, upon a stage twenty feet square, was the Championship of England decided, on January 17, 1791. Johnson, by Joe Ward for his second, and his bottle-holder, Mendoza, mounted the stage at one o'clock, with firm composure; and almost at the same instant Ben followed, with a cheerful countenance, accompanied by Bill Warr and Humphries, as his second and bottle-holder. The first round formed a striking contrast to the caution ordinarily observed in important battles, for no sooner were the men in attitude than a furious set-to commenced, and the round ended by a rally, in which Johnson received such a desperate hit in the face that he fell forward completely stupefied. The effects appeared in the second round, for Ben put in another floorer. Johnson plucked up, and in the next round laid Ben upon his back. Science seemed utterly disregarded. The blows were dreadful in the extreme, and given and taken reciprocally; at length Johnson, missing his aim at Ben, struck the stage with his hand, and broke his middle finger. Tom soon afterwards became desperate, and with the agonising idea that his proud fame was fast expiring, completely lost himself. He caught hold of the hair of Ben's head several times, shifted, and had recourse to manœuvres so unlike his former conduct, that disapprobation was publicly expressed. Ben, after mulling away for twenty minutes, decided the battle, by putting in a most tremendous hit upon Johnson's ribs, and by another, splitting his lip.

We here for the convenience of arrangement close the second period of this history, subjoining the Chronology of 1785 and 1786, up to the first appearance of DANIEL MENDOZA, whose style and exploits form an Era in the Science of Self Defence.

1785.

Perdue beat Brummage, 40m., Islington-fields.

HUMPHRIES beat Dick Smith, 27m., 5 ga., Laytonstone, Essex.

(3) Tom Jones beat Blackwell and Tom Burley, 10s. each, Harley-fields.

[Major Hanger and his black servant seconded Blackwell and Burley, both big ones.]

1786.

Jan. 13. (3) Tom JOHNSON beat Bill Love, 5m., 50 ga., Barnet.

Feb. 13. Perdue beat Bath (the Postboy), 35m., Holloway.

(4) JOHNSON beat Jack Towers, Barnet.

Feb. 13. (4) Tom Jones beat the Sailor, (One-eye), three hard battles, 10, 5, and 7 guineas each, Ring in Hyde-park.

May 3. HUMPHRIES beat Samuel Martin, 105m., 320 ga., Newmarket.

June 3. (5) Johnson beat Fry, 30m., 50 ga., Kingston.

Jack Doyle beat Jack Drake, 30m., Blackheath.

Oct. 31. BRYAN (BIG BEN) beat the Fighting Grenadier, Bloomsbury.

Dec. 19. Doyle beat Chitty, 20ga., Blackheath.

(5) Tom Jones beat Jack Holmes (the Jarvey), 1½ ga., Harley-fields.

## END OF PERIOD II.

## UNIVERSAL ANNEXATION.

LIEUTENANT-COLONEL JEMU VON TULIP, of the United States Everlasting Horse Artillery, presents his compliments, and all that, to the editor of *The Great Gun*, and begs to show him a light that he may see his way clear. In the first place, he may depend that the Universal United States ain't going to be frightened at squibs, so he had better drop them, 'cause they won't do. 'Merrikey has gone too far ahead ever to be pulled back again, even if all Europe was abashing-on at the tail end. She repudiates all attempts to interfere with her high destiny; for she knows, as sure as fate, what she is about in everything, and she laughs to scorn the dilatory doings of the old country. You may depend, mister, go-ahead she will, slick right away into eternity, and who shall stop her, I would like to know? Hasn't she now got full swing of all the airth between the Atlantic and Pacific Oceans? Every inch of it between the sunf of the breakers and the Canada lines—from the crust of the world up to the clouds; and above that when the sky's clear! And you may depend, mister, that wherever she finds a streak of land, which nobody owns exactly, there will she squat; and wherever she squats there also will she annex, till, what with squatting and annexing, all creation shall be absorbed in the Universal United States.

As to your Premier and his new friend, the Old Man of the Mountain, Paddy O'Connell, you may tell them from me that we know them both, and valley them according. They hate each other too much to make 'Merrikey afeard; it's amost as much as the old country can do to keep 'em from worrying each other out of life; and though Paddy O'Connell may blarney the Premier, and the Premier may plaster Paddy with soft sawder, they'll never do nothing worth notice, because they are both going upon a sham ticket, and can't trust each other out of sight, and they never will; you might as well expect a treaty of offence and defence between an alligator and an opossum agin the eagles. Only see now, that crafty old 'coon, Paddy, is blarneying the Premier, as to what may be done agen America, if England and Ireland pull all one way!—a precious rascal he is, with his rint-bag bustin' with 'Merican dollars. But how is Ireland to be got into the humour to pull the same way as England? Why, by letting her have her own way of course! Upset the Union, take away from her that which the old 'coon hates—the Protestant establishment; send her back her own Parliament, and let the scarlet lady mount her dragon again, and then Ireland will be what she will be,

"Great, glorious, and free,  
Greatest bore of the airth,  
And no good to the sea."

They will set the Universal United States at defiance, will they! Let them try it; but, before you send your herrings here, you should remember, as my everlasting respected uncle, Major G. Downing, of the Downingville Militia, 2nd brigade, used to say on this very matter; you should remember that "there never was a stick yet that hadn't got two ends to it, and, if you don't happen to catch hold of the clean one, you'll perhaps get more dirt on your hands than you can find means to get off agen." But let them come on, shoulder to shoulder, and you shall see how them yellow-skinn'd, long-arm'd woodchoppers would finish them off—just as the great Columbian eagle would finish off and teetotally catawampus a brace of chunk-headed turkey bustards to the glorious old tune of "Yankee-doodle," and leave nothing but their feathers to show that there ever had been such things awalking about in this world.

(Signed)

JEMU VON TULIP.

P.S. See how our grand President Polk has chopped off Texas from Mexico, and has skewered up John Bull upon the Oregon question.—*Great Gun*.

## POETRY FOR THE MILLION!

15, CRAVEN BUILDINGS, DRURY LANE, LONDON.

IN this age of rapid motion, when velocity appears to be considered the *summum bonum* of existence, it is hoped it will not be deemed a presumption, that Mr. CHARLES SLOMAN, the only English Extemporaneous Poet, Author and Composer of the "Maid of Judah," "Daughter of Israel," "God Preserve the Queen," &c., &c., &c., respectfully announces, that he is prepared to write Songs, Poems, and Essays, in Prose or Verse, on any subject, at the shortest notice, and on the most reasonable terms. The most inviolate secrecy (if requested) may be relied upon.—Persons making up Albums, or those who wish to express the language of the heart in flowing rhythm and soft-sounding rhymes, will find this a *desideratum* they might in vain have sought at other hands.

Election Squibs in Fifteen Minutes.—Advertising Tradesmen contracted with by the week, month, or year.—Acrostics in one hour.

N.B.—A Song extemporised and sung upon the instant.—Mr. C. Sloman informs Stewards of Public Dinners, and persons giving Parties, in Town or Country, that he is willing to negotiate for his attendance professionally, as Improvisator, Sentimental, and Comic Vocalist.—Remember! Mr. Sloman is the only person who composes a Song extemporaneously, embodying the Toasts, Speeches, and entire detail of a Public or Private Meeting. Copy the Address! 15, Craven Buildings, Drury-lane, London.

### A "NIGHT" IN THE GARDEN.

BY MILES'S BOY.

THE town has been pretty considerably bored by "nights wi' Burns," "nights with Moore," and "Nights" of all sorts from Charley Knight, of Ludgate-street, with his pretty pictorial Shaksperes, down to all the small fry of singers "out of collar," who have been busking it "through the length and breadth" of England and America making "nights" of it, that Miles's Boy is determined to make another, and have his "night in Common Garden." He will leave to the common-placism of the weekly picture sheets to tell the reader in bookish extracts from obsolete works, how Francis, duke of Bedford, and John of that ilk, and Inigo Jones, and Hogarth, and Sheridan, and George Prince of Wales, &c. &c. &c. lent their aid at all sorts of times to make Covent Garden famous, it is with the present he has to do.

How and where he has spent his evening, Miles's Boy will reserve for another occasion. His visits to the "cribs," aristocratic and plebeian, with which the locality abounds, shall form the staple of future articles, for time and space are our masters, and Miles's Boy does but share the common lot in being their bondslave.

It is midnight; yet is there life and bustle, and noonday activity in this favoured spot, to demonstrate which, hark to that by-no-means-despicable band which has just struck up under the piazza, or in the vestibule of that hotel.

Extraordinarily vivacious locality this Covent-garden; and that's one reason why we like it. The people seem scarcely to get a positive consciousness of their existence until nightfall, and not to be warmed into anything like active life until about two o'clock in the morning, when gentlemen begin to make free with their inferiors. Stay, we are wrong; here are two gentlemen who seem already to have got into their meridian, where they have made the extraordinary discovery, that—

"Of all the girls that are so smart,  
There's none like pretty Sally;"

a bit of information which one of them, who seems to know more about the damsel than his companion, follows up by personally assuring us—

"She is the darling of my heart,  
And she lives in our alley."

Yes—you would not have thought it—in spite of the elegance of their dress, they live in an alley—Change-alley, Cornhill, from whence they have come, with plenty of change in their pockets, to enjoy a change of scene. There they go into Gliddon's cigar divan, to purchase some Havannahs; and then, after another bottle or so, it is very probable that their favourite "Sally in our alley" will form the subject of a duet between them in the station-house.

Our present object is not to give a sketch of the harmonic meeting held each night at Evans's, we shall reserve that for a future number, suffice it to say that we here give the "counterfeit presentment," we mean nought personal of a convivial party making their exit from the "Grand Hotel," from "a sketch taken on the spot," as the pictorial newspapers say, when they give a representation of something that never did or could take place.

The "turn out," however, is a veritable one of Saturday "night,"

which, though the "night" of our artist is not the "night" which Miles's Boy has chosen for the subject of the present paper.

("Cut, and come again," in our next.)

# The Sporting World

OR  
LIFE IN LONDON,  
& THE  
COUNTRY.

No. 8.] FOR THE WEEK ENDING MAY 10, 1845. [THREE  
HALFPENCE.

The GREAT FIGHT between MENDOZA and HUMPHRIES, at Stilton, Huntingdonshire, May 6, 1789. (From an Original Painting.)  
**THE HISTORY OF BRITISH BOXING, FROM FIG AND BROUGHTON TO THE PRESENT TIME.**  
 PERIOD III. 1786—1798.

FROM THE TIME OF MENDOZA TO THE APPEARANCE OF JEM BELCHER.

**T**HE plan of a BIOGRAPHICAL HISTORY, which shall exemplify the progress of "the Manly Art," by the deeds of its exponents and public professors in their several careers, has induced us to adopt such a division into Periods as may most conveniently classify the most eminent pugilistic heroes, and give a guide to the times in which they flourished. First, therefore, in the Third Period, we place Daniel Mendoza, as the introducer of a new style of tactics, and follow him by his antagonists, Richard Humphries and Mr. John Jackson; furnishing, as before, a—

## CHRONOLOGY OF THE PERIOD, 1787—1798.

In this year (2 and 3) DAN MENDOZA and Tom Tyne had one turn-up and one fight.

[Omitted under Mendoza, in "Fistiana."] ]

Jan 18. (6) JOHNSON and Bill Warr, 80m., 200 guineas (drawn), Oak-ingham, Berks.

Tom Tring (big porter at Carlton-house) beat Tom Pratt, 5m., 1 to 5 gs., Bayswater.

April 17. (4) DAN MENDOZA beat Samuel Martin, 20m., 25gs., Barnet.

Aug. 19. Tom Tring (big porter at Carlton-house) beat Jack Doyle, Kennington.

Sept. 9. DICK HUMPHRIES beat (5) DAN MENDOZA (turn-up fight), Cock, at Epping, Essex.

Nov. 22. Savage beat Jack Doyle, 48m., Stepney.

Dec. 19. (7) JOHNSON beat Mick Ryan, 24m., Wradisbury, Bucks.  
 Jones (6) Tom beat Aldridge (the Life Guard) 6 rounds, 2 gs. to a watch, Stones, Marylebone.

1788.

Bill Dean beat Jack Doyle, Harley-fields.

[This "Dean" is confounded in "Fistiana" with a man of the same name beaten by John Hampson, of Liverpool, in 1825.] ]

Jan. 9. DICK HUMPHRIES beat (6) MENDOZA, 29m., 150 gs., Odham, Hants.

Jan. 14. Ketcher beat Love, 49m., 10gs., Bloomsbury-fields.

Bill Jones beat Dunn, ditto.

Jan 22. Love beat George Ring, the Bath Baker, 37m., 5gs., Bloomsbury-fields.

Feb. 13. Blunt beat Godfrey, 200gs., Derby.

Mar. 6. Dunn beat Savage, 60m., 50gs., Wimbledon.

Mar. 10. Golder beat Newton, 55m., 23 rounds, Hounslow.

April 17. Eliaha Crabbe beat Old Oliver, 35m., Blackheath.  
 The Sawyer beat Doyle, 20m., Deptford.

May 31. Golder beat Fry, 50gs., Richmond.

June 9. Mr. JOHN JACKSON beat Fewterel (the Highlander), 67m., Smitham Bottom, Croydon.

Bob Watson beat Crabbe, 45m., ditto.

July 1. Tom Tyne beat Bill Jones, 50gs., ditto.

- Aug. 6. Watson beat Jones, 18m., Brighton.  
Joe Ward beat Reynolds, ditto.  
Tyne beat Earl, ditto.
- Aug. 13. Joe Ward beat two hawbucks, Allister and Jelly Rags, 2gs., Lewes.
- Dec. 31. Bill Warr beat Bill Wood, 80m., Navestock, Essex.  
Bee BEN (Bryan) beat Corbally, 50gs., ditto.  
James beat Smith, 15m., ditto.
- 1789.
- Feb. 11. Solly Sodicky beat Pardo Wilson, 25gs., near Rickmansworth, Herts.  
(6) JOHNSON beat Michael Ryan, (2nd fight), 83m., 300gs., near Rickmansworth, Herts.
- Mar. 12. George (the Brewer) Ingleston beat Mr. J. JACKSON, 5 rounds, 50gs., Ingatstone, Essex.
- April 25. Watson beat Anderson, 2m., 50gs., Langley Broom.  
Joe Ward beat Townshead, 20m., 25gs., ditto.
- May 5. Bill Warr beat Swane (turn-up), Deal Enfield.
- May 6. (7) MENDOZA beat HUMPHRIES, 70m., 65 rounds, 850gs., Stilton, Huntingdonshire.  
[Printed *Herts*, in "Boxiana."]
- Aug. 19. Solly Sodicky and Jack Lec, 100gs., (drawn), Chingford, Essex.  
BILL HOOPER (the Tinman) beat Bill Clarke, Bloomsbury-fields.
- Sept. 5. Hooper beat Cotterel, 35m., 10gs., Barnet Common.
- Oct. 22. (9) JOHNSON beat Perrins, 75m., 62 rounds, 250gs., Banbury, Oxford.
- Oct. 23. BIG BEN beat Jacombs, 36m., Banbury, Oxford.  
George (the Brewer) Ingleston, beat Pickard, 84m., Banbury, Oxford.
- Dec. 3. BILL HOOPER beat Wright (Lord Barmore's man), 20m., Wargrave, Berks.
- Dec. BIG BEN beat Tom Tring (big porter at Carlton-house), 19m., 10gs., Dartford.
- 1790.
- Jan. 1. Dick Goodison beat Sam Chiffney, 60m., £20, Newmarket (two jockeys).  
[Printed *Goodison and Chiffney*, in "Flatiana."]
- Jan. 4. Anderson beat Tom Tight, 6m., Wargrave.
- Feb. 17. HOOPER beat Watson, 150m., 100 rounds, Langley-chase.
- Mar. 10. Payne beat Jacombs, 120m., 96 rounds, near Coventry.
- Mar. 24. Tom Tyne beat Crabbe, 35m., 39 rounds, Horton Moor.
- Aug. 30. BIG BEN and HOOPER, 210m., 180 rounds, £50 (drawn), near Newbury.  
[Omitted under Hooper, in "Flatiana."]
- Sept. 29. (8) MENDOZA beat HUMPHRIES, 73m., 72 rounds, 260gs., Doncaster.  
Packer beat Aaron Mendoza, 60m., Doncaster.  
(9) D. Mendoza thrashed Joe Ward in a turn-up, at Carpenter's Coffee-house (a Finish), Covent-garden.
- 1791.
- Jan. 10. Davis beat Watson, 45m., Coal-harbour, Gloucester.
- Jan. 17. BIG BEN beat (10) JOHNSON, 21m., 18 rounds, 500gs., Wrotham, Kent.  
Bill Jackling (Ginger) beat Symonds (the Old Ruffian), £20, Wrotham, Kent.
- Jan. 21. Falkner beat Thornhill, 50m., £54, Studley-park, Yorkshire.
- April 18. Martin beat Bligh, 50gs., Ensham, Oxon.
- April 28. Hailes beat Snailum, 100m., near Bristol.
- June 13. Joe Leashley beat T. Treadway, 35m., 4gs., Marylebone-fields.
- June 22. Symonds (the Ruffian) and Gowllett (the Yokel Brute), 10gs., (drawn), Uxbridge.
- Aug. 2. Jack Firby beat Symonds (the Old Ruffian), Wimbeldon on the Ridgway.
- Aug. 2. (10) MENDOZA beat Squire Fitzgerald, 26m., (for love), Dublin.
- Sept. 25. George (the Brewer) beat Pickard, Shipston-upon-Stour, Staffordshire.
- 1792.
- Firby beat Jack Towers (a turn-up of 3 rounds), St. George's-fields, Surrey.
- May 14. (7) Tom Jones and Caleb Baldwin, £20, (drawn); and  
(11) MENDOZA beat Bill Warr, 23 rounds, 200 to 300 guineas, both at Smitham Bottom, near Croydon.
- Sept. 4. Hooper beat Banner, 6 rounds, 50gs., Bentley-green, Essex.
- Sept. 5. Ben Stanyard and Andrew Gamble, 25m., 19 rounds, (drawn), Bentley-green, Essex.  
Tom Jones beat Andrew Challis, 15m., subscription 30gs. Bentley-green, Essex.
- Sept. 15. Spaniard Harris beat Cox, 55m., 40gs., Lansdown Fair.
- Oct. 27. W. Warr beat Stanyard or Silverlocks, 13m., 10 rounds, 100gs., Colnbrook.
- Dec. 4. Maddox and Symonds (the Ruffian), 2 hours, Datchet.
- Dec. 6. Hackett beat Geary, 80m., 5gs., Tamworth, Staffordshire.
- Dec. 31. Firby (the Waiter) beat Tom Tyne, 22m., 10gs. to 5, Hyde-park.

- 1793.
- Feb. 3. Alcock beat Thomsen, two Crispins, 4 hours, Bromsgrove, Worcester.
- Feb. 12. Bill Wood beat George (the Brewer), 25m., 100gs., Hornchurch, Essex.  
James beat Solly Sodicky, (suspected cross), same place.
- Mar. 23. Fewterel beat the Highlander, 35m., 50gs. to 30, Leith, Scotland.
- June 8. Farmer thin beat Butcher thick, 50gs., Chatteria, Cambridge-shire.
- Nov. 18. Hall beat the Brewer, 65m., 1g., Harley-fields.  
Jack Firby (the Young Ruffian) beat Symonds, Wimbeldon.
- 1794.
- Jan. 30. Darling beat the Caulker, 127m., 4gs., Brompton, Kent.
- Feb. 10. Hooper beat Maddox, 55m., £25, Sydenham, Kent.
- Feb. 18. Jack Holmes and Beef-a-la-mode, 5 rounds, 1 guinea, (drawn), Harley-fields.
- May 10. (8) Tom Jones beat Keely Lyons (I), 11m., 20gs., Blackheath.
- Nov. 12. (12) MENDOZA beat Bill Warr, 17m., small stakes, Bexley-heath, Kent.
- 1795.
- April 15. JACKSON (Mr. John) beat (13) MENDOZA 10½m., 200gs., Hornchurch, Essex.  
Ugly Bark and Old Symonds, 30m., (drawn), same place.
- April 27. Conway beat Tom Treadway, 9 rounds, 5gs., Hyde-park.
- June 2. Jack Bartholomew beat Firby (the Young Ruffian), 50m., 13 rounds, 5 gs., Hounslow.  
Sir Thomas Apreece beat a street-robber, for justice, London streets.
- June 22. Hooper beat Bill Wood (the Coachman), 16m., Hounslow.  
(9) Tom Jones beat Keely Lyons (2nd fight), 16m., 9 rounds, 10gs., same place.
- Aug. 12. Cary beat Bishop Uthman, 40m., Islington-fields.  
Spaniard Harris fought (10) Tom Jones, 20m., for a purse, and bolted with it, Lansdown.
- Nov. 8. James Harmer (the Fighting Carpenter), beat Ben Pile, 46m., near Holt, Norfolk.
- 1796.
- Mar. 9. Jack Cary beat Hodge, 35m., (wives for seconds), Islington-fields.
- Sept. 22. Chapman (no arms) beat Knight, a smith (ribs broke with head), Erith, Kent.
- Nov. 14. Tom Owen beat Hooper, 44m., 50 rounds, 100gs., Harrow. Middlesex.
- 1797.
- Solly Sodicky beat Bill Treadway, 37m., 20gs., Hyde-park.
- Jan. 27. Paddy beat Copper Harry, 5gs., Bloomsbury-fields.
- Jan. 30. Wood beat Bartholomew, 16m., 100gs., Ealing, Middlesex.
- Feb. — Owen beat Billy Hooper, 100gs., near Harrow.
- April 6. (11) Tom Jones beat the Chaffcutter, 36m., 22 rounds, 4gs., Twickenham, Herts.
- June 28. Squire O'Connor beat White, a butcher, 20m., 5gs., near Bath.
- Aug. 22. Bartholomew beat Owen, 30m., 25gs., Sunbury Common.
- Sept. 18. Joe Bourke (alias Berks) beat Christian, 55m., 22 rounds, Hyde-park.
- Dec. 15. Stanford beat Lacy, 8 rounds, Islington.

## CHAPTER I.

## DANIEL MENDOZA.

One of the most elegant and scientific boxers recorded in the annals of pugilism, was born in the year 1768, of Jewish parents, in the vicinity of Whitechapel. Of his earlier years nothing worthy of record is known. His first noted pugilistic contest took place at Mile-end, in 1784, with a big and ugly rough, known by the name of Harry the Coalheaver. Dan appears to have polished off this black diamond in forty minutes: yet so far from being drawn from his regular employment and pursuits by this triumph, his name does not figure a second time until 1787. Shortly after, Dan rose like a phenomenon in the fistie horizon, where he long sparkled a star of the first magnitude. His advent was unquestionably a new feature in the practice of the art, and his style of fighting gave rise to much controversy and animadversion among the cognoscenti. So far as it was illustrated in his own practice it was substantial and complete; and it may be candidly allowed that whenever Mendoza failed, it was rather from insufficient muscular strength, and being overmatched in weight, than any deficiency of skill or courage. It has been contended, that there was more elegance about his positions than an indication of strength; and more show than utility. No puglist ever stopped with greater neatness, hit oftener, or put in his blows quicker, than Mendoza; but they often failed in doing that execution which might have been expected, from their want of force. In height about five feet seven inches, with a well-formed manly chest, and arms of a strong athletic nature; a courage never impeached; and possessing wind that was seldom disordered; his battles were numerous and well-contested. We have selected the following as the most prominent and entitled to notice:—

Martin, the Bath butcher, a pugilist of provincial fame, entered the lists with Mendoza, on Barnet race-ground, on April 17, 1787. Victory was well disputed, and Mendoza exhibited those early specimens of excellence which soon afterwards ripened into perfection. Eventually, the butcher was cut up; Dan taking twenty minutes to perform the operation, while HUMPHRIES, who had fought Martin the year previous, had been 105 minutes similarly engaged!

In 1787 a casual encounter took place between these great rivals, at the Cock, at Epping, in which Humphries had much the best, and this was followed by a contest in 1788; which as Mendoza was defeated, will be noticed under the life of Humphries. The superiority of either competitor was, however, a matter of very serious question with the most competent judges, and their doubts were proved valid by the sequel; for another match was made, the progress and result of which we now proceed to detail. May the 6th, 1789, was the day; the place fixed upon was Mr. Thornton's park, near Stilton, Hunts. In order to accommodate the spectators, a building was erected, enclosing a space of forty-eight feet in circumference, with seats raised one above the other, capable of containing nearly three thousand spectators.

Humphries, attended by Tom Johnson, as his second, entered between one and two o'clock, followed by The Butcher, as his bottle-holder, and Harvey Combe, Esq. as his umpire. Mendoza immediately afterwards made his appearance, attended by Captain Brown and Michael Ryan, as his second and bottle-holder, having Sir Thomas Apreece for his umpire. The seconds, according to agreement, retired to separate corners on the setting-to.

The moment was highly interesting, for public opinion had undergone various changes since the last combat. Mendoza had rather risen in estimation since the first battle, and the betting had no fixed character. Humphries appeared strong and elegant in his position, and endeavoured to put in a facer, but Dan stopped it with great neatness, and returned a sharp blow that felled his opponent. Elated with the success of his attempt, Mendoza concluded the second and third rounds in the same style. It soon began to appear that the Jew possessed considerable confidence; and, although the success was alternate for upwards of half an hour, the advantage was on the side of Mendoza. His neat manner of stopping the blow on his arm, and giving the return so instantaneously as to bring his adversary down, produced some surprise, and even in throwing Dan possessed a superiority. In the twenty-second round the articles were violated (which specified particularly, that if either of the combatants fell without a blow, he should lose the battle), for Humphries so falling, a complete uproar ensued, and nothing was to be heard but cries of "foul, foul!" Mendoza's friends insisted that he had won the battle. On the other side, it was as obstinately contended that the blow was "fair," inasmuch as that Humphries had stopped it before he fell. Tom Johnson was particularly positive as to the fact; but Mendoza's umpire declared it to be foul. An appeal was then made to Mr. Combe, who would not decide upon the case. A warm altercation took place between the seconds, each supporting their interested side, when Captain Brown called the veteran Tom Johnson a blackguard, and threatened that he would kick a certain place, if he gave him any more of his impertinence. This was not only forgetting himself, but they were words Tom was not in the habit of swallowing, so he intimated to the captain that he would try the validity of his threat. The quarrel had now grown important, and a battle was expected; but Captain Brown talked of fighting him at some more convenient period, for 1000 guineas, which was, of course, a flourish of the moment. Humphries insisted on fighting, and taunted Mendoza to renew the battle, but the friends of the latter would not suffer him. The spectators growing impatient for the decision, Humphries threw up his hat in defiance, and endeavoured to provoke the Jew to renew the combat. Mendoza, fearful that an unfavourable impression might go abroad against him, or of its being decided as drawn, consented. Silence was restored, and the combatants again set to.

Mendoza led off in good style, going in with the most determined spirit, and finished the round by knocking down his opponent. In the next, he repeated the dose, and continued, during the remainder of the fight, to have the advantage. After thirty minutes had elapsed, Humphries, either from accident or design, committed the same error in falling without a blow. Mendoza had put in some tremendous hits, and, in following them up, Humphries retreated and fell; when Dan, without a dissentient voice was hailed as conqueror.

(To be continued in our next).

**RAILERY OF A STEAM-ENGINE.**—It seems that a railway train within the past week cut a hawk's head off while it was crossing the line with a snipe in its beak. We are not surprised in the slightest degree at the "buffer" of an engine commiserating the unhappy snipe, and punishing its destroyer; since it must have regarded the latter as legally guilty in "hawking without a licence."—*Great Gun.*

**DOING DAGS.**—A Kentucky girl, marrying a fellow of mean reputation, was taken to task for it by her uncle. "I know, uncle," replied she, "that Joe is not good for much; but he said I dare not have him, and I won't take a stump from anybody."

"It's nothing to me," as the son said, when he heard that his father had forgotten him in his will.

## BRITISH SONG BIRDS.—No. VI.

THE BROWN LINNET.

F the four specimens of the linnet-tribe which inhabit these islands, the subject which heads this article is the only one deserving notice as a song bird. The green linnet (improperly called the greenfinch), the lesser redpoll, and the northern or mealy redpoll possessing little claims on the score of voice.

The brown linnet is the largest of our British species, being a neat, active, and lively bird, exempted by the moderate size of its bill from the heavy-headed look of the green linnet and the sparrow. The bill is dusky, the iris of the eye deep brown, the feet brown, and the claws nearly black. The back and wing-coverts reddish-brown, the centre of each feather being darker than its other parts. The feathers on the breast dullish red, edged with a yellow-grey. The feathers on the forepart of the head being of a dull blood-red, also tipped with brown. In the summer the feathers on the head become brighter, in some individuals rosy-red, hence its name of the greater redpoll. It is somewhat remarkable that the birds in a state of captivity do not acquire the red tints on the poll and breast.

The voice of the linnet is soft and mellow, its song varied and eminently sweet. It is easily reared from the nest, and feeds on rape, canary, and hemp, with chickweed and groundsel. It will also cross with the canary and the goldfinch.

When fine weather begins in spring, the winter flocks break up, and the individuals resort to their summer haunts in the hilly parts of a country, especially where there are bushes or coverts of sloe, whin, or even heather. Here the male, perched on a spray or on a bank, pours forth his delightful notes, while the female broods on the nest hard by. But delightful as the warbling of the linnet certainly is in a room, it has but little effect in the open air as compared with that of the thrush or the blackbird.

The nest of the wild linnet is placed in a tuft of furze or heath, or among underwood. It is framed externally of blades and stalks of grass, thickened with moss and wool, and lined with hair. The eggs are oval, from four to six in number, thinly spotted with purple-grey and red-brown on a bluish white ground. There are commonly two broods in each season, and the young are abroad before the end of May.

## MODE OF TAKING.

These birds are distrustful and suspicious, and, notwithstanding decoys and perching birds, it is very difficult to entice them within the decoy or area, and never many together. In the spring, by means of a good decoy-bird, a few may be taken on a decoy-bush. In the autumn, by fastening snares or lime twigs to the stalks of lettuces, or of the seeds of which the linnets are very fond, several may be taken. Shepherds turn and support the cribs, used to feed the sheep from, in such a manner that the linnets, coming to gather the grains of salt, easily overturn them on themselves.

## THE CAGE.

In confinement it is best to keep them in square cages, as they are less subject to giddiness in these than in round ones, and sing better. They are not often allowed to range the room, as they are very indolent, remaining immovable in the same place, and running the risk of being trodden on; but if a small tree or a roost be placed in a corner, they may be let out of the cage with safety, as they will remain perched there, only leaving it to eat or drink, and will sing all day long.

## FOOD.

When wild, their food is all kinds of seeds that they can shell, and these remain in the crop some time to be moistened before passing into

the stomach. In the house, it is only summer rape seed, which need not be soaked in water for them, as for the chaffinch, since, having a much stronger crop and stomach, they can digest much better. It is not necessary always to give them hemp seed with it, and they must not be fed abundantly, for taking little exercise, they easily become fat, and sometimes die from this cause; but a little salt mixed with their food is useful, as it preserves them from many diseases, and they like it. When linnets are allowed to run about, they will feed with the other birds on the common universal paste; but they must be given green vegetables, water, and sand, as they are very fond of bathing and dusting themselves.

#### GENERAL OBSERVATIONS.

Linnets may be accustomed to go and come at command, by treating them in their youth, or in the winter, in the same way as the house-sparrow; but as they are more timid, it is necessary to be more careful.

It is common for a male linnet to pair with a hen canary, and their progeny can scarcely be distinguished from the grey canary. They sing delightfully, and learn different airs with great facility.

It is well known, that among linnets, some are finer warblers than others, and that, as with many other birds, the old ones sing better than the young; on which account, yellow linnets, being the oldest, are the most valued.

The agreeable, brilliant, and flute-like song of the linnet, consists of several strains, succeeding each other very harmoniously. Our amateurs consider its beauty to depend on there being often mingled with it some acute and sonorous tones, that a little resemble the crowing of a cock, and have made people say that this bird *crows*. Its song is only interrupted during the year by moulting. A young one taken from the nest, which may be easily brought up on a mixture of the wetted crumb of white bread, soaked rape seed, and eggs boiled hard, not only learns the songs of different birds that it hears in the room, such as nightingales, larks, and chaffinches, but if kept by itself, airs and melodies that are whistled to it, and will even learn to repeat some words. Of all house birds, this, from the softness and flute-like sound of its voice, gives the airs that it is taught in the neatest and most agreeable manner.

### PANDEMONIUM.—(Concluded from page 76).

#### CROCKFORD AND THE CROCKFORDIANS.

ATTERS having been thus satisfactorily arranged as to the future management of the club, and Mr. Crockford, having become free from all interference and control by the committee, had leisure for other pursuits and pastime; and he resumed, within moderate limits, the keeping of race-horses, having now more time to devote the necessary attention to them than at the former period of his racing speculations. His retirement, however, from his late active duties and constant occupation in St. James's-street left his every busy mind at freedom to wander into other channels of venture and speculation, and doubtless operated as a leading cause to one of his most heavy and unsuccessful outlays of capital. The adventure alluded to was a mining concern in Flintshire, in which, on the most flattering representations of probable success, based on the authority of scientific report, Mr. Crockford was induced to embark, in conjunction with another party professing to have great knowledge, skill, and experience in mining affairs. The lands in which the mines were situate were reported, on like scientific authority, to be rich and abundant in mineral treasure and resource; and on such apparently indisputable report, Mr. Crockford was led from time to time to make considerable advances in the prosecution of the works. Subsequently, a partnership was entered into, and a further large outlay of capital expended in sinking shafts, repairing old and erecting new machinery; fine specimens of ore, the production of the mines in work, were from time to time submitted to the inspection of the great capitalist and wealthy partner, who, thus influenced, continued the necessary supplies to the continuation of the work and to the ultimate realization of his golden hopes and expectations. But time moved on, and large demands on Mr. Crockford's purse being continued, he commenced a system of argumentation within himself, that something like return, or a prospect thereof, should be forthcoming from so great an outlay; reasoning thus, he jumped at once to the pretty correct conclusion, that mining speculations were too profound a pursuit for him, that the mineral specimens exhibited to him as illustrative of the earth's treasure, and promissory of the immense wealth to be obtained, were dross in comparison with the ready refined golden product, brilliant and fresh from the valuable and admired process of the mint, which he had so lavishly gathered from the verdant surface of his venerated hazard table in St. James's-street. A disagreement took place between himself and partner, which led to a dissolution, under which legal separation of interests a partition took place of the mining lands and property. In this arrangement, it is reported, Mr. Crockford was equally unfortunate; for the mines allotted to him, though considered to promise favourably in future return, turned out on subsequent working to be of little or no value; while, on the other hand, the property partitioned to his late co-adventurer proved of much more valuable consideration. The disappointment and severe mortification occasioned by this result, and by the total failure of his hopes, added to the absolute grief and distress at so great a loss of capital, acting on a mind

unaccustomed to severe reverse, and on a frame somewhat debilitated by age and growing infirmity, brought on excess of nervous excitement, which terminated in death.

For some weeks preceding his decease, Mr. Crockford had been confined to his residence, and fearful apprehensions were entertained that he might not survive the approaching period of the Epsom races, and the great and important event of "the Derby," on which so many thousands were depending in immediate reference to the horse *Ratan*, which at the time stood high in the betting market. Much anxiety was occasioned by the knowledge that, in the event of Mr. Crockford's dissolution before the day of the race, his horse would become disqualified, and hence great confusion would arise in some betting accounts, which, from the short period intervening, it would be impracticable to regulate or amend before the eventful day. Tattersall's yard, on days of business, exhibited a congregation of faces expressive of the most opposite feelings of hope and fear; but anxiety was apparent in all. Ever alive, however, to business, and to any and every event in *future* affording opportunity for a bet, the term of Mr. Crockford's mortal existence was the universal theme of the assembled classes of betting men, and became as much a matter of business amongst the leg fraternity as the race in which his horse was engaged. Under the fear entertained of Mr. Crockford's inopportune decease, the parties more immediately and deeply interested in that event endeavoured to effect an insurance on his life for the short term of one week, and large premiums were offered to the different insurance companies, at Lloyd's, and to private individuals, for such guarantee. Neither public company nor private capitalist could, however, be found to accept terms on so hazardous an event. Mr. Crockford outlived the great and important day of the Derby race, but died on the day of the Oaks, the 25th of May last.

The death of Mr. Crockford, occurring as it did close on the day of settlement of the Epsom account, a time most important to the arrangements of the sporting world, occasioned much confusion in betting accounts, and threw many obstacles in the way of full and satisfactory adjustment. With a laudable anxiety to support the credit that had hitherto attached to Mr. Crockford's name at Tattersall's, and with a view also to prevent inconvenience to persons to whom his account was indebted, and who relied thereon for the honourable discharge of their own engagements, his widow (even in the hour of her immediate grief) took the prompt and judicious course of addressing a letter to the stewards of the Jockey Club, and of forwarding to them therewith her late husband's betting books and a draft for the balance of loss which appeared to be due from him amounting to about £700. On receipt of these documents, a meeting of the Turf authorities took place, and the result of this meeting was an announcement by the stewards (Lord Stradbroke and others) that all parties indebted to the late Mr. Crockford's account ought forthwith to pay, and that, on such payment being made, all claimants on the same account would, upon like principle, be entitled to receive their respective demands.

Thus much of Mr. Crockford as a man of notoriety, for such he most unquestionably was—

"The tramp of fame  
Has seldom blasted forth a name,  
Throughout the country or the town,  
Of more invincible renown!"

As the greatest and most successful gamester of the age, his name was familiar in every European capital. The high patronage bestowed on him screened him from the pains and penalties of the law, gave him privileges and protection over minor offenders, and secured to him the full and uninterrupted practice of his lucrative, but destructive profession as the keeper of a gaming-house. Legislators nightly met at his establishment to violate the laws which in their wisdom and anxiety for the cause of public morality they had been strenuous to enact. Churchmen, who from their pulpits were loud and eloquent in their denunciation of indulgence in vicious propensities, and who laboured to impress on the minds of their congregations the fatal and destructive consequences of gaming, here hugged the vice at which they stormed, and "shook in hanging sleeves the box and dice," hazarding together their piety and their patrimony. Magistrates, too, the grave and sapient administrators of the law, scrupled not to offend the law by the practice of that for which, with judicial solemnity, they had sentenced the minor but unprivileged culprit to imprisonment and the treadmill, but

"Authority, though it err like others,  
Hath yet a kind of medicine in it  
That skims the vice o' the top;"

and as "that in the captain's but a choleric word which in the soldier is flat blasphemy," even such is the proportionate estimate of offence in magisterial wisdom between the unprivileged sinner and the elect of Pandemonium.

"A hell, or common gaming-house," says Lord Byron, "is a place where you risk little, and are cheated a great deal. A club is a pleasant purgatory, where you lose more and are not supposed to be cheated at all," a subtle and satirical distinction, finely conceived, and one which may have had some influence on a certain committee, from whom has recently emanated a very elaborate report on gaming, tending to show that Parliament, which De Lolme declares to be so omnipotent that it can accom-

plish any and every object of its will save that of mutation of the sexes, is powerless to control the vice (though in direct violation of law) when carried on within the sanctuary of a club-house; a kind of special pleading most favourable to the growth of the evil, seeing that gamblers are an ingenious and most enterprising set of individuals, and require no ghost to tell them that clubs are easily formed to the law's evasion.

The entire property amassed by Mr. Crockford must have been immense, regard being had to the fact that, exclusively of a sum of money, amounting to nearly half a million sterling, bequeathed to his widow, he is confidently reported to have distributed amongst his children, about two years ago, a sum nearly equalling, if not exceeding that amount; a circumstance not at all improbable in a man of foresight like Mr. Crockford, and one which will fully account, as well for the bequest of the whole bulk of his remaining fortune to his widow, as for such bequest being absolute and free from all condition. In estimating the wealth acquired by Mr. Crockford through the medium and success of his French hazard bank, (for this was the never-failing source of gain,) there must be taken into account the heavy and extravagant expenditure of the establishment in St. James's-street; his own expensive, though by no means foolishly extravagant, mode of living; the maintenance and education of a very numerous family, the advances of money from time to time made to fit them out and further their prospects in life; the expense of a racing-stud; a considerable outlay in suppressing various indictments preferred against him for his former proprietorship in King-street, and the heavy losses more recently sustained by other venture and speculation. It may be fairly calculated that the certain profits of the hazard-table must have embraced millions! and some idea may be formed of the extent of evil to others consequent on such an accumulation of capital extracted from their means.

In person Mr. Crockford was something above the middle stature, and rather crippled in his walk, owing to a paralytic affection; his expression of countenance was by no means intelligent, or indicative in the slightest degree of that quick capacity which distinguished him in the play and betting rings; on the contrary, there was at times a simplicity of feature bordering on the idiotic, that might well have impressed those who knew him not with a very erroneous opinion of his capability. His dress was plain in the extreme, and not in the least approaching any attempt at fashionable formation or arrangement; indeed Mr. Crockford was a man not at all addicted to outward display. In this he certainly exhibited good sense and policy; for any exhibition on his part, to the extent which his means allowed, would have put royalty's self out of countenance, and by exciting public attention and denunciation, would in all probability have given sudden check to his profitable trade. Mr. Crockford has left behind him the numerous family of fourteen children, all of whom have received the advantages of a liberal education, and have been substantially and handsomely provided for. Some are entered of learned and liberal professions, others are engaged in trade, but all employed in honourable and lucrative pursuits. One son is handsomely endowed in the church, and three others are carrying on the business of wine merchants in St. James's-street. Of the female portion of the family, one is married to an eminent medical practitioner.

The widow of Mr. Crockford is a lady of refined manners and amiable disposition, and much and deservedly respected by those who have the pleasure of her acquaintance. To her extreme care and attention in the exercise of such qualities Mr. Crockford owed not only the enjoyment of great domestic comfort, but the correction of much of his early coarse and uneducated manner, and the removal of habits ill-suited to his after associations. Mrs. Crockford was originally governess to the former lady of her husband's love, by whom he had four children. It is pleasing to contemplate the falling of fortune, however questionable its acquirement, into the possession of those who can justly appreciate its value, and through whom it may, by laudable application, communicate benefit to the unfortunate and less-favoured of mankind.

Having thus traced the career of Mr. Crockford, to the extreme position of wealth and a princely mansion in Carlton House Terrace, a locality commanded only by the most opulent of our aristocracy, nought more remains to announce, but that at this residence he died on the 25th of May, 1844, aged sixty-nine years, above fifty of which were devoted to what (in our opinion by a very serious misnomer) are termed *sporting* pursuits.

#### ON A TEARFUL COUNSEL.

Kelly has borne so many sneers,  
That pity for the man is ripe;  
But surely one so full of tears  
Can never quarrel with a wipe.

**SINGULAR FACT.**—A farmer near Kenmore lately killed a sow, and, upon splitting grumpy's head, found, to his astonishment, a mouse as far up in the nostrils as to come exactly between the poor animal's eyes. It is believed that the mouse has been domesticated there since Hallow'e'en, as the pig was three days, at that time, without taking food, and ever since unwell, and not thriving. The truth of this wonderful statement may be relied on, as the writer has had it from unquestionable authority.

#### HISTORICAL MEMORANDA OF THE FLEET PRISON.

This monument of "man's cold cruelty to man" being now rapidly in course of demolition, and quickly to be numbered among the things that were, a few associations connected with the place, and a slight sketch of its history cannot but afford food for reflection. These fast-disappearing walls were erected after the Gordon riots in 1780, when the former building was destroyed by fire; and it is recorded in Knight's *London* that the mob were polite enough to send notice to the prisoners of the period of their coming, and, on being informed that it would be inconvenient on account of the lateness of the hour to postpone their visit to the following day.

The former building also dated its erection from the period of a fire, its predecessor having been destroyed in the great conflagration of 1666.

Strange things have happened in the Fleet prison. This pile of solid brickwork, described in the auctioneer's placards, as "Material for a small town," has contained within its walls many thousands of pining and some hundreds of jovial debtors, but at the time of the passing of the statute consolidating three prisons into one, the number of inmates had dwindled down to a comparative few, including two veterans who had sojourned in the place upwards of thirty years as prisoners of the court of Chancery. One of the parties, named Jeremiah Broad, was a perfect character in his way, and from him a large sum of money was obtained under what is termed a vesting order from the Insolvent Debtors' Court. The parties are now living in the Queen's Prison, which, before the act mentioned, was denominated the Queen's Bench Prison."

In the Reign of Richard the First, the custody of the royal palace at Westminster and of the Fleet Prison were committed to the same person—the Chancellor of England, so that in the twelfth century the keeping of the prison was a matter of importance. Little is known of the history of the place until the sixteenth century. The gaol was burnt by the followers of Wat Tyler. In the sixteenth and seventeenth centuries the prison was filled with the religious martyrs, and subsequently (in the reign of Charles I.) with the Star Chamber prisoners. In the thirteenth century it was used for the confinement of debtors. The prisoners in 1586 complained to the Lords of the Council, and in their petition stated that the warden had let the victualling and lodging of the prisoners to two very poor men who "being greedy of gain, lived by bribery and corruption." In 1593 (according to the work referred to, from whence the principal facts have been extracted) the prisoners again petitioned, but it was not until 1696 that a Committee of the House of Commons brought to light the atrocities which had been committed. In 1727 the systems adopted in the management of prisons were disclosed, and in the preface to the *Romance of Dick Turpin the Highwayman*, are several remarks and extracts, which will give the reader an idea of the frightful state of the Fleet and other gaols in the reign of the First George. Since that period vast improvements have been effected in the interior of such places. Imprisonment for debt may now be considered as virtually abolished. By the act of last session some hundreds of debtors confined for sums not exceeding 20*l.* were discharged; and, although it is alleged that a corresponding boon has not been awarded to creditors, yet there are but few persons who are now found to support imprisonment—that is, to confine men in the first instance before an examination. It is admitted that the law is in a very defective state, but it is at the same time acknowledged that the place on which the Fleet Prison stands, we shall soon say stood, may be used for a better purpose than the inhuman one of which the walls are a perishing memorial.

#### PUNCH'S CHILD'S GUIDE TO KNOWLEDGE.

Though the *Child's Guide to Knowledge* has passed through twelve editions, we think there are several errors which are likely to mislead the juvenile student. The following questions and answers may be relied upon for their accuracy:—

- Q. Pray, my little dear, what is bread made of?
- A. Alum, plaster-of-Paris, and potatoes.
- Q. What is tea?
- A. That depends a good deal on the shop it is purchased at.
- Q. What is port-wine?
- A. Weak brandy-and-water, with sloe-juice to give it body.
- Q. What is champagne?
- A. A wine that is generally made from gooseberries.
- Q. To what is man indebted for milk?
- A. To the pump and the chalk-pit.
- Q. Who introduced nuts?
- A. The man who first rapped the boy's head with his knuckles.
- Q. What is madder?
- A. To buy Talacre is mad, but to expect them to burn is madder.
- Q. What did the ancients use to write with instead of a pen?
- A. An iron style, which is perhaps the reason of their works being so very hard to read.

"You don't look a-miss," as the young lady said to her beau when he had got her bonnet on.

## CORRESPONDENTS.

- SEAL, Liverpool.**—The article (duly acknowledged,) was from the *Sporting Magazine*; you are a model for correspondents, which is merely reciprocating a compliment. The article will be found in our present number.
- GEORGE AUSTIN, Devonshire-street.**—The article is good, but is not up to the standard of originality; we have read something very like it before. If space permits, we will insert it shortly; but as it relates to pike, and will keep till July, it is by no means perishable.
- ROBERT RICHARDSON.**—We cannot make out your address, but this will probably be of little moment to you. Please to write a little more plainly next time; however, we've arrived at the marrow of your communication, and in reply give you the following recipe:—To PREVENT HORSES BEING TEASED WITH FLIES.—Take two or three small handfuls of walnut leaves, upon which pour two or three quarts of soft cold water; let it infuse one night, pour the whole next morning into a kettle, and let it boil for a quarter of an hour; when cold it will be ready for use. Nothing more is required than to moisten a sponge with the liquid, and before the horse goes out the stable let those parts which are most irritable be smeared over with the liquor, viz., between and upon the ears, the neck, the flank, &c. Not only the lady or gentleman who rides out for pleasure, will derive benefit from the walnut leaves thus prepared, but the coachman, the wagoner, and all others who use horses during the hot months.
- A DUBLIN SUMMERER.**—We cannot read your signature. But the Dictionary of Angling Terms of which you speak would cost some labour to compile, (that we should not mind,) and when done we doubt *si le feu vaudrait la chandelle*. In plain English, such a vocabulary would be so much wasted space to anglers, and, we fear, be of little use to tyros.
- J. W. F., Gloucester.**—It is our intention to do as you desire.—2. We make no charge whatever—*labor ipse volupatus*.—3. The article was inserted because we thought the guesses and anticipations displayed knowledge of the subject, and hope the event will prove the correctness of the writer's prognostication.
- A YOUNG BROTHER BOB.**—Of Mr. W. Blacker, 64, Dean-street, Soho. You may fish up or down stream with, perhaps, equal advantage; it is the question of throwing the fly, not the direction of the current which is the moot point. We'll say a few words about these preliminary points of fly fishing shortly, when we have a little cleared our pages of many claims.
- A YORKSHIRE FLY-FISHER.**—The Grayling is in the engraver's hands. We have only the Cunning Carp before it.
- G. P. R. J.**—Your initials are particularly *romantic*. Apply by letter to the office of Woods and Forests; we believe that the refusals have been numerous. The success of your application depends entirely upon the *respectability* of your address, and the *bonafide* nature of your intentions. A card is forwarded which must be shown to the Ranger's men, if required.
- Squire, Leeds.**—You are quite mistaken.
- "There are more things 'twixt heaven and earth (*friend Squib*),  
Than are dreamt of in your philosophy,  
and these be of them. Imprimis, you are egregiously mistaken about the cuts in our "History of Boxing," for they are copies of copper-plates; all of them, so far as we have gone *contemporaneous*, or as nearly so as procurable. Secondly, most cruelly are you abroad as to authority. Have you ever seen, or do you know where you could procure a book entitled "Pancratia," published by Chapple, in Pall-mall, in the year 1815? If you can get a sight of it (we have a copy), you will see how far you have been humbugged, by supposing the bulky volumes you so pathetically defend, have even the *last claim* you advance—that of research, or originality: for there is, where judgment and industry are brought to the task, a description of compilation which is as valuable, or more so, than erratic originality.
- PROWELL.**—You are mistaken. The first-named book is the work of a gentleman and a scholar; the last-named is, so far as style is concerned, an ugly cross between the stereotyped vulgarisms of a penny-a-liner, and the grotesque dislocations of our mother-tongue perpetrated by "Mrs. Salsrey Gamp, monthly nuss, which is well-be-known at Guy's and Bartlemey's."
- B. P. S.**—There is no question about it.
- L. W., Ipswich.**—Write to the editor of *Bell's Life*. The answer would be legitimately and unquestionably *new*.
- S. R.**—The 29th May, 1660. Consult an almanac.
- N. B. J.**—Try Alec Reid; he is to be always heard of at Owen Swift's, Titchbourne-street, Piccadilly.
- CHICKET.**—**QUERIST, Milton.**—We are no great admirers of such random hits; they endanger all those near the striker, and although not prohibited by the laws, they form no part of the *manly* game. As to your second question, T. Adams's ground is an enclosed one, and the nearest we are aware of to the point you mention.
- T. A., Gravesend.**—Not out. The rule expressly states that the ball must *pitch* straight to the wicket, and, in the opinion of the umpire, would have hit it, had it not been obstructed by some part of the striker's person, in order to constitute the loss of a wicket. If the ball pitch wide, a man may stand before his wicket to play it without the risk of being "out before wicket" by its working in, as he has no right to anticipate such an event, and cannot be considered as wilfully obstructing the ball.
- SENEX.**—Apply to either of the clubs held as the Brecknock Arms, or Copenhagen House, where, if your station in life be suitable, you may be admitted as a member, and will meet with gentlemanly society, good players, and excellent practice. Their rules are somewhat stringent, but no more so than is requisite to ensure respectability, and a perfect enjoyment of the manly and healthful game. We should give the preference to the "Camden Town Eagle," or the "Islington Albion" clubs.
- J. R.**—**E.**—Out. It matters not whether the ball was struck a second time for the purpose of making a run or not. After the ball is once played, the striker has no business to interfere with it, unless in defence of his wicket. Rule 20 says, "the striker is out if the ball be struck, and he fully strike it again."
- INDEX, Hemel-Hempstead.**—The principal supporters of the West Herts Club, (Redburn) are Lords Grimstone and Glamis, the Hon. R. and E. Grimstone, Captain Alexander, the Rev. T. Wade, &c. They play on the common, and the ground is kept in the highest order. W. Burden was their bowler last season.
- \*\*.** We have anticipated your wishes. In an early number we shall give a faithful portrait of England's fastest bowler, A. Mynn, Esq., from the pencil of our old particular, Archie Henning, with observations on the modern science of bowling, by Ned Rub.

## OUR WEEKLY CALENDAR.

AN EPHEMERIS IN JEST AND EARNEST.

## SUNDAY MAY 4.—SUNDAY AFTER ASCENSION.

*Hint for Shopping.*—If you want to purchase a piece of tape, go to Waterloo House, and ask to look at everything new in dresses, cardinals, cloaks, muffs, carpets, and feathers. Having tried upon whom you would purchase if you had the money, say "you see nothing to suit you," buy your tape, and resolve by future rigid economy in the house-keeping, to squeeze "that duck of a Polka jacket" out of the pies and puddings.

**MONDAY 5.**—Royal Academy Exhibition opens.—Napoleon died, 1821.—A young lady takes the veil at Bishopwearmouth, 1844, and is *run* the worse for it.

**TUESDAY 6.**—CHESTER RACES.—Battle of Prague, 1757.—Carlow Races.

**WEDNESDAY 7.**—THE CHESTER CUP. Many gentlemen cupped and *bled*.—Tavistock Spring Races.—Twenty-eight Jewish weddings solemnised on this day, 1844; there's the effects of the *Hebrew persuasion*.

**THURSDAY 8.**—EASTER TERM ends.—British Museum re-opens from 10 till 7; the reading-room from 9 till 7.—Considerable alteration in Greenwich Park, 1844, where the authorities, by *going on with their barrows*, seem to pay no attention to the public coal.

**FRIDAY 9.**—The Pen-jaub in a serious state, 1844: the troops under Sir Charles find themselves in any thing but a humorous situation.

**SATURDAY 10.**—Oxford Easter Term ends.—Wonderful precocity. There is a cad, a mere boy, only 16 years old, who understands the whole of the machinery of the Brixton treadmill.—20,236 pipes of port wine imported into England in the past year. 21,236 pipes of "becowing." What a *Assm*! The Polka introduced 1844; this dance is not solely confined to the heels, many heads being turned by it; after a reign of 12 months is banished from Court by order of her Majesty! What *steps* will royalty take next. Dan says it will be an *Irish jig*.

## The Sporting World,

FOR THE WEEK ENDING MAY 10, 1845.

**G**AN we better devote our first leader in the merry, merry month of May, than to a few words on fly-fishing? We think not. Nevertheless, they must be brief as "the posy of a ring," or "woman's love," for this is not the place or space for instructions therein, or opinions upon throwing, striking, turning, twitching, playing, *et hoc species omne* of physical and metaphysical divisions of the crafty exercise. No! Therefore, we at once plunge practically in *medias res*.

To attempt indeed to describe one-half of the myriads of insects that swarm by the river side at this time of the year, would not only far exceed our limited knowledge, but would be of little utility to the angler, so to the best and the best only, do we intend to confine the present remarks.

First, then, we will introduce the caperer, or as it is frequently termed the alder fly, which comes in mild seasons in some of our rivers as early

The Alder Fly or Caperer. Artificial. Natural.

as the middle of April, though in others not till a fortnight or three weeks later, and it continues all through the months of May and June. It may frequently be discovered pitched upon the bushes, and particularly upon old dry pieces of timber. It is an excellent fly to dap with, and also makes an useful artificial fly, though we have rarely seen it well made. The best materials I am acquainted with, are, the body of a peacock's herl, or a brown hen's wing, whipped with very dark red silk; the wings of a dark grey cock's hackle, hooks No. 6 and 7.

The soldier fly, so called from the red jacket which covers his wings, is a beetle winged fly which comes in about the early part of May, and continues during the two following months; and a very killing fellow is the soldier, either in his natural or artificial form, particularly in hot weather. It is found, not only by the water-side, but also at a considerable distance from it, and is an insect of prey, feeding upon plant lice and other diminutive insects. In addition to its military title it is sometimes called the fern fly, though the latter name seems more probably to belong to the hazel fly or fern web.

And now that we are on the subject of beetle-winged flies, we may mention the tab fly, which is usually imitated by a black palmer, but which is a far more killing fly when made in the form of a beetle. The tab fly in its natural state is found in considerable quantities in cowdung, and is much used in dapping; it is one of the best flies that can be used in hot weather, and will catch fish even where the waters are so low that they can scarcely be tempted to rise at anything else.

Another excellent fly for this month is the oak fly, camlet fly, down-hill

Oak Fly. Artificial. Natural.

fly, and canon fly. It is usually found upon old stumps of trees or pieces of dry timber by the water side. One singularity attending this insect is, that when pitched it always carries its head downwards. But he is one which the fish are very much given to look up at nevertheless, particularly in windy weather, when those flies are often blown unexpectedly off their perches into the stream. The artificial oak fly must be made with a body of orange coloured silk, and should be made rather full, and ribbed with a bold black-rooted red hackle, the fibres of which should be cut off nearly close, except immediately under the wings, where they should be trimmed rather short for the legs. The wings must be of the double grey feather of a mallard or a woodcock, rather short, and tied flat on the back like those of the common blue bottle fly, but standing rather outwards to the right and left.

The stone fly is also one of the best flies we have, and is said to contest with the green drake the title of May fly. It will be found figured at page 42 in our fourth number. Cotton, however, mentions four several flies which contend for this title, viz., the green drake, the stone fly, the black fly, and the little yellow May fly: all of which have their champions and advocates to dispute and plead their priority; though he at the same time observes, that he does not understand why the last two named should, the first two having manifestly the advantage, both in their beauty and in the wonderful execution they do in their season; in all of which we agree except on the subject of the stone fly's beauty, which we consider to possess rather a repulsive appearance than otherwise, whilst the little yellow May fly may fairly dispute the palm of beauty and elegance with all the orders, families, genera, and species of insects that are found by the water-side, whose active flight and sportive gambols in the air, form a strong contrast to the crawling motions of the stone fly; nevertheless as a bait for a trout give us the stone fly. But the stone fly, though it appears so early, is rarely well taken till the middle of May, for it first comes out from its husk or shell a mere crawling insect, with only the rudiments of wings, during which time it conceals itself under dry stones and crevices; and it is not until its wings become full grown and he ventures upon the water, that his edible merits begin to be duly appreciated by the fishes.

This fly is also a most excellent bait to use in dapping; but it is difficult in many of our rivers to find them in sufficient abundance. The proper places to search for them are under dry stones which lie hollow one upon another; and by way of a word of passing advice, we recommend those who pursue the search, to replace the stones under which they are most successful, in their former position, both for their own sakes, and for those who may come after them. Cotton, indeed, speaks of laying down stones with a chink between them, with one lying hollow upon them, for that express purpose; which may probably be still a very frequent practice with some of the knowing ones at the present day.

And next we will turn our attention to the Green Drake, which it is our pleasure to figure as the May Fly proper. For the grey and black

Green Drake, or May Fly. Artificial. Natural.

drake are the same fly, the former being the female in the matron's attire, and the latter the male in his more sober costume of advanced life. In their first clothing they are maintained by some to be most attractive in their natural state; one reason of which may perhaps be, that in their latter form the wings become so very tender, that the fly soon assumes a drowned and untimely appearance; but at the same time it must be observed that the grey drake lasts some days longer than the green.

In general most execution is now done with the real May Fly, as in fine weather the artificial fly makes rather a heavy splash in falling upon the water, which is very apt to alarm the fish and put them upon their guard, but in a good blustering day wonderful sport may be had with them. We have also known instances of persons meeting with success with an artificial May fly in a blustering day even in the early part of the season, long before any of those flies can have made their appearance, and have ourselves caught trout with them as early as the beginning of April. A friend of ours, and a very good fellow too, but a very bad fisher, once caught a very large trout in the Avon below Kingwood, with an artificial green drake in the early part of April, and which merely, for want of knowing better, he had attached to his line. The weight of the fish, he informed us, was six pounds and an half; and from the dimensions of the fish which he showed us cut out in paper, we should certainly consider the account of the weight was not exaggerated. Whether one of the flies of the season would have proved equally attractive we can't pretend to say; though we must confess that the fortune of our friend, as above stated, caused a green drake to dangle at the end of our line for several following seasons, some weeks earlier than it would otherwise have done. Dr. Brookes indeed says, that a trout may be taken with an artificial May

fly at all times of the year; and here doctors do not differ, for reasons we shall state in another place; but as this *ephemera* deserves more than one recipe for his construction, we shall first give those of Charles Cotton, which are as follow:—"The dubbing of camel's hair, bright bear's hair, the soft down that is combed from a hog's bristles, and yellow camel well mixed together; the body long and ribbed about with green silk, or rather yellow, waxed with green wax, the whisks of the tail of the fly of the long hairs of sable or fitchet, and the wings of the white grey feather of a mallard, dyed yellow, which is dyed thus:—"Take the root of a barbery tree, and shave it, and put to it woody vias, with as much alum as a walnut, and boil your feathers in it with rain water, and they will be of a fine yellow." The best fly we have seen have been made of very different materials, with the exception only of the wings; but as we care little for good imitations (too much the hobby of routine fly-fishers), we will give you one as good as any for dressing this prince of the Ephemera, whether grey or green.

For the *green*, the body is dubbed with hog's down or light bear's hair mixed with yellow mohair, whipped with pale floss silk, and a small strip of peacock's herl for the head; the wings from the rayed feathers of the mallard, dyed yellow; the hackle from the bittern's neck; and the tail from the long hairs of the sable or ferret. The hook No. 7 is used.

For the *grey*; dub the body of whitish hog's down, mixed with black dog's fur, or white ostrich herl, whipped with black silk; the wings from the dark grey feather of a mallard, or a black hackle with silver twist, the whisks of the tail of any black shiny hair. N. B. You are desired by many of our old bookmakers to be careful to get a black cat's whiskers! We wonder whether the sex of the cat you are to operate on would influence the biting of the fish!

The last we shall notice in the pictorial way is the *DUN-CUT FLY*, the body of which is dubbed with brown bear's hair mixed with a little

The Dun-cut Fly Artificial. Natural.

blue and yellow worsted, and whipped with green or yellow; the wings from the wing of a landrail or brown hen; and some add, for antennae, hairs from a squirrel's tail.

One paragraph and we have done. For our part, we are at all times inclined to adopt the flies used by the inhabitants of the place we are at, thinking that the use of them must be the result of all previous experience; and while there is no doubt much ignorant prejudice amongst the uneducated, in regard to favourite flies, there is quite as much conceit in those who, although on other subjects better informed, suppose that they can divine what is suitable for any particular water, almost before a trial, and better than the aged and sensible gamekeeper, weaver, or shoemaker, who, on this point, inherit the accumulated knowledge of centuries, and has himself tested it during the practice of a lifetime.

And here we close our chapter of flies, premising that we may say something of *STRIKING* (not *à la Crabb* but *à la Davy*) in another number. Meantime, brother Waltonians, we shake a fin with all of you mentally, and ask your aid for one of the many departments of the *SPORTING WORLD*.

## SONGS OF THE POLICE.

NO. 11.

AIR—*Dear Harp of my Country.*

Dear stave of my office, of good use I've found thee,  
Altho' thou hast slumbered in idleness long,  
And proudly I own to my service I've bound thee,  
And given new strength to my wrist with thy throng.  
The night bird full oft in his light note of gladness  
Has wakened thy fondest thy liveliest thrill,  
When one touch from thee has his joy turn'd to madness,  
And ev'n in his mirth thou hast rendered him still.

Dear stave of my office, with pleasure I grasp thee,  
And ne'er shall thy handle less brilliantly shine,  
Nor the slumber of peace in dull idleness clasp thee,  
'Till touched by some hand less unworthy than mine.  
If the nob of the lushington kid, or street rover,  
Have throbb'd at thy touch, 'tis thy glory alone;  
I was but as the wind passing heedlessly over,  
And all the quietus they took was thy own.—*Great Gun.*

A DIFFICULT OPERATION.—Liston, on being asked what was the most difficult operation he ever performed, said, "Why, man, it was a case of cancer in the mouth of a lady. I cut the cancer out, but I could not stop her jaw."

ROYAL PATRONAGE OF ART.—In order to secure this valuable blessing, artists have agreed to sell their pictures at ten times below their value.

## THE PLATE FIGHT BETWEEN THE PREMIER AND YOUNG BEN.

(Continued from page 81.)

It is supposed that the cause of the dispute, or, more classically conveying it, the "*fons et origo mali*," being referred to the primitive exercise of the hands in lieu of the modern recourse of arms, was partly attributable to moral and religious motives, and partly to "political expediency." Since shopkeepers have taken to the "duello," considerable discredit has been thrown upon the practice; but the display of a blacking-maker's son who polished off a costermonger with the "bishop,"\* was a death-blow to its passable respectability, and therefore "Ben" and "The Bull" were determined to have nothing to do with the *O'Trigger* contingency of "Snug lying in the abbey," neither of them thinking it politic. The moral and religious reasons may be put into a very short compass—that each deemed the mawley safer than cold lead to encounter, whilst it would better tend to show which was the better man, the Jew or the Christian. It was a very old grudge, arising from repeated personalities, in which, by the bye, the frequenters of the house considered that there was an equal interchange of the raw material of the tongue and the fabricated article of chaff, which eventually put our fistic heroes into the state militant. Tamworth Bob, or bull (for, although a "bull" is change for five "bob," yet he is equally well known in town and country circles by either name), has for many years past frequented a flash crib in Westminster, notorious for its rows and late hours. Bob's knowledge-box is screwed on the right way; and Nature, when she gave him in charge to the "General Delivery," contrived to pack temper at the top of the togger, with special directions to "keep this side uppermost." Bob has, at any rate, never lost his temper (nor anything else, they say, who know him best, that he could lay his hands upon), and, by degrees, what with soaping his foes and chalking his friends—that is, scoring them on tick like a milkwoman—he became the regular Great Gun of the tap-room, and all he said was looked up to as law. Ben, the Hebrew, alias the Shrewsbury Gamecock, a traveller and descendant of Captain Lemuel Gulliver, has also been in the habit of doing the clay and heavy during the season, at the same house, kept at present by a relative of Jenny Shaw's, called Le Fevre, and a very respectable man he is, though at times he has a hard job to keep his crowded house in order. Ben and the Bull hit it off bravely for a long time; in fact, till within the last three years, when the first split arose from a slight put on him, in Ben's opinion, by his slippery friend. Bob's contract for horsing the True Blue, since called the Reformer, running between Palace-yard and Windsor, as all the world knows, was about that period accepted, and Ben swears that he was promised the situation of guard, which, as everybody knows, is dispensed with; Bob, or Slashing Bob, handling the ribbons, blowing the horn, selecting his cattle, and choosing his passengers for himself. Ben, the other evening, determined on bringing matters to a crisis, came down to the house in question with two or three of his staunchest friends, valorously declaring that he would either make the bull draw in his horns or enter the ring. Young Coningsby was with him, who has made such a sensation lately, and of whom we have never seen a personal description; he is a character at first sight; tall and fresh-coloured, he has a shambling gait, wears his hair curled *a la* Ellenborough, before he took the gates of Somnauth, lips, and is terribly near-sighted. On this occasion he wore a fustian shooting-jacket, with a white choker, a waistcoat scarlet as the dye of Babylon, to which were appended black kerseymere never-mentioned-'ems, with paste buckles, large ribbed white silk stockings, and pumps surmounted with huge rosettes. To make the picture complete, he had a profusion of rings on his fingers, which are never desecrated by gloves, as he likes to have his hands free for all our manly sports. And this "Guy" is the bosom friend and companion of Ben, an insult to whom he would resent, perhaps, even more bitterly and sensitively than one offered to himself. On this eventful night it would be useless for us to attempt a detail of as pretty a quarrel as ever evaded the vigilance of the police. The Gamecock called Bob, amongst a number of civil epithets, a sneak and a humbug; that he was down to any dirty work, and fly as a cracksmen from petty larceny up to a jemmy and crowbar. The Slasher at first treated the charges with cool contempt, and said, suiting the action to the word, with a pot of the "half and half" of which he is so fond, "I thus blow away the froth of 'Young England,' and commend to his own lips the foaming tankard of bottled bile," upon which Ben shoved in a commentary upon the first chapter of Maccabees, the fighting Sheeny smack on the gob of the Bull, which his pal, the Peeping Postman, declared to be a *casus belli*, and articles were then and there drawn up for adjustment of differences according to the old English game of "knock-'em-downs."

Both men were immediately put into close training; Slashing Bob shifting his quarters from Oxford (where Fussy Pussy, and a few other fighting blades were backward in coming forward with the mopusses, owing to a dirty feeling of jealousy) to Tamworth, where he did as strong work as could be required by the Postman, or Goldie, otherwise Gold-burn, and likewise The Chequer Lad, could have coveted. Ben trained in the vicinity of Houndsditch and Rag-fair, and acquitted himself so

much to the satisfaction of the east-enders, that Lazarus, the great competitor of Moses in the Minorities, and who rejoices in three golden balls, as well as the structure of "reach-'em-downs" and peg taglionis, vowed that he would not only back him in for a Rabbi, but would, at his own costs and risks, "secure the sherrishes of Smyth the 'Canterbury Pet,' and Little John the pet of the London fancy."

The thing was, under circumstances, kept as snug as a bug in a rug, but we had the office, and cut away by the special train with a lot of swells, belonging to what are denominated, in slang phraseology, the upper and lower house. Of course they were denizens of either the attic or the cellar, and they looked it. There were in some of the carriages a few country gentlemen, evidently such from their bewildered appearance, who seemed to take but little interest in the issue; denounced them both as humbugs, and trusted that both would get the tanner's recipe for skins well leathured.

The *locus quo* for hostilities was a certain field called "Turnabout," in the vicinity of Tamworth, and at an easy distance from the station: this field, like the Highgate milestone where Whittington heard the "turnagain chimes of Bow bells, is replete with associations of local and general interest. Here the present possessor, sprung from the ancestor of his family, was wont to walk, and turn, and turnabout again, cogitating upon changes of currency, relief of the Romans, and the value of grass land, till at length he bought a bull, and, pasturing him for the benefit of his neighbourhood, christened him the "Tamworth Bull;" hence the sobriquet of our "Slashing Bob."

The customary services of trusty Tom Oliver, the commissary-general of the P. R., were on this important emergency dispensed with, and a Mr. Duke from Hyde-park-corner, better known as "Ironsides," was entrusted to do the roping, aided by his recent confederate, Twitchnose, first cousin to Johnny Broome, and facetiously nicknamed the Great Bore of Cannes. Ironsides, in imitation of Oliver, kept a sanctum of litter for his Corinthian chums, whom it would prove a breach of privilege to specify by name; suffice to say, that they were of the Upper Benjamin description. The Commons, who could not stand the tippery, amounting to between six and seven hundred members, were beaten as usual, without the cords. At one o'clock precisely, by our ticker, all things being in readiness, Bob first shied his tile into the arena, amidst loud shouts of "Go it, my tulip! Huzza for the tariff!" he looked pale, but confident, Ironsides telegraphing from the point of his proboscis, and remarking with a knowing leer, "There is no mistake, there can be no mistake, there shall be no mistake." Ben followed suit instantaneously, Lazarus and the mob from Dukes-place cheering him vociferously, the former shouting out at the top of his voice, which would have shook the cocked hat of Nelson off its monument, "Hurrah for Young England!" "Success to the ten tribes of Israel; he's the picture of the Wandering Jew!" Bob won the toss for corners, an omen of his general luck, and put his back to the sun, it not being the rising sun, when the process of disrobing was speedily accomplished; he was waited on by "The Flash or Peeping Postman," who averred that every

"God had set seal

To give the world assurance of a man,"

and Sibby, alias the Colonel; whilst similar kind offices were performed for the Shrewsbury Gamecock by the Canterbury Pet, and the Star of the City of Fancy, Little John. The umpires chosen, Gentleman Sidney and Ex-Foreign Dandy, having taken their seats by the side of the referee, and the colours being intertwined at the mid-stake, lily-white for Ben, and cream-coloured body, with pale blue and bright green at two corners, and thistles and leeks at the transverse ones, Twitchnose, with his well-known stop-watch, volunteering to be timekeeper, all things were in readiness.

Anxiety stood on tiptoe, like Taglionis, when, at eleven minutes past one, the men advanced to the scratch, and threw themselves into attitude for

## THE FIGHT.

ROUND 1. Bob elevated his dexter as determined to guard the daylight, with his sinister close at home for the victualling board; Ben, with his pins straddling, advanced both arms, obviously anxious for an opening, and resolute to deliver with either five as chance might present the opportunity. A little feinting on either side, when Ben rushed in, and Bob ducking to avoid, he caught Manners, the bottle-holder, a slap on the chops, amidst derisive shouts from the Bullites of "*Salus ante moras*."

2. Both parties came up piping after their gallant exertions, when Bob let fly his left bang at the mazzard. ("Bravo, Slasher, that's the line of country to stop his jaw.") Ben retreated, rallied, and plunging in nob foremost, butted the Bull, and sent him to dorse. (Here Coningsby's feelings overcame him, and he jumped over the ropes to pat his double on the back, but Ironsides caught him a whack with his persuader that sent him hawling to his straw bed.)

3. Ben tried in fighting, but Bob, too heavy, stalled him off; gathering himself up for mischief, he made his favorite rush, when his opponent slipping adroitly aside, he pitched head foremost on the stake, and but for the loan of Coningsby's smelling bottle, full of volatile sal, as a medical coroner informed us, it is doubtful if he could have come again to time.

4. Bob was the first to leave the Postman's knee, and beckoned his

\* Bishop, the noted gunsmith in Boud-street, a synonym for pistol.

antagonist to the scratch, who looked a little wild; he had scarce put in an appearance when Bob popped in one for the nut, and another for the victualling department; but received a lunge on the kidneys, which doubling him up, he dropped. ("By the holy Moshes, the Bull's a cur," from the one side, responded to by the other with, "Take him away, or his mammy won't know her beauty.")

5. After an exchange or two, Bob planted a scientific snuffer, which tapped claret from the conk (first blood for The Slaughter); when The Gamecock, seeing his arms about like a windmill in convulsions, swept Bob clean off the ground, and got the next event in his favour of the knock-down.

6. Even betting; the winner for choice! Bob, throwing off his usual reserve, went in like the rampaging bull, his namesake, and administered pepper with a profusion that showed it to be free of duty; Ben down at his corner, shifty. ("That's the ticket," hallooed the Postman; "Stick to him, Bob," shrieks the Chequer Lad, "he can't stand your in-come tax!") Sibby uproarious.

7. Following the counsel of his talented seconds, Ben, not standing upon repairs, closed with his man, and, giving him the crook, threw him a heavy back-fall. (The Sheenies in ecstasies, and "Give him another chapter on manly sports, Ben!")

Forty minutes had now elapsed, and which, to say truth, was a considerably longer period than the friends of either man considered them capable of staying, yet neither would say enough, though it was evident both of them had given and taken considerably more than they calculated upon, when one of the rural police, who had a wager on the issue, of which he was dubious, got inside the 24-foot enclosure, and charged the combatants in the Queen's name to desist. As neither party was over anxious to prolong the contest, the command of the Peeler was instantly complied with, the stakeholder and referee, Mr. Le Fevre, stating that he would name an early day for the renewal of hostilities. Some of the light-fingered gentry, we regret to say, bolted with Ben's clothes, who took it very good humouredly, remarking, that it was not the first time that Bob's intimates had walked off with other people's apparel, and that they were not over nice if they could seduce their opponents to come to "buff" either at milling or bathing.

## REMARKS.

It would be impossible to style this a game fight, or a scientific one, or one worthy of a contest for the championship. Ben was as much too rash, as Bob, with the exception alluded to, was too slow and cautious, his tactics being to take care of number one at any sacrifice of reputation for pluck and bottom. On the other hand, Ben is a bad one to back, being utterly devoid of science and temper, which are the very elements of self-defence. We should recommend them to draw stakes, shake hands, and not come again into collision, freely admitting, "Brother, brother, we have both been in the wrong." Bob and Ben are both "prigs," and ought to have a fellow feeling, the only difference between them being, that the former is a prig of unacknowledged trifles, and the latter a prig of the society of eccentrics. Surely the world is wide enough for the two schools of Bill Seames and Beau Brummel!

## A FEW OBSERVATIONS ON THE TREATMENT OF RACE-HORSES.

BY A TRAINER.

## PREPARING TO RUN, AND TREATMENT AFTERWARDS.

On the day previously to that on which a horse is to run, some difference is to be observed from his ordinary treatment, more especially as regards feeding; most of them require a strong gallop on that day. It will, however, demand some consideration, and depend upon what work they have lately been performing, their constitutions, how they feed, and when they sweat last. On ordinary occasions, that discipline is exacted three or four days before running; gross, indolent horses requiring to sweat nearer to the day, than light-fleshed and irritable ones. If a horse be found to accumulate flesh, which some do, when travelling, to a great degree, whilst others lose it, a sweat may be necessary the day but one before running: a gentle sweat properly conducted the day previously to the one before the race is the means of bringing many horses fresher and lighter to the post than an extra quantity of galloping on the day immediately preceding. The great art is to have a horse light in himself, full of muscle, fresh on his legs, with his courage unsubdued by unnecessary fatigue. Having declared thus much, the discretion of the trainer must be exerted to produce these happy combinations to the fullest extent the animal he has under his care will admit of.

After the termination of whatever exercise may be considered necessary on the day before running, the usual allowance of hay and water must be diminished. Thirty-five to forty go-downs is as much water as can be allowed, except under peculiar circumstances—very hot weather may be a guarantee for a little more, as the evaporation which takes place will carry it off. The usual allowance of corn, if the appetite be good, will not be varied; but the quantity of hay must be considerably restricted, certainly not more than half the accustomed portion. On going to the stable in the evening, from twenty-three to twenty-five go-downs of water must be the limit; and after the usual quantity of corn has been consumed, a very small portion of hay is to be given, the general appearance

and fulness of the body being the principal guide. The trainer should not omit to examine his horse when he is stripped for the purpose of being dressed. He should feel the pulse and beatings of the heart, the state of the mouth, and observe the appearance of the eyes, that of the dung, the condition of the legs, the workings of the flank, which will indicate the action of the lungs, unless some particular excitement exists, which may readily be distinguished, as most horses under such influence break out into a sweat; the quantity of flesh which the horse carries is to be considered, and to what extent it is reduced; any one or more of the animal functions appearing out of order must regulate the course which will be most likely to restore them. This mode of examination is necessary on all other occasions after sweating or strong work.

When a horse is fit to run, his mouth should be moist, his eyes bright, clear, and tranquil, his pulse regular, and rather full than feeble, his crest firm, his ribs quite free from fat, and perfectly visible to the eye as well as the hand; the skin upon them should be loose and silky, the muscles of his arms, loins, quarters and thighs, full and hard, his legs cool but not cold, perfectly free from windgalls or enlargements of any description, and with his feet all of an equal temperature.

The ceremonies of plaiting the mane and of plating the feet must not be forgotten, and are frequently performed on the evening before the race. When the modicum of hay which is allowed has been eaten, the setting muzzle is to be put on, and the horse is to be shut up for the night.

An early hour should be appointed for going to the stable on the following morning, when the horse is only permitted to wash his mouth, so as to induce him to eat his corn; he is then, when the usual stable process has been gone through, to be led out for an hour. When he returns to the stable, the usual system of dressing is exacted, and at the ordinary time he is allowed six go-downs of water; before shutting him up a feed of corn is to be given, and unless his race comes off at an early hour, the muzzle being put on, and his bed shook up, his head must be uncracked, when he will very probably luxuriate in a roll—an indulgence which many horses are very fond of, and which seems to be exceedingly refreshing; he is of course not to be permitted to have any hay until after the race, which, if it take place at a late hour, will guarantee his having a double handful of oats about three hours before he is led out, when the final ceremony of wiping over is performed, as there will not be any occasion to release his head after this period.

The rules which have always been in operation at Newmarket, and which have lately been introduced at several country meetings, whereby the exact time of starting for each race is punctually appointed, are a great boon to all owners of horses at such places as they are adopted, because it being known to a moment when to lead out, the annoyance of having an irritable tempered horse kept waiting in the confusion and bustle of a racecourse may be avoided, a circumstance which will very materially reduce the chance which some have of winning.

When the precise time for each race is known, an hour previously to its being run will generally be the signal for leading out, and if he be a nervous horse, he should, if possible, be kept in some quiet, retired situation till nearly the last moment. If the regulation as to time be not strictly adhered to, the stewards or clerk of the course should make known the order in which each race is to be run, so that the period for starting may be determined with some degree of probability; and under any arrangements, great care should be taken that the horses do not arrive on the course too late.

After running, the treatment recommended for horses after sweating is to be adopted; it is therefore only necessary to refer to that chapter; and the same apparatus, such as scrapers, water bottle, &c., will be required on the course.

There may be some horses which will come to the post better under different treatment; such for instance as very irritable, nervous old ones, which understand every note of preparation, as well as those who attend them; in those cases, certain observations and customs which particularly denote something out of the daily course must be avoided, merely to deceive as much as possible the sagacity of the animal; nevertheless, the principal circumstances must be adhered to as nearly as can be. Some will not bear to be muzzled without breaking out and fretting in a most fearful manner; with them there is no alternative but to take the chance of their consuming a little of their litter; but in order to prevent that as much as possible, care should be taken not to allow any new straw within their reach to tempt them to eat it; but such nervous animals are not, in general, particularly voracious.

## ORDERS TO JOCKEYS.

In giving directions to a jockey how to ride a particular horse, if he be a man of experience, the less he is restricted the better, beyond informing him, if he be riding a strange horse, whether the animal's speed or stoutness is supposed to be his forte. Circumstances constantly happen in running which cannot be foretold, and if a rider be prohibited from availing himself of any advantages which occur to him during the race, many good chances will be thrown away, and the talent of a clever man is but of little service indeed; if he be not capable of judging, he is not qualified for the important office; independent of which a trainer, although he may know the running of his own horse, is frequently ignorant of the qualities of strange ones which are running against him.

If the services of an inexperienced boy are required, it is another matter, and more definite orders must of necessity be given, but they should be very clear, very concise, and thoroughly impressed upon his understanding before he is put up. Nor should the orders be delayed in their demonstration till the last moment, when various events combine to abstract the attention of the most collected, and the boy evidently from the vague expression of his countenance, and his mechanical replies of "Yes, sir," to all the observations which are made, evidently declares that he does not comprehend, at all events does not retain, the meaning of one word that is being spoken.

On all occasions, a jockey should ride the horse up a gallop before the day of running, and, if possible, on the previous morning, more especially if he has never ridden him before. It is impossible for any man to make the most of a horse in a race, unless he have a previous knowledge of his mouth, temper, and style of going.

## A "NIGHT" IN THE GARDEN.

BY MILES'S BOY.

(Concluded from page 84.)

COVENT-GARDEN, again we greet thee!—freed from the slight obfuscation which our last night's tour of thy tavern-studded locality hath inflicted. Days of our youth!—how have ye fled like a dream! Covent-garden hath indeed changed, since we knew it in the days of drab-coated Charleys—locomotive cockchafers on their hinder legs—each decorated with his S. P. C. G., "in black letter on a white ground," as the act of Parliament prescribes for certain inscriptions. Then were we a lettered people; for who will dare to compare the mystic characters on the back of the Old Watch, (so called from being always asleep), and the meagre alphabetical exhibitions of their oil-skinned successors? Then were "Nights in the Garden," as the preludes to "Mornings at Bow-street;" and the fun and frolic, the merriment, the devilry, the effervescence of animal spirits, raised to "larking point" in the human thermometer, allowed a proper and seasonable latitude. "What is a gentleman without his recreations?" asks Shakspeare; and truly, if we may judge of the Garden in the days of yore, a gentleman's recreations were aught but gentlemanly. Then, when "sober sons did set at six o'clock" (a.m.), after glorifying themselves in the taverns made classic by the wits, the artists, the senators, the actors, the *bon vivants* of a former generation, might be seen the scion of a noble house—the hope of his mother (who was entirely unconscious of his absence from home)—the managing clerk "wot knew life," (according to his seventeen-shilling underlings)—the spend-thrift, the spooney, or the swell wot had "the key of the street," (and did not dare, from arrears of rent, to ring up his landlady)—in conjunction with Dusty Bob, thus forming an emblematical representation of the constellation

GEMINI,

not to be found in the celestial globe, albeit right often visible on the surface of the globe terrestrial, where "St. Giles's and St. James's" hobnob

or jostle in many other places than the pages of the novelist. But Miles's Boy is again wandering: what has he or the reader to do with the past? The days of Tom and Jerryism are departed, and "a spree" is now but the shadow of a shade, even on its own ground, the night-haunted Garden. Jack Rowbottom, with carbuncled nose, shuffles slipshod in dropsical Northampton and ventilating kickseys about its purlieus, whereerst he rollicked in "tops and cords," flaring up at his "Finish" "till all was blue" in the sky above, and the uproarious blades who staggered from his crib in James-street made "night hideous" to the sleepers by their vociferous chaunts. Nor alone is Jack a monumental wreck of the days that are gone; a score of night-house keepers have shared his ruin, and for fun "nights tapers are burnt out" in the Garden. Yet still it continues the central point, round which, in mazy movement, rally the dissipated, the witty, and the humorous, and maids who love the moon, and men who love the maids, are still prone as ever to make this ancient spot the converging point of their sayings and doings after dark.

Hark! 'tis two o'clock, and as the piazza clears a little of its revellers—save here and there some mopsy wight, who staggers homeward, apostrophising the various pillars, and then cursing the inconvenient proximity of the shutters on the opposite side of the broad footpath—the spot is well-nigh deserted. But a new world is awaking. Hark to the heavy rumbling sound in the distance; and presently the early market-carts come lumbering in from the west-end suburbs, and the men who have the care of them begin to unload. About this time the coffee-shops in the neighbourhood open their doors, at each of which, for the last half-hour, a few miserable outcasts have been waiting to expend their last three-halfpence in the purchase of a cup of coffee, and to enjoy, for a short time, the luxury of rest and shelter.

And see yon toilsome widow has set up her little stall for the supply of those who are not too proud or rich to partake of "a public breakfast," which, as our contemporaries of the "pictorial" school have overlooked, we here present to the curious—

A PUBLIC BREAKFAST.

Need we dwell upon the picture—doth it not tell its own tale? The small urchin in the foreground—the lad turned out as Sam Weller says, "into the streets to pick up his education;" the seedy adult behind him—the comic singer, or tap-room waste-butt of some low public-house, recently thrust from his corner, and "doomed for a certain term to walk the night," till the opened door of the sots' hole he has been kicked from shall again allow him to sneak in—tell their own story sufficiently. The younger is groping his pockets, and hunting into a corner the fugitive farthing which shall make up the needful penny for a cup of the steaming liquid: the other, cunningly concealing his dexter ogle, put "into mourning" by an ugly rap on the overnight, leans anxiously out of his dexter optic in hope of finding some "swell of other days," or kind-hearted bacchanalian, who will "stand Sam" to warm his gin-destroyed intestines. He sees, however, with "half an eye," that the rough-and-ready driver of the market cart, who stands behind him, lapping his roasted rye, is not the sort for him to sponge on; for as the great Doctor discovered the fal-

[Concluded on page 96.]

## THE TURF.

## A PROSPECTIVE GLANCE AT THE CHESTER AND EPSOM MEETINGS.

From the *Sporting Magazine* for May.

## CHESTER.

THERE are, as I mentioned last month, the large number of seventy-one acceptances for the Trade Cup, but of these a large proportion are unlikely to come to the Post, and I much doubt if the list of starters will exceed twenty-nine. The running at Northampton, Catterick, and Newmarket has, I conceive, destroyed the chances of success of Carranna, Porto Bello, Dr. Husband, Veluti, Seaport, April Noddy, Bastion, and Extravaganza, and has sadly abated the ardour of the friends of Stella and Celeste, both of whom are now quite out of the betting. St. Lawrence, Agriculture, Strathspay, Cabin Boy, Bastion, Mystery, Pag, and the Saddler filly are engaged at Bath, and on their performances there will their hopes for Chester in a great measure depend. Of the others, Cataract and Semiseria still keep together at the head of the betting, while Ould Ireland, of whose pretensions I have always thought favorably, came with a rush during the Craven Meeting, and now stands, along with obscurity, at 11 to 1. Trueboy ran a very game horse at Catterick, but his two severe races there cannot have improved his chance for this event, which would otherwise have been a good one. The Era will run in the front rank, but the weight must tell at the finish. Winesour is scarcely good enough to stand on; and The Cure's victory for the Claret has not altered my opinion of his powers of staying the distance. Queen of the Tyne is only a bad mare, though much favored as to weight. If he has any running at all left about him, Cataract ought not to lose, for, though deficient in speed, he can stay his course, *a sine qua non* in a race like this. Emma-ac Knuck (whose name is spelt some twenty different ways) has been freely backed, but if there is any truth in public running, the Pride of Kildare ought to make him safe and all her other competitors, save those in her own Stable, of which Ould Ireland and Mickey Free are by far the most formidable. On a review, then, of the Handicap, I should take for choice Semiseria, Obscurity, and Ould Ireland; the first and last from their superior public running, and Mr. Johnstone's mare, from the goodness of her blood, the lightness of her weight, and her being supported by one of the most powerful stables in the North of England. If then I were compelled to stand on one single animal, that animal should be Obscurity.

The St. Leger Stakes, run for on the Thursday, will be interesting, as bringing before the public, on the same of her first triumph, the present first favorite for the Oaks. Besides the Lancashire Witch, there are also engaged in this race, Mentor (a Derby favorite), Miss Elis, Sir Francis, Twig, Hope, Grim Con, and others of some slight provincial note. If fit, I see nothing in the race with any chance of competing successfully with Lancashire Witch.

The Cheshire Welter cup, with eight acceptances, must, I think, find its way to the same Stable by the aid of Hooton.

On Friday, there are twenty acceptances for a Free Handicap, with penal weights for previous winnings. As the distance (six furlongs) will just suit her, I shall look to Semiseria to win.

The match between Extempore and British Tar created some slight interest at the time of its being made. The result can, I think, be hardly doubtful; for if Extempore possess but the slightest remains of her former powers, she cannot fail to beat so sorry an animal as is on this occasion opposed to her.

The Cheshire Stakes, for which fourteen have accepted, will depend principally on the results of the preceding events of the week.

And now I trust I have said sufficient to prove, that, if anything be lacking to the complete success of the meeting, its frequenters will have no cause to complain of a deficiency in either the quantity or the quality of the sport provided for them by the industry and vigilance of the Chester caterers.

PETARD.

## EPSOM.

Of the Derby nags that came out in the Craven-meeting, only Idas and Winchelsea gained any additional favour by the results of their public appearance. The former clipped the flight of Wood Pigeon in so clever a style as to confirm the eulogistic confidence of his friends; while Winchelsea, on three successive days, bagged both the Riddleworths and the Column, without once being pressed, although the crack Cobweb colt was brought out against him, and received a sound beating for his pains. It is true that the fields opposed to him were bad; but what more could even an Eclipse do than win in a canter? If Weatherbit can give Mr. Wreford's nag the thrashing his friends ascert, the Derby is in Mr. Gully's pocket. Scott's lot is not in force this season, and I shall not look to it to furnish the winner. There is too little difference in the odds between Kedger and Newsomonger to allow of either of them being anything very superior. 'das may win the Two Thousand, though I fancy he will find some difficulty in performing even that exploit, but he is no Derby nag to my eye. Alarm is an over-rated horse, but will run into a forward place. Forth will be sure to have a good nag, but which is it? Back the lot ye who hesitate in doubt, and wait the result with no *doleful* faces!

In conclusion, I trust that no such barefaced impositions may be at-

tempted as disgraced this race last year, but that the Derby of 1845, fairly contested, and won by the most deserving horse, may long remain pre-eminent as the dawning of a new and brighter era in the annals of the Turf!

April 21, 1845.

PETARD.

## THE IRISH MARTYRS.

"The martyrs wore the uniform of the 'M Club."

We have received, and hasten to publish, the enclosed favour from LADY MORGAN:—

At Kilkenny King Dag and his Martyrs  
Sat down to their plattens and jerums,  
In lovely green-coats and good garters—  
Och sure they are sweet uniforms!  
But there's martyrs besides these regallors  
Who on the occasion displayed them—  
The martyrs I mean are the tailors,  
The tailors at Dublin who made them.—*Push!*

RIGHT OF SEARCH.—The Duke de Broglie has raised a very strong objection on the above question during his late conference with Dr. Lushington. That nobleman says he thinks Sir R. Peel ought to be satisfied with one privilege of search instead of two; and that, as the Premier has established a new right of search by diving into the people's pockets for the income-tax at home, he can well afford to waive the old privilege respecting foreigners.

THE FORCE OF NEGLIGENCE.—From the inefficiency of the "Detective" Police Force in discovering the perpetrator of any crime, it is the intention, we believe, to alter their title to the more appropriate one of the "DUPRECEZ FORCE."

Just published, No. 1. of the continuation of

TALES OF THE WARS, embellished with Two admirably executed Steel Plates, and an excellent Wood Engraving.—Plate I. A beautifully executed emblematical Frontispiece—comprising Portraits of Admiral Sir Charles Napier, K.C.B., &c. General Sir Robert Sale; the Heroes Lady Sale; Ashur Khan, and the Emperor of China.—Plate II. A splendidly engraved Title Page, with a vignette representing "The Golden Island," the site of the principal mines whence the Chinese ransom is drawn. The Work will be continued Weekly, in Numbers, price 1d., and completed in Twelve Monthly Parts, price 6d. each.

With Superior Etchings on Steel.

THE LOVE MATCH. A work of the most profoundly humorous character, designed to illustrate the various conflicting influences which sprang from the Union of Mr. and Mrs. Tom Todd. By HAWAY CECROW. Author of "Valentine Vox," "Stanley Thorn," "Sylvester Sound," &c. &c. To be completed in 12 Monthly Parts.

New Publishing, on the 1st of every month, price Two-pence, with Forty Engravings, THE GO-A-HEAD JOURNAL. The cheapest and best paper in the World. May be had of any Bookseller.

EVERY MAN HIS OWN LAWYER, OR COMPLETE LANDLORD AND TENANT. By a BARRISTER. Containing ample Instructions for Agreements, Leases, Ejectments, &c. &c. Also, price Sixpence, by a BARRISTER.

A PLAIN AND POPULAR ABSTRACT OF THE NEW POOR LAW AMENDMENT ACT. Containing Simple Instructions on the Clauses on the Out-door Relief, Bastardy, &c. &c. In One Volume, 3s. 6d., Fifty Engravings.

THE TALES OF PIRATES; or, Lives of Smugglers, &c. &c. in all parts of the Globe. The following are all uniformly bound in cloth, gilt edges, price 3s., or post free, 1s. each. Embellished with an outline Engraving of a Ground and Players.

CLARK'S CRICKETERS' HANDBOOK. Containing the History and Origin of that manly Game, an Account of Celebrated Players, remarkable Matches, Instructions to Young Cricketers, and the New Laws of Cricket.

WRESTLING AND PEDESTRIANISM. With full Instructions in Training for Athletic Sports and Exercises: with Engravings.

MODERN BOXING. Containing the History and Practice of Pugilism, Illustrated with Numerous Engravings.

SPORTING SONGS. Containing upwards of One Hundred of the most approved Sporting Songs extant. Just Published, in 1 Vol. 8vo., handsomely bound, price 5s., with nearly Seventy Engravings, an entirely New Edition, revised, and nearly re-written, of the popular romance of DICK TURPIN, THE HIGHWAYMAN. By HAWAY D. MILLS.

In One Volume, neatly bound, price 5s., a new Historical Romance, by a highly popular writer, illustrated with fine Engravings, founded on fact, entitled WILL WATCH; A TALE OF THE COAST.

This highly interesting Work is founded on popular facts, and abounds with scenes and incidents of the most thrilling description, portrayed in a bold and masterly style.

PARLEY'S KEEPSAKE FOR 1845.

PARLEY'S FRIENDSHIP'S OFFERING FOR 1845.

PARLEY'S FORGET-ME-NOT FOR 1845.

Each of these Miniature Volumes will be found to contain three or four of the Gems of Modern Literature, and the Series is admirably adapted for Prize-books and Presents.

PARLEY'S LIBRARY OF ENTERTAINMENT AND DELIGHT COMPLETE! In Nine Volumes, uniformly bound in ornamental cloth, 1s. 6d. per Volume. Single Volumes may be had to complete sets.

PEOPLE'S EDITION OF COOPER'S NOVELS.

Each Novel, containing 20 Engravings, complete for 1s., and comprise the following:—

Part I. THE PILOT.	Part V. THE PIONEERS.
II. THE SPY.	VI. THE PRISONER.
III. LAST OF THE MOHICANS.	VII. THE RED ROVER.
IV. LIONEL LINCOLN.	VIII. THE WATER WITCH.

All Orders should specify "People's Edition." A beautiful Ornamented Case, to bind the above, price 1s. 6d. Or the work may be had in one very handsome volume, price 10s.; consisting of nearly 1,000 Octavo Pages, and 300 Engravings. Beautifully printed in Nonpareil Type. Originally published in 24 Volumes, at Twelve Guineas.

LONDON:—W. M. CLARK, Warwick-lane, Paternoster-row; and all Booksellers.

lacy of the conclusion that he "who drives fat oxen, should himself be fat," so hath his worldly knowledge (bought in the worst and vilest school) taught him, that he who drives green cabbages must not, as a necessary consequence, himself be green. A brace of basket women and a porter complete this characteristic group.

But, hallo! The sun peeps up with jolly May-morn face, and what have we here?

A GENTLEMAN DISGUISED (in liquor).

'Tis our friend of the affable temper. He whose havanna scorned not, a short time since, to rub noses in friendly interchange of fire with Dusty Bob's *dhudeen*. But who has changed his hat? ask the policeman at the corner: we are in the district which owns A 1, yet

"Can such things be,  
And overcome us like a summer's cloud  
Without our 'special wonder,'"

and the police cost—but pshaw! d—n the expense, Miles's Boy is not a parishioner, and if the gentleman has a shocking bad hat—sarve him right!

And now," says some rural reader, "what is the Garden?" Why the first and finest mart in the world for vegetation. The mart which, thanks to the munificence of the present Duke of Bedford, whose arms, entangled in front of the massive pile, read a lesson on the vanity of life, informing the passing traveller, in choice Italian, "that what will be, will be," transcends all others in the world. A practical comment on Touchstone's "that which is, is!" is the motto of the noble duke, whose ancestor obtained the lands of the "attainted Somerset," and thus became a bad man's heir. Yes, Covent, or more properly speaking, Convent Garden, originally formed part of the lands of the Abbot of Westminster, and was granted to John Earl of Bedford, together with the field contiguous—the Seven Acres—called Long Acre.

The original market stood in the space, on the south side of a row of low houses, and on which Southampton and Tavistock-streets are now built. The building of this street occasioned the removal of the green-market further into a square, two sides of which, namely, the piazzas, were formerly inhabited by nobility and gentry, who, subsequently to the establishment of the market here, removed, when their magnificent dwellings were let to tavern-keepers, &c., to whose purposes they were best adapted. Still the gentry continued to haunt this favoured spot, and the celebrated Beef Steak Club, now removed to obscure chambers in Exeter-street, adjoining the English Opera House, assembled the *élite* of the nobility and wits of the day. This illustrious association was formerly held at the Bedford.

The hustings of old were always erected on the east front of the church, and the area rear of the row of market-houses, fronting Tavistock-row, being, at that period, entirely open, formed the battle-field for the supporters of the different candidates; while the species of devotion with which these hireling supporters of a contested election performed the duty for which they were paid, may be gathered from the fact that the charge for dressing the broken heads, during the contest between Hood and Wray, was the foundation of the late Hewson the surgeon's fortune, and raised him from "a beggarly account of empty boxes," to a standing in the parish and an equipage.

The present Covent-Garden Market was erected by John Duke of Bedford, in 1832, from the designs, and under the direction of Mr. Fowler. The market is placed under the control of an officer called clerk of the market, and three beadles or toll-collectors; and the revenue derived by the Bedford family from this source alone is very considerable. The toll on potatoes, the market for which fronts Tavistock-row, is 1s. 2d. per ton; on vegetables 1s. per waggon. The latter are pitched in the spaces, and still sold in open market to the higglers and surrounding shop-keepers, who principally supply the retail dealers of the metropolis. The fruit, flower, and herb markets, occupy the centre and north avenues of the market; and the central avenue on a market-day, as you enter from the church, presents a *coup d'œil* of surpassing beauty. It makes one positively more in love with nature every time we look on it; and yet what profound art has been devoted to bring floriculture to the pre-eminence to which it has arrived! An erroneous notion is entertained by the resident market people of Covent-Garden, that this market is out of the parish of Covent-Garden, and that therefore they are not assessable to poor's-rate: it is not so; for though they do not pay directly to the parish fund, they indemnify the Duke of Bedford in an increased rent, who pays the parish a heavy rate on the vast revenue he derives from tollages, rents, &c.

But we had well nigh forgotten, while telling you about the buildings and the business, one of the most important features of the locality and of the time we are speaking of—early morn. It is the renowned original of that high lyric strain, known to street-singers as

"BIDDY, THE BASKET WOMAN."

This, reader, is no fancy portrait. This strange being, of whom the sex has often been doubted, yet labours in the market; and, truly,

"If to her share some female errors fall,  
Look in her face, and you'll forget them all."

But the world is all abroad: busy clerks are bustling city-ward; pretty women are tripping in to buy flowers; people who have not been out all night, begin to stare at those who have; Miles's Roy's face is dirty (or feels so), and he will home to bed.

#### PINKNOCK FOR THE MILLION.

What is a floating-pier?—A nobleman whose means barely enable him to keep his chin above water.

What is the distinction between an aqueduct and a viaduct—*aqua-duck* is a water-duck, and a *via-duck* is any other duck.

What is a caisson?—A large hollow chest or box into which a pump is frequently inserted, as may be seen any night at Drury-lane Theatre.

What is the difference between a stone bridge and a suspension bridge?—A stone bridge is an arch way, and a suspension bridge a waggish way of crossing a river.—*Great Gun.*

## IDAS.

**Winner of the Two Thousand Guinea Stakes, Newmarket, 1845.**

Rode by Nat (Flatman).

IDAS (by Liverpool) is the property of the Earl of Stradbroke, he became in *force* immediately after Evenus won the Cambridge-shire Stakes at the Houghton Meeting, 1844, it being stated that "Idas beat Evenus at racing weights." He is trained by Ludlow, and is a strapping horse, of a bright bay colour, hard on sixteen hands high, with powerful limbs, but declared by his non-admirers to be "leggy."

## OH, 'TIS THE MERRY MONTH OF MAY.

Oh, 'tis the merry month of May!  
Hence, away with melancholy;  
Banish sorrow, banish folly;  
Pleasure is crown'd on the gay May day  
With laughter, song, and harmony,  
And health, and love, and liberty,  
And mirth, and jollity, and glee.

Oh, 'tis the merry, merry—merry, merry—merry month of May,  
And the village youths and maidens and the garlands green are gay!

Oh, 'tis the mellow month of May!  
Gone is winter, like a bubble;  
Gone its terrors, gone its trouble:  
Nature is clad in rich array;  
And summer suns, in happy skies,  
With the mellow matin rise,  
Tingeing heaven with glorious dyes!

Oh, 'tis the mellow, mellow—mellow, mellow—mellow month of May,  
And the village youths and maidens and the garlands green are gay!

Oh, 'tis the merry May day morn!  
Colds, rheumatic pains, and cholic  
Wait not on a vernal frolic.  
Wind the boreal dirge on the sounding horn;  
For the winds of March have had their sway,  
And April damps no longer slay,  
And winter storms are far away!

Oh, 'tis the merry, merry—merry, merry—merry May day morn,  
By the village youths and maidens gay the garlands green are borne!

## "THE DOG WILL HAVE HIS DAY."

BY CASTOR.

"She had got a little dog, which she had kept tied by a string to her girdle; as I looked at her dog, she very gently drew him towards her with the string: 'Thou shalt not leave me,' Sylvio," said she."—*The Sentimental Journey.*

EVERYBODY, of course, by this time has heard of the Dog Bill—Stay: a gentleman in the crowd, with a very knowing round hat and a very silly flat face, affirms the Dog Bill to be a near relation of the Dog Billy, and we must consequently, at however great a cost, proceed to enlighten him.

Once upon a time there were some very good old times, when laws were made like state liveries, or the six-foot footmen who wear them—more for show than service; well, in those merry old days, the gallantry with which a gentleman robbed a mail was only equalled by his politeness in plundering a female, the facility with which a genius broke into a private house just excelled by the ability he evinced in breaking out of a public prison, and the swagger and independence with which cracksmen and crackskulls walked the streets such as none but policemen presume to at present. But, alas! this sort of thing was too good to last for ever; a change came about somehow or other, and burglary lost its romance, and robbery found its reward. New lights and new laws increased the dangers and lessened the opportunities; even thimble-rigging became associated with fine and imprisonment, while Turpin's most expressive signal, however well it might have worked on "The Telegraph," would have now but little effect in pulling up the down train. The profession owned to all this in no very enviable state of mind; but before yielding outright to hard living and hard labour, they took one long look round, and then, like many a fine flashy fellow before them, came all at once to the dogs.

"Your money, or your life!" that old English exhilarating appeal which so many a dashing highwayman has made to the pockets of his patrons, was not forgotten in this new branch of the art. The bait is prepared, the dog's lost, the reward's offered, the stranger's admitted, and then comes this candid composition of impudence and impunity:—

"That I have ta'en away this old 'oman's dog,  
It is most true; true that I knows where he is;  
The very head and front of my offending  
Hath this extent, no more."

And now I'll tell you what I'll have—your money, or his life—if you don't bleed freely, he does, that's all about it—ten pound down's the word."

"Ten pounds! why that's more than three times the value of Bishop of Bond-street's sagacious Tiny."

"I dare say it is, and perhaps twice as much as she weighs; but what of that? you knows the terms, and, if it don't suit, why of course I makes away with her in the best manner I can—starts her for Holland in a hoystir barrell, or sends her to Greenidge fair in a muton-pie manufactory."

\* Poor Tiny, second only to Tiny Tim, though dead in the flesh, still lives in song:

"Just seven pounds 'dear Tiny' weighs,  
As I've been often told;  
And 'Uncle Bishop' proudly says  
She's worth her weight in gold."

Gentlemen of England! and ladies too! have you, do you own to, the slightest partiality for raised pies or meat pasties? If so, you will allow me to remind you of the fate of Actæon, who, tradition avouches, was devoured by his own dogs—it's a disagreeable idea certainly, but really, if you don't take care what you're about, you'll be reversing that unhappy man's case some of these fine days.

Yet why should money or dog's-meat be made in this way? Why should the affections and the digestion be tampered with like this by a set of wretches who have little knowledge of, or sympathy with, either one or the other? Why, in fact, should you refuse the dogs that protection you give to every other animal? Hares and pheasants have their life-preservers; the man that makes free with another man's mutton, will have little chance of saving his own bacon; and setting a robber on horseback, we calculate, will send him to the devil (or the penal settlements) rather faster than the proverb estimates it would a beggar in the same elevated position. And yet, the dog—so full of fidelity, instinct, enterprise, heroism, humanity, and all the other fine feelings to be found in the Book of the Passions, or the Percy Anecdotes; our companion by day, and our guardian by night; our ever-ready and willing and able assistant in all our travels and troubles, by land or by water; who succours us when we are drowning, and stands by us when we are drunk—him you leave to the mercy of a villain, who makes a good living by liver! and who would not hesitate to do worse, did not success assure him that he couldn't do better. Once more then, we repeat, why not allow the dog his proper protection? The only answer to which we can find, after looking at it in every possible way, is, that as the dog has always made it his chief business to protect man, man can surely have no business at all to protect him.

Gratitude drowns the echo in a sob, while "the Bishop" blushes crimson for the human race!

There is nothing we wish to avoid so much as to be taking a partial view of the matter, and, therefore, cheerfully admit that under some circumstances the dog as well as the stag may be allowed a little law; a point that we shall explain in the way of a precedent. An ingenious young man having tried the effects of intoxication for two or three weeks in succession, on again arriving at a partial state of sobriety, felt scarcely satisfied with his conduct; and after thinking of suicide, saving money, and a variety of other ways and means of setting things right with himself and his friends, at length very magnanimously resolved to make a public atonement by smashing the Portland Vase. Now, the worthy magistrates on hearing the charge declared that as far as the vase itself was concerned he could not go on, for "there was nothing in it;" but if they liked to make it a case of case he'd convict; and they did so, and he did convict. Gentlemen of the jury, the Duke of Portland's vase is the Marquis of Worcester's dog, and the case is the collar; or, rather I should say, the collar's the case. The jury took this as an exceedingly brilliant notion; while the prisoner himself was transported at the very idea!

Complainant.—"May it please your worship, I've lost my dog, (very much affected,) I always endeavoured to keep a good eye on him—"

Magistrate.—"Eyes, sir! what's your eye to me? I'm not an oculist. If you want an oculist you had better write to the Times: this is not an advertising office."

Complainant.—"But I thought the fact of my keeping my eye on him—"

Magistrate.—"Stuff and nonsense, sir! If you expect me to interfere, you mustn't talk about keeping an eye on your dog; you must keep a collar on him, and then I'll attend to you."

And so the unfortunate man leaves the court, labouring under the impression that as far as dogs are concerned, his worship's character verges on the Dogberry. "My friend, you are mistaken; that ebullition was nothing but the effect of fellow-feeling. The gentleman has no dog of his own, so of course he can't sympathise with such as have or had; while, per contra, I think you'll allow he's plenty of choler."

Shall such things last? Shall Liddell, Fitzroy Kelly, Major Beresford, and the worthy Bishop of Bond-street, labour in vain? The dogs forbid! Colville of the Dale, a gallant knight, who arose in his place, and raised his voice like a man and a sportsman for the preservation of foxes; we call on thee to do as much now! "Haven't you a word to throw at a dog?" Let every man join in who feels a pride in his country and her pastimes; and, on the next motion, let the dog bill be pushed into parliament with as much determination as the boy Jones pushed himself into the palace! And then shall the man who steals a dog be called a thief, and common sense be found in the Hall of Justice, and common civility in Justice Hall.

The above "refresher" on a subject now coming bodily before the House, owes its appearance to a hasty perusal, late in the month, of a revised and enlarged edition of the indefatigable Mr. Bishop's "Chronicles of Crime;" and we can only add in sober seriousness our belief that every man whose habits or inclination lead him to look over these pages, will give his aid in reforming a measure which at present is simply a disgrace to those who make laws, and an encouragement to those who break them. We, indeed, feel certain that such energy in action must end in triumph; and, consequently finish as we commenced with the feeling safe and sure, that "the dog will have his day."—*The Sporting Review for May.*

## THE FISHER'S CREEL.

THE GRAYLING.

HE grayling lies deeper, and is not so shy a fish as the trout; and provided your link be fine, is not so apt to be scared by the cast of the fly upon the water.

Grayling may be angled for much in the same way as trout, with the exception of minnow fishing, which, notwithstanding the authority of Walton, is not found to be good. It is a more gregarious fish than the trout, though not so much so as the perch and carp. It spawns in April or the beginning of May; depositing the roe amongst gravel at the tails of swift currents. While trout is a spring and summer fish, grayling is best in season in autumn and winter. It feeds more on the ground, and is not so easily scared, though more difficult to deceive than trout, and likes smaller flies.

According to the Rev. Mr. Low, the grayling is frequent in the Orkney Islands, as it is in Lapland and Switzerland; but it is rare in Scotland, and confined in England to the Avon near Salisbury, the Ure near Fountain's Abbey, the Wye near Tintern Abbey, the Dee between Corwen and Bala, and the Dove; also the Trent, the Wharfe, the Humber, the Rye, and the Derwent.

That great and good man, and excellent angler, Sir Humphrey Davy, is too high an authority to be left without notice in an article devoted to the grayling, he says:—

"The fineness of the link, and of the gut to which your flies are attached, is a most essential point, and the clearer the stream the finer should be the tackle. I have known good fishermen foiled by using a gut of ordinary thickness, though their fly was of the right size and colour. Very slender transparent gut, of the colour of the water, is one of the most important causes of success in grayling fishing. In the Avon and Test, May-flies, and even moths, are greedily taken in the summer by large grayling. Flies, that do not inhabit the water, but are blown from the land, are good baits for grayling. There is no method more killing for large grayling than applying a grasshopper to the point of a leaded hook, the lead and shank of which are covered with green and yellow silk, to imitate the body of the animal. This mode of fishing is called sinking and drawing. I have seen it practised in this river with as much success as maggot fishing: and the fish taken were all of the largest size; the method being most successful in deep holes, where the bottom was not visible, which are the natural haunts of such fish. In the winter, grayling rise for an hour or two, in bright and tolerably warm weather; and, at this time, the smallest imitations of black or pale gnats that can be made, on the smallest sized hook, succeed best in taking them. Throughout the summer and autumn, in fine calm evenings, a large dun fly, with a pale yellow body, is greedily taken by grayling after sunset; and the imitation of it is very killing. In the end of October, and through November, there is no fly-fishing but in the middle of the day, when imitations of the smaller duns may be used with great success; and I have often seen the fish sport most, and fly-fishing pursued with the greatest success, in bright sunshine, from twelve till half-past two o'clock, after severe frosts in the morning; and I once caught under these circumstances a very fine dish of fish on the 7th of November. It was in the year 1816; the summer and autumn had been peculiarly wet and cold, and, probably in consequence of this, the flies were in smaller quantity at their usual season, and there were a greater proportion later in the year."

Grayling, if you take your station by the side of a river, will rise nearer to you than trout, for they lie deeper, and therefore are not so much scared by an object on the bank; but they are more delicate in the choice

of their flies than trout, and will much oftener rise and refuse the fly. Trout, from lying nearer the surface, are generally taken before grayling where the water is slightly coloured, or after a flood; and in rain trout usually rise better than grayling, though it sometimes happens, when great quantities of flies come out in rain, grayling as well as trout are taken with more certainty than at any other time. The artificial fly, in such cases, looks like a wet fly, and allures even the grayling, which generally is more difficult to deceive than trout in the same river.

## CATCHING A TROUT.

(From a Correspondent.)

O! oh! the chuck enchanting the big trout makes us feel  
When he the fly has taken, and ringing goes the wheel.  
By Jove! I now have hooked him—a brave one does he seem,  
He's heavy, but is quiet, and is sailing up the stream:  
That tokens he's well hooked, aye, safely, it is plain,  
And by some part it seems, too, that does not give him pain;  
I dare not yet oppose him—the best that I can do,  
Is line to keep just stretched, and careful him pursue.  
But hold—he grows impatient, I must have nicest care  
'Mong stocks, and reeds, and rushes, with but a single hair.  
My line's wound short—I'm ready; my wheel will glibly go,  
So now we shall start fairly whene'er he play will show;  
But stay, my boy, I like not your aim for yonder weed,  
And gentle hint must give you to stay your course and speed;  
He likes not hint controlling—has felt of steel the sting;  
Down, down the stream he's shooting, and makes all whizz and ring.

Away, away he's darting, into deep hole he goes,  
And there on his own station hopes safety and repose:  
We shortly shall have stiff work when he finds not repose,  
And something quite alarming still tickling his nose.  
Vexation grows upon him, and sorely he's perplexed,  
Now up the stream he dashes, to desperation vexed,  
And writhing as he cleaves it, he shoots and tugs amain;  
Now downwards turning springs out, then splashes in again.  
(My rod a little dropt there, saved line from sudden chuck—  
At all events all's safe yet, by management or luck).

The contest in the strong stream no longer pleased to keep,  
He shakes his head, and round runs in water still and deep.  
Ah, now's my time of peril, each stock and bank he seeks,  
And if I'm there entangled, my line he instant breaks:  
He must, he must not thither. Oh, hold, oh, hold, good hair,  
Rod-top and wheel shall aid thee with their most tender care;  
This is the vital struggle, alternate we give way—  
By Jove, by Jove, he breaks me! yet, hold—he stands at bay;  
He yields, he yields! yet struggles, and downward points his nose,  
And strives to reach the bottom with almost vital throes;  
Each struggle brings him weaker, and quick augments his woes,  
And now upon the surface his yellow belly shows,  
And fiercely there he flackers, and slaps about his tail,  
His fins are broadly spreading, which shows their vigour fail;  
His tail it plays alternate in water and in air,  
And seems to want to give a slap at that tormenting hair.  
In vain in angry struggles his strength now fast recedes;  
In vain, too, are his efforts to creep among the reeds.  
The heavy stream no aid yields, nor safety does the deep;  
He seeks the hole's extremity, where waters thinly sweep,  
And as he gains the shallows he twists and tugs amain,  
Upon the surface slaps his tail, and upwards turns again.

He strives to reach the bank now, upon the further side,  
Hoping to rub his nose there; but, ah! that hope's denied;  
He struggles, and he flackers, and coasts the bank along,  
And now renews his efforts to get the weeds among:  
But see, he's so exhausted, I can, with prudent care,  
Guide him from all such danger, by strength of single hair.  
Defeated on the farther bank, behold, he thinks it meet  
To try if he can aid find 'mong stocks beneath my feet:  
But no, my line is short wound, my rod held right away,  
And six feet from the danger again he is at bay.  
With weak and weaker effort he's shooting round and round,  
Till he is quite exhausted—some folks would say he's "drowned."

Behold, his mouth wide open, he falls upon his side;  
And so, feebly resisting, shall on the surface glide:  
Thus, easy on I'll draw him, in water and in air,  
Of twitch or sudden struggle still holding nicest care;  
And as he nears the margin, steer rush and reed between,  
Now there, behold, he's lying! and shows his golden side,  
The fruit of glorious angling, its pleasure and its pride.  
Oh, he's a noble fellow!—that tap ends all his pain,  
There in my CREEL you lie, sir—and now I'll try again.

Liverpool, May 1845.

FLYING.

## REMINISCENCES OF THE PRAIRIE.

## THE WOLF AND THE HOG.

THE prairie wolf, which is the kind that most abounds, would fall very far short of filling the expectations of those who have read

"How the grim wolf runs howling thro' the lair,"

and have associated with the name something terrible and ferocious. An animal but little larger and not much more formidable than a fox hardly personates the wolf of the Pyrenees,

"Grim, gaunt, and savage, bursting on the plain".

But he is a genuine wolf, notwithstanding, and if he falls short of our expectations of what a wolf ought to be, he might say, that in the first place he is not responsible for his size, never having been consulted in the matter, or he would doubtless have exhibited himself to the curious as large as a Bengal tiger. And in the second place, it is no fault of his, if our information on matters connected with himself be erroneous, or if our imagination have erected to itself a standard of what a wolf should be, different from what nature has shown in his case that a wolf is. The prairie wolf in fact is a diminutive and timid animal. His depredations are confined to the smaller and less protected animals, and the farmer dreads him as an intruder upon the hen-roost, or as an enemy to his lambs and the smaller specimens of the hog family; the maternal pig is generally a sufficient protection to her young brood, the raised bristles and tusky proboscis of the "nursing mother" presenting an appearance sufficiently terrific to deter a bolder animal. This wolf is by no means shy; he may be often seen trotting leisurely before the traveller, or at a little distance squatted in the grass, his pricked ears and sharp visage giving an air of intelligence to the steadfast and curious gaze with which he returns the regards of the stranger. His principal reliance is upon his speed and endurance, and it requires a stout and a fast horse to run him down. It is often done, however, and such is his cowardice, that he will, when overtaken, submit to be beaten to death without resistance with the stirrup, an extempore weapon frequently used for fault of a better, *furor ministrat arma*. I know a man who having run upon one after a long chase, found him so cowed that he took him upon his horse, and carried him into the village.

"Yet scarce I praise his venturous part,  
Who tampered with such dangerous art."

I well remember my first wolf chase, and though the results were not very brilliant, yet it afforded me at any rate, "argument for a week, and laughter for a month." My "turn out" would hardly have been reckoned a very "swell" affair at an English fox hunt. An emergency had compelled me to be beholden to a neighbour, who had furnished me with the best he had; *videlicet*, the tree of an old saddle, laid on some blankets, unconfined by a girth, and garnished with one stirrup. This, to be sure, was not the guise in which "to witch the world with feats of horsemanship;" and an attempt at anything of the sort was very far from my thoughts when I set out.

"But intentions are nonsense, and wishes are worse,  
Who can tell where he'll ride, when he saddles his horse."

A lame wolf crossed the road not more than fifty yards ahead of me, on three legs; the temptation was too strong to be resisted, so I started after him without a moment's reflection. But the limping rascal no sooner found me in pursuit, than he clapped his game leg to the ground, and went off at a speed that called for a pretty liberal application of "the timber." My horse, however, proved to be pretty heely, and in about three quarters of a mile I had overhauled him. He immediately gave up and crouched down, resigned to his fate. Forgetful of the state of my equipments, I attempted to spur my horse over him; but the steed as might have been expected, bolted: and I, and my unique apparatus, like "Kitty's sweet buttermilk, covered the plain." Before I could adjust my traps and remount, the wolf, who, like William De la Marck, would "wait no man's pleasure," had recovered from his panic, and getting on to a piece of ploughed ground, saved himself from the pursuit I had zealously recommenced. So I "took nothing by that motion." It was not long afterwards that I saw, as Tom Noddy says, "an individual" (I flattered myself it was the same) crossing a piece of prairie. I had to return half a mile for a gun, which of course I found unloaded; and by the time I had slipped a ball into it and got started again, I took it for granted he was out of reach: but my friend was determined, it seemed, not to back out so easily, and I found him in nearly the same spot, when I gave him what Sir Lucius O'Trigger calls a "quietus" with a rifle ball.

These wolves inhabit the prairie almost exclusively, excavating burrows, in which they rear their young, but they are to be seen out of them at all hours; in fact, very seldom, even when pursued, taking to them for shelter, trusting rather to

"Their long slow gallop, which can tire  
The hunter's deep hate, and hunter's fire."

They are taken sometimes (though they are too wary to be easily caught,) in traps of various constructions. It is said they will unite in packs for the pursuit of deer, and other large animals, their short yelping bark is often heard at night, as though they were opening on the track. The larger varieties of black and grey wolf, though more im-

posing from their size, are not sufficiently numerous to be very troublesome. I have occasionally seen them in my rambles looking hungry and sulky, and never seeming in much haste to get out of the way. Their size, strength, and ferocity, make them more than a match for any two or three dogs, and I have known some valuable hounds fall victims to their impetuosity in attacking them when out of the reach of assistance.

Perhaps a more formidable animal in reality, than any of the varieties of the wolf, is the wild hog, numbers of which are to be found in the densely timbered river bottoms. They are nothing more than the domestic hog, escaped from the supervision of man, and subsisting on the nuts and acorns with which these forests abound, but in no whit resembling in appearance, temper, habits, or disposition, that corn fed, somnolent, and adipose animal; on the contrary, the wild hog is a lean, long-legged, locomotive savage, dangerous to attack and worthless when taken, for it is a singular fact that it is impossible to fatten them in a pen; indeed it is but seldom they will feed while any one is watching them, being even more untamable than almost any other denizen of the forest. They run in herds and will without ceremony attack anything that molests them, giving with their long sharp tusks, wounds, more ghastly than can be inflicted by any other animal. One peculiarity in their construction, I learned from inspection which was new to me, and possibly may be so to others. The boars are furnished with a hard, gristly substance (commonly called their shield) some six or eight inches in diameter, directly behind the shoulder on each side, immediately under or perhaps an induration of the skin. Any one who has witnessed a fight between two of these creatures, will comprehend the use of this protection, as it covers the part most exposed to injury from each other's tusks. So firm is its texture that it will resist a thrust with a knife from a strong hand. I once encountered an old boar who had taken possession of the road across a small prairie, for what reason I was not sufficiently deep in the secrets of his tribe to know; but there he stood, the foam flying from his tusks, and looking most particularly "devilish and dangerous;" being well mounted I ventured near him, but he made such decided demonstrations of hostility, that, unwilling to risk my horse's legs, and perhaps my own, in a contest where so manifestly

"There was nothing to gain, and all to lose,"

I gave him a wide berth, and left him in undisturbed possession of the field.

## PALE ALE, AND THE CONQUEST OF INDIA.

BY LITELBO.

OLD Bacchus one day  
Conquered India, they say,  
And I never knew any one doubt it;  
With his dissolute rout,  
Song, revel, and shout,  
I'll tell you how he set about it:

He invaded the land with a three-bottle band,  
Scorning all circumstance martial;  
Wines of every sort, from Falernian to Port,  
Were the weapons to which he was partial.  
With victory sated his godship "retrated,"  
But left it in charge o'er his realm,  
That no interlopers, but jolly good toppers,  
Should e'er make a stand at the helm.  
Then Philip's mad son, for a taste of the fun,  
Ran a monk throughout all Hindoostan;  
And swore he would rule from Ceylon to Cabool,  
For he could get drunk like a man.  
Next the Persian Nadir made a terrible stir,  
With his Musselmaun hordes to subdue it;  
But the Prophet's command is "Shun wine or be —"  
So no wonder that he could not do it.  
When Portugal tried, 'twas in vain that she fried  
*Petits plats* of Hindoos and Pariahs;  
Or managed to stow a whole cargo at Goa  
Of orthodox padres and friars.  
And 'twas equally vain that Duplin and Suffrein  
Imported the fiddle and dance;  
They drank *caw sucree*, by no means the way  
To attach jolly Bacchus to France.  
But his Godship enjoys us hard-drinking boys,  
From old Lawrence and Clive, down to Sale;  
And swears we shall rule if we don't play the fool  
And stick till all's blue to Pale Ale.

A JUVENILE HERSCHELL.—On a recent moonlight night a mother had the following observations made to her by her son, a little urchin of about six years of age:—"It maun be a' nonsense, mither, about there being folk in the moon." "What way, my man?" "Oh, because how could they crush themselves thegither when it's only half moon?"

## CORRESPONDENCE.

## ROOK SHOOTING.

MR. EDITOR,—The rook it is well known is one of our very earliest birds in forming its nest, and the production of its young seems to sustain no injury from high winds, as the bird contrives to fasten its nest so very strongly to the branches upon which it is formed, that it is very rarely blown from its elevated situation. But although the skill of these sable architects may bid defiance to the violence of the winds, they, like the rest of the feathered creation, feel the influence of the atmosphere; generally speaking, young rooks present themselves to the sportsman about the middle of May; but owing to the very ungenial weather which has characterised the spring of the present year, they will not be sufficiently fledged till a fortnight perhaps beyond the usual time.

As soon as the young birds have acquired sufficient strength, they sit or perch on the sides of the nest, and on the neighbouring branches, and thus form a conspicuous object for the shooter. The air-gun and the cross-bow being the engines generally used for rook shooting. I would strongly recommend those who are fond of the sport to make use of the former, as being the most preferable, not merely on account of its superiority in taking aim, but also inasmuch as the use of it is attended with less trouble and less danger. In drawing up the string of the cross-bow, considerable strength is required, and at the same time great care is necessary lest it should slip and severely injure perhaps the cheek or face of the shooter. I trust the object of these cautionary remarks, will plead a sufficient apology for my intrusion on your valuable time, and beg to subscribe myself, Mr. Editor, Yours, &c.,  
Holderness, 1845. — Rookwood.

May 5, 1845.

SIR,—When I addressed you on the 16th April last, I headed my letter (First Spring Meeting); I did so because, though it is generally known as the Craven Meeting, the Craven stakes, from which the meeting took its name, did not fill, and I do not fancy things called by a wrong name. I mention this to satisfy an inquiry on the subject.

In that letter I entered a little on the "Zanoni" case, and stated it as my opinion there was a point against the horse, and so it has turned out; and he is for the present disqualified from running. It is admitted, however, as the belief of all parties (confirming my own), that "Zanoni" is the colt by the Gladiator, his dam by Capicum. I regret this, for the sake of the party who owns him, that he is disqualified, because he is a good horse, and would do honour, in his running, to the British stud.

As regards the late meeting at Newmarket, as the results are in everybody's mouth, I do not think I am trespassing against your rule in making a comment or two on one of the races, known as the "Two Thousand Guineas;" I mean, that I am not intending to add any news on the subject, but simply offering an opinion. The time in which that race was run leaves me at liberty to say that, on a comparative ratio, it will take Idas, who won it, four minutes and thirty seconds to get over the Derby course; and as this time is beyond the usual Derby time by nearly a minute, I do not fall into the idea that Idas has yet done anything very transcendent. On the contrary, we must look for much greater speed and more lasting powers are we can hail him the best three-year-old of 1845. Yet I am inclined to think he has not his equal; for, though he is leggy, I cannot admit the objection to prevail, as some do, against him. His legs are long, but they are good; and his frame generally shows power and compactness; added to which, it is known, as a fact, that when called on in the late race, very nearly at the close of a mile, he showed he had a good deal in him to spare. On the whole, I see nothing like an "absolute certainty" of his winning the Derby; confessing, however, that I have rather a presentiment (with a little sneaking kindness for him) that he will.

I could add a word or two as to his most likely challengers; among them, I am inclined to think a certain *ci-devant* champion is gathering himself up for a rush. More anon.

Yours,

SOOTHSAYER.

COCK-FIGHTING.—Exclusive of the Royal Cock-pit (which James I., being partial to the sport, visited twice a week), there was formerly one in Drury-lane, another in Jewin-street, and a third in Shoe-lane. "Crosses" appear to be of ancient date, judging from the following anecdote of an occurrence in the sixteenth century:—"Sir Thomas Jermin, meaning to make himself merry, and gull the cockfighters, sent his man to the pit in Shoe-lane, with a hundred pounds and a dung-hill cock, neatly cut and trimmed for the battle; the plot being well laid, the fellow got another to throw his cock in and fight him in Sir Thomas Jermin's name, while he betted his hundred pounds against him; the cock was matched, and bearing Sir Thomas's name, had many bets laid on his head; but, after three or four good brushes, he showed a pair of heels; every one wondered to see a cock belonging to Sir Thomas cry 'craven;' and away came the man with his money doubled." Cock-fighting is a very ancient sport in Asia, and is a very general sport, and of long standing in China.

WE HAVE NO SUCH FUN NOW-A-DAYS.—JUNE 1776.—The Duchess of Chartres lately beat the duke, her husband, in a foot-race of five hundred yards, on her own terrace, for two hundred guineas. N.B. The duchess was allowed to tie her coats above the kness of her drawers.

## CRICKET.

## HINTS TO CRICKETERS.—No. 3.

ON THE SELECTION OF UMPIRES.

EW things, if any, are so conducive to a true enjoyment of the game as the judicious choice of an umpire; for in the hands of one who well knows his duty, every accomplished player feels that he is safe—at least, so far as human foresight can make him,—and the mere tyro is conscious that if he be subjected to strict surveillance now, it will be to his ultimate advantage, and save him many severe trials of temper at a future time. An umpire should, in the first place, possess a perfect knowledge of the laws of the game in all their bearings, and be prepared at any moment, and without the slightest hesitation, to give his decision on any point that may occur. Wavering or doubting is worse than useless; his answer must be prompt and decided—aye or no. A good eye is almost indispensable, and upright and conscientious decisions, without favour or affection to either party, *thoroughly so*. To do his duty with strict propriety, requires the most vigilant and unwearied attention on his part throughout the game; and if he give that, and is guided in his decisions by justice alone, and those decisions are given with temper and firmness (which will be naturally consequent on a consciousness of their rectitude), he will rarely, if ever, fail in affording satisfaction to all parties.

It is a well-known fact, and one much to be regretted, that if we expect the umpires in two or three of our principal clubs, there are not one in four who are fully competent to discharge the duties of the office they assume. Indeed, how can it be otherwise, when we consider that many of the most experienced general players admit their comparative ignorance of the *minutiae* of the game when reduced to practice, unless it occur in their own individual case, and even then there must be many points that might easily escape them, or of which they cannot by possibility judge fairly, if at all. Thus it is necessary to appoint one for the office who has made it his study not only to become master of the *legitimate* rules of the game, but who has given his attention to the *equity* of it also. There are many things that may occur during the play, to meet which *literally* there is no law, and in such a case much is expected at the hands of an umpire, who, if he knows his duty, will be at no loss to give an immediate and satisfactory decision. But, should such a case occur to one who, however good a player, had not studied the duties of umpireship, he would by an unsatisfactory decision, be very likely to create a feeling between the parties anything but desirable on a cricket ground. This being the case, how much should we repudiate the too common custom of the minor clubs of appointing an umpire from their own body, not, perhaps, on the score of economy, but in order that they may have something to do to console them for not being ticked to play.

How much ill-will has been engendered between clubs and individuals on account of the unsatisfactory decisions and flagrant bias of umpires, may be left for any experienced cricketer to decide. This is well known—that when the member of a club is standing as umpire for his own party, he must, unless more than man, have an innate—perhaps unconscious—leaning in their favour, and which despite his most strenuous efforts, will colour his decisions.

The remedy I would propose for any such defect would be this:—to allow no person to take the office of umpire in a match until he had passed an examination as to his knowledge of the rules of the game, and the contingent events that might by possibility occur in its progress; such examination to be conducted by some individual of known competency, who should upon approval grant the applicant a certificate to that effect. There is no doubt that there are many old and experienced umpires who for the love of the game, and with a view to its extension and well-being, would cheerfully take upon themselves the office of examiners gratuitously, at appointed times, and consider it as a "labour of love."  
NED RUB.

[Anxious to devote a portion of their publication to the elucidation of the many, healthful, and good old English game of Cricket, and to promote its interests to the utmost in their power, the proprietors of this work will feel much pleasure in receiving communications and suggestions from any correspondent who may wish to further that object. In the next number will appear some observations on the modern style of bowling, embellished with a faithful full length portrait of one of its most accomplished professors, A. M. W. Esq. This will be followed by several spirited illustrations of the art of batting, offensive and defensive, with occasional notices of the most eminent players of the present day.]

PIGEON SHOOTING EXTRAORDINARY.—A lad relating to one of his companions the exploits of his father in hunting, on the previous day, asserted that he had killed nine hundred and ninety-nine pigeons at one shot. His companion observed that it would have been well to have added one to the number, and made it an even thousand, on which the lad, in high dudgeon, retorted—"What! do you think my father would tell a lie for one pigeon."—*New York Spirit of the Times*.

WHAT A SHAME.—If there is any law against badger-baiting, it is broken every night in the House of Commons, where poor Bobby, the Tamworth badger, is regularly baited, to the high diversion of the lovers of cruel sport.—*Punch*.

## CORRESPONDENTS.

**DETONATOR.**—We will give the **LANDRAIL** of CORNBRAKE in an early number, with an engraving. Surely we lack no stimulus!

**PHILO-HIPPO.**—Expectorants is a term applied by horse-doctors (veterinary surgeons is a polite term) to medicines which increase the discharge of mucus, and thus relieve coughs and impeded breathing. In cases of coarseness they should be aided in their operation by glysters and bran mash. The following is a simple expectorant ball:—  
 Gum ammoniacum . . . . . 2 to 4 dr.  
 Powdered squill (the wild onion) . . . . . 1 to 2 dr.  
 Castile soap . . . . . 3 dr.  
 Oil of aniseed . . . . . 30 drops  
 Ginger . . . . . 1 dr.

Syrup enough to form a ball.

**White says.** "It cannot be too often repeated, that unless the horse's diet is carefully attended to medicine is of little avail, either in chronic, cough, or imperfect wind."

**Egros.**—Stockport.—Glanders is a contagious disease: and is generally supposed incurable. There never was a disease with this character but what almost every year produced its specific. This should not discourage attempts to discover a remedy, but former failures should teach modesty. Lafosse, forty years ago, proposed your remedy with additions. To your second observation, or rather question, we reply:—Inquire of the city, or rather Smithfield, police.

**HENRICUS.** Hertford.—Thank you for the favourable opinion expressed on the conducting of this Miscellany; as the only one of its class we ask your recommendation to your friends.—On the subject of the migration of birds, the physical difficulties you imagine will vanish, we think, if you mentally weigh the following facts. A sparrow is calculated to be capable of flying at the rate of thirty miles an hour: and many experiments have proved the river-duck can fly ninety miles in the same time. The common kite has been observed (by accurate measurement, made by means of an instrument, which we cannot describe to you here) to fly over a quarter of a mile in forty-five seconds. At this rate it could travel from Cape Ruth to the Land's End in one day. The famous ornithologist, Monsieur Audubon, shot the passenger-pigeon of America 800 miles from the nearest spot where it would have procured rice, with that grain undigested in its stomach; and therefore swallowed not many hours before its death. Though the willow-wren, the nightingale, and other birds of passage, fly with but half the swiftness—they may not only reach most parts of the south of Europe, but North Africa in a few days. Your theory has been confuted more than fifty years ago.

**AN OLD ANGLER.**—We candidly confess we do not know: neither would we give a half-farthing to be told.

**BILLY BUTTONE.**—Very facetious—if we could find out the fun of it. **MILK'S BOY**—what he is.

**SOOTHSAVER.**—Our esteemed correspondent will find the packet he inquires about at 35, Holywell Street; or, should he prefer it, we will forward it, if he will furnish us with his exact address.

**LECTOR.** Gravesend.—We do not know any resident pugilist of note, who gives lessons in the art. If we should learn that there is such a one, we will notify it through the medium of this column.

**WILLIAM B. R.**—Obliged for kind intentions: but if mere geographical description of the rivers be meant, that is of course open to us at the cost of the mere labour of compilation. What we want is modern descriptions of "Fishing Localities," their present state, the sport they principally yield, brief notions of the accommodations at Inns, Anglers' Homes, &c. in the neighbourhood, with good-natured sketches of "mine host," or "mine hostess," cost of permission to fish; or, if free, what attractions are presented, and so forth. Mere topography is the dulllest of all things; and quite foreign to our purpose and desire.

**L. L.**—A "broken wicket" is where the balls are off, either by running over it, or in an ineffectual attempt at stumping, throwing out, &c., in which case it is necessary in stumping, to strike one of the stumps out of the ground. If one ball remain on, it will be sufficient to strike it off.

**WIDE BALL.**—Wide balls are not called until they have passed the striker, since the promulgation of the new law. (See Rule 45.)

**A. Z.**—Not out. The ball must be retained in the hand while the wicket is being put down in the way you describe.

**SWANSEY.**—No run can be scored where a catch is made. If caught off the hand, out; if the wrist or arm, not out. The patent gloves may be had of Caldecourt.

**INDEX.**—You are right. We will see to getting a portrait of Caunt; we have one of Bendigo, and publish the rival champions, with a brief sketch of each of their careers in the same number.

**CRICKET.**—G. F. C.—There is no prescribed limit to the length of the popping crease, but it must not be shorter than the bowling crease, 6-feet 8-inches.

**CYCLOPS.**—Not out. You had no right to take the ball before the wicket.

**ALLANER.**—Certainly. We shall not lose sight of the first opportunity to *Cope* with you in the way you mention. To your second question, if from the hand—out.

**P. L. A. Y.**—The ground in question is now broken up, as is the West Surrey, in the Wandsworth-road; they are about to commence their season shortly, when we shall doubtless hear of their whereabouts.

**GYP.**—Your observations are perfectly correct. One of your subjects of complaint you will find commented on in the present number. As regards the other, its cure must depend entirely on the state of the club funds.

**TOXOPHOLITE.**—Several cuts relating to ARCHERY, are in the engravers' hands.

**SILVERSIDES.**—"Throwing a quail thirty yards" is not decided by throwing it from the top of a steepie. It must be thrown in the usual way without "bubble."

**WILL WICKET.**—We flatter ourselves we are authority on these points. One of the most experienced umpires in the kingdom has kindly taken charge of the answers to questions relating to CRICKET.

**BACKGAMMON.**—Double or quits is an even bet; that is to say, if you lost a crown, you play another game to settle whether you pay ten shillings or nothing.

**D. J. S.**—Thurteill was executed for the murder of Wear, January 9th, 1833.

**A WELL-WISHER.**—If you wish to serve us, show and recommend the **SPORTING WORLD** to your friends.

## OUR WEEKLY CALENDAR.

AN EPHEMERIS IN JEST AND EARNEST.

**SUNDAY, MAY 11.**—**WHIT SUNDAY.**—Courvoisier committed for the murder of Lord William Russell, 1840.—Mr. Percival shot by Bellingham, in the lobby of the House of Commons, 1812.—The latest species of summer birds of passage arrive at the beginning of this month. Among these are the goat-sucker or fern owl, the spotted fly-catcher, and that interesting songster, the garden warbler. The admiral butterfly and the May bug make their appearance.—Vegetation becomes very attractive both in the garden and fields: in the latter we find in blow—hawthorn, cowslip, forget-me-not, brook-lime, water violet, lily of the valley, wild ranunculus, and the poet's favourite the little daisy.

**MONDAY 12.**—**WHIT MONDAY.**—Milk's Boy goes to Greenwich—rolls down the hill, and writes his "experiences."—**Neston Races.**—Mr. Richard Dunn, an Irish barrister, taken into custody on articles of the peace, exhibited by Miss Burdett Coutts:

"Have Dunn," says he; "I won't," says she;  
 And thus the row begun."

—Prince Johnville publishes his pamphlet, in which he menaces England, 1844. Cock-a-doodle-doo!

**TUESDAY 13.**—**WHIT TUESDAY.**—Newmarket Second Spring Meeting.—Manchester Races. Eglington Park, ditto.—Old May day.

**WEDNESDAY 14.**—**Oxford Term begins.**—Mendoza beat Bill Warr, 300 guineas to 300 guineas, 23 rounds, Smitham Bottom, near Croydon, 1792.—**Agricultural Notice.**—The dairy now requires constant attention, but take care not to put your butter on your beam, and keep your eggs out of the way of your grandmother.

**THURSDAY 15th.**—Edmund Keen died 1833.—Tom Oliver beat Cooper, 17m. 13r. 25gs.—Moulsey Hurst, 1813.

**FRIDAY 16.**—**Shiffnal Races.**—Plaidford ditto.—"Seek to make money," says the Astrologer; take care of the police, then, say we: is not this knave concealing capital felony?—Tom Spring beat Bob Burn, 30m., 18r., £100, Epsom, 1830; Charles Gibbets beat Kasher, 83m., 58r., £90; and Gibbey Cooper (Jack) beat West Country Dick (West), 29m., 29r., £10, and £5 of Mr. Gully's same place.—Tom Gaynor beat Alec Reid, £50 a-side, 70m., 34r., No-Man's-Land, 1833.

**SATURDAY 17.**—Tom Oliver beat Ned Painter, 26m., 8r., £58, Shepperton Range, 1814.—Tom Cribb's Farewell to the Ring, 1822.—Weather getting warm for 13 inside, exclusive of "two infants in arms," of ten years old each, three hat boxes, and two well-stuffed bundles; to those who, impelled by necessity, waste time by riding, we recommend the following:—*Confessions of a Conductor.*—"Busses is erroneously said to hold only 13 inside—if they like they can hold a great many more, besides bundles and wet umbrellas. Man is a squeezable animal, and 'busses is like carpet bags, there's no knowing what they will hold till you tries 'em. Consequently, though your 'busses seems full, shove 'em in, and drive on, and they are sure to shake down and fit in as close as wood pavement. Bad sixpence is useful on rainy nights, for stingy women as won't pay more than the fare for themselves and a caravan-full of parcels. When short of passengers, stop at the corner of every street, to make observations, and dance the Polka on the foot-board.—Talleyrand died 1838.

## THE MOON IN MAY.

New Moon, 6th .. .. .	9 57 morn.
First Quarter, 14th .. .. .	2 8 aft.
Full Moon, 21st .. .. .	3 55 aft.

## The Sporting World.

FOR THE WEEK ENDING MAY 17, 1845.

**THE** flattering success which has hitherto crowned the efforts of the proprietors of this miscellany calls for some acknowledgement at their hands. Anxious to show their gratitude, and to prove that they will not be content to "rest idly upon their oars," they have determined upon producing an **EPSOM NUMBER**, which shall vie in illustration and literary matter with anything hitherto produced by the most expensive weekly prints. With this view they have engaged a popular writer and a first-rate engraver to give an embellished description of the **ROAD TO THE DERBY**, beginning with the start from London, and ending with the "trysting place" at Epsom. Cuts, right and left, humorous and numerous, of places, persons, and things, will illustrate the text. Look out, then, for our **EPSOM NUMBER**, in which we confidently anticipate "taking the lead, and keeping it," and finding our "number up" at the "winning post" of public approbation.

In an early number we trust also, to be able to announce as a **PRESENT**, a **Sporting Print, worthy of a frame**; which, in execution, shall surpass any engraving hitherto presented by the most popular of the stamped newspapers. As this undertaking will, however, involve a large outlay, we shall fix a particular number of this paper (after the specimens are issued), upon which we shall calculate the number of our average sale; and no more copies of the **steel plate** will be delivered than the amount of papers taken by the wholesale vendors in that particular week. This is no more than a matter of proper precaution; inasmuch as it is to our regular subscribers only that we purpose to present this gift, each copy of which, in cost to ourselves, will far exceed the whole charge for an impression of the paper with which it is given.

## SONNET

BY THE UNSENTIMENTAL POET.

I NEVER lie beside a purling spring,  
 Watching the silver bubbles as they float,  
 In reveries wrapp'd—and all that sort of thing—  
 And may be coming home with a sore throat:  
 I never, cover'd with an old pea-coat,  
 At midnight to the paly moon did spout,  
 While she who bare me knew not I was out;  
 From other source my inspiration sought.  
 When on the bounty of a friend I'm thrown,  
 Champagne, old port, hock, claret, noyeau, are  
 My spring Castalian, my inspiring star;  
 And when upon resources of my own,  
 A glass of brandy and a decent weed  
 Are all the inspiration that I need.

**FINE INVESTMENT.**—In the neighbourhood of Chancery-lane is the following notice in the shop of an undertaker, posted on the side of a very extensive coffin:—"Pleasant lodging and partial board for a single gentleman of retired habits. N.B. The parties can be done for." We should think so.

THE BLUE BELL OVERHAULING THE BELVIDERE, FOR LORD SAY AND SELE'S CUP.—(From a Sketch taken at the Match.)

### THE R. T. Y. C.

**H**ERE is a nationality in the noble sport of Yachting, which awakens a thrill of worthy pride in the bosom of every lover of the "tight little island;" and among all the recreations to which the active spirits of Britain have addicted themselves, we know none less exceptionable, nay more praiseworthy, than the comparatively modern establishment of the Royal Yacht Club. Its numerous progeny may now boast the name of Legion, for the Yacht Clubs, North, South, and West are indeed many.

The promotion of aquatic amusement combines the soundest policy in the pursuit of pleasure, two points but rarely united; in addition to which it benefits that class of our artisans, the shipwrights, who, during a time of profound peace, require some such auxiliary aid; nor is it less patriotic in affording employment to seafaring men, encouraging the natural characteristic of Britons, and feeding and fostering a branch of service upon which the country must ever rely for its support and defence in time of peril. To the owners it offers advantage and attractions which are not, in other pursuits generally attainable; Health here waits on Pleasure—Science benefits by its promotion—friends may partake without inconvenience or much additional expense—travel is effected with economy—and change of scene and a knowledge of foreign coasts, obtained without the usual privations and incumbrances attendant upon the public mode of conveyance. By a generous regulation too, any gentleman's pleasure yacht may enter the ports of France, or those of any other power in alliance with England, exempted from the enormous exactions generally extorted from private and merchant-vessels, as harbour and other dues—a privilege of no mean consequence to those who are fond of sailing. In addition, there are those, and of the service too, who contend, that since the establishment of the R. Y. C., by their building superior vessels, exciting emulation, and creating a desire to excel in naval architecture, and also by the superiority of their sailing, the public service of the country has been much benefited, particularly as regards our lighter vessels, such as revenue-cutters and cruisers. This club, which originated with some gentlemen at Cowes, in the year 1815, now comprises the name of almost every nobleman and gentlemen in the kingdom who keeps a yacht, and is honoured with that of the sovereign, and other members of her family, as its patrons.—Cowes Harbour is the favourite rendezvous; and here, in the months of July and August, may be seen above a hundred fine vessels built entirely for purposes of pleasure, and comprising every size and variety of rigging, from the ship of three hundred tons burden to the yawl of eight or ten.

Thus much of the Royal Yacht Squadron, which does not muster its miniature navy for active operations till the eve of its regatta at

Cowes, in the month of August, they are the very aristocrats of yachting; the models of ultra exclusivism. Not so with the delightful R. T. Y. C., the delight of our noble river. They begin at Easter and don't lay up till after Michaelmas. With the majority of the members of this active and spirited club. Sailing is indeed a sport, and the club is indeed worthy of the queen of rivers, from which it derives its name.

ITS FLEET OF ONE HUNDRED AND TWENTY FIVE VESSELS stands at the head of the pleasure marine of the world; and, as a society, it is a pattern of what a community of gentlemen engaged in a noble, national pursuit ought to be. The cause of yacht-sailing had long been its debtor for efforts to promote a spirit of emulation among the proprietors of pleasure craft everywhere that yachting exists. By its latest act the popularity of that sport will be as widely extended as the convenience of its members has been wisely consulted, and their intercourse secured from the danger of untoward collisions. Doctor Johnson used to say that a concert would be a most agreeable amusement, only for the music; we have all had experience that a regatta would be a much more harmonious affair if it were not for the racing. Of all the struggles of rivalry in which gentlemen can be opposed to gentlemen, I am satisfied that of yacht sailing is the most soul-absorbing. I have sailed in a fair share of matches in my time; and I have witnessed "by the cunning of the scene," a temperament, in all the ordinary chances of life, gentle and apathetic, transformed into a spirit fierce, and fell as that of a jungle tiger. It is not because the tussles for glory awake a man's soul, and set his blood racing through his heart, that I object to them: on the contrary, they do him thereby both moral and physical benefit; but they should be so contrived as not to arouse any feelings but those of chivalrous honour—"without fear," and also "without" the possibility of "shame." When society was half barbarian, horse-races used to be ridden wherein the jockeys were permitted to cross and jostle, and, consequently, to carry out their contests like any other cavalry engaged in deadly feud. When the turf became the sport of gentlemen, rules were contrived for its refinement, and to prevent the occurrence of all angry collisions. Thus should it be with yachting; and thus it has been long, in so far as relates to the courses of craft engaged in sailing races. But more was wanted to rid them of material obnoxious to good-fellowship; and this has been done, as I believe, by the recent resolutions passed by the R. T. Y. C. for the regulations of all vessels which shall in future enter for any of its matches. This most excellent regulation appears as a simple paragraph added to No. 9 of the sailing orders, and is to the following effect:—"That no yacht is to put out or to shift ballast after the race has commenced; nor shall any yacht be allowed to put out or take in ballast for twelve hours previous to the time of starting. All

yachts to keep their platforms down and bulkheads standing: no water ballast allowed."

The effect of this will be that instead of some three or four shells—skeleton boats—flying Dutchmen—that followed each other from port to port during the season like grim death, monopolising all the cups and stakes, regular ship-shape squadrons will enter. The matches of the R. T. Y. C. at least will be thus influenced for the future, and great additional interest will attach to them, so long as they shall remain upon their now established footing. But still let that club, while they adopt sound innovations of their own, beware that no novelties gain favour among them till they be well overhauled. For instance, let them eachew like a leeshore in a hurricane the system of handicapping for tonnage elsewhere in vogue. Of all the lubberly contrivances ever hit upon in the matter of pleasure sailing, surely that is the most essentially tailorish: a scheme only worthy of the horse-marines. Imagine a noble fleet of yachts all darting from their moorings abreast, at the booming of the signal gun, returning to the goal in all manner of chronology: this haply before luncheon—that for dinner; some catching the dessert, and the majority returning just in time to go to bed by candlelight! Bad enough this, "the order of their going," but worse remains behind. Sweet reader, it's odds but "boots" wins: a gallant no-decked two-manner, allowed fourteen hours in the regular Queen's Plate Course. This may seem a fancy sketch, but its a tolerable likeness of a race round the Wight, which came off within reach of the most treacherous memories. Taste is proverbially an affair on which people differ; it remained for the invention of handicap sailing to produce an issue on which there should not be a second opinion. To describe that opinion by means of an old salt-water hyperbole, it may be justly said that he who goes to a handicap yacht match for fun, should go to Davy Jones's locker for diversion.

The opening R.T.Y.C. match of the season—took place on the 3rd of May for the Belvidere Cup, presented by Lord Say and Sele, with an entry numerically and intrinsically superior to any ever made for a match on the river Thames. Fourteen vessels were originally named for it, whereof the Belvidere, Antagonist, Ino, Prima Donna, and Leveret are new, having been launched this spring. But the record of the particulars of this exciting contest we leave to our stamped contemporaries, promising that our artist's sketch is a faithful picture of the crack Blue Bell and her beautiful rival.

Steam, which gave the first heavy blow and discouragement to the "wooden walls of old England," has been followed in its example by our pleasure marine. The R.T.Y.C. has several iron vessels, and that material gains popularity fast among the curious in wager-boats. Who shall deny that time works wonders? True it is, that there is a time for every thing in this gay and busy metropolis: and few men are without their *hobbies*, where such a variety of attractions claim their attention, to fill up a leisure hour or two in a pleasant and agreeable manner, with this difference only, that some of those persons who are attached to any particular sort of amusement, ride them much harder and faster than their neighbours. However, be that as it may, the sports on the river Thames are kept up during the season, nearly with equal spirit to those of the field; and if the Cocknies cannot shoot flying, leap over a five-barred gate, join in a steeple-chase, or give the view-halloo, in the first spirit and style of excellence, they nevertheless flatter themselves they are not much from home on Old Father Thames; for the river is a sort of element of their own. There may be some weight attached to this position—they rather pride themselves in being competent to take a lead in a cutter, from their frequent practice; or to handle a skull, to feather an oar, take the situation as strokesman in an eight-oared boat, do their duty in the *mid-ships*, and at times, show themselves off to advantage by acting like a waterman at the bow. It is the ambition of most men to excel in that sort of amusement or sporting towards which their penchant appears so conspicuous.

The Mersey, next in importance among English rivers to the Thames, is fast mustering a pleasure fleet quite worthy of its character. The Royal Mersey Yacht Club already numbers close upon 300 members, and its list is rapidly filling with the names of the leading men of that district. Under the auspices of the Marquis of Conyngham, the Royal Southern Yacht Club is going free before the favouring gales of popularity and prosperity. Perhaps there is not a locality so every way suited to the purposes of pleasure-sailing as Southampton Water, "where'er winds blow or waters roll." The Royal Western Yacht Club has its head quarters at Plymouth. Lord Mount Edgcumbe is its commodore, and "hearts of oak are its men"—choice spirits, stout and true.

It is not our purpose here to offer a catalogue of the clubs with which the coast of our island is studded in such fitting array. The object of this paper is chiefly to direct the attention of such societies to the great importance of so framing the rules by which their institutions are governed, as may best promote the greatest amount of sport and good-fellowship among the greatest number of their members. The alteration already noticed as recently introduced into the sailing orders of the Royal Thames Yacht Club is eminently qualified to bring this about, and we therefore have here put it prominently forward. However carefully regulated, there is no denying that sailing-matches, like all other matches (from Love to Lucifer inclusive) are made out of very fiery particles. Being contests, it almost follows naturally that they bring about quarrels: it is

certain that they *do*, and therefore it is an excellent thing to twine with their laurels an occasional branch of the peaceful olive. This scheme of sending the contending vessels on their cruises of glory in their ordinary trim is, at least, a passive promotion of order and tranquillity; while the knocking out of bulk-heads and clearing decks for action was certainly not the way to prepare Jack for peace, or to foster within him a calm spirit. At all events, it will promote comfort and convenience; and, with all respect and regard for yachting, we must be permitted to hint that, where these things are not superfluities, the cultivation of them is by no means to be despised.

Although there is a great spirit of rivalry and emulation displayed between the various owners to become the crack on the river, yet, we are happy to assert, that nothing but the most gentlemanly feeling is manifested towards each other, with a recent exception, which we hope will never recur, and to commemorate the pacification of which the cup, which formed the subject of the petition delineated in our engraving, was generously given.

#### THE GENTLE RIVER SIDE.

MERRY in the greenwood is the note of horn and hound,  
And dull must be the heart of him that leaps not to their sound;—  
Merry from the stubble whirrs the partridge on her wing,  
And blithely doth the hare from her shady cover spring:—  
But merrier than horn or hound, or stubble's rapid pride,  
Is the sport that we court, by the gentle river side.

Our art can tell the insect tribe that every month doth bring,  
And with a curious wile we know to mock its gauzy wing;  
We know what breeze will bid the trout through the curling waters leap,  
And we can surely win him from shallow or from deep;  
For every cunning fish can we a cunning bait provide,  
In the sport that we court, by the gentle river side.

Where may we find the music like the music of the stream—  
What diamond like the glances of its ever changing gleam—  
What couch so soft as mossy banks, where through the noontide hours  
Our dreamy heads are pillowed on a hundred simple flowers—  
While through the crystal stream beneath we mark the fishes glide  
To the sport, that we court, by the gentle river side?

For us the lark with upland voice the early sun doth greet,  
And the nightingale from shadowy boughs her vesper hymn repeat;  
For us the pattering shower on the meadow doth descend—  
And for us the fitting clouds with the sudden sunbeams blend;—  
All beauty, joy, and harmony, from morn to eventide,  
Bless the sport, that we court, by the gentle river side.—AN ANGLER.

#### SPRING.

Of course everybody loves Spring. That "goes without saying," as our Gallic neighbours touchingly express it. Everybody has some sonnet, soliloquy, or set speech to let off in praise of the buttercups and daffodils, daisies and dandelions; and of a sooth they are witchingly beautiful. But what we especially admire in Spring is its *promisingness*. Autumn is very glorious, more brilliant perhaps than May itself, but then all its bright hues are fading hues; so tearful a time is that we might almost call it "hue and cry." It is a prism: Time suddenly turns the glass, and all the colors are gone. Summer is not a bad season; but then its fullness we don't like: everything is as good as it ever will be; there's nothing to hope for: it is a metaphor worked out to its last gasp; a city dame, decked in all the feathers, fringes, lace, gauzes, shawls, veils, tippets, and polka cloaks that she can cram on. No: give us the hopingness of Spring; and the season is full of it: woods, meadows, uplands, moors, and gardens: Hope is everywhere: Pandora's box had that ingredient only in a little out-of-the-way corner at the bottom: May's casket is top full of it: full! aye, pressed down and running over "I promise to pay," seems written by Nature on every object around—flowers, forest trees, orchards, corn fields. The birds are circulating their promissory notes in every green bough and under every bit of blue sky; the fish in the streams, the flocks and herds in the pastures; cold bloods and warm bloods, all follow so good an example; and, what is best of all, every promise is sure to be paid in full—Nature never repudiates.

This is what to us makes a ramble in the meadows in May or June so exquisitely delightful; it is this that makes our heart tingle with such a stirring joy by the side of every forest bank, by the gleam of every sunny stream; it is this, in fact, that makes us such an inveterate fisherman; for who so well as the fisherman can enjoy the charms of the opening year! who, like him, can find out the quiet nooks, the little flowery corners and crannies of the world, where all the best beauty is; and where, but for him, Nature would have thrown away some of her happiest efforts of decoration, and laid out some of her fairest landscapes, without eye to see or heart to feel their loveliness!—*Sporting Magazine for May.*

REASON FOR NOT WEEPING.—A melting sermon being preached in a country church, all fell a weeping but one man, who, being asked why he did not weep with the rest, "Oh!" said he, "I belong to another parish."

## HINTS TO A HORSE-SELLER.

BY HARRY HIMOVER.

UNDER any circumstances that may induce a person to send a horse to a repository, let me advise him first to consider whether he is a competent judge of his value (for what he may have given has nothing to do with it): if he is not a judge of the value of horses, in the name of common sense let him consult some one who really is; for as at least three-fourths of buyers pay more for a horse than he is worth (*in the market*), so three-fourths expect a salesman to get them a price the horse will not bring when thus offered for sale. This ends in disappointment both to the agent and the owner. If you go to a respectable man, tell him candidly all you know about your horse, his failings as well as his merits; if he really *knows* you to be a man of good temper and good sense, he will (if asked) not object to give an opinion of the price you may expect, or something very near it: and under such circumstances he should be allowed a discretionary power to either take what he considers the first fair offer, or to hold the horse over if he feels confident of getting a better. Of course this discretionary power and this attention to his advice and judgment must only be awarded to a man known to be one of integrity.

If you send a horse to a man to whose general conduct you are a stranger, the mode of doing it should be this: first get the horse examined by a known veterinary surgeon; it is 10s. 6d. generally, well laid out, for you may fancy you know whether he is sound or not: if you do, there is not one owner in ten who does. You may know he is not dead-lame, blind, or broken-winded; but there are many things very short of any of these that will make a professional very properly reject a horse as an unsound one. It therefore saves time and expense in learning this beforehand. Send your horse with a *written* description of his qualifications and his price; say he will be left with Mr. \_\_\_\_\_ so many days for sale; and if not sold by that day, he will be fetched away. Desire no offers may be communicated to you, as you have made up your mind, and sent his lowest price; and state he has passed a veterinary surgeon as sound. All this will show an honest man what to do; and it will show a rogue you are not one to be played with. I might be asked whether a Nickem would not, even in this case, begin some of his tricks? He might, but I should say he would not; for there are so many with whom he can do so with impunity, that he would not run the risk with one where it seemed likely he could not: and if he has reason to think you are not one he can bamboozle out of £20, he will rather get his commission by selling your horse than only get the bare livery; so he *will* sell him, or at least try to do so.

I have endeavoured to give my reader sufficient hints of the proper and improper practices of dealers and repository-keepers to enable him to judge a little of what is intended by either. I have stated many things that may be done by any one in the horse trade, also many things that sometimes are done; but let me entreat him not to imagine they are always done. A man conversant with the thing might write a treatise on the mode by which property is abstracted from our persons by pick-pockets: this does not make pickpockets more numerous, or need we clap our hands on our pockets whenever we meet a person in the street. Pockets are occasionally picked, and by pickpockets; men are occasionally robbed, and by horse-dealers of different sorts: but the difference of the case is very wide indeed. The pickpocket knows how to pick your pocket, and *will always* do it if he can: the dealer may know how to do it also in his way; so does every tradesman, but they do not *always* do it; and I am happy to say there are many who *never* do. I grant the horse trade affords great facilities for imposition and rascality—perhaps no trade more so: the greater the merit then of those men who tread a path so beset with temptations with credit to themselves and integrity to their customers, who would scorn the practices of a Nickem as much as they would and do the perpetrators of them. Such men—and I could point out many—are as worthy objects of the esteem of the public, as they are for the imitation of their less conscientious brethren in the same avocation. This I give as a hint to (in concluding the foregoing hints) on horse-dealers.—*Sporting Magazine for March.*

THE STATISTICS OF SOAP.—Mr. Hutt, with a laudable desire to ascertain how his county is off for soap, has moved for and obtained a Parliamentary return embracing all the statistics of this very interesting subject. It seems that, in England, the quantity of soap manufactured is considerably larger than the quantity made in Scotland. Perhaps the increase in the manufacture in British soap may have arisen from a rumour that several of the old Tories intended to wash their hands of Peel; and as some of those hands have had a finger in matters not particularly nice, it was naturally thought that a great quantity of soap would be required for the operation alluded to. We understand that Mr. Williams seconded Mr. Hutt's motion, on the ground that we ought to know how we stand for soap, when we may be called upon rather suddenly to lather the Americans.—*Punch.*

AN ARCH REPLY.—A little boy having been much praised for his quickness of reply, a gentleman present observed, that when children were keen in their youth, they were generally stupid and dull when they advanced in years, and *vice versa*. "What a *very sensible boy, sir, must you have been!*" returned the child.

## SONGS OF THE POLICE.

I met her in the flowery month  
Of May serene and sweet,  
When trees put forth their tender leaves,  
But never in my beat.  
I took her gentle hand in mine,  
And this is what I said:—  
"I always had a yearning heart  
To-wards a kitchenmaid."

When summer came with sunny days,  
And soft blue hanging skies,  
I often lounged about the door  
To catch her laughing eyes;  
And when she fetched the supper beer,  
Just in the evening shade,  
I often drank her health and kiss'd  
My willing kitchenmaid.

When autumn came, and jovial folks  
All went to Croydon fair,  
I took my recreation too,  
But did not take her there.  
I borrowed from her half a crown,  
Which somehow ne'er was paid;  
I think love drove it from her head,  
My darling kitchenmaid.

When winter came with dingy look,  
And night like cheerless day,  
She often brought a private drop  
To keep the cold away.  
At length her missus found her out,  
And tho' she cried and pray'd,  
Ah! woe is me, she lost her place,  
And I my kitchenmaid.—*Great Gun.*

THE EXETER 'CHANGE BEADLE.—This unfortunate individual appears to be in danger of falling a victim to the solitary system. He wanders from morning till night between the iron gates of the arcade of Exeter 'Change, which offers no change, alas! to him, and his existence is one of such utter solitude, that his fate might inspire another Zimmerman. When the gates are closed, he still continues his mournful promenade up and down; and the savage desolation of the spot, where no human foot-fall is ever heard, has rendered him almost wild, so that he looks through the bars with an aspect of fierceness at the persons passing the cage he is imprisoned in. We earnestly entreat the proprietors of the Arcade to consider the consequences of enclosing a human being in a living tomb, excluded from all association with his fellow-creatures. It is idle to deck him out in a gaudy livery, the brilliancy of which only mocks the darkness of his fate, and throws a blacker hue upon the lot which has befallen him.—*Punch.*

PLEASE TO OBSERVE THE ADDRESS.—The old inscription used to be "Messages carefully delivered, and carpets beat." But President Polk's flourishing Address ought to have appended to it "Messages carefully delivered, and *fustian* beat."

## NEW AND IMPORTANT EDITION.

Just published, Fourteenth Edition of the "SILENT FRIEND" on Human Frailty, with Coloured Engravings, price 2s. 6d. Free by post (in a sealed envelope), 3s. 6d., a new and important edition of

THE SILENT FRIEND; a Medical Work on the Infirmities of the Generative System in both sexes; and on the loss of the reproductive powers, with means of restoration. The baneful effects of solitary indulgence, neglected Gonorrhoea, Gleet, Stricture, Secondary Symptoms, &c., are fully pointed out. Illustrated by Engravings; followed by observations on MARRIAGE, with plain directions for the removal of certain disqualifications. By R. and L. PERRY and Co., Consulting Surgeons, London. Published by the Authors, and may be had at their Residence, 19, Berners-street, Oxford-street. Sold by STRANGE, 31, Paternoster-row; HANNAY and Co., 63, Oxford-street; GORDON, 146, Leadenhall-street; FURKINS, Compton-street, Soho, and all Booksellers. OPINIONS OF THE PRESS.—"We regard the work before us, THE SILENT FRIEND, as a work embracing most clear and practical views of a series of complaints hitherto little understood, and passed over by the majority of the Medical profession, for what reason we are at a loss to know. We must however confess that a perusal of this work has left such a favourable impression on our minds, that we not only recommend, but cordially wish every one who is the victim of past folly, or suffering from indiscretion, to profit by the advice contained in its pages."—*Age and Argus*.—"The authors of THE SILENT FRIEND seem to be thoroughly conversant with the treatment of a class of complaints, which are, we fear, too prevalent in the present day. The perspicuous style in which this book is written, and the valuable hints it conveys to those who are apprehensive of entering the marriage state, cannot fail to recommend it to a careful perusal."—*Era*.—"This work should be read by all who value health and wish to enjoy life, for the truths therein contained defy all doubt."—*Farmers' Journal*.

THE CORDIAL BALM OF SYLACUM is exclusively directed to the cure of nervous and sexual debility, obstinate gleet, irregularity, weakness, impotency, barrenness, loss of appetite, indigestion, consumptive habits, and debilities arising from venereal excesses, &c. In bottles, price 11s., or the quantity of four in one bottle for 33s. by which 11s. are saved. The five pound cases may be had as usual. THE CONCENTRATED DETERGENT ESSENCE. An anti-syphilitic remedy for searching out and purifying the blood from venereal contamination, scurvy, blotches on the head, face and body, ulcerations, and those painful affections arising from improper treatment or the effects of mercury, removing eruptions of the skin, secondary symptoms. PERRY'S PURIFYING SPECIFIC PILLS, price 2s. 9d., 4s. 6d. and 11s. per box, are the most effectual remedy for gonorrhoea, gleet, strictures, inflammation, irritation of the bladder, &c., without hindrance to business. Consultation fee, if by letter, £1. A minute detail of cases is necessary. Messrs. Perry are in daily attendance, for Consultation, at their residence, 19, Berners-street, Oxford-street, London, from 11 till 2, and 5 till 8. On Sundays from 10 till 12. One personal visit only is necessary to effect a permanent cure.

DANIEL MENDOZA.

## THE HISTORY OF BRITISH BOXING, FROM FIG AND BROUGHTON TO THE PRESENT TIME.

PERIOD III. 1786—1798.

FROM THE TIME OF MENDOZA TO THE APPEARANCE OF JEM BELCHER.

## CHAPTER I.

MENDOZA—(continued.)

**A**LTHOUGH the general opinion allowed Mendoza to have made much improvement since the previous fight at Odham, it is certain that the betting to the East continued in favour of Humphries. Humphries, too, had evidently lost much of that finished and commanding style of attack which rendered the first fight remarkable; he did not maintain his ground with his usual confidence, but suffered his opponent to drive him, and upon some occasions he seemed to labour under an impression that he had a superior boxer to cope with. Mendoza looked upon victory as certain, and, in many instances, treated the guard of his opponent with much contempt.

From his superior style of stopping, too, Mendoza received scarcely any blows of consequence except a severe one on his cheek.

The head of Humphries exhibited symptoms of sharp punishment, his face was much disfigured, one of his eyes completely closed up, and forehead and lip severely lacerated. Upon the whole, there was a falling off in his style of fighting.

The pugilistic world were not yet quite satisfied; and as the parties themselves were eager for a renewal of the fray, a third battle was arranged finally to decide the merits of the respective combatants.

September 29, 1790, was the day fixed for the decision of this grand combat at Doncaster. To prevent interruption from the populace, and to render the accommodation more secure and complete for the subscribers, who had purchased their admission at half-a-guinea each, a large yard, belonging to an inn, at the above place, was selected for the scene of action, enclosed on one side by numerous houses, and on the other by the river Don, and further secluded by a stout paling. But perseverance and curiosity frequently overcome all impediments;—water proved no hindrance, nor thick boards any obstacle to the anxiety of JOHN BULL to witness this heroic contest. Hundreds were rowed over from the other side to the paling, who lost no time in removing the obstruction to their wishes. Independent of those intruders, upwards of five hundred tickets were sold and admitted.

Between the hours of ten and eleven the combatants mounted the stage, amid thunders of applause: Humphries displayed considerable agility in springing up; and Mendoza was equally anxious to display his good spirits. The stage was twenty-four feet square, and raised four feet from

the ground. Tom Johnson, who had in the last contest been so anxious in the cause of Humphries, now appeared as second to Mendoza, accompanied by Butcher as his bottle-holder; Sir Thomas Apreece in his former capacity of umpire; Humphries was attended by Ward and Jackson; and Colonel Hamilton took upon himself the office of umpire; but, in case of any dispute arising between the chosen umpires, Mr. Harvey Aston was appointed as the third, whose decision, if appealed to, was to be final.

The odds were five to four upon Mendoza; and Humphries' friends, still sanguine of his success, took them with avidity. Mendoza's superior pretensions to science were readily admitted; but the fortitude and bottom of Humphries, and his other excellent qualities, had made an impression upon his admirers not easily effaced, who hence entertained a strong opinion in his favour.

The set-to at length commenced; every eye beamed with anxiety; the interest was absorbing, and every spectator lost in suspense. The combatants were heroes of no common stamp, and every feint was regarded with respect and attention. Money was known to be a secondary consideration; the wreath of the victor was the grand hope of either antagonist. Both felt noble emulation, and were determined honorably to gain or lose the proud title of conqueror.

Humphries, full of confidence, went boldly in, attacking his opponent with great impetuosity; but Mendoza, prepared, met him with equal resolution; they closed and fell. The second round was equally determined; and though Humphries appeared to put in the most blows, they did not seem effective. The combatants, aware of each other's excellence, paused; and it was stop for stop, and hit for hit, for some time, when, an opportunity offering, Mendoza concluded the third round by knocking Humphries down.

The fourth was of no import; but in the fifth round, Humphries endeavoured to put in a tremendous stomacher—the Jew knowing this favourite attempt of his opponent, stopped it with uncommon neatness, and returned the compliment for his attention with a facer—Humphries, full of game, fell in the return. It now seemed as if Humphries was on the decline. He had not lost his gaiety, but still there was a certain something that told the amateur he was going. The odds rose rapidly upon Mendoza, till they reached ten to one. Humphries's inferiority soon became manifest. Mendoza scarcely ever failed in bringing him down whenever he hit him; indeed he frequently fell from even a feeble touch, and sometimes without a blow, but the conquest appeared so

safe to Mendoza that it was never noticed. If Humphries was compelled to acknowledge the superiority of his opponent's science, it must not be forgotten that Dick never lost his greatness as a man: his fortitude was still the same, and the reluctance he manifested in abandoning the contest, even when pressed so to do by his friends, who saw that no chance was left, was unequivocal proof of his indomitable spirit.

Mendoza, in conquering so distinguished a competitor achieved considerable fame; but the greatest merit attached to the conquest was the manner in which it was obtained. Mendoza, being a Jew, had not the wishes of the multitude for his success; but courage is not the attribute of any particular creed or colour, and the humanity of Mendoza was conspicuous throughout this battle. On several occasions he threw up his arm, when he might have put in most tremendous blows upon his exhausted adversary.

Both the combatants displayed marks of heavy punishment:—Humphries's nose was much disfigured, his right eye was completely closed, and his forehead was dreadfully lacerated; he also received some heavy body blows; a few ugly touches were observed under his left arm, and his upper lip was split; in fact, he was so exhausted as to be carried by his friends to a carriage, the more speedily to obtain medical assistance. Mendoza, who gained strength by the exhilarating sound of victory, sported his figure upon the race-ground for a short time after the combat, but not without symptoms of uneasiness—his head was much bruised, and his left eye and ear indicated the vigour of his opponent's fist. His ribs were also in a tender state.

Bill Warr was next matched against Mendoza, and the mill appointed to take place at Stokenchurch, Oxfordshire, June 22, 1791. The beaks, however, were on the alert, and the parties having received warning, it was agreed that the contest should stand over till the ensuing September, and be decided at Doncaster. Here, however, the old "cup and lip" proverb was again verified, the trial postponed till May 14, 1792, and the venue changed to Smitham-bottom, near Croydon. On this eventful morn pedestrians out of number, and vehicles of every quality, were seen in rapid motion, eager to arrive at the destined spot. Between one and two the combatants appeared upon the stage, and were greeted with shouts of applause: Mendoza had for his second and bottle-holder, Tom Johnson and Butcher, with Harvey Aston, Esq., as his umpire: Warr was attended by Joe Ward and Jackson, and Mr. Watson as umpire.

At the commencement of the fight, the odds were in favour of Warr; and much was expected from his well-known skill and strength. For the first eight rounds of the battle he fought tremendously, and in the fourteenth he succeeded in nailing Mendoza on the jaw in such style that the Star of Israel came down with uncommon violence. Warr's friends were now in high spirits, as it was thought that Dan had received a sickener; but his game soon brought him about, and he finished two successive rounds by flooring his opponent cleverly. The superiority of Mendoza now became manifest. Warr perceived he was in the hands of his master and the spectators began to change their opinions. Mendoza knocked down his antagonist every round, nevertheless, Warr fought gamely an uphill battle, put in some good hits. In the twenty-third round the combatants closed—Warr was completely exhausted, and Mendoza falling on him, he reluctantly gave in. This victory established Dan's fame.

Nevertheless, Bill Warr fancied that in another trial he might regain his laurels; accordingly a match was made to come off in January 1794, near Hounslow, but the magistrates interfering, it was postponed till the 12th of November following, when it was decided upon Bexley Common.

The opening of the battle was good, and Warr seemed to feel that he should accomplish his wish; as before, in the earlier rounds he seemed to have a slight advantage, and his opponent fell before him; whether Mendoza permitted him to show himself off in this manner, that he might be enabled to exhibit his great superiority afterwards, or that he could not resist the efforts of his antagonist, cannot be ascertained; but it was evident that he treated all the attempts of Warr with perfect coolness, and seemed quite confident of the success of his waiting game. In the fifth round he went in, stopped the hits of his opponent with the greatest ease, and returned so tremendously, that Bill was disposed of in the short space of fifteen minutes! It was clear that Warr, from the moment Mendoza assumed the offensive, was lost, his opponent's confidence completely overawed him; and it was visible that he laboured under its depressing effects.

But amid all his glory, he was doomed to experience the vicissitudes of fortune by a mortifying defeat in his contest with Mr. Jackson, at Hornchurch, on April 15, 1795, which will be detailed in the memoir of Mr. John Jackson. This preyed so much upon his feelings that after six years had elapsed they burst forth with fury, occasioned by the following circumstance: Jem Belcher after beating Burke at Hurley Bottom, challenged Dan to fight, who immediately replied, that he had given up pugilism, and supported, by his industry (as a publican, at the Lord Nelson, in Whitechapel) a wife and six children, and only wished to fight Jackson, who had dealt unhandsonably by him as a pugilist; and he now publicly declared himself ready to enter the lists with him for one hundred guineas, provided that he would not take the unmanly and cowardly advantage of holding his hair. This oration of Mendoza's was soon trumpeted abroad, and some busy persons inserted a sort of

challenge to Mr. Jackson in the *Oracle*, or, *Daily Advertiser*, which was immediately answered by the latter.

The affair however, ended in nothing. In this letter Mendoza says he has fought THIRTY-TWO pitched battles.

In the year 1806, Mendoza was again introduced to the notice of the public, from a squabble with Harry Lee, arising out of some affair of *boil*, which it would be a mere waste of time and space to detail. The trash of "milling correspondence," with which the papers of the day—*The World*, and *Daily Advertiser*, in particular—were then deluged, is indeed surprising and wearisome. This farrago of lies, bad grammar, abuse, and ill feeling, the gentlemen who now *lead* the sporting press of England has rightly suppressed, and for it our best thanks are due.

We shall not here enlarge upon the squabbles of Lee and Mendoza, suffice it to say they resulted in a match.

Harry Lee was well known as an excellent sparrer, but had never publicly entered the lists as a boxer; he was extremely well made, and had the advantage of height and length of arm over his antagonist.

On March 21, 1806, at Grimstead Green, a short distance beyond Bromley, in Kent, the combatants met, and fifty guineas were the stakes deposited. It was a roped ring of twenty-five feet—Mendoza had for his second, Bill Warr, and his bottle holder, Bill Gibbons; Harry Lee was attended by the Game Chicken and Gulley. The odds were three to one on Mendoza.

ROUND 1. Mendoza looked at his opponent contemptuously, as if possessed of a more than usual degree of confidence. Lee soon made it appear that he was no novice in the art: he stood well up, with his left arm extended, and tried rather artfully to pop in a hit over Mendoza's guard; but the latter stopped them, and eventually got Harry down. The odds rose ten to one on Dan, and the bets were decided respecting the first knock-down and first blood.

2. Lee rose in a furious state, the claret flowing copiously. Mendoza made a hit, which was neatly returned by Lee upon Dan's nose—they closed and fell.

3. Lee, out of temper, went in to mill away; but Mendoza punished him right and left for his temerity, and he saluted his mother earth.

4. Lee now convinced the spectators that he was something more than a sparrer, by showing game—he put in a good hit over the left eye of Mendoza; but Dan threw him in the close. The opinions of the cognoscenti began to waver, for it appeared not quite so easy a thing as imagined; and two to one was sported that Mendoza did not beat Lee in half an hour.

5. Lee, not destitute of pluck, attempted to rally; but Mendoza, aware of his intentions, put in so severe a blow Harry went under the ropes. Three to one against Lee.

6. Mendoza, experienced in all the manoeuvres of the art, with the coolness of the veteran, judging that his opponent would attempt another rally, waited for him with the greatest composure: as he came in Dan put in a tremendous hit over Harry's nose, and threw him.

7. Of no account.

8. Lee, trusting to impetuosity more than judgment, went in rapidly; but the folly of such conduct was self-evident—Mendoza hit him away with the greatest ease, following him, and, in the event, throwing him a cross-buttock. Lee's frontpiece had now a variegated appearance.

9. Lee, full of gale, rallied—but Mendoza hit him sharply over the left eye, which was already terribly swelled. Five to one on Mendoza.

10. Dan laughed at his opponent; who made a feeble hit and fell upon his knees.

11. It appeared from Lee's conduct, that he entertained an idea that his opponent was to be conquered by impetuosity. He rushed in most furiously, when the latter hit him. Harry retreated and took refuge upon the ground.

12. Mendoza thought it was necessary to show a little fight, and, in a sharp rally, quickly punished his opponent out of the ring.

13. Rallying was the order of the day with Lee; Dan put in a severe hit, and, to avoid going down, Harry caught hold of his opponent.

14. Mendoza struck his adversary, who, to the astonishment of the spectators, laid himself down as before. [Some hisses and disapprobation occurred—and cries of "foul—take him away!"]

15. Trifling away time; Lee went down without a hit—and Dan laughed at him. [Six to one against Lee.]

16. Mendoza waiting for his opponent, hit him in the throat, which more than tickled him, and he fell from its effects, to all appearance extremely weak. [The odds now were out of comparison: a guinea to half-a-crown was offered.]

17. Lee went to the ground on the first blow.

18. Here flourishing—the men closed and fell.

19. Harry, quite gay, tried what effect another rally might produce: but Mendoza's sagacity rendered the attempt futile. He gave Lee a desperate blow upon the chin, which not only cut it severely, but sent him under the ropes.

20. Mendoza laughing at the insufficiency of his opponent's attempts—who now appeared quite passionate—stopped Harry's blows with the greatest sang froid. In closing, both went to the ground.

21. Dan gave Lee so severe a body hit, that it instantly floored him. [All betters, no takers.]

22. As Mendoza made himself up to strike his opponent, Lee fell. [Cries of "foul!"]

23. Of no consequence—both closed and fell.

24. Lee, still fond of rallying, tried it on: but Mendoza hit him away easily, and Lee slipped down.

25. Mendoza, as if expecting Lee would rally again, was perfectly prepared for the attempt. Lee went in, and got punished right and left, finally going to the ground, much exhausted.

26. Dan, full of spirits and vigour, as soon as Lee stood up gave him a floorer.

27. Lee, in making a hit lost his distance and fell.

28. This was a most singular round. Harry went into his opponent, and by main force threw him down by the arm.

29. A rally on both sides—Lee, undismayed, put in several hits: in the close Mendoza was uppermost.

30. The science of Dan was truly conspicuous, he stopped every blow; but happening to slip Lee put in some faces as Mendoza was going down.

31. Of no note whatever.

32. Dan appeared rather fatigued, in making a blow he went down upon his knees.

33. Lee now endeavoured to show that his spirits were in good trim, and made the best use of his knowledge, which was by no means mediocre; but it was in vain, his heart was better than his skill, and Dan milled him down.

34. Both the combatants fought well; but the turn was in Dan's favour.

35. Mendoza sent Lee under the ropes, from a well-directed blow.

36. Dan repeated the dose.

37, 38, 39. In all these rounds the superiority of Mendoza was manifest:—Dan stopped and hit as he pleased.

40. Mendoza punished Lee's ribs severely; he fell from the effects of the blows.

41. Lee was now becoming much exhausted; he fell from a mere touch.

43. Lee began to be convinced that the chances were against him; his exertions were on the decline.—Mendoza did as he pleased, and closed the round by throwing him.  
53. For the last ten rounds Lee had met the smallest prospect of success; still his game prompted him to continue the fight in hopes that some lucky chance might offer; but having fell a second time without a blow, Mendoza was declared the conqueror.

The amateurs were completely surprised at the protraction of the above fight, for one hour and ten minutes. It is certain that Lee was not equal to the task of encountering so experienced and finished a pugilist as Mendoza; but it is equally true, that his conduct was entitled to honourable mention, and considering it his first appearance in the ring, Lee acquitted himself in a superior manner. That he was not wanting either in courage or resolution, was evident; and his scientific efforts, in several instances, were entitled to much praise; indeed he completely eradicated the prevalent idea that he was nothing more than—a sparrer!

## JOTTINGS IN ST. JAMES'S PARK.

BY MILES'S BOY.

**L**ONGS of London, all hail!—Right cheerfully do we greet thee; and as Miles's Boy's last ramble was by night in the gas-lighted and cabbage-strewn quadrangle of a "Garden" by courtesy, now, in cheerful day and smiling sunshine, amid opening flowers, shrubs which blossom and burgeon, glittering waters, twittering birds, stately swans, and surrounded by palatial structures, will he take his pleasure in a garden proper.

But it is not with inanimate nature, with tree or fountain, with flower or shrub, that he will spend his time; the "human form divine," in its multifarious phases, yields stronger attraction to him who devotes himself to a higher study than mere botany, ornithology, or natural history: namely, the study of *mental physiognomy*, as exhibited in his fellow-creatures. To the unobservant the population which pass before him are but as an aggregate of humanity, to be formed into tables of births, marriages, and deaths, by some "fact and figure" member of the Statistical Society. To Miles's Boy, each unit in life's grand account, each individual ripple in the human tide, has its special story—its distinctive character. To the ordinary observer, a flock of sheep presents an uniformity of physiognomy which conveys no peculiar impression: to the shepherd's eye each "woolly-faced fool" has its characteristic expression—and thus it is to the man of the world, that each two-legged wearer of lamb's-wool bears some distinctive character. But a truce to speculation.

Gentle, or ungentle reader, let us take your arm. We stand in the square of Trafalgar, and turning our backs on the "Palmer's candle-stick" whereon is placed the effigies of "Britannia's god of war," the immortal Nelson, with the two dumbwaiters mis-representing fountains, we stroll leisurely by the admirable statue of the decollated Charles, and, en-

THE SWAIN, HIS INNAMORATA, AND THE LISTENER.

tering by the Spring-garden gate, saunter into the Mall. 'Tis Sunday, and see the seats, which invitingly stand beneath the verdant shade, have already their varied occupants. Ha! here is a characteristic group.

Surely the third in this trio is a pregnant illustration of the adage that "two are company, but three is none." How say you: is the youth who "whispers soft-nothings" in the lady's ear most enamoured of her or of his own sweet self. We will wager he is no lover by his very look. A natty sempstress, uncomfortably reflective on her own finery, and some spruce "young man" from "Waterloo," "Wellington," or "Victoria" House—some "linendraper bold:" and the cunning wight—he of the ante-diluvian checks—whose 'cute phiz bespeaks the satiric glee with which (while pretending to spell some weekly pen'orth) he drinks in the cockneyisms of the swain aforesaid—who, and what is he? A penny-a-liner; some hunter up of crowners' quests; one of that little regarded race, who always "in at the death," do "dreadful accidents," "horrid outrages," "fearful catastrophes," "seduction and suicide," for the diurnal and hebdomadals at three-halfpence per line. The oracle of the coffee-shop, the orator of the "parlour," we recognise him at a glance. That man leads a strange life, if such life be living. The seediness of his tweed wrapper, and the Holywell-street gone-by-ism

A MASKED ATTACK.

of his trowsers, render him, perhaps, insignificant in the eye of the spruce counter-jumper—yet, doubtless, he is a fellow of infinite mirth, and calculated to shine where Count Dimity must needs be "writ'n down an ass." But we leave the trio and enter the enclosure.

Paradise of nursery maids and their infant charges, lounge of life-guards-men, solace to the valetudinarian, recreation to the healthful, we wish heartily that thy like were multiplied east, west, north, and south, for the disport and refreshment of all! Here lounge fools who make fashions, and wise men who follow them. Here the knave, who lives by seeming that which he is not, walks side by side with meritorious members of society, whose diffidence conceals their true merit. And here again, we have a picture. Mark yonder sexagenarian swell in apparent paternal admiration of that frightful lump of juvenile ugliness! Think you his love of childhood induces that urbane and smiling condescension, that unusual familiarity? Have you never heard of "fondling the child for the sake of the nurse?" 'Tis a ready and a facile mode, a covert and cunning way of carrying by *sap* that fortress which could not be otherwise unobservedly approached. Oh! "lean and slippered pantaloons," but ill disguised in boots of Hoby and trowsers of Curlew, whence thy newborn philoprogenitiveness? Let the arch and smiling face of that fresh and rosy nursemaid answer. Yet 'tis plain that Ruth, Rachel, Sarah, or whatever her name may be, is not so green as the turf she walks on. Alas! for poor human nature, is it to see such sights as this that we find ourselves in these pleasant places? Hie thee home ancient libertine; and "with spectacles on nose," seek other amusement. But here we have a promenader of another sort.

(To be concluded in our next.)

LONDON:—Printed for the Proprietors, J. DUNN and E. SWEET, (and Published by them, 35, Holywell-street, Strand,) at the Steam-Press of W. M. CLARK, 10, Red Lion-court, Fleet-street, and Sold by W. M. CLARK, 17, Warwick-lane, Paternoster-row.

# THE Sportsman's Magazine

LIFE IN LONDON

No. I. FOR THE WEEK ENDING MAY 24, 1845. THREE HALFPENCE.

CONDUCTED BY THE EDITOR OF "THE SPORTING WORLD."

## INTREPID.

**Winner of the Chester Cup. (Value of the Stakes £1,625).**

Rode by (Arthur).

Is a four-year-old, the property of Mr. Skerratt, and is half-bred. He is, by ACCIDENT, out of Judy Callaghan, and is a strong little horse. The time (4 min. 18 sec.), and his competitors for the Chester Cup, sufficiently tell *his style of going*: he is trained by Wadlow, in the same stable as Ironmaster, The Libel, and Sweetheart.

## ADVICE TO YOUNG SHOOTERS.

Young Sportsmen have at times the detestable habit of firing both barrels at once into a covey of partridges which rise under their feet, and that without taking aim. I have ever seen those who were in such a hurry that the ends of their barrels were actually close to the birds. This habit is vicious, blameable, and abominable: it is the surest manner not to kill, but possibly to wound several, who die far off, or are the prey to vermin. Having once succeeded in killing, and having picked up three or four birds with one shot, they hope to succeed again; but you may bet ten to one that in firing this way you will kill nothing.

A good sportsman selects a right and left shot in the covey, probably two separated from the others; aims at one, then the other, kills them both, and lets the others off, with the intention of meeting them again.

And it is not without the best intention that I advise your aiming at the birds separated from the covey. If you fire at those in the centre, their neighbours may go off wounded. At all times, when two birds cross, it is as well to fire at their meeting point, if they have not met; or, if you discover their mutual intention of approach, keep your eye on the void which separates them, and the moment they meet pull your trigger: thus I have killed doubly-double shots, but this is a rare occurrence, only such as arrives on fortunate days, such as the Romans noted with a "white stone."

In sporting, as at *ecarté*, or any other game of chance, you may have your good luck and your bad: on some days everything goes well; on others quite the contrary.

Be satisfied with the consequences without desiring to divine the cause. Besides, we are not likely to discover it; it is one of the thousand riddles of the world.

Continue your walk. Here we are in a field of potatoes: your dog ranges actively: all at once he stands firm, his nose straight, his paw elevated: he remains like a statue in the position he had when moving. His tail is stiff, a trifle arched below: his seriousness is imperturbable; he is altogether at his work: be you at yours.

Everything denotes a hare: look beneath that tuft; she is on her form there, and safe from the rays of the sun; she has chosen the best position for shade and comfort; she never dreamt of a gun. Unquestionably you might destroy her point blank; but we are sporting, not committing murder: moreover, it is a question of learning, and not the desire of having a hare in your bag. By and by I will explain to you the circumstances which may permit you to fire under the nose of your dog.

Walk on: the hare starts; aim well, and fire, but not in a hurry. Allow your dog to do his work: should the hare be wounded, her pace will be retarded; she will be taken; if not, your dog will return when satisfied that pursuit is useless.

When a hare runs straight, your aim should be between the ears when you touch the trigger; if not, you run a risk of wounding or missing her. A sportsman should not satisfy himself with breaking the leg of a hare or the wing of a partridge: when he has a fair shot, his game should be dead. At a long shot it is another question: it is then excusable to wing a partridge or wound a hare.

When a quail is on the wing, then more patience is required. The quail flies straight, and more slow than a partridge. When it rises, you have time to take a pinch of snuff and kill it; you must even be careful not to fire the moment you are ready, or have taken aim, or your bird will be destroyed. Let him fly, and do not fire less than twenty-five or thirty paces off. A good shot never misses a quail which rises from the point of his dog. This is the *pomp asinorum* of the sportsman.

As for a rabbit, it is far more difficult. They start from bushes, do not run straight, but make many zigzags, and it requires much practice to knock them over well without a good aim, and I will pardon you all the shots you may miss. But the bush-rail, the king of quails, which rises at your feet, stretches out his long hanging legs, and gives you all necessary time: the ease with which these good and innocent birds are killed always leaves me in surprise that any remain.

The pheasant rises majestically: he shows a bold front to your aim; but the noise which he makes astonishes those who are not accustomed to it. Beginners always miss them: they hurry too much—they lose their heads, and really not without excuse. You must recollect that his tail is not a portion of the animal, and that the rear-guard often saves an army.

This lesson often repeated will bring you by and by to the best results. Practice will do the rest: soon with much coolness you will see your dog at the point: a hare will start, a partridge will rise, but the pleasure will be always the same. And tell me if in regard to all other things you can say the same.

**NO RULE WITHOUT AN EXCEPTION.**—When Marshal Blucher was riding with the Duke of Wellington in his carriage, after the victory of Waterloo, "My lord duke," said the marshal, "you have beaten to-day the best troops in the world."—"I hope," replied the duke, "you except those who have had the honour of beating them."

**TRUE CIVILISATION.**—Prosecutions have already commenced against the press in Algeria. This is the strongest proof we have yet heard of the colony becoming every day more and more French.—*Punch*.

## PREVENTION OF ACCIDENTS FROM FOWLING PIECES.

I HAVE known several serious accidents arise in re-loading fowling-pieces, all of which have occurred with the use of spring-flasks—not that I think that the involuntary ignition is always caused by a spring-flask, though it be a question if they do not sometimes ignite the powder by friction caused by particles of grit getting under the stop and spring of a flask after having had a fall in the sand. This could be easily decided by those who have had the misfortune to have suffered by such accidents, providing they are sufficiently collected to remember if the explosion did take place before the nozzle of the flask touched the muzzle of the gun, and the hand and flask downward. The haste in reloading to keep up the wild *hurry-scurry* of the *battue*—an exotic that has led to many accidents both serious and regretted, and which I hope to see the day that it may return whence it came, or blast and wither in our Isle—is one great cause of this undesired ignition; though there are other apparent causes; first, from some particle of tow being left in the barrel; and, second, from very much and quick firing, that a hot scale slips from the barrel into the breech. A third may be mentioned, that of charging with paper, though this is now never done except from necessity.

Explosion by the first can be guarded against after firing, by applying the finger or thumb to the muzzle of the gun, which will act as an extinguisher, and stopping the vent holes, if any, at the same time. The second, by turning the muzzle downward, and knocking out the hot scales, and applying the finger as above directed. It is needless to say anything of the third.

Amongst the many and variety of accidents I have known, one is that of a youth having fired, and, in re-loading, an explosion of the flask shattered his hand, throwing back the thumb, and, what was worse, a ragged portion of the flask was driven into his forehead, which it required a strong effort of a surgeon to remove. The blow had not fortunately deprived him of that presence of mind to run to the nearest medical man instead of going home: happily he soon recovered, and and nowise daunted, as I met him with his gun a few months ago.

I am personally acquainted with seven or eight of these mishaps: the last was that of a worthy baronet (Sir Thomas Boughiey) in this neighbourhood, and though fortunately not so severely wounded as at first reported to be, was sufficient to create much anxiety of his friends and the laying aside of his gun for the season.

In cleaning a gun, the very best tow should be had, not what is here called *noggs*, as these *noggs* are the very worst sort, full of splints and shattered particles, which are likely to lodge in the barrels after cleaning; neither do I consider the best tow to be free entirely from particles that might lodge in the gun. Without considering mine the best, I give it as I at present know none better. First, fill the barrel with cold water three or four times, shaking to and fro the water therein, and turning it out at the muzzle. By this means, the principal part of the foulness is got rid of without being forced through the nipples, which wears them more than firing; then apply the tow and cleaning-rod in plenty of cold water until the barrel is thoroughly clean. Hot water causes oxide or rust so quickly that many a good barrel has been injured. Dry the barrel with a succession of dry tow, and make the barrel sufficiently warm, but not hotter than the hand can endure. Finish with a small portion of oil on the tow.

I forgot to say that after the barrel has been well washed with the rod, &c., I fill the barrel and shake the water about and turn it out as before described; for I think this part of the cleaning is likely to leave some material that has been used in the washing. After the first fire stop up immediately with thumb or finger the muzzle as before mentioned.

Vent-holes I think worse than useless, as a current of air passes through the barrel in consequence, and keeps the fire alight should there be any inside the tube.

The old-fashioned flask is the best after all, as only one charge can ignite from latent fire, which would certainly burn the fingers a little, but not seriously injure the person; and in *battue* he may not have quite so many notches on his stick—but this would be much better than "cutting his stick" from a more serious cause. For those that are wedded to spring-flasks, a receiver might be suspended from the button-hole of the jacket, and dropped immediately on charging, with very little loss of time. No flasks are proof against general explosion; if it were possible to make them so, a few days wear would hazard that security.—*Sporting Review*.

**A MONSTER PORTFOLIO.**—At the dinner given by the directors of the Hungerford Suspension Bridge on its opening, it was stated that the bridge had remained for six years in the portfolio of Mr. Brunel. We have heard of all sorts of things lying in a nutshell, but a bridge lying in a portfolio is something quite new, and, indeed, to us it appears very like a crammer.

**CHEAP REFRESHMENT.**—The *Birmingham Advertiser* says:—"In these days it is quite refreshing to pronounce the name of the Duke of Newcastle." We suggest, then, as the warm weather is coming on, that the name of his grace should be written up in every public thoroughfare.—*Punch*.

RICHARD HUMPHRIES,  
THE GENTLEMAN BOXER.

THE HISTORY OF BRITISH BOXING, FROM FIG AND BROUGHTON TO THE PRESENT TIME.  
PERIOD III. 1786—1798.

FROM THE TIME OF MENDOZA TO THE APPEARANCE OF JEM BELCHER.

CHAPTER I.

MENDOZA—*Concluded.*

**W**E have already had occasion to observe the rarity of men believing in the decline of their own physical capabilities, and Mendoza, unfortunately must be added to the list of those who, in the words of Godfrey when speaking of Broughton, allow their "valour" so far to get the upper hand of their "discretion" as to "trust a battle to waning age." But other men, as well as pugilists, are guilty of this mistake; we shall not therefore dwell upon it further than to say that Dan ended his career, like so many other celebrated men, in defeat, though by no means in disgrace.

In July, 1820, being fourteen years from his last appearance within the roped ring, Mendoza met Tom Owen, in a contest for fame and fifty guineas. The battle arose from an old grudge; and although no one can doubt the game of Tom Owen, as we shall duly note in our memoir of that boxer, yet the frothy outpourings of the "Historians" in honour of his friend "Tom" and at the expense of Mendoza, are as bad in taste as they are extravagant in phrase. Be that as it may, Dan was defeated, and we need hardly add it was his "last appearance upon any stage."

From this period his life no longer belongs to the public writer. He died September 3rd, 1836, in the region of which he was so long the milling star—namely, Petticoat-lane, Houndsditch—at the advanced age of 73.

As a scientific professor of the art of self-defence, it was Mendoza who trod most immediately in the steps of Broughton. His success as a professor was unrivalled; and there was scarcely a town in the kingdom where he did not exhibit his finished talents to admiring and applauding assemblages. It seems, from a work we have before us, published by Mendoza himself, and containing much forgotten squabbling between himself and Humphries, that he derived his first knowledge of the art, scientifically, from his elegant competitor, "the Gentleman Boxer." But he so rapidly improved upon his master's system, as to stand for years without a rival. No man of his time united the

theory of sparring to the practice of boxing so successfully as Daniel Mendoza, and as a distinctive feature, the "School of Mendoza" marks a period in the HISTORY OF PUGILISM.

CHAPTER II.

RICHARD HUMPHRIES,

Was popularly known by the cognomen of THE GENTLEMAN BOXER, from his prepossessing appearance and the amenity of his general deportment. His attitudes were admired (according to the taste of the old school) for their impressive grace. Altho' we doubt not some of our modern professors, as they inspect the faithful copy of a contemporary print, which heads the first page of our 8th number, will be of quite another opinion. But "times change, and men change with them," and we suppose we must admit that our progress has been improvement.

HUMPHRIES was about the middle size, strong, and well-limbed; and had studied the science with great advantage. His blows were effective. The mark, or wind, and under the ear, being the principal objects of his aim. Contrary to modern notions, he struck with his right and stopped with his left; but did not make use of both hands with equal facility. His game was unquestionable, and he was justly considered a first-rate pugilist. He was so attractive as to give a renewed impetus and increased patronage to the art of self-defence; and on its being publicly announced, that he was to fight Martin, the Bath butcher, on a stage, at Newmarket, May 3, 1786, the battle assembled their Royal Highnesses the Prince of Wales, the Duke of York, the Duke of Orleans, and most of the French nobility then in England. A guinea was the price of admission, which hundreds cheerfully paid, to go to the winner; between thirty and forty thousand pounds were betted upon the occasion.

Martin was a boxer of some repute, shorter than Humphries, yet a well-made man, and had seen some service in the field of honour.

The set-to was distinguished for science; Humphries parrying his adversary's attacks with great adroitness, and standing up to Martin manfully. The latter was deficient in distance, and sometimes fell; hence his blows were often ineffective. Humphries was the favourite. Martin, finding his distance wrong, went boldly in to Humphries; the contest now became spirited, and the betting equal. However, Humphries soon appeared the better man, giving his opponent a most tre-

\* Mendoza was at that period fifty-seven years of age—while Owen was nearly six years younger; an important difference—supposing all other circumstances equal—at such an advanced (we had almost said absurd) time of life for a fistie exhibition.

mendous knock down, which varied the odds in his favour. Martin, notwithstanding, appeared game and fought well, contesting every inch of ground; and it was not till after a determined combat for an hour and three quarters, (Boxiana states three quarters of an hour) that Martin declared he had had enough. The distinguished company were highly gratified, and Humphries won—"golden opinions from all sorts of men."

Numerous sporting men rallied round Pugilism, and the professors of the science were not without high and noble patrons. Royalty now frequently witnessed the display of the art, accompanied by dukes, earls, honourables, &c., and men of the first distinction did not feel ashamed of being seen in the ring, or acting as umpires at a manly boxing match.

The science, courage, and gentleman-like conduct of Humphries had secured him many friends, and, with a mind by no means destitute of intelligence, he could not fail in obtaining admiration and respect. But deservedly distinguished as Humphries stood in the boxing hemisphere, a competitor arose to share his fame and glory; if not to aspire to superiority. He was not only a daring, but a most formidable rival, as his pretensions to pugilistic excellence were known to be sound; he had been proved, and his displays of skill in trying conflicts had made a deep impression upon the best judges, and as there was also a personal jealousy and rivalry, there was little difficulty in bringing together DANIEL MENDOZA and RICHARD HUMPHRIES.

Preliminaries being agreed to, Odiham, in Hampshire, was agreed on as the place, and 400 guineas as the sum for which these masters of the art should contend. A raised twenty-four feet stage was prepared, in a paddock, and the door-money was to be divided between the combatants. On the day (Jan. 9, 1788) being announced, the anxiety which prevailed upon the decision of this tourney was unprecedented. Odiham was then "a distance" from town, it is now a steam-steed's "stride." Everybody was there, for Humphries and Mendoza were to fight. In the towns and villages near the scene of action, the country-people were equally interested, and innumerable pedestrians were seen in all directions moving towards the fight, so that within an hour previous to the battle, the multitude collected was truly astonishing. To prevent the combatants from being bilked of the door-money, (which was half-a-guinea each,) the most athletic of the milling corps were selected for the protection of the entrance, and the potent arms of Dunn, Ryan, and Tring, assisted by other powerful pugilists, kept for some time order in the crowd. But, as the time drew near for the combatants to mount the stage, John Bull's anxiety increased beyond every other thought, and with one desperate effort, the "majesty of the people," like a mighty flood swept all before it. The door-keepers were soon lost by the violence of the torrent, and thousands never gave themselves the trouble of asking the price of admission. All was noise, uproar, and confusion, for some minutes; but upon the appearance of the combatants, their attention was so completely riveted, that silence instantly prevailed.

Upon mounting the stage, Humphries was greeted with loud and repeated cheers, which he gratefully acknowledged; Tom Johnson appeared as his second, the athletic Tom Tring as his bottle-holder, and Mr. Allen as umpire. Mendoza almost instantly followed, and was greeted with the most flattering marks of approbation; a Mr. Moravia acted as his umpire, David Benjamin was his second, and Jacobs his bottle-holder. Humphries' appearance, when stripped for the fight was peculiarly attractive, and his fine manly form was seen to great advantage. His fighting costume would now-a-days excite a smile, it consisted of a pair of fine flannel drawers, white silk stockings, the clocks of which were spangled with gold, and pumps tied with ribbon! The dress of Mendoza was unpretending.

About twenty minutes after one, every thing being ready, the preliminaries of shaking hands were observed, after which (a grotesque trait of the Frenchified manners of society at the period), the combatants saluted each other with a *congé*; and the fight began. Much was expected from two such skillful artists, and the expectation was not disappointed, for the feints made by each party were elegant and scientific. Mendoza felt no terrors from the athletic frame of his antagonist, and Humphries viewed the admirable skill displayed by his opponent with firmness and composure; the parryings were numerous and varied, and the cognoscenti experienced one of the richest treats ever exhibited in this noble and manly art: at length, Mendoza put in the first blow, and, recoiling from its effects, slipped and fell upon his back, the stage being greasy from the rain which had fallen previous to the battle. The blow however, though well directed was not effective, as Humphries blocked it and retreated. In the second round, Mendoza went in vigorously to his antagonist and knocked him down: and in closing in the third round the Jew threw Humphries. The odds, which had been much in favour of Humphries, now changed rapidly upon Mendoza. Flushed with his success, Mendoza kept the game alive with unabated perseverance, and Humphries did not appear to hold his own: Dan twice or three times got through his guard, and fiercely punished him down, but the state of the stage made these falls questionable. The Jews sported their cash freely, as Humphries, it was supposed, must soon be vanquished; but the friends of the latter undismayed took the odds greedily. At one time the contest was nearly coming to a premature determination, from the cry of "Foul, foul!" by the friends of Mendoza, who, in the early part of the fight

having driven Humphries upon the rail of the stage, while the latter was upon the balance, aimed a blow at his ribs which must have finished the battle, but Johnson caught it. The umpires considered that Johnson was correct. The stage was so slippery that Humphries could scarcely stand upon his legs, and soon discharged the finery from them, for the more substantial service of worsted hose.

Humphries now felt his feet, went in with his usual confidence, and the bets became even. He was fast recovering in wind and strength; and the spectators were delighted with his undaunted courage and neatness of execution. Mendoza was thrown, and in falling pitched upon his face; his forehead was cut just above the right eye, and his nose assumed a different shape; but the Jew's pluck was good, and in the next round he gave Humphries such a facer that the betting was still alive.

Humphries was gaining ground fast. He soon put in a doubler upon the lower ribs of Mendoza, one of the Jew's most vulnerable parts, which he followed up by one in the neck: Mendoza fell with his leg under him, sprained his ankle, and was reluctantly compelled to acknowledge the superiority of Humphries. Almost immediately afterwards Mendoza fainted, and was taken from the stage.

Thus ended this truly celebrated contest, in twenty-eight minutes and fifty-four seconds, during which period it is probable a finer combination of skill and courage was never displayed. The Israelites were severe sufferers; but although Mendoza was defeated his fame and character as a pugilist were considerably increased. His style of fighting was highly spoken of by the scientific; and at close quarters and as a quick hitter, he was evidently superior to his antagonist. The advantage was also upon the side of Mendoza in strength of arm, and when struggling to obtain the throw he punished his adversary considerably by keeping down his head. His guard was excellent, and displayed a thorough knowledge of the art; in consequence of keeping it closer to his body than that of his adversary, his blows were given with more force when he hit out; and with respect to stopping, he was not inferior to Humphries. For elegance of position, cool and prompt judgment, fortitude of manner, and force of blow, however, he was thought much inferior. He wanted also that manly bearing which was so apparent in Humphries, and whose confidence rendered him so apparently indifferent of self; in throwing, too, Mendoza, to the great surprise of many, had the advantage.

Humphries attitudes were of the most manly and tasteful description, and, even in the most trying moments of the fight, his postures were considered graceful. His intellectual capacity had rendered him more acquainted with the properties of the human frame than pugilists in general; and his habits of life had tended to make him more conversant and attractive in society than fighting men perhaps think essentially necessary. His manners were conciliating; and he endeavoured through life to enact the gentleman. His friends were materially increased by such conduct.

It was extremely difficult to decide which was the neatest pugilist; so much activity, science, elegance, and courage, were displayed upon both sides, though extremely different as to character and manner: but it appeared that Humphries, in the defensive position, although he kept his adversary at a distance by extending his arms, lost that celerity and power which his hits might have possessed had his arms been nearer his body.

Mr. Bradyl was the patron of Humphries, but prevented from attending the battle by business of a private nature. He felt so anxiously for the issue of the contest that his servant was ordered to witness the conflict, and convey to him the earliest intelligence. Humphries, immediately after the fight, like the heroes of old, wrote the following laconic epistle to Mr. Bradyl:—

"Sir,—I have done the Jew, and am in good health.

RICHARD HUMPHRIES."

To trace the career of Humphries further than this contest, would be to recapitulate what we have already given in the life of Mendoza, suffice it to say that, in the two succeeding battles of May 6th, 1789, and Sept. 29th, 1790, he suffered defeat at the hands of his Israelitish pupil. Humphries lived for many years after the last named contest, and died in respectable circumstances, his pursuit being that of a coal merchant in the neighbourhood of the Strand.

**SPEAKING IN TIME.**—A buffoon at the court of Francis I. complained to the king that a great lord threatened to murder him for uttering some jokes about him. "If he does," said Francis, "he shall be hanged in five minutes after." "I wish," replied the complainant, "your majesty would hang him five minutes before."

**FLIGHTS OF GENIUS.**—We are glad to state there is no truth whatever in the rumour that Stanfield, and a number of distinguished artists, had recently sailed for America. This statement of their flight originated in a report that Prince Albert had commissioned each of the artists in question to paint a fresco for Buckingham Palace. It is said they only returned when assured that the commission had been given by the Prince to a German decorator.—*Punch*.

**PAYING FOR INFORMATION.**—A man was asked the other day, if the new Hungerford-bridge was likely to pay? "Go over it, and you'll be told," was the reply.

## CORRESPONDENTS.

B. C. C.—We will gladly communicate with you according to your preposition.  
S. ROBERTSON, junior.—We will give you our opinion of fifteen probable starters for the Derby. To reprint the list of all the nominations now would be a mere waste of space. Of course, it is a guess; but we flatter ourselves a near one.

Idea.	Alarm.	Cabin Boy.
Kedger.	Wood Pigeon.	Punter.
Weatherbit.	Pam.	Worthless.
Old England.	News-monger.	Doleful.
The Libel.	Young Eclipse.	Miss Whip Coll.

There will probably be twenty-five or starters, or thereabouts.  
R. T.—We said before that Caesar and Bonifacio's portraits were in hand  
SAMUEL R.—Yes: we should like a good many such.  
B. B. S.—The mare, Lady Hampton, has twice trotted seventeen miles in the hour; on both occasions driven by Burke, of trotting notoriety.  
SUMNER.—A raffle takes place in which there are forty-four members. A member throws 40, when A bets B that 40 will not win; in the course of the raffle three throw 40, afterwards one of the ties throws 41. Does A win.—Yes.

HOWARDS.—We extract the following from *Bell's Life in London*, of Sunday last. Praise from so competent an authority is doubly gratifying:—"THE SPORTING WORLD, a weekly periodical, in which the tastes of all classes of sportsmen are consulted, continues to preserve its reputation, and by its admirable illustrations and treatment of various topics upon which it touches, especially the HARRY OF THE RING, deserves the extensive patronage which it has obtained." Though we this week change the title of this paper, the spirit which animates and guides it is the same.

R. BROWNLOW.—Which port, London or Liverpool, receives the greatest number of tons of shipping in the course of the year?—London.  
A WATER JUMP.—Thirty-three feet are often cleared in a hunter's jump, thirty-six are often asserted as being accomplished, one of Lottery's measured leaps was thirty-four feet.

N. P.—Cribbage.—A played a 6, B a 6, and took two points; A a 4, B a 7, A a 5, B a 3. Must A take four points for the 5, and B five points for the 3?—Yes.

A NOVICE.—How do pedestrians train themselves with regard to diet, exercise, &c., in order to enable them to run?—We will give you a regular paper or two on TRAINING for Pedestrianism and Wrestling; the subject is too extensive for a mere answer in the Correspondents' Column.

BOOTHBY.—Please to direct your communications to THE EDITOR (care of the Printer), at No. 10, Red Lion Court, Fleet Street.

RIVINS.—Durham.—We presume the Great Bustard to be extinct as a wild bird in this country; in the absence of information to the contrary. It therefore would hardly feel within our proposed plan to give an engraving and a description.

SUMNER.—A horse with a broken knee is not therefore absolutely unsound.

BARBICA.—A stone of meat in most country places is 14 lbs.—In London a stone of meat is 8 lbs.

IDEAS.—Here is his pedigree—IDEAS, by Liverpool out of Marpessa, (the dam of Evesham) by Muley—Clare, by Marmion—Harpaloe, by Gohanna—Amazon, by Driver—Fractious, by Mercury—Woodpecker—Eversfasting, by Eclipse—Hyena, by Snap—Miss Belsea, by Regulus—Bartlett's CHILDREN—Hollywood's ABRAHAM—Dam of the Two True Blues.—What would you have better in the way of blood? Though even this, after two descents, experience tells us is but a piece of foolery, if either of the intermediate sires or dams are poor in constitution, deficient in make, and degenerate, which is often the case.

AN ENORMOUS PIKE.—If any of our friends who are clever at "winding up a Jack" wish to see a curiosity in this line, we would recommend them to look in at our friend Little's, the tackle-maker, in Peter-lane, where they may see one of the most beautiful specimens of the freshwater Shark, that it ever fell to our lot to behold, for form, size, and colour. He is indeed a splendid fish, 42 inches in length, "spotted like the pard," and of the weight of twenty-three pounds; this monster was taken about a month since spinning with the minnow, near Chertsey, and is well worth a walk to see.

CRICKET.—J. B., Gravesend.—We have forwarded your enclosure to *Bell's Life*. The penny padlock closes our columns against news within a certain date.

DEFENSOR.—Your questions might all have been decided by reference to the Rules, and as they are now published in a very inexpensive and convenient form, we should advise you to save your postage pence and our time by investing a couple of Jozeys in the purchase of Clark's "Cricketers' Handbook." You will derive from it much amusement and valuable information, and it will lie snugly in your vest pocket without causing a wrinkle there, though it will put many in your caput.

OXON.—Decidedly out. You did not have left the wicket until given out by the umpire. Your other question is ambiguously put, but the umpire at the holder's end was the most competent judge—or ought to have been. This confirms the necessity of the remarks we felt called upon to make in our last on the selection of umpires.

WATFORD BOB, J. S. C., and A. B.—Profit by the advice given to "Defensor."

F. F.—The umpire had no right to give you out unless appealed to.  
\* \* \* Press of matter, and the number of Engravings, have compelled the postponement of the conclusion of Miles's Boy's "Jottings in St. James's Park," until next week: which we were the more inclined to do, as we have in this number given a sketch of another park, that of GREENWICH, at Whitsuntide.

☞ In future all Correspondents are particularly requested to address their queries or communications to "The Editor of the SPORTSMAN'S MAGAZINE," at the Office, "10, Red Lion Court, Fleet Street."

## OUR WEEKLY CALENDAR.

## AN EPHEMERIS IN JEST AND EARNEST.

SUNDAY, MAY 18.—TRINITY SUNDAY.—Cambridge Term divides midnight.  
MONDAY 19.—Prince of Wales elected Governor of the Blue-coat School, 1844. "Mind, my boys! no larks with the Governor!"—Anne Boleyn executed, 1536, and a melancholy neck or nothing affair.—ST. DUNSTON'S DAY:—

Who was a rare old fellow,  
And cooched the Devil by the nose,  
As every pious Christian knows,  
Vioh made him for to better!

TUESDAY 20.—Gorhambury Races.—Napoleon raised the siege of Acre, 1799. Sir Charles Napier knocked Acre down, 1840.—"No night till July 22nd," say the almanac-makers. What will become of Sir Peter Laurie?—Jack Langan beat McGowan, 107 m., 35 r., Curragh of Kildare, 1819.—Jack Randall beat Harry Holt, 25 m., 8 r., 35 gs., Combe Wood, 1817.—Tom Spring beat Neate of Bristol, 37 m., 8 r., 200 gs., Andover, 1823.—Columbus died, 1506.

WEDNESDAY 21.—Shrewsbury Races.—Tom Cribb beat Ike Pig, 11 r., 40 gs., Black-heath; and Richmond beat Yousop, 6 r., 20 gs., same day and place, 1805.—Molyneux beat Rimmer, 21 r., 100 gs., Moulsey, 1811.—Ned Neal (then known as the Streatham Youth) beat Deaf Davis, 100 m., 20 gs., near Woolwich, 1823.

THURSDAY 22.—Trinity Term begins.—The Derby Day, 1844, *Running Rein's* reign turns out to be mere *Walker's*; after some violent storms in Westminster, *Orlando* is hailed as safe in port. The stakes proved to be well done, and so forth, especially as regarded *Leander's* "chope."—Mr. Chisholm, the surgeon, assisted by mistake for Bernard Gregory of the *Satirist*: the errors of the press not properly corrected, 1843.—Dinner to Sir Henry Hardinge from the East India Directors. Sir Henry being away in his berth, the directors give him a good tuck in, 1844.

FRIDAY 23.—"Indifferent," says the *Antislavery Almanac*: we suppose this means a sort of Margate "Wheel of Fortune," viz., a regular blank concern.—Dick Curtis beat George Cooper (gipsy), 15 m., 7 r., 18 gs., Epsom Downs, 1822.—Victory of Ramillies, 1706, gained by the Duke of Marlborough.

SATURDAY 24.—QUEEN VICTORIA'S BIRTHDAY; born 1819; with a large golden spoon in her mouth marked J (ohn) B (ull).

*Things Worth Knowing.*—Horse-dealer's Duty.—The horse-dealer's duty is to cheat everybody he can, and take care that all "white stockings" are blacked with caustic; to warrant all knacker's backs as thoroughly sound, and express happiness at the chance of taking them back again if not approved; to speak of every vicious animal as "the sweetest mare he ever saw;" to call glanders "a cold;" and live nobody knows where.

## The Sportsman's Magazine.

FOR THE WEEK ENDING MAY 24, 1845.

CIRCUMSTANCES, which it would be tedious and uninteresting to detail, have occasioned a change in the TITLE of this paper, as the reader will doubtless observe; but with the change of name it shall not be our fault if any change takes place in the quality of this publication, either in literature or embellishment. Shakspeare has said, and thousands after him,

What's in a name?

A rose by any other name would smell as sweet!  
and under his authority we shelter ourselves.

But this change is not mere caprice.

Men are the sport of circumstances, when  
Mere circumstances seem the sport of men,

and hence a change of proprietorship in this publication has induced a mutation of title. Nevertheless, we are anxious to observe that this paper is conducted by the Editor of the "Sporting World;" and hence, every one of the serial articles, the BRITISH SONGBIRDS, the succession of FISH, the rambles of MILES'S BOY, the HISTORY OF BOXING, &c., &c., in the SPORTSMAN'S MAGAZINE, will proceed from the same pens, and the illustrations from the same artists, as those in the whilom Sporting World. In fact, if any alteration takes place (for mere business arrangements, which are nobody's business but those concerned, have caused this novelty of title) it shall not be our fault if it is not for the better. With these brief observations we confidently solicit a continuance of that patronage bestowed on its predecessor for this first number of the SPORTSMAN'S MAGAZINE.

ACTIVE AND PASSIVE VERBS.—A teacher, one day, endeavouring to make a pupil understand the nature and application of a passive verb, said—"A passive verb is expressive of the nature of receiving an action, as, Peter is beaten. Now, what did Peter do?" The boy, pausing a moment, with the gravest countenance imaginable, replied—"Well, I don't know, without he *hollered*."

BAPTISM.—A collier lately waited upon one of the clergymen of Dunfermline, for the purpose of obtaining baptism to his child; after some preliminary conversation, the minister asked him—"What is Baptism?"—"Joost thirteen pence ha'penny," replied he—"that's what I paid to Mr. R—, o'e know."

A ROYAL BON MOT.—When the Queen visited the Royal Academy exhibition, the fountains in Trafalgar-square were forced up to an unnatural elevation of thirty-three feet. On her Majesty being asked what she thought of them, she merely replied that "she had no idea absurdity could be carried to such a height."

THE HIGGINS' SYSTEM.—A CARD.—Doctor Higgins, Catholic Bishop of Ardagh, at present residing at Ballymahon, presents his compliments to the whole world of rascalhood and ragamuffinry, and begs to inform it that he is desirous of giving lessons in the Tongue of Billingsgate according to his own plan, known throughout Ireland as the "Higgins' System," by which discovery the pupil may in one week become a greater master of more foul words, uncharitable phrases, filthy epithets, and false assertions, than if he had studied for three years under any other master. Doctor Higgins confidently refers the public to his letters to Mr. O'Connell on the Maynooth Grant, &c. Doctor Higgins begs further to inform his readers that, being a Christian priest, he invariably precedes every lesson with a short but fervent prayer for Christian love and unity throughout the world. (Down with the "besotted" English, and hurrah for Repale!)—Punch.

## THE BELVIDERE CUP,

PRESENTED BY LORD SAYE AND SELE.  
(WON BY THE BLUE BELL.)

## BRITISH SONG BIRDS.—No. VII.

**A**MONG the most elegant and gaily attired of British Song-birds, the goldfinch, thistlefinch, or, as the naturalists term it, *Carduelis elegans*, deservedly ranks first. It is justly held in high estimation on account of its docility, teachableness, and the sweetness of its song. The plumage is blended, very soft, and slightly glossed, excepting the red feathers on the fore part of the head, which have a silky lustre. The wings are rather broad; the second quill longest, but scarcely exceeding the first, which is a little longer than the third. The primary quills are rounded, the secondary emarginate, excepting the inner two. The tail is short, and rather deeply emarginate, the difference in length between the middle and outer feathers being a quarter of an inch.

The bill is whitish, tinged with red, the point of both mandibles blackish brown. The irides brown. The feet dusky brown. The feathers marginating the bill all round, the loreal or preocular space, the top of the head, the occiput, and a semicircular band on the upper part of the neck from behind, black. Anterior to this is a broader band of white passing over the throat, and behind it a narrower of brownish white. The throat and forehead are crimson, that colour extending over the eyes. The hind neck and back are umber brown, that colour passing into ochre-yellow on the rump; the sides of the breast and flanks paler; the rest of the lower parts white. The smaller wing-coverts and alula are black, as are the primary coverts; the secondary coverts rich yellow; the proximal or basal half of the outer webs of the quills pure yellow, that of the first excepted; the other parts of the quills black, their tips pure white. The

tail-feathers are black, tipped with white; the two outer have a large white spot on the inner web.

Thus much for dry description, now for the bird in a state of nature. Let us stroll abroad on this fine autumnal day, when the sun shines brightly on the yellow fields, and the thistle-down floats along on the gentle breeze, gliding like snow-flakes over the river. There, on that old pasture, is the source of the plummy eruption, a forest of tall weeds, which the husbandman ought to have pulled up and burnt before they had time to perfect their seeds. See what tufts of down are scattered about by those little birds that seem bent on demolishing all the heads—anthodia, or capitula, as the botanists term them. How curiously they hang on the prickly stems and leaves, with what adroitness do they thrust their bills into the heart of the involucre, and how little do they regard us as they ply their pleasant pursuit, unconscious of danger, and piping their mellow call-notes! Now, some of them have perceived us; they fly off, chuckling, to a distant clump of thistles; and as we approach, others shift their stations; but as yet the main body has no thoughts of retreating. Let us stand still to observe them. They flutter over the plants, cling to the stalks, bend in various attitudes, disperse the down, already dry and easily separable, pick out the pericarps one by one, and swallow them. There comes a stray cow pursued by the herd boy. The birds suddenly intermit their labours, pause for a moment, and fly off in succession. You observe how lightly and buoyantly they cleave the air, each bird fluttering its little wings, descending in a curved line, mounting again, and speeding along. They wheel around the field, now descending almost to the ground, now springing up again. Some of them suddenly alight, when, the example thus set, all betake themselves to the tiny thicket of dried and withered weeds, and in settling display to the delighted eye the beautiful tints of their plumage, as with fluttering wings and expanded tail they hover for a moment to select a landing place amid the prickly points that seem to stand forth as if to prevent aggression.

The goldfinch usually nestles on trees, in orchards, gardens, or plantations. The nest resembles that of the chaffinch in form, but is more elaborately interwoven with wool and hair, the exterior being composed of grass, moss, and lichens, as well as occasionally thread, twigs, and other substances, the interior of the down of various plants, cotton, and such other delicate filaments as it meets with. The eggs, about five in number, are about nine-twelfths of an inch in length, six and a half in breadth, bluish-white, or pale greyish-blue, sometimes tinged with brown, and marked with a few spots of greyish-purple and brown, and in some cases a dark streak or two.

THE GOLDFINCH.

In the excellent Treatise on British Birds, published by Mr. Syme, will be found the following notice of this bird in captivity:—

"The goldfinch is easily tamed and easily taught, and its capability of learning the notes of other birds is well known; but the tricks it may be taught to perform are truly astonishing. A few years ago, the Sieur Roman exhibited his birds, which were goldfinches, linnets, and canaries. One appeared dead, and was held up by the tail or claw without exhibiting any signs of life; a second stood on its head with its claws in the air; a third imitated a Dutch milk-maid going to market, with pails on its shoulders; a fourth mimicked a Venetian girl looking out at a window; a fifth appeared as a soldier, and mounted guard as a sentinel; and the sixth acted as a cannoneer, with a cap on its head, a firelock on its shoulder, and a match in its claw, and discharged a small cannon. The same bird also acted as if it had been wounded. It was wheeled in a barrow, to convey it, as it were to the hospital; after which it flew away before the company. The seventh turned a kind of windmill; and the last bird stood in the midst of some fire-works which were discharged all round it and this without exhibiting the least symptom of fear.

(To be concluded in our next.)

## CRICKET.

HINTS TO CRICKETERS.—No. 4.  
ON THE MODERN STYLE OF BOWLING.

ALFRED MYNN, ESQ.

THIS week redeem our promise by presenting our readers with what we trust they will deem a striking likeness of the first fast bowler in the world, and a correct representation of his attitude in the act of delivering the ball.

Mr. A. Mynn was one of the first who adopted the present style of round bowling with a high delivery, and which was scarcely heard of, and seldom practised until 1827 or 1828, and even then was not formally acknowledged or sanctioned by the generality of county clubs. Its superiority over the old-fashioned under-hand bowling is too evident to all who practice the game to need any comment here; and we will merely state one instance of its usefulness, viz., that where matches once required three, and even four days to play out, they are now easily disposed of in two, notwithstanding the somewhat tedious practice, to a looker-on, of giving only *four* balls in an over. This saving of time is of greater importance than many might at first sight suppose. As far as the poor man is concerned, it prevents an excessive demand on his time, and consequently his pocket, which he could ill afford; and with respect to the gentlemen, however fond they may be of the pastime, it would in the former case not only have surfeited them of it, but would put a bar to other equally exciting and invigorating sports which in turn would demand their attention.

Let the admirers of under-hand bowling say as they will, it is certain that the bat had, under its auspices, obtained an undue and prejudicial mastery over the ball, and some change was absolutely necessary in order to keep up the balance of interest between the two grand points of the

game, batting and bowling; and as it is on all hands allowed that more science is required in the practice of *both* under the modern system, it surely cannot be denied that the game has become a far more agreeable and intellectual one. As an instance of the comparative weakness of the old style of bowling, take the following score of the once justly celebrated Hambledon club's first innings, when they played against All England, (June 18, 1777,) premising that the enormous number of runs were obtained against some of the best bowlers England could at that time produce.

HAMBLETON, FIRST INNINGS.			
Lord Tankerville, b by Wood	3	Taylor, c by Bullen	32
Lear, b by ditto	7	Aburrow, c. by Minchin	22
Veck, b by Lumpy	16	Aylward, b by Bullen	167
Small, c by White	33	Brett, not out	9
Francis, c by Wood	26	Byes, . . .	5
Nyren, b by Lumpy	37		
Sueter, b by Wood	46		403

In 1815, also, the Epsom club obtained 476 runs in one innings against the county of Middlesex, although the latter were allowed Robinson as a given player; and Mr. Ward, certainly the finest bat of his day, scored 278 off his own bat in one innings, when playing at Lord's against the county of Norfolk with some given men. In 1817, at Lord's, a match was played by the Epsom club against Sussex, when the score stood thus: Sussex, 737—Epsom, 308, the grand total being 1045!

We could, were it necessary to strengthen our argument, adduce many instances where Lord Frederick Beauclerk, Mr. Felix, Marsden, and many others made enormous scores in consequence of the mastery they had obtained over the ball; and which although showing the greatest merit on the part of the batter, did not afford equal pleasure or interest to the bowler; for even the batsmen, finding that they had obtained the master-key, were comparatively uninterested in further triumphs.

To remedy this evil the new style of bowling was introduced, and we should be the last in the world to censure any change in the laws of a sport so truly English that can render it at once more scientific and amusing. Of one of the first and fastest of our modern bowlers we have here presented our readers with a sketch, which we intend following up by some notices of his many achievements as well at the wicket as at the bowling-crease; and our artists have now in hand some spirited graphic delineations of the various hits, draws, blocks, &c., which will be given in quick succession. NED RUB.

## THE FISHER'S CREEL.

RIVER LEA AND ITS FISH.

THE RYE HOUSE.

HE celebrated Rye House has been stamped by history with everlasting fame; and old Izaak Walton has firmly hooked it on the memories of his disciples, for the tradition will be handed down to the followers (in embryo) of the gentle art, as long as the river Lea winds its silvery course through the flowery meads of Hertfordshire. The scene of the memorable Popish plot was laid here, as chronicles tell, although later times and better information has shown the whole to be a vile fiction and a foul treachery to betray good men to unworthy enemies: we all know, however, that the witty monarch, Charles the

Second, whose life, we are led to believe, was threatened, as he slept here on his return from Newmarket, reached London unscathed. Not so some of the reputed leaders of this fictitious plot; Russell and Sydney were sacrificed, as well as Rumbald, the maltster, who occupied the dwelling which heads this article.

There is enough of interest, nevertheless, whether in a historical or piscatorial point of view, to call for notice of this antiquated pile. The veriest cockney who ever graced Cheapside knows that the Rye House is situated on the river Lea, and when once on the margin of this favoured stream, he will have learnt that it is also within the parish of Stansted, and not far from Hoddesden, in Hertfordshire; and if he be poetically as well as piscatorially inclined, he will repeat or read to himself the beautifully simple pastoral which Walton carolled forth, while pursuing his innocent and healthful recreation with his pupil in the "gentle art." The most prosaic sun-inspired "Brother Bob" that ever drew breath would surely feel something akin to inspiration while reading this incomparable composition on the identical spot, endeared to all "brothers of the angle," by the recollection of the master spirit who once hallowed the surrounding scenery with his presence. In honest old Izaak's days there were fewer fishers and more fish. London then did not extend out of town, the Rye House was fairly in the country, and a jaunt to this celebrated place was esteemed something like a journey, much upon a par with a trip to York in the present day. In those good old times the scaly inhabitants of the river Lea had a quieter time of it; they were undisturbed, save by the visitations of cunning Izaak and his disciples, and these latter were few. We have all advanced in every branch of knowledge, and the Piscators have not been behind-hand in the acquirement of this fascinating art; and it is a question if "*Il gran maestro*," old Walton himself, could he be resuscitated, would not cut a sorry figure by the side of some of the crack fishermen of the nineteenth century. In the old gentleman's treatise we read of tackle which might create a smile from a school-boy; the fish were either very blind, very simple, or very plentiful, perhaps all three. Who the Bownesses and Chevaliers of those times were is not upon record. In spite of the havoc that has been committed with the finny tribe in the neighbourhood by the lovers of the craft, there is much good sport to be met with near the Rye House. The troller will find ample employment if he be skilful, for there are some well-grown pike in particular nooks and corners we could point out. The fly-fisher, also, if he angle merely for the sake of sport and care not for the quality of his fish, we can promise him it will be made up in quantity, for the chub do abound thereabouts, and great amusement will he find. There are some very good stands down the stream, where chub rise merrily at the fly in all weathers, and when they do rise freely we do not know any branch of the sport more exhilarating to the young beginner; it is a capital practice, and moreover keeps the tyro in good heart, for it is seldom the chub breaks his hold when once hooked. As an additional inducement, we can promise the angler most comfortable quarters and good cheer to boot, after his day's labour, at the renowned ale-house bearing the ever-attractive title of the Rye House.

With the fisherman it must ever be held sacred, for it is the self-same tenement honest old Izaak himself frequented, and of which he makes mention in his delightful book: he terms it the "honest ale-house," and says, "we shall find a cleanly room—lavender in the windows, twenty ballads stuck about the wall, and a hostess both cleanly, handsome and civil." The host who now rules the roast keeps up the charter; the character of the house, we can take upon ourselves to say, is in no wise changed; cleanliness and civility are the order of the day, the accommodation is excellent, and the charges moderate. The cook is a good one too—and the landlord a worthy fellow. By the Eastern Counties Rail to Broxbourne is a mere half-hour's trip; and when you have caught fish you will find the artist of the establishment fries with irreproachable skill; in short, the visitor and the sportsman will be highly gratified by a trip to the Rye House.

As a pendant to this skeleton sketch of the Rye House we will append a few "HINTS TO FLY FISHERS," and next week give the pond angler his turn by an engraving and a description of the CARP.

## HINTS FOR FLY-FISHERS. CHOICE OF FLIES.—THROWING THE LINE.

### CHOICE OF FLIES.

**VERY** angler has some favourite fancy fly, and every writer seems to have some peculiar theory on the subject. "If the water be full," says Mr. Hofland, "and somewhat discoloured, your flies may be of the larger and darker kind; if the water be low and clear, and the day bright, your fly should be dressed accordingly, i. e., it should be pale in colour, and spare in the dressing." We at first thought that we had mistaken the meaning of this author, from our want of that knowledge of the nomenclature of colours which he must possess, or from a want of precision in language on his part; but, on comparing the above with other passages of his work, it appears that he really intends to recommend dull coloured flies for discoloured water, and bright flies for clear water. Among the flies recommended by him for the Test, on ac-

count of the clearness of its stream, pp. 262, 263, are some of the very brightest description, as his No. 1, peacock herl and gold twist, with parti-ringed wing; No. 8, red squirrel's fur, red hackle, gold twist, and starling's wing; No. 13, pale yellow silk body, ribbed with crimson silk, with woodcock wing, and so on. In this particular his views are in direct opposition to those of other authors.

Mr. Stodart, author of the "*Scottish Angler*," and a gentleman of considerable practical experience on numerous rivers, lays it down, that "when a stream is small and clear, a hare's ear body, especially during spring, kills well; also the dun or mouse body, and small black hackles, at a later season," all of which are dark flies, and if the water be large and brown, a red professor, i. e., "a bright fly with orange silk body, made buzz with grouse or other hackle."

Younger, when treating of trout flies, does not expressly speak to the above point, but, in treating of salmon flies, he indicates general opinions which seem to coincide with Stodart's views, although they are not by any means clearly supported by other parts of his book. "In every case," says he, at p. 20, "of light wings, white, grey, or mottled, the shade should be darkened as the water falls into summer clearness." "I am not fond of broad tinsel in any case, except occasionally in deep dark cold winter water," p. 23; and he talks of "his principle of light colours in deep dark waters." The two last quotations seem to be contradictory of the first, and go to the very opposite extreme of Mr. Hofland, and equally wide of the true principle. A fish, as may be witnessed from a bank, when on the feed, lies with his nose peering over a stone or ledge of rock, and pointed up the stream, ready to take flies as they float downwards, provided there be nothing obtrusive in their appearance to awake his suspicions, and restrain his appetite until the fly is past. The object is not so much to awaken his appetite by a fly more attractive than the natural one, which you can hardly expect to achieve, as to avoid startling the fish when he has seen your fly, and would take it, among others, if there were nothing obtrusive in its appearance. Now the flies best suited to this object, are those which are most assimilated to the colour and character of the water. These, in clear water, are the hare's ear and blue (grey) water mouse bodies, together with pale yellow fur (not silk) bodies, which last, on examination, will be found to be very unobtrusive when wet. Silk bodies are the reverse. On the other hand, tinsel and bright colours are calculated, in a clear state of the water, to scare the fish, although, when it is dark and discoloured, they may possibly be useful, in order to engage his attention. So far as we know, therefore, it is the usual practice to use red hackles, orange bodies, and tinsel, for discoloured water, and the duller and fainter colours, for clear water. We can only account for the different theory entertained by some, by supposing them to have mistaken the inference to be drawn from a known fact, that flies altogether black take equally well in dark and in clear water. On this, the advocates for the use of dark coloured flies in these different states of the water, seem each to have founded a general and opposite rule, whereas the fact itself is, in reality, an exception. Another cause may be the want of an understood definition of the colours used by anglers, so that by "darker," may really be meant stronger colours, and by pale, not brighter, but fainter colours.

But the truth is, that the fulness or smallness of the water has not so much to do with the matter as is generally supposed. The weather is of more importance. Fine weather produces the more delicate flies, and cold weather the harder ones, and a good imitation of the fly in season at the time, whatever be the state of the water, will be taken better than any other. This last evidently seems to be Younger's rule, although his knowledge of the natural flies produced during the season, and of the best imitations of them, is but limited. He, like Stodart, recommends only three or four flies, which, although he knows nothing of their names, are evidently the March brown and blue dun, for the early part of the season, when these natural flies abound, and the little black gnat, and something like the peacock fly, for the latter end of May and June, at which season trout will hardly take any other artificial fly than the gnat, unless it be the pale yellow dun. Ronald's system is clearly reducible to the same rule as Younger's; only that, being an entomologist, he would be directed to the fly in season, by the natural history of the insect, whereas Younger would ascertain it as a fact, by looking what fly was on the water. Ronald's scientific knowledge of what flies were proper to the season, would, of course, have the advantage, if, as it often happens, no fly can be discovered on the water.

Thus the most scientific and the most simple authorities come to the same conclusion, and we think that, on a consideration of the whole subject, the following general rules may be advanced: viz.:-

1st. That the artificial fly, used for trout, ought to be an imitation of the natural fly in season.

2nd. This rule is in so far affected by the weather, as that a fine state of the atmosphere naturally favours the production of the more delicate coloured flies, and indicates the propriety of using the imitations of them; while these imitations, viz., the hare's ear, blue dun, and faint yellow dun, are, in point of fact, from their delicacy, the least startling to the fish, in a fine state of the weather and water.

3rd. The fulness of the water is not, strictly speaking, an ingredient in these principles, inasmuch as trout are found to take an imitation of the fly in season better than any other, both in discoloured and in clear water:

but it is so far a modification of them, that if the water be a good deal discoloured, it may be necessary to strengthen the colours and enlarge the size of the artificial fly, in order that it may be seen by the fish. It farther modifies their effect in this respect, that, when the water waves, the fish are on the feed, and readily seize flies of all sorts; and, at the same time, from the discolouration of the medium, they are more easily deceived, and nicety of colour in the fly is not so requisite as in clearer water.

In recommending an imitation of the natural fly in season, it is necessary to guard against a common error in beginners; viz., filling their book with every imaginable artificial fly, of which a prototype can be found at any time of the year. No such thing is requisite. Younger is nearly right when he recommends only three or four kinds; but as he resides on the river side, and never fishes but when the water and weather are favourable, his list, which does not contain even a single palmer, black or red, is too scanty for a townsman, who, after having travelled a great distance for the sport, must take matters as he finds them, however unfavourable. The latter, too, visits different localities, and thus requires a more varied selection of flies, to suit the different rivers, lakes, or pools, that he may try. The other authorities again, amid their endless store, bring forward so many repetitions of the same thing, that the difficulty is to classify them in making a selection. To aid in doing this, take the following list, which will be found to comprise almost everything useful. To facilitate the knowledge of them, we have prefixed the numbers they bear in Mr. Hofland's book, as he says all the tackle-makers are prepared to furnish them on a reference to his numbers.

No. 3. March brown.

4. Blue dun.

7. Pale yellow dun. Represents all May flies.

11. Hare's ear dun. Make it with a brown drake wing dyed olive.

15. Gravel fly. } Represent all black flies.

18. Black'gnat. }

22. Sand fly.

24. Alder fly. Represents all peacock bodies. Let it be made small.

27. Black palmer.

28. Red palmer.

To these add—August dun, No. 38 of Ronald, i. e., yellowish brown fur for body, spun on yellow silk, very spare, so as almost to show the silk, with any wing of same colour. Younger's evening moth—ginger-coloured body from behind—the hare's ear, and thrush wing. Use the two first of the above list in spring and autumn, and in cool weather throughout the season; the others after the middle of May. Winged flies, and of a large size, say No. 6, of Adlington's, are used for lakes. Palmer's and buzz flies are used on small and clear streams. When flies are dressed with hackles for legs, there should be no dubbing. Soft fur makes the best body, a little being teased out for legs, in place of a hackle. Mohair is too coarse for trout flies, and floss silk never makes a deadly fly.

Be simple in your flies; your basket will weigh the heavier. The most successful angler among the fine fishermen of Tweed, is a fisher at Innerleithen, who knows nothing about flies, and cares as little, and who, on a promising evening, having taken his rod, or borrowed one, calls, on his way to the water, at the house of a Mr. Boyd, a gentleman in his immediate neighbourhood, from whom he gets a couple of flies or so, a March brown and blue dun, for the service of the day. On one occasion, indeed, he fared better. Mr. Boyd, who himself ties a most beautiful and simple fly, had got over a few first-rate Irish flies, as a specimen of Martin Kelly's manufacture, and such as were worthy of the notice of the secretary of the St. Ronan's Fishing Club, which office he holds. One fine morning the fisher called, on his way to the river, for his usual supply, and finding that Mr. Boyd had preceded him to the sport, he, with the licence of custom, took up the first flies that attracted his notice, and carried off the far-fetched Limericks, reckless of their beauty or their cost. But his sport was not better than it had been with the plain hare's ear and water-rat.

#### THROWING THE LINE.

All the writers on angling that we have met with, avoid entering on this part of the subject, and state the art of throwing the line to be one that is only to be acquired from example, but not taught by precept. This, however, upon close consideration, will be seen to be true of the *manière*, or style of the performance, only; not of the action and movements gone through, which last are capable of being traced in this, as well as in any other art. Thus, although a correct bearing in the art of fence, and the true air, or carriage, in that of riding, will, no doubt, be best acquired from imitation (in the gymnasium or *mangée*), yet the motions of the limbs and body in making the parades of carte and tierce with the foil, or in giving the aids in horsemanship, perfectly admit of being described in words, and there are many who have learned these motions in no other way.

In now attempting to describe the action of throwing the line, we must be understood as speaking of the long line and large rod only, whether single-handed or double. The small rod for single hair fishing, is managed by little more than a jerk of the wrist, which must be checked in the midst, so as to arrest the line a few inches before it reaches the water, that the fly may drop from thence on the water with its own weight only.

The action of throwing the long line contains, properly speaking, two

movements only—the upward and the downward throw. But as each of these requires a preparatory movement, that is of the utmost importance to it, we shall include the preparatory movements in the division of the subject, and thus make four movements of it; premising that, in the whole four, the left hand supports the extreme end of the butt, as a socket or fulcrum, the right grasping the rod some thirty inches farther up, at the place where it may be found to give the greatest command.

**First Movement.**—The first movement is preparatory, and consists in getting almost all the line clear out of the water, the trail-fly only remaining on the surface to be lifted neatly off.

**Position.**—If the top of the rod be slightly elevated, the stream will carry out the line till it be free.

**Note.**—This movement, though preparatory, is essential, as, without it, the fish that may be lurking below you, in the water you have not yet passed over, would be scared by the splash of plucking the line quickly out of the water, and the rod would run a great risk of being broken by the resistance the water makes to the line, if pulled up before being extricated. If you doubt this, try.

**Second Movement.**—Raise the rod to the perpendicular, with sufficient force to throw the line to its full extent, rather over your head than behind you.

**Position.**—Turn the hands, especially the right one, with the nails inwards, and rather upwards; i. e., towards the face and head; sink the bended elbows close down by the sides, and keep them confined there throughout; keep the right wrist rigidly firm without any lateral motion whatever. The movement must not be made by any play of the joints, except the raising of the fore-arm. The force of the muscles of the arms, vigorously braced, is sufficient for the purpose, the rod being directed by the firm grasp of the right hand and thumb, which must arrest it at the perpendicular, close up by the right ear, nearly in the soldiers position of "make ready."

**Note.**—If the rod be allowed by any play of the wrist, or otherwise, to go farther back than the perpendicular, the line will infallibly strike the ground, to your loss in tackle; and the fourth movement will be marred.

**Third Movement.**—This is preparatory to the next, and consists in simply turning the hands, especially the right, so as to place the nails outwards, towards the river.

**Position.**—The perpendicular position of the last movement must be rigidly preserved; the doubled elbows still kept confined to the sides; and the wrist not thrown backwards in the least.

**Note.**—In order that the line may fully extend itself, take as much time to this movement as to the second, for which purpose we have given it a separate place. If you do not, you will crack off your fly, or bruise the gut, which will cause it to look white in the water. By degrees you will come to feel when the line is fully extended, by its weight on the hand.

**Fourth Movement.**—Throw forward the rod, so as to cast the line to its full extent in the direction across the river.

**Position.**—Extend the arms vigorously towards, or athwart, the river; the elbows being no longer kept confined to the sides, but freely opened out; and give the rod, by means of the right wrist and thumb, a circular motion round the butt, as a pivot.

**Note.**—These two motions, by practice, become in some degree, blended together, so as to give the true movement, which is exactly as if you were laying the extended rod gradually from butt to top across the river, in order to measure its breadth. The force required is proportioned to the stiffness of the rod; a stiff rod requiring considerable force, a supple one very little. Aim the fly at an imaginary point a few inches above the water, from which it should drop with its own weight only, so as to make no splash. Let as little of the line as possible fall in the water; not more than to the highest drop-fly.

Having got the fly into the water, it may be useful to some, to remark generally, that the trail fly should float down the water before any part of the line. If it has not fallen in a position to do so, hold the rod a little up the water until the stream take it down, so as it may be presented first to the notice of the fish, else you will hardly catch many. Let the line hang in an easy curve from the rod, without dragging in the least. The weight of the line will slowly bring round the fly to the side for another cast. Let the rod follow, not lead, the line downwards, and round to the side. In fishing in running water, if you draw the fly in the least, or let it be dragged by the line, so as to make the smallest ripple, you will catch none but small fish. In lakes, and still parts of rivers, the fly must be drawn slowly along the water. It is peculiar to the native anglers on the Lochy, and most of the large rivers on the western coast of Scotland, that, in fishing for large trout, they move the fly in the same manner as if they were fishing for salmon. But we are not aware that any but sea trout are caught in this way.

#### MORE DID-YOU-EVER.

Did you ever hear of a young lady taking the veil who was not described as possessing great personal attractions?

Did you ever know a new member second the Address, whose opening remarks were not reported as inaudible in the gallery?

Did you ever know a man who did not tell the point of a story twice over?

## AN IRISH METHOD OF "EMBALMING" A HOUSE.

"There was one person I didn't like to let the house to," says Larry, "I didn't like the cut of his jib, but however, the wife got over me, and I was coaxed to let them have it, and sorry enough I was for it afther—for by my sowl they embalmed it in right earnest."

"What do you mean by embalming a house, my man?" "Och! it's just another word for gutting it, sir, and the devil a grate, or windy-sash, or a ha'porth they left in it before a month was about."

"How came you by that fine word, Larry?" "Why, sir, you see my master was a young man, and he was not long out of Trinity College, and when he was well to do, he used to have a lot of the collaygens wid him drinking an' eating Poolbeg oysters, till there was no end to it,—and he towld me the Ayyipshins, whoever the devil they wor,—when they used to embalm the dead bodies—God presarve us!—used to scoop out all the inside, an' that was the rayson they called gutting a house embalming it—as if a christian an' a house was all the same—Anyhow, when I'm dead, I hope they'll let the worms get their natural diet, and not deprive them of their perquisites. Thim was dam queer chaps, thim Ayyipshins, to keep a fellow crayther from what they're entitled to."

**LIABILITIES OF AN EDITOR.**—Lord Denman has laid down the law recently, that an editor has no right to insert any paragraph before he has ascertained "that the assertion made in it is absolutely true." So then, in the case of the late discoveries made by the Earl of Rosse's telescope, an editor ought to have proceeded to the different planets mentioned before he inserted any statement respecting them. According to Lord Denman, the man in the moon and orion would both recover swinging damages from almost every editor in the United Kingdom for the reflections cast by the earl's telescope on their characters as planets.—*Punch*.

**A USEFUL HORSE.**—A gentleman having a horse that started and broke his wife's neck, a neighbouring squire told him he wished to buy it for his wife, to ride upon. "No," said the other, "I will not sell it, I intend to marry again myself."

**DANGER OF UPRIGHTNESS.**—Baron Platt going the western circuit the other day, had a great stone thrown at his head; but, from the circumstance of his stooping very much, it passed over him. "You see," said he to his friends, "that had I been an upright judge, I might have been killed."

What's the best way to stop a woman's crying? To dam(n) her eyes, to be sure.

GREENWICH HOSPITAL, THE RIVER, &amp;c., FROM THE PARK.

## A COCKNEY TALE FOR WHITSUNTIDE.

BY MILES'S BOY.

**R.** TIMOTHY SNUGSBY and Miss Caroline Jinks had long known, and almost as long loved each other. Timothy was a journeyman cabinet-maker by trade; his adorable Caroline plied the needle. With respect to their pecuniary resources, we do not think we shall be running wide of the mark, when we say that Timothy's earnings averaged thirty shillings a week, Caroline's about fifteen. Both lived in the suburbs; and it was their custom to frequently go out together—especially on fine Sundays, and on summer evenings. There were extraordinary occasions also for their public appearance—Greenwich fair, for instance; and as it is our intention to show them there, we will here now conclude this brief but necessary preface.

Whit-Monday morn broke dull and cloudy, but towards the afternoon old Sol shone out in splendour. It had been arranged that Timothy should call at the residence of the all-beauteous Caroline, and have his breakfast there. He did so—and, oh, ye gods! how was he charmed at the appearance of his bride that *was to be*! She had arrayed herself in a bran new purple silk dress, shot with orange, with ever so many flowers in her hair, in which there was also exhibited a profusion of bows and ribbons; pink silk stockings embraced her pedal extremities, and her feet (she had very pretty feet) were charmingly encased in a pair of patent leather shoes. To crown all, a shawl, many coloured as the rainbow, gloves of brimstone hue, and a shot-silk bonnet, surrounded by a wreath of brimstone-coloured leaves interspersed with blue bullaces, lay on the sofa.

Timothy had not been careless with regard to his personal appearance. He always so contrived matters as to have a new coat at that particular season of the year; blue was the invariable colour, and treble-gilt but-

tons the never-neglected ornaments. On the Whit-Monday in question he had donned a most brilliant waistcoat, white ducks, a new six-and-three, Wellingtons, and so forth, and had not forgotten a black cane with a silver top. Dull and drearily the clouds yet hung about the horizon: and to while the time they fell into converse sweet, in the course of which Timothy prevailed on the yielding Caroline to confess to a "mooted flame," as he phrased it, and finally to breathe a soft consent that they would be married so soon as the industrious Timothy had "accommodated a room o' things," and the other indispensables to committing "the sin that they call matrimony."

At length, the walkin cleared; and right joyously and proudly, for he was "a haccpected young man arter two years keeping o' company," Timothy marched forth towards the Borough terminus of the "Grinnidge Railway," supporting on his dexter arm the lovely and simpering Caroline Jinks.

Gaily the interesting couple walked along, arm-in-arm, much envied and much admired, and quickly arriving at the terminus they hurried to secure seats in the starting train. Off it went; and Timothy had scarcely time to exclaim, "Well, this here is quick!" ere he found himself in Greenwich. He could hardly believe his senses, and had he not been in Greenwich before, he would perhaps have played the same part as the honest Jack tar, who would insist that the company had some grudge against him, and wanted to get his *sixpence* for taking him no distance at all.

Who has not been in Greenwich on Whit Monday? Let those who have not assure themselves that they have lost a sight. What bustling about there is to be sure—what bucks from town—what pretty girls—what noise, rattle, and agreeable confusion! When Snugsby and the divine Caroline arrived there were hundreds in the Park, and hundreds making their way towards it; many, too, were boosting in the parlours of the various taverns. Now, it was through going into one of these, that Timothy—but we are anticipating.

"It's wery warm, Carry," remarked our delectable friend Tim, addressing his lady-love.

"It is," acquiesced Caroline, who shrewdly guessed this assertion was the prologue to a wet.

"I think we'd better have a drop of something short afore we goes further," said Tim.

"Oh, by all manner of means," replied Caroline; and the twain entered the public-house.

"What's it to be?" asked Timothy, gallantly.

"I don't mind a little g-i-in," returned Caroline, letting the word slip out of her mouth by fragments.

"A glass of gin and water—hot, with," said the journeyman cabinet-maker, with a sharp emphasis; and as he gazed down at his high-heeled Wellingtons, (none of your Miss Fitz Clarence at 8s. 6d.) he positively thought he looked military.

The gin and water came, and was discussed—in a style of dignity by Timothy—amiably and sippingly by Caroline.

It so happened that a soldier sat beside them—a strapping six-foot specimen of humanity—a real living life-guardsmen. Tim cast an eye of admiration at the trooper's accoutrements; and the latter soon got into conversation with Caroline and Tim. He asked them if they meant to take a turn in the Park—they replied, "Yes;" well, by a strange coincidence, he was going there too; and as he knew the road thither would be very much crowded, and as a delicate female could not be too well protected under such circumstances perhaps the lady and gentleman would permit him to accompany them—the former accepting the temporary aid of his arm.

"Oh, yes!" exclaimed Caroline, flattered. "Thank'ee;" mumbled Tim, for he hadn't pluck to decline the offer. Was it strange that they should do so? was it strange that Timothy should do so, even allowing the consent of Caroline to be a thing of course? It must be confessed that the former had had various qualms touching the Park. He remembered very well the last time he had visited Greenwich—when, manfully striving to clear a path for his adorable and himself, some Goth shouted out, "Never mind little Short-legs;" indeed, to speak the truth, Tim was apprehensive of the insult being repeated. But now that the office of pioneer would be chiefly sustained by a tall guardsman, he felt as though eased of a load. We have omitted to mention that Timothy was not more than five-foot four in height: the reader will therefore very naturally conclude that he had taken the term "Short-legs" in the light of a gross personality.

In the crowded fair, through which the wily guardsman purposely led them, (well knowing that in a throng there are many opportunities for sly squeezes, nudges, slight pressures, &c., which would be indecorous and particular elsewhere,) the services of their strapping protector proved so evidently useful that Tim made a third in the diagonal rank of which Caroline was the middle with much pleasure; and on they pushed, the guardsman leading, Caroline close up, and little Tim towing astern. At length they made their way to the Park; the son of Mars having, as he thought, by this time made some advances in the fair bonnet-builder's good graces. They climbed slowly and tediously to its summit, and gazing down on the merry groups, the majestic trees, and the green-sward slopes, their eyes were greeted by the view presented to the reader's eye on the opposite page.

To their right, amid umbrageous trees, stood the palace-like asylum for the brave tars who have "braved the battle and the breeze" in all climes, and in every peril, for the safeguard, the glory, and the wealth of this "tight little island." Before them was the Naval School, where they train the youth, one day perhaps to be time-honoured veterans beneath the shadow of the neighbouring walls. Beyond, spread the noble river, a prominent object on the waters of which is the bulky DREADNOUGHT, now devoted, after years of chasing or facing Britannia's foes, to the peaceful purpose of a seaman's hospital. But see, a cloud overspreads the Essex shore, and the soldier-companion of Tim proposes an adjournment to the town, where shelter may be easily found enforcing his proposition with two cogent reasons; one, the dampness of the grass, which, (he said, with a leer at Carry's small and neatly-shod feet,) might give the young lady cold; and secondly, he was fearful that as the evening drew on the air might affect the *young lady*. Carry perfectly coincided with all the guardsman said; accordingly the adjournment was carried *non con*.

Seated in the parlour of a neighbouring tavern, which commanded a fine view of the water, the trio "quaffed the rosy," not forgetting to accompany it with the more substantial. The soldier laughed, joked, and talked; but, strange to say, did not, for the first hour, awaken jealousy in the bosom of Timothy. At length, however, the little cabinet-maker *did* feel some unpleasant twinges, more especially as, to his thinking—for Timothy was a young man of strict moral propriety—Caroline laughed longer and louder than she need have done at every word, jocular or otherwise, which the soldier said.

"My fine fellow, Snugsby, you had better pay the shot," said the soldier, with the coolness of the colonel of "the Blues;" "I'm out of change, at present: make it all right, my boy, by-and-by."

"Y-e-s," returned Snugsby: he called the bill—"Twelve-and-eightpence, sir."

"T-t-twelve and eightpence, sir?" gasped Tim. The swallow of his military friend had certainly been prodigious. Tim threw down a sovereign with a half-groan. He would not have minded had it been for Caroline, but he was fast losing his good feeling towards her over-attentive friend the guardsman. "Well thought of," said the latter, rising and stretching his long legs, and squaring his elbows to adjust the sit of his padded coat. "He's going, the Lord be praised," internally ejaculated the simple Timothy. Not a bit of it. "Well thought of," my fine fellow, said the soldier; "I've a huncle in the orriginal here—King Charles's ward—did you ever see it inside?" "No," gasped Tim. "Then come along of me," said the soldier. Caroline was already on her feet adjusting the skirt of her shot-silk, which she had carefully turned up to avoid soiling it with the form on which they sat, and with what Tim thought unseemly alacrity, had taken possession of the guardsman's arm. There was no resource but to grin and bear it, for Tim had not the moral courage to break off the dangerous acquaintance. They reached the hospital in a few seconds. Turning to the left towards the river, on entering the quadrangle, the trio entered a doorway, ascended a broad stone-staircase, and came into a long gallery filled with queer-looking hutchies, something between ship's cabins and landmen's bed-chambers, this was King Charles's Ward.

Ben Boosey, a wooden legged pensioner, the uncle of the guardsman, was quickly discovered dozing in a sort of settle. "Ah! Ben, my jolly old tar," cried the lobster to his avuncular relative; "how's all that's left of ye? Here's a 'quaintance o'mine from Town (Tim thought this much more familiar than mannerly) as wouldn't rest till he'd stood a stiff glass of grog, for he hadmires beyond everything the defenders of his country." Astonishment fairly struck Tim dumb. True, in the course of conversation he had expressed himself "rayther" patriotically at the view of the hospital; hoping thereby to attract some portion of Caroline's attention to himself. But as to this offer of grog (Tim thought of the 12s. 8d., and 2d. to the waiter, with a sigh), such a thing had never entered his brain. Tim stared up at the guardsman, but his tongue clave to the roof his mouth as he reflected on the probable consequences of contradicting such a fellow. The soldier winked his eye patronisingly at Tim. Old Bob Boosey, whom the mention of grog had suddenly rejuvenated, stumped off dot-and-go-one toward the staircase-door by which they had entered. "Best leg foremost," said the soldier, laughing, as he ostentatiously put forth his foot: and Caroline doing the same, the soldier and Tim's lady-love followed Ben Boosey, keeping step with military precision; the long fellow accommodating his stride to Carry, who somewhat lengthened hers; while Tim, with a sigh, brought up the rear.

We shall not dwell on the justice which Ben Boosey did to about five shillings worth of stiff rum-and-water, with lashings of backey; the soldier gallantly declining to smoke "on account of the lady." Caroline, too, imbibed enough to make her exceedingly lively—indeed Tim thought indecently so. Ten shillings was again called for from the meshes of Tim's purse. "What would ha' becom o'me if I hadn't a bin well blunted," thought he: "I shouldn't never have been able to get home." Night fell, and they walked from the tavern into the street; for the house became momentarily more crowded, and Caroline complained of the heat and smoke. "We're agoin' to Town," said Tim, with a desperate effort, hoping to shake off his scarlet nightmare.

"Well, we shan't part yet," remarked the soldier; "for I'm going to Town as well as yourselves."

He had still one of the arms of Caroline in his, and poor Timothy knew it to his sorrow; the arm he nursed hung listlessly, the other closely squeezed the elbow of the guardsman, who, in return, pressed tightly the kidded hand of Caroline within his monstrous paw.

They entered the office of the terminus.

"Tickets, gentlemen!" said the policeman.

"All right — there — first class — pay for three!" said the son of Mars, leading Caroline towards the narrow turnstile, while Timothy's half-crown was impounded for two shillings, and he hastened through after them with his sixpence and three bits of bilious-looking paper, to which his complexion was fast assimilating.

The platform is reached: the bell rings: the guardsman hands Caroline into the farthest seat, follows immediately, and Snugsby is on the "near side" of the guardsman.

"Cuss me," muttered the cabinet-maker; "but that's cheeky!"

"Here we are," said the son of Mars when the train stopped.

"Going your way," said the soldier; and he, Snugsby, and Caroline, walked in the direction of the last-named's residence.

"Ahem, 14," said the soldier, looking at the number; "and now, good night!" He added this to Caroline, whose hand he shook very familiarly. Then, turning to Timothy, he said, "a parting glass, old fellow, if it's only to drink to our better acquaintance."

"Y-e-s," said Snugsby; he thought that he should get the money owing to him; that forlorn hope saved him from utter madness.

"Gone!" exclaimed the former.

"Yes, to be married," replied the latter.

"To be m-m-married?" stammered Snugsby—"to be married to whom?"

"A hossifer," returned the girl, bridleing up;—"a hossifer in the hoss-guards."

Poor Snugsby! he saw his fate before him. The "hossifer" was his late companion. Here was a situation for a susceptible journeyman cabinet-maker! all gone at one fell swoop! a sweetheart and twenty-seven shillings!

Timothy Snugsby swore an oath, and he kept it.—Never, never was he again seen at Greenwich Fair.

H. M.

### EFFECT OF WEIGHT ON HORSES.

I believe it is quite an allowed fact by heavy weights, that a horse which has carried them one season well, will (supposing him to continue well and sound) carry them the next season better. This is easily accounted for. The power of carrying heavy burdens is very much increased by being accustomed to do it; those parts of the frame, whether belonging to man or quadruped, that are most called upon under weight acquire additional strength from practice, as the arm of the smith does by using his sledge-hammer: but, independent of this, the horse learns by experience that style of going which enables him to get along with the most ease to himself. It may appear to some persons a singular assertion on my part, that numbers of horses go (particularly on the road) much safer under a very heavy man than under a light one; it is nevertheless the case, and is easily explained. A horse, to go safely on the road, should step short and quick, for in so doing, supposing him to make a false step, the succeeding leg comes so quickly to his support, that he is right again in a moment; but if he walks with the long lounging stride of the race-horse, and make a mistake, or treads on a stone, he rolls forward on his head before he can bring the other leg in a place to act as a prop to his body; independent of which, dwelling so long a time on each leg fatigues both muscles and sinews. Let any person try the truth of this by measuring only half a mile by striding it in yards; he will be more fatigued than by walking four times the distance at moderate short steps. Comparatively speaking, race-horses tire very soon in walking. Set one to walk from here to Edinburgh by the side of a butcher's hack; why little Cutlets would wear him out; and the chances are the Leger or Derby nag would have been on his hose half a dozen times during the journey. No horse with a long stride either in his walk or gallop can carry weight. I never saw even one that could. If any person doubts this, I can assure them a horse does not (after he has carried weight a few times), and will be found in a very short time to alter his gait. Desire a man to walk fifty yards, and observe his way of walking; then clap a sack of oats on his back; I will answer for his taking three steps where before he only took two. So it is with a horse; with 8st. on him he walks lazily and loungingly along; he can do so: put 18st. on him, he, like the man, will shorten his steps, and will make fewer blunders in consequence of so doing. He must do the same thing in his gallop before he can live under great weight; he has sense enough to learn this and many other ways of saving himself, and this

is the great reason why, when put to carry weight, he does it better the second season than the first. If I had a hack that was clever in every way but in taking long strides in his walk, I would lend him to an 18st. man. I will answer for it he cures him of that fault at all events.

HARRY HIE'OVER, in the *Sporting Magazine*.

### GOOD FOR THE LIVER, AND BAD FOR THE LIGHTS.

Bob, taken by Tom his new mansion to view, Observed, though 'twas large, it had windows too few. "As for that," replied Tom, "I'm the builder's forgiver, For taxes 'twill save, and that's good for the liver." "True," says Bob, "as you live upon farthings and mites, For the liver 'tis good, but d—d bad for the lights."

A SLY FOX.—In Ireland a sharp fellow is said to be "as cute as Power's fox of Ballybother'em," which used to read the papers every morning to find out where the hounds were to meet."

### THE MOST POPULAR WORK OF THE DAY.

Publishing in Weekly Penny Numbers, and Monthly Sixpenny Parts, beautifully illustrated with Woodcuts.

**THE MYSTERIES OF LONDON**, by G. W. M. REYNOLDS, Author of "Pickwick Abroad," "Robert Macaire," "The Modern Literature of France," "Master Timothy's Book-case," &c.

Since the days of Box's "Pickwick" no original work has created so powerful a sensation in the reading world as "THE MYSTERIES OF LONDON." It was at first contemplated to publish it in Monthly Shilling Parts; but, upon mature consideration, the proprietor and author resolved to issue it in a form which should render it accessible to all classes. The prejudice against cheap literature having completely died away, this determination was acted upon; and a success, which far exceeded the most sanguine expectations previously formed, has crowned the work. The weekly and monthly sales, taken together, now amount to upwards of 30,000 copies. The thrilling interest of the tale; the vivid descriptions of London society, both high and low; the graphic delineation of strange or remarkable localities in the great metropolis; the exposures of all kinds of roguery to which the unsuspicious ones may become a prey; and the fearlessness with which the cause of the industrious millions is espoused, have given to "THE MYSTERIES OF LONDON" a character which has become the element of the most lasting popularity. Part VII. and No. 35 are now ready. All the Numbers from 1 to 27 inclusive have been reprinted. London: G. VICKERS; and all Booksellers and Newsmen in Town and Country. Paris: A. and W. GALIGNANI.

LONDON:—Printed for the Proprietors, by W. M. CLARK, at his Steam-Press, 10, Red Lion-court; and published by him at 17, Warwick-lane, Paternoster-row; J. CLEAVE, Shoe-lane, Fleet-street; and all Booksellers in the United Kingdom.

# THE Sportsman's Magazine

LIFE IN LONDON

No. 2. FOR THE WEEK ENDING MAY 31, 1845. THREE HALFPENCE.

CONDUCTED BY THE EDITOR OF "THE SPORTING WORLD."

## "BURNING THE WATER." LEISTERING SALMON ON THE TWEED

**A**MONG the various modes of capturing the "monarch of the stream," the silversided Salmon, though others may be more elegant, yet for picturesque boldness, strength of arm, and steadiness of nerve, and that kind of wild adventure which sets the blood bounding through the veins, we know none more excitingly pleasant than a leistering excursion. The "Wizard of the North," we mean Sir Walter Scott, not the card conjurer of "that ilk," has left on record some serio-comic adventures, involving duckings, upsets, hits, misses and casualties attending leistering excursions, wherein in the "days of his youth" he bore a part. When practised by day, which in adventure and sport may be termed "alow work" in comparison to torch-light, it is termed "sunning;" by night "burning the water;" of the latter it is our cue to speak.

Before we describe what is called "burning the water" we will make an observation that may be of service to the rod-fisher. It is that salmon which have been disturbed in the night with boats and lights, will draw into the streams above, and take the fly all the better for this disturbance the following morning; and as burning always takes place when the water is very low, they probably will not be found far from the place of the nocturnal operations.

The boat in general used for burning at night is larger than the rod fishing boats, as more room and steadiness is required. In the centre of it, close to the side on which the leister strikes the fish, is a pole fixed vertically, with a frame at the top of it formed of ribs of iron to contain the combustibles. In our engraving the boatman holds in his right hand the torch with which he burns the water. Three men are

sufficient to man the boat; one at the head, another at the stern, as boatmen, and the third at the centre to kill the fish, and train the fire. But it will contain more men if necessary.

The salmon spear at present in use, resembles a trident in its general appearance; but has five prongs instead of three, made of very stout iron; there is only one barb to each prong, as two would tear the fish too much in extricating them. This weapon is fastened to the end of a pole, more or less long; according to the depth of the water in which it is intended to be used; sixteen feet is the general length, and it is not easy to see or strike a fish at a greater depth. In *burning* (which we shall describe hereafter) the boat is managed with this leister; but no one can make use of it in this way who has not learned to work it with a pole—which art is termed *canting*, and is little understood, except in the Tweed; in the Tay and Annan, they know nothing of the matter. Now the pole is not used as in punting; but the man who manages the boat instead of shifting his place, stands up or sits down at the stern; he keeps his eye upon her head, and forces her straight up the rapids, pressing the pole in the direction in which he would steer with a rudder. This is in a great measure effected with a twist of the body. If he does not keep her straight in her course, the current takes her at the side, whips her round in an instant, and down she goes, the deuce knows where, head foremost; nor can you resume your position till you again bring her head up the stream. In forcing your boat up very strong water, at every fresh thrust you must catch up the pole and put it in again quickly; for when you are not pushing the boat will recede, if the rapids are heavy, and thus you may lose way. This can be done better by sitting than standing, as you are nearer your

work. In this manner you may thrust your little craft where no oars could take hold of the water.

Having described the method of managing the boat, we will endeavour to explain the manner in which the salmon is struck. The leister should not be held firmly in the grasp, but sent loosely through the hands, as its own weight in falling, will be more effective than any force you can give it with a thrust. Should you hold the weapon firmly and determinedly, and the water proves deeper than you had calculated upon, and not touching the bottom with your spear, in you go as a matter of course, your head taking the lead, and the rest of your members following the playful example.

Strike your fish over the shoulders, if you can, and bring your boat in such a position as to make the stroke as vertical as possible. When you have fixed him, hold him to the ground space: then run your hands down the pole, making the distance between them and the fish as short as you conveniently can; lift the animal with his head uppermost, by which means he will come out lighter, and such action as he may make with his tail will assist you rather than himself. The late Lord Staffa, before he came to his title, was once drawing the Pavilion Water with John, Lord Somerville, and perceiving that the fisherman in their boat had struck a salmon that was likely to get off the spear when he might attempt to lift him; in the true spirit of a Highlander, and without saying a word to any one, plunged at once into the Tweed with his clothes on, dived down to the fish, and brought him into the boat with his hands. "A Highlander can never pass a seal, a deer, or a salmon, without having a trial of skill with him."

Having premised thus much by way of explanation, we will now give a slight sketch of "life" by night on a Scottish river, which we will call

#### THE BURNING.

"—All being now ready, a light was struck, and the spark being applied to rags steeped in pitch, and to fragments of tar barrels, they blazed up at once amidst the gloom, like the sudden flash from the crater of a volcano. The ruddy light glared on the rough features and dark dresses of the leisters in cutting flames directly met by black shadows. Extending itself, it reddened the shelving rocks above, and glanced upon the blasted arms of the trees, slowly perishing in their struggle for existence among the stony crevices; it glowed upon the hanging wood, on fir, birch, broom, and bracken, half veiled, or half revealed, as they were more or less prominent. The form of things remote from the concentrated light was dark and dubious; even the trees on the summit of the brae, sunk in obscurity.

The principals now sprung into the boat. Harry Otter stood at the head, and Charlie Purdie at the stern. These men regulated the course of the craft with their leisters: the auxiliaries were stationed before them, and the light was on the centre by the boat-side. The logs, steeped as they were in pitch, crackled and burned fiercely, sending up a column of black smoke. As the rude forms of the men rose up in their dark attire, wielding their long leisters, with the streaks of light that partially glared upon them, and surrounded as they were by the shades of night, you might almost have fancied yourself in the realms below with Pluto and his grim associates, embarked on the Stygian lake; but as the sports began, and as the Scotch accent prevailed, the illusion passed away.

"Now, my lads," says the master, "take your places. Tom, stand next to me; Sandy, go on the other side of Tom; and do you, Jamie, keep in the middle, and take tent to cap the boats well over the rapids. Rob, do you and Tom Purdie keep good lights and fell the fish. Halloo, Tom! you have smuggled a leister into the boat for your own use."

"Ay, ay, that have I, joust for mine ain diversion, ye ken."

"Well, work, you may just keep it, for you are a stout chiel, and it would be hard well to get it from you; besides, no one can use it more dexterously than yourself. Now, then, we will push the boat up the chuk of the stream till we come to the head of it. That will do. Now shoot her across the gorge, and down she goes merrily, broadside foremost, according to rule. Cap, Charlie, cap, man, we are drifting down like mad; keep back your end of the boat."

"Aweel, aweel, she gangs cannily now; look, uncle, a muckle fish before ye; or ever ye kent the maister's leister gaed through him and played auld life. That side, that side, Jamie; he's running up to get past. Od, ye have him; and I hae anither and anither. Keep a gude light, Tom. Now, let us tak' up the boat to the head of the stream, or ever we look the stanes, for there war a muckle fish ganged by that none o' ye gomrells ever saw. There we are high enuch now; hand yer hand and let her faw doon again: hey, but I see him the nod afore me;—on, what an awfie' beast."

So saying, Charlie drove his leister furiously at him; but whether one of the prongs struck against the edge of the rock above him, which prevented its descent to the bottom, or from whatever other cause the stroke was unsuccessful, and as he lifted the barren weapon out of the water there arose a merry shout and guffaw from the spectators on shore.

"Cap, cap," cried Charlie, "now hand your hand; gie me up the boat; od, but I hae him yet; he's gone amangst the hedding stanes." So saying, Charlie brought the head of the boat to the stream, pushed her higher up, and pulled her ashore; he then landed, and seizing a brand out of the fire, put it into Jamieson's hands, who preceded his eager steps like a male Thais, or one of the Eumenides in pantaloons. He now stood

upon a rock which hung over the river, and from that eminence, and with the assistance of the firebrand, examined the bottom of it carefully. His body was bent over the water, and his ready leister held almost vertically; as the light glared on his face, you might see the keen glancing of his eye. In an instant he raised up his leister, and down he sprang from the rock right into the river, and with that wild bound nailed the salmon to the channel. There was a struggle with his arms for a few seconds; he then passed his hands down the pole of the weapon a little way, brought himself vertically over the fish, and lifted him aloft, cheered by shouts of applause from his friends on the shore.

Two or three more fish were taken amongst the stones at the tail of the cant; and the sport in the curry-wheel being now ended, the fish were stowed in the hole of the boat, the crew jumped ashore, and a right hearty appeal was made to the whiskey bottle.

#### A FOX HUNTER, A JUMBLE OF PARADOXES.

He sets forth clean, though he comes out of a kennel, and returns home dirty. He cares not for cards, yet strives to be always with the pack. He loves fencing, but without *carte* or *terce*; and delights in a steeple-chase, though he does not follow the church. He is anything but litigious, yet is fond of a certain suit, and retains scarlet. He keeps a running account with Horse, Dog, Fox, and Co., but objects to a check. As to cards, in choosing a pack, he prefers Hunt's. In theatricals, he favours Miss Somerville, because her namesake wrote "The Chase," though he never read it. He is no great dancer, though he is fond of casting off twenty couple; and no great painter, though he draws covers, and seeks for a brush. He is no musician, though he is fond of five bars. He despises doctors, though he follows a course of bark. He professes to love his country, but is perpetually crossing it. He is fond of strong ale and beer, but dislikes any purl. He is good tempered, yet so far a Tartar as to prefer a saddle of horse to a saddle of mutton. He is somewhat tough and bearish himself, but insists on good breeding in horses and dogs. He professes the Church Catechism, and countenances heathen dogmas, by naming his hounds after Jupiter, Juno, Mars, Diana, and Vulcan. He cares not for violets, but he doats on a good scent. He says his wife is a shrew, but objects to destroying a vixen. In politics he inclines to Pitt, and runs after Fox. He is no milk-sop, but he loves to tally. He protects poultry and preserves foxes. He follows but one business, yet has many pursuits. He pretends to be knowing, yet a dog leads him by the nose. He is as honest a fellow as needs be, yet his neck is often in danger than a thief's. He swears he can clear anything, but is beaten by a fog. He esteems himself prosperous, and is always going to the dogs. He delights in the Hunters' Stakes, but takes care not to stake his hunter. He praises discretion, but would rather let the cat out of the bag than a fox. To conclude, he runs as long as he can, and then runs to earth, and his heir is in at his death; but his heir does not stand in his shoes, for he never wore anything but boots.—*The late Thomas Hood.*

**ECCENTRICITIES OF NEWSPAPER ADVERTISING.**—Newspaper advertisements are avowedly strange things, but the last week has been productive of some still more extraordinary than usual. The first one that met our eye was the following:—"To builders, &c.—To be sold by auction, on Wednesday next, the uncleared *apertunances* of the late Mr. Borthwick, comprising capital building materials in fir, Portland stone, &c." Now, if this be really a true description of Mr. Borthwick's "apertunances," he must have been a complete curiosity. In the *Times*, of Tuesday, we find—"A lady who has just dismissed her nurse, wishes to obtain for her a *similar situation*." It does not appear that the said nurse has any situation at all, so what a *similar one* would be, we confess our inability to discover. A Sunday paper recently gave the following:—"MATRIMONY.—A gentleman, having £400 per annum, arising from the private exercise of a genteel profession, five feet eleven inches in height, and of prepossessing manners, is desirous of an alliance with a lady having the same qualifications as himself, &c." Here is a gentleman who must have an odd taste to choose a wife "five feet eleven," but what the "genteel profession" is which she is required "*privately to exercise*," deponent saith not. In the *Post*, of Monday, we read of "a gentleman, about to leave London for the benefit of his wife's health, &c.," why he should leave London for the benefit of his wife's health, we cannot conceive, unless indeed he has nursed serious designs of poisoning her; but these morning broadsheets do concoct most extraordinary things.

**AMERICAN MARRIAGES.**—A green, good natured, money-making, up country Jonathan, who said every thing drily, got things fixed and struck up a bargain for matrimony; having no particular regard for appearances, the parties agreed to employ a green-horn country justice to put on the tackling. He commenced the ceremony by remarking that "It was customary on such occasions to commence with a prayer, but he believed he would omit that." After tying the knot, he said it was customary to give the married couple some advice, but he would omit that also; it was customary to kiss the bride, but he would omit that." The ceremony being ended, Jonathan took the squire by the button-hole, and clapping his finger on his nose, said, "Squire, it is customary to give the magistrate five dollars, but I'll omit that."

MR. JOHN JACKSON.

## THE HISTORY OF BRITISH BOXING, FROM FIG AND BROUGHTON TO THE PRESENT TIME. PERIOD III. 1786—1798.

FROM THE TIME OF MENDOZA TO THE APPEARANCE OF JEM BELCHER.

### CHAPTER III. MR. JOHN JACKSON.

**I**N penning the HISTORY OF PUGILISM, one object has been our polestar—a desire on the one hand to avoid fulsome adulation, and on the other never to cast undeserved censure: to “nothing extenuate, nor set down aught in malice,” but to speak of men as they were, and as their actions proved them.

These remarks appear appropriate to a notice of John Jackson, inasmuch as, blinded by early prejudices, which no after-information has tended to dispel, and imposed upon by the contemptible sophisms and paltry libels of lily-livered scribes, who “earn their dirty-pay” by pandering to what they suppose the taste of the reading public, no small proportion of that public has taken it for granted that pugilism and black-guardism are synonyms. It is as an antidote to these slanderers, that we pen a candid History of Pugilism; and taking the general habits of men of humble origin (elevated by their *courage* and *bodily gifts* to be the associates of those more fortunate in worldly position), we fearlessly maintain, that the *best* of our boxers (we take no account of *outsiders*, inasmuch as they have no claim to the designation), present as good samples of honesty, generosity of spirit, goodness of heart, and humanity, as an equal number of men of any class of society. But the Manly Art of Self-defence—one of the most generous, noble, and national traits of the English character has never lacked detractors. The mean-spirited, the treacherous, and the cruel can never be its admirers. But does it appear that the *mind* is debased from witnessing such public displays? would the usages of society be infringed upon if such exhibitions were legalised? Are the feelings of men so blunted from these specimens of hardihood and valour, as to prevent them from fulfilling those public situations in life which many are called upon to perform, with fidelity, justice, and reputation? We reply, no! and experience corroborates our assertion. Were it otherwise, we should admit pugilism to be a disgrace to the country where it is permitted, and boxers obnoxious to society.

It is an incontrovertible fact, that one of the most celebrated public characters of the early part of the century, whose patriotic attention to the preservation and due administration of the laws; whose firmness in supporting, upon all occasions, the liberty of the subject; whose dignity and consistency of conduct in representing the first city in the

world in Parliament; and who fulfilled the high office of Lord Mayor of London, with honour to himself, and advantage to the first city of the world, was an ardent and firm patron of Pugilism. We allude to Harvey Christian Coombe, Esq., whose name never suffered the slightest tarnish from his patronage of the Old English custom of Boxing in the early part of his life, but through a long and distinguished career, proved his pretensions so clearly to the character of a real Englishman, an honest citizen, and an independent senator, that in 1816, he was returned a fourth time as member for the City of London.

We will now pass to another member of the senate whose enlightened mind, classical acquirements, and transcendent talents, shone even at a time when wits and orators were rife in St. Stephen's Chapel—to a mind stored with ancient and modern literature, conversant with popular recreations in all their gradations, from the rusticity of a cudgelling bout at a country fair to an *assaut d'armes* in the aristocratic fencing-school—the Rt. Hon. Wm. Windham added a true English spirit of fair play, when he thus publicly declared his sentiments:—

“A smart contest, this, between Maddox and Richmond! Why are we to boast so much of the native valour of our troops, as shown at Talavera, at Vimiera, and at Malaga, yet to discourage all the practices and habits which tend to keep alive the same sentiments and feelings? The sentiments that filled the minds of the three thousand spectators who witnessed those two Pugilists, were the same in kind as those which inspired the higher combatants on that occasion.—It is the circumstances only in which they are displayed that make the difference.

“He that the world subdued, had been  
But the best wrestler on the green.”

There is no sense in the answer always made to this, “Are no men brave but boxers?” Bravery is found in all habits, classes, circumstances, and conditions. But have habits and institutions of one sort no tendency to form it more than of another?—Longevity is found in persons of habits the most opposite; but are not certain habits more favourable to it than others? The courage does not arise from mere boxing, from the mere beating, or being beat: but from the sentiments excited by the contemplation and cultivation of such practices. Will it make no difference in the mass of people, whether their amusements are all of a pacific, pleasurable, and effeminate nature; or whether they are of a sort that calls forth a continued admiration of prowess and hardihood?”

We cannot but think the reader will consider these slight notices of how our fathers viewed the science of self-defence—now for a season only, as we trust, “fallen into the sear and yellow leaf,”—as a fitting preface for the life of Jackson, who flourished in these palmy days of pugilism; a gentleman who not only supplanted Mendoza, but took a higher position in the social scale than any boxer who preceded or followed him, no less from the firmness and urbanity of his manners, than the high requisites he possessed for shining as an athlete.

Mr. Jackson was born in London, in 1768, and was the son of an

eminent builder, by whom the arch was thrown over the old Fleet Ditch. His uncles were farmers and tenants of the Duke of Bedford and the Marquis of Hertford. Nature had bestowed upon him all those athletic requisites which constitute the *beau idéal* of perfect manhood. There was a happy combination of muscular development, with proportionate symmetry in his frame (his height was five feet eleven, and his weight fourteen stone), which rendered him a fitting model for the sculptor, and excited the admiration of all those by whom these qualities are appreciated. At the age of nineteen he became a frequenter of the sparring schools, and displayed such talents as proved that he was destined to eclipse the more favoured of his contemporaries; added to which, possessing as he did the *suaviter in modo*, as well as the *fortiter in re*, he soon found patrons of the highest grade.

Mr. Jackson's first public contest, under the patronage of the Hon. Harvey Aston, was with Fewterel, a Birmingham hero, on the 9th of June, 1788, in a roped ring near Brighton, which was honoured by the presence of the Prince of Wales. Fewterel, had a high provincial reputation, having proved victorious in many battles. The contest came off the 9th of June, 1788, at Smitham Bottom, near Croydon, in Surrey. Fewterel was attended by Warr and Dunn; and Jackson had for his second Tom Johnson, Dick Humphries officiating as his bottle-holder. It was apprehended that Jackson would never be able to knock Fewterel down, as the latter was a man of great bulk and uncommon strength; but the fallacy of this opinion was proved by Jackson knocking him down in the second round, and repeating it several times in the course of the fight. Fewterel had recourse to shifting, and several times without a blow. The contest lasted an hour and seven minutes; and Fewterel was considerably punished.

The Prince of Wales was much pleased with the intrepidity displayed by Jackson, and acknowledged it to the latter by a gratifying token of his approbation.

Jackson's next battle was with George Ingleston, the brewer, at Ingatestone, in Essex, on March 12, 1793, for fifty guineas a-side. Ingleston was seconded by Tring, Jackson by Big Ben. Superior art was manifested by Jackson, and in the first round Jackson levelled the Brewer. In the second and third, several good blows were exchanged; but the science of Jackson was so evident to the spectators, that the odds were high in his favour. In the fourth round, they were nearly two to one, when, unfortunately, owing to the slippery state of the stage, from the rain that had fallen, and its faulty construction, he fell, dislocated his ankle, and broke the small bone of his leg. In consequence of this accident there was no alternative left for him but to give in, it being impossible for a man to continue the fight who could not stand. In other respects Jackson was in full vigour. The report of the day states, that, to prevent disappointment to the numerous spectators, Jackson offered to be fastened down in a chair, in a manner similar to the sailors, who seat themselves on their chests for pugilistic encounters—provided Ingleston would do the like, and thus fight it out. This the Brewer, who had become entitled to the stakes, very properly refused; as also to consent to another meeting.

His next contest was one of the most general interest of any for many years. His antagonist was no other than the conqueror of Humphries, the deservedly celebrated Daniel Mendoza. The stakes were 200 guineas a-side; and the battle was decided upon a twenty-four feet stage, erected at Hornchurch, in Essex, on April 15, 1796. Mendoza was seconded by Harry Lee, Symonds officiating as bottle-holder; and Jackson was attended by Tom Johnson and Bill Wood. Both the combatants were loudly cheered upon their appearance. The betting was in favour of Mendoza.

Round 1. Judgment was not wanting on either side, and a fine display of the art was witnessed. After several feints, parries, and stops, at the end of one minute, Jackson put in a straight right-handed hit, so well distanced, that Mendoza was laid prostrate on the stage.

2. In this round Mendoza exhibited the most finished science, he stopped the blows of his antagonist with great neatness, and returned several good hits.

3. Both on the alert, pelting away with little ceremony—Jackson put in several severe hits, and Mendoza was not behind in returning the compliment; but at the end of the round Dan was down. Notwithstanding this, the odds rose two to one on Mendoza.

4. This was the hottest part of the battle—caution seemed cast aside, and the combatants lost to everything but victory. Jackson, confident of his powers and knowledge, kept at close quarters; severe half-arm fighting, in which Jackson set at naught the science of Mendoza, punishing him most terribly. Dan fell from a severe blow on the right eye, which bled profusely. The odds turning upon Jackson.

5. The scene was now changed, and loud disapprobation expressed by the friends of Mendoza, Jackson caught his opponent by the hair, with his left, and punished him with the right till he got down. An appeal was made to the umpires upon the propriety of this, but it was declared consistent with the rules of fighting, and the battle proceeded. [The odds now changed to two to one on Jackson.]

6 to 8. Mendoza was getting rather exhausted, and endeavoured to merge his strength and wind, by acting on the defensive; but he could make no head against the superiority of Jackson.

9 and last. Mendoza's chance was clearly gone. Jackson appeared in full activity and vigour; he hit away his man with great ease. Dan suffered considerably, and after falling completely exhausted, acknowledged he had met his superior.

For the time it lasted (ten minutes and a half,) this battle was never exceeded in severity. Jackson was little the worse for it, and jumped from the stage with great activity. It was far otherwise with Mendoza, who was severely punished. But it must be remembered that Mendoza's competitor had not only the advantage of youth, but that he had the physical disproportion to contend with of 5 feet 8 against 5 feet 11, and eleven stone against thirteen! This common justice calls upon us to record, as it has been omitted by every previous writer. Numerous patrons of pugilism were present upon this occasion, among whom

were the Duke of Hamilton, and many noblemen and gentlemen amateurs.

A gay paragraph, near seven years after the above combat, appearing in the newspapers, announcing that a fight would take place between Mendoza and Jackson; the latter, by way of a farewell to the public, informing them of his determination, inserted the following letter to the Editor of the *Oracle and Daily Advertiser*, of Wednesday, Dec. 1, 1801.

SIR,—I was somewhat astonished, on my return to town on Saturday, to learn that a challenge was inserted in your paper on Thursday last, as if from Mr. Mendoza. Should I be right in my conclusion, by believing that it comes from that celebrated pugilist, I beg you will inform the public through the medium of your paper, that for some years I have entirely withdrawn from a public life, and am more and more convinced of the propriety of my conduct by the happiness which I enjoy in private, among many friends of great respectability, with whom it is my pride to be received on terms of familiarity and friendship: goaded, however, as I am to a petty conflict, I hope that it will not be considered as too much arrogance on my part simply to observe, that, after waiting for more than three years to accept the challenge of any pugilist, however dexterous in the science, and however highly flattered by his friends, I think it rather extraordinary that Mr. Mendoza should add a silence of four years to those three, it being nearly seven years since I had the satisfaction of chastising him; but Mr. Mendoza derived one great good from the issue of that contest—he was taught to be less hasty in forming his resolutions, more slow in carrying them into effect.

This cautious and wise principle of action deserves much commendation; and having served an apprenticeship of seven years to learn a certain portion of artificial courage, he now comes forward with a stock of impudence (the only capital which during that time he seems to have acquired) to force me to appear once more in that situation which I have for years cheerfully avoided.

Reluctant, however, as I am to attract again even for a moment the public attention, I shall have no objection to vindicate my character by a meeting with Mr. Mendoza when and where he pleases, provided he'll promise to fight, and provided he'll also promise not to give previous information to the magistrates of Bow street, or elsewhere.

I am, Sir, yours and the public's most respectfully,

Nov. 20, 1801.

JOHN JACKSON.

Need we say that this was on the part of Mendoza a mere piece of that absurd system of gagging then so much in vogue, and on which we have elsewhere commented.

This was the last appearance of Mr. Jackson in the prize ring.

Independent of his pugilistic prowess, Mr. Jackson was distinguished for his extraordinary powers as a runner of a short distance, and as a leaper no man of his day was equal to him at a standing jump, of which many extraordinary feats are on record. His muscular strength was equal to his bodily activity, and in the presence of Mr. Harvey Combe, a never shrinking advocate for the national sports of his countrymen, he lifted ten hundredweight and a quarter, and with eighty-four pounds' weight on his little finger, wrote his own name.

It would be improper to pass over his patriotic and generous conduct in procuring a benefit at the Fives' Court, in Saint Martin's-street, in 1811, towards aiding the public subscription tending to assist the suffering Portuguese, whose towns had been destroyed by the French. This benefit produced the sum of one hundred and fourteen pounds, and was paid to the committee.

In thus paying attention to the wants of our suffering allies, Jackson's humanity encouraged the pugilists to get up a similar benefit in aid of the British prisoners in France. This took place in the beginning of the year 1812, when the sum of one hundred and thirty-two pounds six shillings was the sum handed over in aid of that laudable purpose. To the credit of the pugilists be it remembered, that on the first intimation of such a plan, they cheerfully volunteered their services.

(To be continued in our next).

ADVERTISEMENT.—From the *Daily Advertiser*, Dec 8, 1797.—Wanted for a wine-merchant's house in the city, as porter, an athletic man, of a serious countenance, a good character, and the Lady Huntingdon's persuasion; must attend prayers twice a day, and divine service four times on Sunday; be able to bear confinement; have the fear of God before his eyes; and be able to carry two hundred weight. Wages, fourteen shillings a week, and find himself.—N.B. A Yorkshireman will not be objected to, but no Irishman will be accepted.—Apply to-morrow at one o'clock, to S. D., at No. —, Philpot-lane.

FOR THE COURT CIRCULAR.—Mr. Benjamin D'Israeli didn't take out Master Robert Peel for an airing last week, but will do so on the very first opportunity. Master Robert is anxiously looking out for the promised holiday.

HOW TO SAVE ONE'S BACON.—A gentleman near Limerick, a blood descendant of Sir Boyle Roche, having heard that the newly-invented galvanic rings would cure anything, ordered a number of them to be used as snout-rings for his pigs, expecting to have his bacon cured that way.

## CORRESPONDENTS.

**A. VOTUM.**—Says, "I was induced by a hotel keeper of this town to become a subscriber to his Derby Sweep, in 1844, and my chance turned up Orlando. Hearing of the disqualification of the horse named Running Rein, I gave notice to the landlord not to pay the first prize to the person holding that horse. He told me he should retain the money until the case was decided between Running Rein and Orlando; but now declares he will pay nobody, and that if an action is brought against him for the amount, he would plead the illegality of the whole transaction."—If our correspondent will look into the *Derby Life*, or the *Sunday Times*, of last Sunday, (May 18th) he will see his case decided by the action of TOMBS against WARR.

**JUVENIS.**—Apply to Mr. Little, of Fetter Lane, he will put you in the way.

**SAMPER IDEM.**—The canine mange, according to the best authority (Blaine) is a chronic inflammation of the skin, arising from a morbid constitutional action.—It is both infectious and contagious.—It is the red mange with which your dog is afflicted: use the following ointment:—

Powdered charcoal	2 oz.
Sulphur (powdered)	4 oz.
Potash	1 dr.
Lard	6 oz.
Venice Turpentine	1 oz.
Mild Mercurial ointment	1 oz.
Use this one day, and the next alternate it with the following wash:—	Mix.
Decoction of tobacco	2 oz.
Decoction of white hellebore	2 oz.
Corrosive sublimate	5 gr.

Dissolve the corrosive sublimate (called oxymuriate of quicksilver) in the decoctions, and add two drachms of powdered aloes, to render it nauseous, and prevent the dog from licking it off: you should also put on him a fine net muzzle.

**A. FANCIER.**—The name *Bantam* is derived from that of a kingdom so-called in India, whence these diminutive, prolific, and courageous little fowls originally came.

**QUIZZICAL.**—To back a horse, means in stable phraseology, to mount him; it is also used for breaking him. Your objection is hypercritical, as there is no reason to confine the term to compelling him to go backwards.

**S. ROWORTH, Manchester.**—Who told you so? Antimony is a metal.—We will give some engravings of pigeons in due time. But we must see Epsom over, before we make any promises in the way of illustrations.

**RING.**—"N. G."—Barney Aaron fought Dick Curtis but once. Cannon fought Dolly Smith in May, 1817.

**PREDSTRIANISM.**—"B. SAMSON."—If two persons agree to run a mile with their clothes on, and one takes off his coat during the race, he loses, as in horse-racing, it is throwing away weight. If no such agreement were made, then the taking off the coat does not vitiate the race. Fuller walked forty miles in seven hours, one minute, and five seconds.

**W. J. MARIE.**—This paper is conducted by the Editor of the "SPORTING WORLD," as stated in its leader and on its heading; the name of the change of title was a mere matter of business, which is not worth the space its explanation would occupy; change of proprietorship rendered it necessary, or rather advisable. You will observe, that all the serial articles are continued by the same writers. To your Cribbage question, they count twelve.

**W. BARNES.**—The martin is a large kind of weasel; its fur is much valued. It inhabits trees, and is very destructive to pheasants and roosting birds. The pine martin in Canada and other parts of North America is the animal which supplies what in common parlance are called "sables," and which are pretended to be the skins of a description of Russian fox.

**CRICKET.**—W. H., Portsmouth.—We are glad to find that you and your friends approve of our remarks on bowling. The subject will be resumed.

**W. F. B. Sherbourne.**—We shall be glad to hear again from you; your request is complied with as regards the newspaper.

**A. Z.**—It must have been negligence on the part of your newsmen, as no delay took place in the publication. To your first question, not out; to the second, some part of the foot or bat must be behind the crease.

**TARTER.**—Apply to Caldecott, Townsend-road, St. John's Wood.

**A. L. B.**—Of what avail are the Rules if they are not abided by? The umpire acted in a fair and proper spirit.

## OUR WEEKLY CALENDAR.

AN EPHEMERIS IN JEST AND EARNEST.

SUNDAY, May 26.—FIRST SUNDAY AFTER TRINITY.

**FRUIT.**—Prune what trees you have neglected. Remove all suckers, except selected ones of raspberries. Pinch off strawberry runners. Destroy insects, especially snails and caterpillars. On the first symptoms of the leaves rolling up unroll them and pick out the grub.

**MONDAY 26.**—Cambridge Easter Term divides midnight.—The Irish Attorneys resolve to reduce the fees to barristers one half. This is not only reducing the Wigwags to half-and-half, but compelling them to take "something short at the bar." This joke is "above proof."—Ladette died, 1844.

**A Proverb reversed.**—"His money makes the mare to go," is now exploded; in its stead say the parishioners of Walbrook, "Tis the mayor makes the money to go."

**TUESDAY 27.**—EPSOM RACES.—"Venerable Bedes" say all the almanacks: this we take to be part of some old necktie.—Discovery of coin. An eminent artist having left a painting with Moon, finds in his pocket three silver and two copper coins of the reigns of Vict. and Geo. IV.—Faganall died, 1840.—Prince George of Cumberland born, 1819.

**WEDNESDAY 28.**—THE DERBY DAY.—Look out for our EPSOM NUMBER, for MILES's Boy is "down the road," and will tell you all about it.—"The moon's last quarter," says the Almanack: what shall we do o' nights when she's left the premises she has so long occupied?—ERON MONTEN:—

"And a begging will go-o, go-o, go!"

"And a begging will go-o, go-o, go!"—Ancient Ballad.

**THURSDAY 29.**—King Charles II. restored, 1660.—A piece of plate presented to Alfred Bunn, Esq., for his patronage of the Drama. Oh Lord!—this plate must have originated in a few spoons.

**FRIDAY 30.**—THE OARS DAY.—"General Peace, 1814," say all the almanacks: who was he? Some feather-bed officer on the home-service, surely, if that was his birthday.—How to get a coat.—The Royal Humane Society sharpen the points of their drags, that they may ensure a good hold in the carcass of any unfortunate bather who may remain more than half an hour under water. A capital time for finding unknown vestments in Hyde-park, before 6 a.m. and after 6 p.m.

**SATURDAY 31.**—Bingham Fair—Talgarth Fair.—Anne Boleyn, mother of Queen Elizabeth, crowned, 1533.

## Life Sportsman's Magazine.

FOR THE WEEK ENDING MAY, 31, 1845.

MILES's BOY AND HIS PAPA HAVE A TALK WHICH ENDS IN NOTHING.

**HE** near approach of the EPSOM DERBY calls on us to sound the note of preparation. MILES's Boy will most assuredly be down the road there, with his friend GEORGE CRATON, the Sketcher, accompanied by old Miles, his venerable and venerated papa. And while a faithful picture of "Life" in all its phases is transferred to the sketchbook of the artist, to be transferred to wood for the amusement of the ten thousand readers of the SPORTSMAN'S MAGAZINE; MILES the elder will do the reminiscences and the descriptive. He will tell, (for his memory is far better than that frequently quoted personage, "the oldest inhabitant") how, "sixty-six years ago, namely in 1777, the late Lady Derby—formerly Lady Elizabeth Hamilton—had a grand fête champêtre on her wedding day to the Earl, thereupon originated (in 1780) the great public race, which on this day so many thousands"—"There that will do old Miles, as a sample," interrupts his dutiful son: "don't you know that it is Life, not the histories of deceased generations that we want?"

Old Miles "humphed," and muttered something about "young people thinking old people fools; but old people knowing young people, &c." It was clear the old un's dander was up: so we changed the subject remonstratively, as the yankees say to prevent his "riling and turnin' sour."

"But don't you know, dad, that our Epsom Number is to be full of cuts, right and left, and that I, your own dutiful son, have undertaken to picture, with point of pen, all sorts of cockneys, countrymen, counts, cadgers, costermongers, cardsellers, and chummies, greenhorns, gammoners, go-cart-men, gipsies, and guplins, jehus, jockeys, joskins, and jews, viscounts, and vitt'lers, barons, baronets, beersellers, barrow-women, barneys, bumpkins, and betting-men, swells, swindlers, spooneys, and sharps, marquises, muffs, and mutton pie-men, prigs, peers, pensioners, pimps, and pretty women, how then in the name of common-sense, dear dad, can we spare space for your historical and topographical details?"

"Bah!" replied our respected progenitor. "I dare say you think that rope o' words very cleverly paid out; but life presented more picturesque variety, more character when I was young, than now. Then (if you didn't sleep at Epsom, which prudent people did), mayhap a mounted man—if so be you stayed to take a parting glass, would ride up on Putney, or Barnes Common, or thereabouts,—ah, I see you grin, jackanapes; I'm speaking of times when Vauxhall-bridge wasn't built, and half the westenders went over that of Putney,—well, a particular friend o' mine, a saddler, in Swallow-street—"

"My dear Dad; when I began scribbling, I meant our conversation to be a sort of programme of what we intended to do next week; but if you will gossip and tell stories—"

"Tilly vally, boy," we are ourselves on the shady side of forty-five; "you shouldn't tell your mind; do the thing and don't talk about it: take 'em by surprise, and—"

"Well, we will. Here, devil, carry the copy to the printer."

## THE CORN CRAKE, OR LANDRAIL.

To the Editor of the "SPORTSMAN'S MAGAZINE."

**SIR.**—Among the few "Summer Sports" of which the fowler can avail himself, and one which has afforded me a great deal of amusement at times, is that of "Corn Crake Shooting;" and as the period of its commencement is at hand, I trust the few subjoined remarks on this subject may not be inapplicable at present in your valuable pages.

The Corn Crake (known also by the names of the Landrail and Daker Hen) may be regarded as the harbinger of summer, and is remarkable as a bird of passage; since with apparently very inadequate powers of wing, it nevertheless makes its way over a trackless ocean for hundreds of miles. It generally makes itself heard in this country about the middle of May, but is seldom seen, as it avoids human observation as much as possible. It continues amongst the grass and corn till they are out, when it seeks shelter in the stubbles and amongst the turnip and potato crops, till the month of October, when it quits these shores in search of more genial latitudes.

The Corn Crake lays from ten to sixteen eggs of a dull white color, marked with a few yellow spots, and larger than those of a quail. The nest is negligently constructed with a little moss or dry grass, and usually placed in some little hollow amongst the thickest grass, but much oftener among the wheat crops. Like the partridge and pheasant the young of these birds leave the nest as soon as they are hatched and follow the mother. Of all birds known in this country, not one is equal

in pedestrian speed to the Corn Crake; its legs are longer than those of the partridge, and it runs in a very different form.

In the middle of last summer, while walking with a friend, a young Corn Crake had by some means got upon the turnpike road in a part of Derbyshire, near which I was then residing, where the height of wall on each side opposed an insurmountable barrier to its regaining the shelter of the meadow, out of which it had evidently issued, at the gate-place about two hundred yards distant. It was tolerably well fledged, but could not fly over the top of the wall, which it several times tried to accomplish. On our approach, it turned in the direction for the gate, and it required our best speed to overtake it. The circumstance afforded us an opportunity of observing its progressive motion. The partridge, as is well known, runs with its head erect; the Corn Crake, on the contrary, thrusts forward its head in such a manner, that its crown, neck, and back form a straight line; and thus as it runs, it seems about to fall forward on its bill.

These birds are found in great plenty near the banks of the river Trent in Staffordshire and Derbyshire, in Cumberland and the north west coasts of the kingdom; in the Isle of Anglessea they are particularly so, as well as in Ireland, where it has been thought many of them pass the winter. They abound also in the county of Caithness, in Scotland, and are found in most of the Hebrides and Orkneys. Few places in England are destitute of them in summer, but they never winter here.

The best time I have found for pursuing this sport, and the most likely to prove profitable, is the first hour or two after daybreak, and an hour before sunset till dusk; indeed, I have killed more during the short interval of twilight than at any other time: the call of its courtship, the *crik, crik*, of the rail, being then oftener heard. The shot I have generally used has been No. 3 (common shot), that mostly in vogue during the middle of the partridge season; but some sportsmen recommend No. 1, which I consider too large and likely to mutilate the object too much, the bird generally rising but a short distance off. It is easily known when a dog (I have always found a pointer the

THE CORN CRAKE, OR LANDRAIL.

best for this sport) scents a landrail, and the obstinacy with which the bird keeps the ground; it often stops short and squats; the dog pushing eagerly forward, overshoots the spot, and loses the track; the rail, it is said, profiting by his blunder, retraces its path; nor will it spring till driven to its last extremity, when it flies heavily, and generally with its legs hanging down, but never far at a flight: when it alights it runs off, nor is it sprung a second time without great difficulty. Indeed, I have followed a rail across two or three large meadows, the bird running and dodging about before the dog, and not rising until nearly trod upon, and dropping again a few yards off. It is however easily shot, as it rises heavily, flies low, and generally gets up within gun-shot. How, from the nature of its flight, it contrives to cross the sea, must for ever remain inscrutable to the limited faculties of man. Its weight is from six to eight ounces, and its flesh is reckoned by some a great delicacy; but I have uniformly found it a mere lump of fat, and could never persuade myself to consider it as the finest flavoured dish in the world.

In conclusion, I beg to remark that the common idea, that where quails are met with the Corn-crake is found in abundance is erroneous, and which I well know from experience to be the case; though the former bird makes its appearance about the same time as the latter, and leaves this country in like manner.

I am, sir, yours obliged,

Matlock, Derbyshire,  
May 12, 1845.

LONGGRASS.

## THE FISHER'S CREEL.

THE CARP.

THE CARP, styled by Walton, "the queen of rivers," will here be treated of in his more ordinary character of a pond-fish. With water-room, good feed, in warm, weedy, and soft bottomed ponds, it lives long, and attains a goodly size. The author of the *Angler's Sure Guide* says he has taken them above 26 inches long, but Walton says he has never seen one above 23 inches, and this is a noble fish. The carp is leather-mouthed, and is seldom lost, when once hooked, by breaking his hold; and in ponds this fish cannot, with propriety, be said to have any particular haunt or retiring place, thriving in a fat rich soil, but never in cold, clear and hungry waters. They breed three or four times in the year, their first spawning time being in the month of May. They live longest out of water of any fish: and it is stated by Sir John Hawkins that in Holland he has seen them kept alive for three or four weeks, by hanging them up in a net, in a cool place, surrounded by wet moss, and feeding them with bread and milk. The carp appears to be an omnivorous gourmand, inasmuch as green peas, old cheese, ox-brains, the spinal marrow of the same animal, red or black cherries with the stones out, earthworms, gentles, dung-hill worms, grasshoppers, and various pastes have been severally vaunted as possessing high attractions for his palate.

That amusing and fluent writer, "Ephemera," whose papers from time to time appear in *Bell's Life*, has given so neat, pleasant, and terse a resumé of the art of bottom fishing that we cannot resist the temptation of extracting it *vice* (as the *Gazettes* say) anything we could indite on the subject.

"The art of angling is divided into three general branches, to wit, fishing at the top, fishing at the middle, and fishing at the bottom. Fishing at the top means fly-fishing, fishing at the middle comprehends trolling in all its branches, and bottom fishing signifies angling with live or dead baits sunk close or to the bottom. Fly-fishing and trolling require a good share of the alertness and activity unimpaired or barely impaired "thaws and sinews" give. Bottom fishing is satisfied with the watchfulness, the quiet attention and placid perseverance of old age. 'Tis the special out-door sport, therefore, of the sobered-down temperament of the man of "sere and yellow leaf." Patience chiefly suffices for its successful practice. It is an immobile, so to speak, pastime. It can be practised from an easy chair.

By the side of a murmuring stream  
An elderly gentleman sat,  
In the grasp of his hand was his rod,  
And sunk in the brook was his plat.

"Tis the oldest branch of the art—the strong, steady trunk of it; the two others are brilliant out-shoots—children of more restlessness than their sire. No artificial baits will do for bottom fishing; they must be real edible ones, and not apparently so. One rod, one line, one hook, one bait will do for bottom fishing. Like all primitive practices, simplicity is its characteristic. 'Tis a thing that suggests itself at once, an invention of necessity. The cunninger branches of the art are inventions of the luxury civilization knowingly craveth for. 'Tis a thing that delighteth in still waters; its children thrive best in the current and the wave.

"We have defined it; let us teach it. Buy a general rod, which will enable you to bottom fish, and your children or friends both to do that,

and to fly-fish, and to troll. Buy it, and with it reel line, and bottom lines, and hooks at any of the shops indicated in the advertising columns of this journal. You will want moreover floats, shooting shot of various sizes, plumbing lines and other minor paraphernalia, which your tackle merchant will not fail, for the sake of his own profit and reputation, to point out for your purchase. Your reel lines must have more of hair in them than of silk, and your bottom lines be of silkworm gut of different degrees of fineness, and sometimes of a single horsehair even. As in fly fishing so in bottom fishing, he who can angle with the finest tackle will take the greatest number of fish, and what is still better the largest ones. You are by the river or pond side. Put the joints of your rod together, then put on your reel or winch, and pass the line through the rings placed at different distances along your rod. Having done so, loop to the end of your reel line your bottom line, having previously placed on the former your float. Next plumb the depth of your water—a sort of piscatorial heaving of the lead. This is done in order to ascertain the exact position at which you are to place your float—lest your length of line immersed in the water may be too long or too short. If too long your bait drags upon the bottom, which it ought never absolutely to do; if too short it will be higher up in the water than the spot at which feed the fish that are the object of the bottom fisher's pursuit. Your float properly placed, put on your hook whatever bait you intend to angle with. A sinking more or less of your float tells that a fish is at your bait, and in order that he may not eat it off with impunity, snatch it pretty quickly, though not rudely from him, that the hook may enter some portion of his mouth. This is what is called striking or hooking your fish, and on the manner you do it much of your success will depend. It is done by chucking your wrist in an oblique direction upwards. The carp proper must be more quickly struck at than any of its species, and to its species most of our coarser river fish belong. The uninitiated reader has here a general outline of the mode the bottom fisher must adopt. That mode varies according to the sort of fish you angle for, and when I shall speak of fishing for each particular sort, I'll point out the precise variation.

"The most general bait for angling at the bottom is the worm, for I believe not a single river fish refuses to eat it. 'Tis a standing dish, a plain piscatorial joint, relished when fish are satisfied with homely food; but sometimes, nay, very often, they are dainty, and have, like mortals, spoiled appetites, and then, carrying on the comparison, they vastly prefer *entremets* and far-fetched made dishes. Monsieur Carême himself must frequently cook for them. These made dishes generally consist of cured salmon roe, various sorts of pastes, prepared greaves, and cheese. Next to the worm, the gentle or maggot is the most general and best bait. Of worms, the different species are many; but those used for angling are the dew or lob-worm for large fish, such as the chub and barbel, the bluehead and brandling, the best worms known, for the former will take salmon, and the latter most of the salmonidæ, besides eels, and all the carp tribe. Though a little thing, it is full of life and death. Worms must be scoured, the larger species particularly, to the end that expelling the earth that fills them, they may become tough, not break in the action of putting them on the hook, and live longer in the water. The common way, and common sense recommends no other, of scouring worms, is to place them in an earthen pot, with a light mould, and fresh gathered moss. In two or three days they will be sufficiently scoured for use. If you wish them to live long, let them have fresh mould and moss every third or fourth day, and whenever you look at them, if you find any dead or sickly, throw them away. The best paste is made of the crumb of bread. 'Tis the "magic paste" of Mr. Mechi, the best angler with paste, perhaps, in England. Composite and scented pastes are quack recipes, not the regular prescriptions of fishing physicians. Some persons recommend green peas parboiled, raw beef cut into long thin slips, grubs and snails, for bottom fishing, but they belong to the experimental school, and the searchers after novelty may use them if they like.

To be to any great extent successful in bottom fishing, you must have recourse certainly to one thing, viz., to using ground bait, which means throwing into the river at the spot and thereabouts at which you propose to fish, a large quantity of the different sorts of baits you propose to use. If worms, throw in large quantities of them chopped up—if gentles, large numbers of them surrounded with clay, so as to form balls as big as one's fist—if cheese or greaves, plenty of those commodities must be flung in. Balls made of a mixture of bran, bread, and clay, well kneaded together, are good when you fish for roach, dace, and carp. Brewers' grains are used when angling for the lesser sort of river fish. If you can bait your ground over-night, and if you do so for a week together, your success will be the greater. Now, you may ask what is the rationale of ground baiting? You shall be answered. As the hungry are drawn to the workhouse to be fed, and there remain for a time, so fish are drawn to your baited ground, and there remain as long as you feed them. Whilst they are waiting for a fresh supply come with your rod and baited hook, and as the fish have been already so long feeding with impunity, they will expect no injury to your *appât*, and swallow it *gulement*, like aldermen just recovered from sea-sickness. I am fond of boasting—most individuals and nations that have nothing to boast of are—and I now vaunt me of having written, in the shortest

possible compass, as complete a treatise on bottom fishing as ever has been written since—I wrote last. Read it, ye cosy codgers of the city who are about retiring from active life into the green fields, and I promise you will never feel an inkling to return to hides, hemp, tallow, and tar again."

Thus far "Ephemeræ," from whose pleasant generalizations on bottom-fishing we return to our carp in particular; who may be fished for at top in the following manner. Throw a few slices of bread to be carried by the wind, and it is a chance but in a short time you will see many fish feeding on them. If not, crumble some small, and cast it in near where the slices float, which will draw them to where the slices swim at top. When they have fed in quiet on these for some little time, take a very long rod, a strong line, a middle-sized hook, with one shot fixed a little above the hook, and baited with a piece of French roll about the size of a horse-bean, taken from the upper crust, and well rasped. You will find, if you have a good eye and a steady hand, that you may thus pick out what size and quantity you wish by dropping your baited hook before the largest fish as he is feeding on the floating slices on the surface. This fish, as we have already said, is very cautious, therefore your float must be very small, and you must keep out of sight; and as when hooked he struggles violently, and is extraordinarily strong, your tackle must be good, or he will break away.

We shall shortly (after dispatching Erson), give the Pike, with an engraving, and several smaller cuts displaying the mode of baiting with the minnow to take the "tyrant of the stream."

## JOTTINGS IN ST. JAMES'S PARK.

BY MILES'S BOY.

(Concluded from No. 9, page 108 of the "SPORTING WORLD").

HEN compelled abruptly to break off, the eye of Miles's Boy (which is worth a Jew's-eye in detecting the finer and less obvious lines of character), had just fallen on a specimen of "the human form divine," which presented a strong contrast to the sexagenarian Lothario who figured in that page. Ha! this is indeed "a full-private" in the Lifeguards. The "cousin," who, on Sunday, "when missis is out," visits Mary the cook, or Sarah the nursery-maid, and who divides with A. 999 the admiration of the servant wenches. Fine fellows those guardamen, and dreadfully "insinuating," as Rebecca declares: "And so 'ansome too," replies Susan; "for my part, I don't think there's a ossifer in the ridgement as is a patch on 'em." And of this opinion is Private Pipeclay himself, as any one with "half an eye" may see, who is just physiognomist enough to translate into plain English the nonchalant look he casts over his left shoulder, to ascertain whether Rebecca or Susan aforesaid, are just then observing his gait

and person. 'Tis a problem not yet solved, why women and turkey-cocks, mackerel, and monkeys, should run, hop, swim, and jump after scarlet rags. Yet so it is; and if some one of the twelve hundred members of the British Society for the Advancement of Science, would

[Concluded on page 130.]

## ON THE DECLINE OF HORSE EXERCISE,

WITH HINTS TO ELDERLY STOUT GENTLEMEN IN PURCHASING A NAG.

BY RINGWOOD.

**N**D is there aught left unwritten, unsaid, or unsung touching that noble animal the horse? Verily, we believe that amidst an accumulated mass of "the knowledge of horse-flesh" in possession of the Equestrian Order of the British Isles, there is still some rubbish to be swept away, some old-fashioned notions still suffered to lie about unheeded, merely forsooth because their removal has not been deemed indispensably necessary in the advancement of the main object of the present day—pace. "Do you know a horse that will suit me or my friend such-a-one?" is a question, alas! too often proposed to our imputed *connaissance* in such matters, and as assuredly answered in the negative. Trite and true is the advice, "never choose a wife or a horse for a friend." If you have troublesome or disagreeable neighbours or acquaintances that you wish to get rid of (and who does not?), should they seek your assistance, purchase with their money by all means; the thing is a certainty. Now, although we will not venture to choose horses for our friends, yet, we feel quite sure that knowledge such as we possess, founded on observation and experience, coupled with advice, may be safely offered to the public for adoption or rejection; and to those who dare to think for themselves the following "Hints" are addressed.

Our opinions respecting "carrying weight" in the field or over the course, recorded in these pages, we happen to know were subjected to the severest scrutiny, and accepted; it may therefore not be deemed presumptuous in attempting the easier task of recommending means suited to the end, by which heavy and elderly men may (under less hazardous circumstances) be carried on horseback safely and pleasantly. A peep at a fashionable watering-place will point out the class of persons for whom this prescription, "take horse exercise," is written. Here you see men, who, after spending the heat of their days in accumulating money, are seeking for health to enjoy it. Sedentary habits and high feeding have done their work; muscular power, from disuse, is unable to offer to the patient dying of too much health strong invigorating pedestrian exercise; and therefore instead of enjoying in a green old age the evening of his days after the mid-day toil, he sinks into the grave sodden with medicinal waters, pills, and potions, "used-up" before his time, possessing all things, enjoying nothing.

"My medical man has ordered me to take horse exercise," said an indolent dyspeptic of somewhat unfair proportions. "I wish he sold horses with his physic. Where am I?" said he, with a sigh, measuring his redundancy of form, "to find an animal to carry me? Why, 'tis of all things that which I used so much to enjoy, and only relinquished it because I could not find horses to carry me." And is not this the complaint to be heard from Johnny Groat's house to the Land's End? What subject regarding man's comfort, improvement, or well-being, that has not been thoroughly sifted, investigated, and practically illustrated in this nineteenth century? yet circumstances have combined nearly to drive horse-exercise from our land, one of the most invigorating and luxurious gifts presented to man by an all-bountiful Providence. Let any one who can carry his recollections five-and-twenty years back enter the metropolis by one of the public thoroughfares in the spring of the year at about 5 P.M., and then let him draw comparisons as to the mode of transit used by the "well to do" in the mercantile world in returning to their respective country-houses in the days to which I advert and now. No one, I say, who has such recollections but must call to mind the numbers of well-mounted gentlemen returning homewards after the business of the day. From twelve to twenty miles per diem were performed by hundreds in this delightful and healthy exercise, recruiting both bodies and minds, and enabling them fully to enjoy the good things which the gods had placed before them. Now, "look upon this picture!" a nasty stinking bus takes them up, and drops them down for inebriety; livery-stable-keepers are running to seed; whilst cases of apoplexy are rife, and coroners have no sinecures.

And after this little digression, let us return to those who affirm they would ride if they could get horses to carry them. In the first place, let us look at the difficulty complained of, divested of prejudices, in favour of opinions that we believe have little more to recommend them than their antiquity. Secondly, let us inquire what is required of the animal to be purchased into a gentleman's stable, and begging our readers to remember that we are now treating only of horses intended to carry heavy men upon the road, so as to render muscular and nervous exercise a pleasure, not a toil. And that the opinions and advice offered may have fair play, examples and illustrations will be produced that may tend to induce some persons to try horse-exercise who have only been deterred by the assurance that a horse could not be found fit to carry them; and if any one human being, by attending to these suggestions, should try the experiment, and restore a vitiated appetite to a healthy state with good digestion, his blessings will be upon our labours a sufficient reward.

Now the grand mistake which is daily made, the rock upon which common sense has been split, or for a time stranded and rendered useless, is the received opinion (one of modern date, and rendered conventional by the countenance of horse-dealers) that nothing but a thing called a *Cos* (I hate the name and the thing too, with very few exceptions) can carry

a heavy quietly-disposed gentleman, and thus, when a purveyor of horse-flesh gets an order to procure a good hack for a man of the above description, in nine cases out of ten the animal brought for trial and inspection is the counterpart of his rider that is to be; as if there could not by possibility exist the remotest analogy between the exercise of muscular power and activity in a biped and a quadruped. I have now in my mind's eye a short squabby man moving from his hall-door upon a *cos*, whose only recommendation was that he had three times as much fat and flesh upon his body as a proper sort of riding-horse ought to have, and whose great bony hairy legs have been mistaken for strong ones. These are the nags that have thrown horse-exercise into the shade: they tire the rider long before the time given to exercise is over. A springing elasticity of action, and a lightheartiness, if I may be allowed such an expression touching a riding-horse, is almost always wanting after the first half hour, the *sine qua non* of an agreeable hackney. Now, instead of relying upon the apparent powers of these unsightly brutes, let heavy gentlemen desirous of taking exercise on horseback, purchase low well-bred horses, having regard to sound legs and feet and good shoulders; let them keep them in good condition; let them shut their eyes the first time they mount them, and throw away prejudice; and then let them declare whether they believe, from what they feel, the animal can carry them. They must be deaf to the gratuitous opinions of their acquaintances whom they may meet in their first trial—such, for instance, as "that animal is just fit to carry your daughter" (Miss in her teens); or "it is not strong enough to carry a pair of boots;" with a variety of other deprecatory comments equally wise and equally threadbare. Let them take heed that they fall not into the common error, that clumsiness is strength; and let them remember that strength without activity (for the end they are seeking) is nothing worth. Good action, commonly the combined result of symmetry without, and a right spirit within, is the "*animus bonum*," the thing never to be lost sight of.

Is an invalid ordered to take carriage exercise—do they place him on a brewer's dray or a turnip tumbrel? Certainly not; but upon a well-built vehicle, light and elastic in its motions, that bodily and mental comforts may move in unison. But nothing is more common in the mass of men than acting upon received opinions, without examining their soundness or unsoundness; and thus thousands are hourly deceived, contrary to the evidence of their own senses. An elderly gentleman of our acquaintance began life in this much-beaten path, but became timely wise by thinking for himself. However, during his noviciate, and whilst under the delusion of opinion, he now confesses, and to this hour regrets the parting with the first animal, and perhaps the very best of the horse tribe, out of the scores that he has since been owner of, that he ever possessed. But, as out of evil will sometimes come good, this mistake erected a beacon in his memory that he never afterwards lost sight of.

(To be concluded in our next.)

## THE STANDING JOKES OF LONDON.

PERHAPS there is no city in the world so rich in works of comic art as London. We do not allude to the caricatures in the print-shops, or even to the paintings of Hogarth in the National Gallery: we rather contemplate that gallery itself than any pictures in it. Our remark, in fact, has reference to the various buildings, statues, and structures erected of late years in different parts of the metropolis. We may specify, for instance, the Fountains in Trafalgar-square, and the adjacent image of GEORGE THE FOURTH riding his horse to water. The revered father of that monarch, with his pigtail, a little further west, may also exemplify our observation. We consider these objects to stand in much the same relation to their respective localities as that which a wafer on the end of the human nose would hold to that organ; or we might compare them to those effigies which are sometimes exhibited in corn-fields for the preservation of the crop. The authorities are greatly to be commended for thus catering to the amusement of the public, in providing the passenger at almost every step with an object calculated to promote mirth; but yet it is a pity that they do not go the whole hog, or Goth, in a spirit of true British burlesque.

Why not, for the future, select designs for "improvements" by a competition somewhat on the principle of a donkey-race, preference being given to the most absurd and tasteless? Who knows but that some humourist may conceive an eye-sore even more ridiculous than the squirting dumb-waiters—Trafalgar fountains—above mentioned? There are no limits to human whimsicality. At the same time we should be thankful for what we have got. Butts were formerly erected for the encouragement of archery; and these decorations being a sort of butts at which all manner of persons may aim their jokes, indicate a revival of the good old times. And perhaps, since the oddities in question are seriously meant to be ornamental, they create more diversion on the whole than they would had they been intended to be funny. In these embellishments the public is provided with standing jokes—cut, however, we must add, at its own expense.

"DELIGHTFUL NOVELTY."—"We are charmed to see in the shops a new portrait of Prince Albert." It was very much wanted; and makes, we think, the forty-fifth this year.

## BRITISH SONG BIRDS.—No. VII.

## THE GOLDFINCH.

(Concluded from page 114.)

"They may also be taught to draw up little buckets or cups with food and water. To teach them this, there must be put round them a narrow, soft leather belt, in which there must be four holes, two for the wings, and two for the feet. The belt is joined a little below the breast, where there is a ring, to which the chain is attached, that supports the little bucket or cup."

**MODE OF TAKING.**—In spring these birds are taken on a lure bush, with a decoy bird of their own species. They will also enter the area, or barn-floor trap, with chaffinches, if bundles of thistles are placed there; but it is not without difficulty, for they are very watchful to avoid nets and lime-twigs. In the winter, by building up bundles of thistles, and placing snares and traps on them, several may be caught; but in autumn and spring lime-twigs should be placed on them in preference. It is a still better plan to place bundles of thistles in a tree stuck about with lime-twigs.

These birds do not like hopping about the upper part, as they would be forced to do, if in a bell-shaped cage, and also inclined to swing round. When they run on the floor they should be given a small artificial tree for a roost; for they like to perch on this whilst singing as well as sleeping.

**FOOD.**—Their food, when wild, consists of all kinds of small seeds, such as lettuce, goats-beard, thistle, milk, and canary seed.

With us, in the house, they are principally fed on poppy, hemp seed, properly varied with lettuce, rape, and canary seed. If allowed to range, the second universal paste agrees very well with them. I have a goldfinch which appears in good health, and eats not only of all the vegetables brought to table, but also meat, though, in their wild state, these birds never touch insects. They must have green food occasionally, such as chick-weed, water-cresses, lettuce, or endive. These birds feed largely, when loose in the room, rarely leaving the food-dish, and driving off, if they can, with loud cries, any of their companions who wish to approach. They will allow those birds, however, to feed peaceably with them, that bear some analogy to their species, at least, in the nature of the stomach, such as the canary, siskin, and especially the lesser redpole, without distinction of male or female.

**BREEDING.**—The goldfinch prefers building in large orchards, at the tops of trees, on weak and terminal branches. It makes the most beautiful nest of any of our birds, except the chaffinch, it being finely rounded, very elegant and firm. The outer part is constructed of fine moss, lichens, stalks of grass, and slender twigs; the whole being interwoven with the greatest nicety. The interior is lined with wool, horse-hair, and the cotton or down of the thistle, or willow. The female has rarely more than one brood in the year, unless she has been disturbed, and, in this case, the number of eggs is always diminished; on this account goldfinches never appear to increase in number. On a sea-green ground, the eggs have pale red spots and speckles, mingled with streaks of reddish black, which often form a circle at the large end. The parent birds disgorge the food into the young ones' throats. Before the first moulting the heads of the young birds are grey. If it is only wished to take male birds from the nest, all that have a whitish ring round the root of the beak, must be left. They must be brought up on poppy-seed and the crumb of white bread, soaked in milk or water. Of all the natural songs of birds, they imitate most easily and perfectly that of the canary; they also pair with the canary, and produce together fruitful young ones. For this purpose, a male goldfinch is paired with one or two female canaries, which succeeds better than by placing a male canary with a female goldfinch; the former being more amorous, most favours this union, particularly if educated from youth. The fruit of this union are not less distinguished for the beauty of their plumage, often yellow, with the head, wings, and tail, of the goldfinch, than for the sweetness of their song, whether natural or acquired.

If you are afraid that a pair of canaries you value may not hatch their eggs as you wish, place them in the nest of a goldfinch in your orchard, and you may be certain that they will be properly matured, and the young ones brought up in the best manner. When they are ready to fly, place them in a cage, and suspend it by the side of the nest till they can feed themselves. By this means you will have no trouble with their education.

**DISEASES.**—Epilepsy is one of the commonest disorders of this bird. If the eyes are weak and swollen, anoint them with fresh butter. Stupor and giddiness being very properly attributed to too great a use of hemp seed, it is best to suppress it entirely, and supply its place with the seed of lettuce and thistles. This latter is so beneficial, that it would be well to give them, from time to time, a head to pluck the seeds for themselves.

Old age makes them blind, and deprives them of their beautiful colour; yet, notwithstanding all the evils with which they are afflicted, in a cage a goldfinch has been known to live sixteen years, and even twenty, or twenty-four years.

The goldfinch is taught to go and come at command, without any danger of losing it, much sooner than the linnet, though the latter learns quite as soon to build in the room. To accomplish this feat the

winter should be chosen, and the cage, containing a goldfinch that has not been rendered tender by having been too long accustomed to the heat of the room, must be placed on the outside of the window every day, or on a shelf intended for it, and where the mice cannot reach it. Hemp seed must be scattered round, and a bunch of thistle heads fastened by the side, the seeds of which should be mixed with the hemp seed. Presently one or more goldfinches, attracted by the call of the prisoner, collect, to take advantage of the scattered food; as soon as you have succeeded so far it is useless to let the decoy remain any longer exposed to the cold, which may injure it. It will be quite sufficient to place the cage within the window, and to put on the outside a cage as a trap, not for the sake of catching these birds, but to scare away the sparrows, that would soon eat up all the seed unless thus prevented; and in order that the trap may only close when you wish, the door should be supported by a string, passing into the room, and loosened, to catch the sparrows, but the goldfinches should be allowed to go in and out at pleasure, till the snow is on the point of disappearing, then close the trap on those you wish to keep: the bird thus captured should be placed in a cage, where they will soon grow tame, and learn to go and return to it.

## THE ENGLISH, A SPORTING NATION.

"With early dawn he mounted gay,  
The hunter stood, exulting o'er the tale,  
And drew the rosy breath of orient day;  
Sometimes retiring to the secret vale,  
Y'clad in steel, and bright with barbed mail,  
He strained the bow, or loosed the sounding spear,  
Or, darting on the goal, outstripped the gale,  
Or strenuous, wrestled hard with many a tough compeer."

ONE of our sporting writers, in his talented "Piscatorial Passages," very justly observes that the inhabitants of the Britannic Isles are the hardiest, the healthiest, the most powerful in mind and body, and the longest lived of all nations, and there is but one cause for it, viz., their general love of rural sports and athletic exercises. From their cradle, our rural population are taught to give themselves up to out-of-door amusements. The grand difference between us and all other civilized people is in no one thing so marked, so widely distinct, so diametrically opposed, as in our respective pastimes. Amusements practised on the mountain and the plain, in woodland and upon water—upon every surface, rugged or smooth, of the wonderful rind that covers the earth. The early initiation into the practice of sports produces a race of men capable of bearing the rigours of every climate, and living hearty and hale far beyond the natural term allotted to man. The mass of the inhabitants of other countries are old at the age which bespeaks the Englishman's prime. Man, in other countries, is in a state of decrepitude when the Englishman, daring in everything, but most daring in this most daring of acts, takes to himself a third, or perchance, a fourth wife, in years young enough to be his grandchild, and procreates the finest children that ever gambolled on the green sward, with bright eyes twinkling in the sun. What's the cause of this? Out-door amusements. Cricket, quoits, foot-ball, rowing, rackets, riding, hunting, shooting, fishing, eternal energetic exercise in their boyhood, their adolescence and early manhood have done it all—have tempered and toughened their thighs and sinews, so as to render them proof almost against the hard handicuffs of that deadly hitter, old Time. The hand that prostrates, in central Africa or Asia, with unerring rifle, the springing tiger, first learnt its fatal cunning in its early exercises upon the timid hare or beautiful pheasant; the hand that steers amid the tempest and dangerous breakers that gallant frigate, was first taught the art in sailing matches on the waters of the Thames; and the hand that hurls that harpoon deep into the sides of the leviathan of water animals, first caught its steady aim in spearing the bounding salmon at the weirs and waterfalls of the Tay, the Tweed, or the Shannon. The effects of our native rural sports on the health and character of our country are manifest and manifold.

## SOOTHSAYER'S AUGURY FOR THE DERBY OF 1845.

In ancient times Soothsayers and Oracles were much consulted; but all the credit now due to a lucky prophecy is simply, that a man can see a long way, or has an eye which will go through a deal-board. The answers of the Oracle were sometimes given in verse, or written on tablets, but their meaning was mostly obscure, and often the cause of disaster to such as consulted. On the contrary, our Derby "prophets" of late years have been too positive; and for 1844, "Ratan" was prophesied, but did not perform, much to the chagrin of the uninitiated and credulous. My observations, allow me only to express myself equivocally; and my answer to the consultants is, as of old, obscure. It is threefold:

"ENGLAND! with all thy faults, I LOVE THEE STILL."—SHAKESPEARE.

prologue Aphareia Lynceus,

Et celest Idas."—OVID. Met. 8, v. 305.

"You are rather low, P—," said the Goodwood peer, as he poured out the champagne to his friend, who had betted largely against the Mitchell-grove lot; "By Jove," cried S—, after a pause, "only think of Daddy Forth having gone and done it."—*D'Israeli's "Sybil"* literally altered.

just write a "monograph" as they call it, on this interesting fact in physiology, we will back it against any one of the essays on "Moon-stones," "Miasma," "Maybugs," or "Megatherium," to be read at the next meeting, for interest, amusement, or utility. And "talking of pundits," as Caleb Quotem would say, "puts one in mind of policemen."

We have already said (that is, in our plural individuality, for Miles's Boy, like all editors, is a noun of multitude) that the policeman is a formidable rival to the dashing guardsman in the good graces of the wenches: but this, as we shall show, is from circumstances. Did he of the red coat possess the numerous advantages of the semi-civilian in blue, the scarlet would carry it all to nothing against his cerulean competitor: but no! the subject of the sketch before us is "cabined, cribbed, confined," Susan must, in most instances, come to see him, while A 999—but we pause. Is there not the front area, near which his sounding heels echo from the vocal pavement, crying, "Mary, I am going as far as the corner of the square, can you come out?" Then, is there not always a something a-wanting from the greengrocer's, or the public-house, or "down the mews," or—? We fear the public force (we like that term) have sadly superseded the soldiery in the private walks of life; but here, here in St. James's Park, he is on his own ground. Here the policeman is indeed insignificant, and the same passion which raises a sigh in the breast of a heiress for the Honourable Captain Fitzflunkey, of the Fusiliers, finds it echo in the bosom of the nursery-maid for Corporal Cartouche, of the Carabineers. But we have done with the guardsman; and again on gravel, not of our meditations, but of the broad walk by the waterside.

Ah! here is another episode! what story doth this tell? We "guess," as Jonathan would have it, that there is much more in that book than meets the eye, at least of the young lady who pretends to be perusing its pages. Think you, she came here to read? Green, green as the turf beneath her pretty feet must he be who believes it. Mark you the air of abandon?

(Excuse a foreign slip-slop now and then,  
If but to show we've travell'd;  
For after all, what is the use of travel,  
Except to teach one how to quote and cavil.)

Mark you how *déagé* the style in which the parasol swings on the tiniest finger of her tiny right hand? And last, but not least, observe how her eyes—sweet eyes—rolling in liquid lustre, are pertinaciously directed "over the left," while her smitten *innamorato* is on the right, which here seems the *wrong* side in love, as well as in driving? Thus much is, as the advertisers say of puzzling school-books "perfectly clear to the meanest capacity;" but Miles's Boy sees deeper: think you she knows

not that he *would* be there, that he *is* there? Of course; and when mamma (for mothers are lynx-eyed when "detrimentals," *alias* younger brothers, are in the way) heard that her darling Antonia-Theresa (Eng-

THE SENTIMENTAL YOUNG LADY.

lish names being voted vulgar, especially as papa was at her birth attached to the embassy at Naples, or some other dirty Italian court) was anxious to walk in the enclosure, she readily consented, never dreaming that in that resort of nursery-maids and their charges, yonder penniless

adorer was watching the golden fruit. Well, she is a nice girl; and if Thomas Trefusis Trevelyan, Esq., whose pedigree is longer than his purse, has her heart, "happy man be his dole," says Miles's Boy: for myself,

I should like exceedingly to be the man  
On whom her reveries celestial ran,  
or terrestrial either, for that matter. But it is evident she is bespoken;

we read it in her look, we see it in her tendril-like lovelocks, and in her gracefully-neglected shawl; she is determined to create a sensation; and when a pretty woman resolves on that, she is sure to do it. Let us turn then from the "bespoke" young lady, to a couple, who, we suspect would fain be so.

We have turned the sweep of the walk opposite the Horseguards, cleared the pretty little cottage of the Ornithological Society, and here

is another group. Their occupation or amusement is too grateful, kind, compassionate, and feminine to call even for a line of criticism. Shakspeare has made Romeo say,

Oh! that I were a glove upon that hand

That I might touch thy cheek!

but if the Venetian wished himself a glove, how often might an "unfeathered bibed" like Miles's Boy wish himself a goose to attain such privileges as the silly birds here before us. But by'r lady "our geese are swans," as they've often been reckoned without being so; so having nothing better to do than to stroll seaward towards the palace of Buckingham, we here, after this most insulting mistake (so far as the artist is concerned) quit the dangerous vicinity of the syrens depicted above, make our bow till "time and the humour" again set us Jotting in St. James's Park.

## FELIX FOYLE AND THE HORSE-STEALER.

A TALE OF YANKEE 'OUTNESS.

(From the New Series of Sam Slick.)

SOMETIME how I have often laughed at that story of Felix Foyle and the horse-stealer! Did I ever tell you that contrivance of his to do the Governor of Canada?"

"No," I replied, "I never heard of it." Sam then related the story, with as much glee as if the moral delinquency of the act, was excusable in a case of such ingenuity.

"It beats all," he said. "Felix Foyle lived in the back part of the State of New York, and carried on a smart chance of business in the provision line. Beef, and pork, and flour was his staples, and he did a great stroke in 'em. Perhaps he did to the tune of four hundred thousand dollars a-year, more or less. Well, in course, in such a trade as that, he had to employ a good many folks, as clerks, and salters, and agents, and what not, and among them was his book-keeper, Sossipater Cuddy. Sossipater (or Sassy, as folks used to call him, for he was rather high in the instep, and was Sassy by name and Sassy by natur' too,)—well, Sassy was a 'cute man, a good judge of cattle, a grand hand at a bargain, and a most an excellent scholar at figures. He was generally allowed to be a first-rate business man. Only to give you an idee, now, of that man's smartness, how ready and up to the notch he was at all times, I must jist stop fust, and tell you the story of the cigar."

"In some of our towns we don't allow smokin' in the streets, though in most on 'em we do, and where it is agin law it is two dollars fine in a general way. Well, Sassy went down to Bosten to do a little chore of business there, where this law was, only he didn't know it. So, as soon as he gets off the coach, he outs with his case, takes a cigar, lights it, and walks on smokin' like a furnace flue. No sooner said than done. Up steps constable, and says, 'I'll trouble you for two dollars for smokin' agin law in the streets.' Sassy was as quick as wink on him. 'Smokin'!' says he, 'I warnt a-smokin'.' 'Oh, my!' says constable, 'how you talk, man. I won't say you lie, 'cause it aint polite, but it's very like the way I talk when I lie. Didn't I see you with my own eyes?' 'No,' says Sassy, 'you didn't. It don't do always to believe your own eyes, they can't be depended on more nor other people's. I never trust mine, I can tell you. I own I had a cigar in my mouth, but it was because I like the flavour of the tobacco, but not to smoke. I take it it don't convene with the dignity of a free and enlightened citizen of our almighty nation to break the law, seein' that he makes the law himself, and is his own sovereign, and his own subject too. No, I warnt a-smokin', and if you don't believe me, try this cigar yourself, and see if it aint so. It hante got no fire in it.' Well, constable takes the cigar, puts it into his mug, and draws away at it, and out comes the smoke like anythin'."

"I'll trouble you for two dollars, Mr. High Sheriff devil," says Sassy, 'for smokin' in the streets; do you understand, my old 'coon?' Well, constable was all taken aback, he was finely bit. 'Stranger,' says he, 'where was you raised?' 'To Canady line,' says Sassy. 'Well,' says he, 'your a credit to your broghtens up. Well, let the fine drop, for we are about even I guess. Let's liquor,' and he took him into a bar and treated him to a mint julep. It was generally considered a great bite that, and I must say I don't think it was bad—do you? But to get back to where I started from. Sassy, as I was a-sayin', was the book-keeper of old Felix Foyle. The old gentleman sot great store by him, and couldn't do without him, on no account, he was so ready like, and always on hand. But Sassy thought he could do without him, tho'. So, one fine day, he ab-squittled with four thousand dollars in his pocket of Felix's, and cut dirt for Canady as hard as he could clip. Felix Foyle was actilly in a most beautiful frizzle of a fix. He knew who he had to deal with, and that he might as well follow a fox a'most as Sassy, he was so everlastin' cunning', and that the British wouldn't give up a debtor to us, but only felons; so he thought the fust loss was the best, and was about givin' it up as a bad job, when an idee struck him, and off he started in chase with all steam on. Felix was the clear grit when his dander was up, and he never slept night or day till he reached Canady, too; got on the trail of Sassy, and came up to where he was airted at Niagara. When he arrived it was about noon, so as he enters the tavern he sees Sassy standin' with his face to the fire and his back to the door, and what does he do but slip into the meal-room and hide himself till night. Jist as it was dark in comes old Bambrick,

the inn-keeper, with a light in his hand, and Felix slips behind him, and shuts too the door, and tells him the whole story from beginnin' to end; how Sassy had sarved him; and lists the old fellow in his service, and off they set to a magistrate and get out a warrant, and then they goes to the deputy-sheriff and gets Sassy arrested. Sassy was so taken aback he was hardly able to speak for the matter of a minit or so, for he never expected Felix would follow him into Canady at all, seein' that if he onct reached British aide he was safe. But he soon come too agin, so he ups and bullies. 'Pray, sir,' says he, 'what do you mean by this?' 'Nothin' above particular,' says Felix, quite cool, only I guess I want the pleasure of your company back, that's all, and then turnin' to the onder sheriff, 'Squire,' says he, 'will you take a turn or two in the entry, while Sassy and I settle a little matter of business together,' and out goes Nab. 'Mr. Foyle,' says Sassy, 'I have no business to settle with you—arrest me, sir, at your peril, and I'll action you in law for false imprisonment.' 'Where's my money?' says Felix—'where's my four thousand dollars?' 'What do I know about your money?' says Sassy. 'Well,' says Felix, 'it is your business to know, and I paid you as my book-keeper to know, and if you don't know you must jist return with me and find out, that's all—so come, let's us be a-movin'.' Well, Sassy larted right out in his face; 'Why, you ousned fool,' says he, 'don't you know I can't be taken out o' this colony State, but only for crime, what a rael soft horn you be to have done so much business and not know that?' 'I guess I got a warrant that will take you out tho', says Felix—read that,' a-handin' of the paper to him. 'Now I shall swear to that agin, and send it to Governor, and down will come the marchin' order in quick stick. I'm soft I know, but I ain't sticky for all that, I ginerally come off clear without leavin' no part behind. The moment Sassy read the warrant his face fell, and the cold perspiration rose out like rain-drops, and his colour went and came, and his knees shook like anythin'. 'Hoss-stealin'!' says he, aloud to himself—'hoss-stealin'!—Heavens and airth, what parjury!! Why, Felix,' says he, 'you know devilish well I never stole your hoss, man; how could you go and swear to such an infernal lie as that?' 'Why, I'm nothin' but a cussed fool' and a 'rael soft horn,' you know,' says Felix, 'as you said jist now, and if I had gone and sworn to the debt, why you'd a kept the money, gone to jail, and swore out, and I'd a-had my trouble for my pains. So you see I swore you stole my hoss, for that's a crime, though ab-squittilation aint, and that will force the British Governor to deliver you up, and when I get you into New York state, why, you settle with me for my four thousand dollars, and I will settle with you for stealin' my hoss,' and he put his finger to the tip eend of his nose, and winked and said, 'young folks think old folks is fools, but old folks know young folks is fools. I warnt a-born yesterday, and had my eye teeth sharpened before you'n were through the gums, I guess—you hante got the Bosten constable to deal with now, I can tell you, but old Felix Foyle himself, and he aint so blind but what he can feel his way along I guess—do you take my meanin', my young 'coon?' 'I'm sold,' says Sassy, and he sot down, put both elbows on the table, and covered his face with his hands, and fairly cried like a child. 'I'm sold,' says he. 'Buy your pardon, then,' says Felix, 'pay down the four thousand dollars and you are a free and enlightened citizen once more.' Sassy got up, unlocked his portmanteau, and counted it out all in paper rolls, jist as he received it. 'There it is,' says he, 'and I must say you deserve it; that was a great stroke of your'n.' 'Stup a bit,' says Felix, seein more money there, all his savin's for years, 'we aint done yet, I must have five hundred dollars for expenses.' 'There, d—n you,' says Sassy, throwin' another roll at him, 'there it is; are you done yet?' 'No,' says Felix, 'not yet; now you have done me justice, I must do you the same, and clear your character. Call in that gentleman, the constable, from the entry, and I will go a treat of half a pint of brandy.—Mr. Officer,' says Felix,—'here is some mistake, this gentleman has convinced me he was only follerin', as my clerk, a debtor of mine here, and when he transacts his business, will return, havin' left his hoss at the lines, where I can get him if I choose; and I must say I am glad on't for the credit of the nation abroad. Fill your glass, here's a five dollar bill for your fees, and here's to your good health. If you want provision to ship off in the way of trade, I'm Felix Foyle, and shall be happy to accommodate you.'

"Now," said Mr. Slick, "that is what I call a rael clever trick, a great card that, warn't it? He deserves credit, does Felix, it aint every one would a-been up to trap that way, is it?"

**CHANGING COLOUR.**—An extravagant young gentleman having for a few days sported a pair of beautiful grey horses, asked a friend of his, who happened to be of a more serious cast, what he thought of his greys. "Why, I confess, Ned," replied the other, "they look extremely beautiful, but take my word for it, your greys will very soon be converted into duns."

**IMPORTANT TO LADIES WITH THIN SHOES.**—We understand some enterprising crossing-sweepers intend starting a company to supply the metropolis with an improved watering-cart, that throws out a double quantity of water, as they have found from experience that the more the streets are made impassable from mud in the fine weather, the greater the traffic, and profit over their crossings. To quote their own words; "There is nothing like a good watering-cart for bringing down the dust."—Punch.

**IMPUDENCE.**—Fitzroy Kelly, examining a very young lady, who was a witness in a case of assault, asked her if the person who was assaulted did not give the defendant very ill language, and utter other words so bad that he, the learned counsel, had not *impudence* enough to repeat them; she replied in the affirmative. "Will you, madam, be kind enough, then," said he, "to tell the court what these words were?"—"Why, sir," replied she, "if you have not *impudence* enough to speak them, how can you suppose that I have?"

**REAL MODESTY.**—A young lady, with her eldest sister, was in company where stories of gallantry were told with very minute details. The eldest girl took her sister aside, and said, "Are you able to hear such stories with so much attention, and not blush?" "Indeed, sister," said the younger vestal, somewhat archly, "indeed I see nothing to blush at; but you may understand the stories better than I, perhaps."

### WEAK LEGS, KNEES, and ANKLES.

Surgeons in England, Ireland, and Scotland continue to recommend BAILEY'S ELASTIC LACED STOCKINGS, KNEE-CAPS, and ANKLE-SOCKS. They are light, cool, and warranted to wash. Since the reduction of postage, afflicted persons in the country can have any bandage by post for a few pence, by forwarding their measure. The particular property of the Stocking is to give constant support in varicose veins, weak, swollen, or dropsical affections of the legs, or in any case requiring equal pressure. The Knee-cap will be of great service where the knee-joint requires support, from accidents to the pan of the knee, after inflammation, rheumatic or gouty affections, or in any case where, from weakness of the part, support may be required. Laced Stockings, 18s. 6d. to 21s.; Knee-caps, 10s. 6d. to 12s. 6d.; Sock for Ankle, 10s. 6d.; TRUSSES, 7s. 6d. to 10s. 6d.

**RUPTURES.**—BAILEY'S TRUSSES are declared by many eminent Surgeons to be the best: they are light and easy to wear, and if a cure is to be obtained they will effect it. The patient is also carefully attended to by Mr. Bailey or his assistants during 12 months for One Guinea (the Truss included); by this means, a proper adjustment being always preserved, the inexperienced will be enabled to effect their cure in the shortest time possible. Trusses may be had as low as 7s. 6d. and 10s. 6d. Ladies attended by an experienced female assistant. Bailey's 418, Oxford-street, London.

### FREE TRADE BAZAAR, COVENT-GARDEN THEATRE.

Gentlemen from the Provinces, attending this grand national demonstration, are respectfully informed that excellent ACCOMMODATION will be found, on terms that will meet the views of the fair economist, at **PYNE'S BELL HOTEL**, Wellington-street North, Strand. The situation of the Bell presents unusual facilities to gentlemen having City, Surrey side, or West End business. Steamers at the bridge, and omnibuses from morning till night to all parts, within hail. Pyne's Bell Tavern, Wellington-street, North.—Letters (post paid) attended to instantly.

### EASE IN WALKING AND COMFORT TO THE FEET.

WELLINGTON STREET, STRAND, LONDON.

**HALL & CO. PATENTEES OF THE PAN-NUS CORIUM,** or Leather-cloth Boots and Shoes, for Ladies and Gentlemen. These Articles have borne the test and received the approbation of all who have worn them. Such as are troubled with Corns, Bunions, Gout, Chilblains, or Tenderness of Feet from any other cause, will find them the softest and most comfortable ever invented—they never hurt the feet or get hard, are very durable, and adapted for every climate; they resemble the finest leather, and are cleaned with common blacking. The Patent India Rubber Goloshes are light, durable, elastic, and waterproof; they thoroughly protect the feet from damp or cold. **HALL & Co.'s** Portable Waterproof Dresses for Ladies and Gentlemen. This desirable article claims the attention of all who are exposed to the wet. Ladies' Cardinal Cloaks, with Hoods, 18s. Gentlemen's Dresses, comprising Cape, Overalls, and Hood, 21s. The whole can be carried with convenience in the pocket. N.B. **HALL & Co.** particularly invite attention to their Elastic Boots, which are much approved; they supersede lacing or buttoning, are drawn on in an instant, and are a great support to the ankle.

### EVERYBODY SHOULD ASK FOR

**TURPIN'S RIDE TO YORK!** Splendidly Illustrated. Complete in Eight Numbers, at Twopenny each, or neatly done up for Eighteenpence. The illustrations commence with the start from Kilburn Wells, after the death of Tom King. The second plate shows his flying leap over a donkey-cart and driver. The third plate represents his leap over the toll-bar. The fourth, his stoppage of the York Mail. The fifth, his interview at the foot of the gibbet. The sixth, his race with the Phantom! and the seventh, the death of the faithful Bess, close to the gates of York, and the escape of our hero. This extraordinary set of pictures, with an Emblematical Frontispiece, may be had separately, price One Shilling plain, Three Shillings coloured. London: Cleave, Shoe-lane, Fleet-street; Clark, Warwick-lane; Vickers, Holywell-street; Purkiss, Compton-street, &c., &c., and all Booksellers.

### THE COMFORTS OF A HOME, ECONOMY, AND EXCELLENCE.

**AT THE CROWN TAVERN, Stationer's Hall Court, Ludgate Hill.**—Gentlemen who have business in the City, and residents in the neighbourhood, will find every accommodation. Good Beds, Choice Wines, Spirits, and Cigars, and an Extra-ordinary Ordinary, every day, at half-past One o'clock, at a figure you will not believe till you come and see the fare, and find the charge, which is as unheard of as the cheer is excellent.

The first complete and uniform Edition of **THE WORKS OF M. EUGENE SUE**, closely printed in large 8vo., price 6d. each part, containing 64 pages, equal in amount to a twelve volume. **THE MYSTERIES OF PARIS**, is now nearly complete. \* \* \* This is the only cheap, complete, and faithful translation from the latest Paris Edition, with explanatory notes by the Editor. All other cheap issues of this work are from the spurious Belgian editions, pirated from the Paris newspapers, previous to its revision by M. Eugene Sue, himself.

**PEOPLE'S EDITION OF COOPER'S NOVELS.** Each Novel, containing 20 Engravings, complete for One Shilling, and comprise the following:—

- I. THE PILOT.
- II. THE SPY.
- III. LAST OF THE MOHICANS.
- IV. LIONEL LINCOLN.
- V. THE PIONEERS.
- VI. THE PRAIRIE.
- VII. THE RED ROVER.
- VIII. THE WATER WITCH.

All Orders should specify "People's Edition." A beautiful Ornamented Case, to bind the above, price 1s. 6d. Or the work may be had in one very handsome Volume, price 10s.; consisting of nearly 1000 Octavo Pages, and 200 Engravings. Beautifully printed in Nonpareil type. Originally printed in 24 Volumes, at Twelve Guineas.

**A BOOK FOR THE MILLION!** To be completed in Sixty Numbers at One Penny, or Twelve Monthly Parts at Sixpence each.

A now and elegant Periodical, consisting of sixteen closely-printed pages, double-column, and embellished with several superb Engravings, by Landells and others, entitled,

**NEW LAWS OF CRICKET.** **WRESTLING AND PEDESTRIANISM,** With full Instructions in Training for Athletic Sports and Exercises: with Engravings. **MODERN BOXING.**

Containing the History and Practice of Pugilism, illustrated with Numerous Engravings.

**SPORTING SONGS,** Containing upwards of 100 of the most approved Sporting Songs extant.

**THE MOST POPULAR WORK OF THE DAY.** Publishing in Weekly Penny Numbers, and Monthly Sixpenny Parts, beautifully illustrated with Woodcuts.

**THE MYSTERIES OF LONDON**, by G.

W. M. REYNOLDS, Author of "Pickwick Abroad," "Robert Macaire," "The Modern Literature of France," "Master Timothy's Book-case," &c.

Since the days of Box's "Pickwick" no original work has created so powerful a sensation in the reading world as "THE MYSTERIES OF LONDON." It was at first contemplated to publish it in Monthly Shilling Parts; but, upon mature consideration, the proprietor and author resolved to issue it in a form which should render it accessible to all classes. The prejudice against cheap literature having completely died away, this determination was acted upon; and a success, which far exceeded the most sanguine expectations previously formed, has crowned the work. The weekly and monthly sales, taken together, now amount to upwards of 30,000 copies. The thrilling interest of the tale; the vivid descriptions of London society, both high and low; the graphic delineation of strange or remarkable localities in the great metropolis; the exposures of all kinds of roguery to which the unscrupulous ones may become a prey; and the fearlessness with which the cause of the innumerable millions is espoused, have given to "THE MYSTERIES OF LONDON" a character which has become the element of the most lasting popularity. Part VII. and No. 36 are now ready. All the Numbers from 1 to 27 inclusive have been reprinted. London: G. VICKERS; and all Booksellers and Newsmen in Town and Country. Paris: A. and W. GALIGNANI.

London:—W. M. CLARK, 17, Warwick-lane, Paternoster-row. Sold by every Bookseller in the kingdom.

### ON ENTIRELY NEW PRINCIPLES, TAILORING, WOOLLEN DRAPERY, AND OUTFITTING ESTABLISHMENT, No. 29, LUDGATE HILL.

SAMUEL, BROTHERS, Proprietors.

**THE novel principle on which we intend to** conduct the business of this Establishment, constitutes an entirely new Era in our line of business, it will afford another incontestable, cheering and triumphant proof of the wonders to be effected in the world of commerce by the union of Judgment, Capital, and Experience.

We confidently and positively assert, that our system will effect a greater saving to the Public in the article of Dress, than has ever yet been realised, we rely not alone on its novelty, for it only needs to be once tested to be universally encouraged. We are aware that there is a general impression that lowness of prices necessarily involves inferiority of quality; but we unhesitatingly say, that with the facilities fortunately at our command, we can secure Lowness of Prices with every other concomitant advantage. The Establishment of Samuel, Brothers, is the first (we may say) in the world which has originated the judicious plan to which publicity is now given, a plan which cannot fail to be hailed with admiration, because, while it realizes the most sanguine hopes of the economist (as it tries to be a source of pride to its inventors, based as it is on the most enlightened views, and conducted as it will be upon the most honourable principles. We will now state in what the novelty consists, though simple in its details, it is most beneficial to the public in its operation, and is neither more nor less than this.—Every customer will be enabled to ascertain the Value and Quantity of material required for every variety of Garment. Each and every Cloth, Cassimere, Doeskin, &c., being marked in plain figures at the price per yard, such price being the same as would be charged upon the purchase of the material by wholesale.

We shall explain to our Patrons the exact quantity that will be necessary for the particular article of dress wanted, and shall charge separately for the making and trimmings. This system (as a trial of its operation will abundantly demonstrate) will effect a saving of fully one-third of the expense in the articles required in Gentlemen's dress. Our unlimited command of Capital secures to us the advantage of making our purchases for Cash—our knowledge of the best Markets—our connexion with the most respectable and extensive Manufacturers—our position in the estimation of our friends—our anxious desire to merit more extended patronage—the enormous expense we have incurred in rendering our Stock as varied and complete as that of any House in London, are so many distinct and certain pledges to the public of the fidelity, ability, and zeal, which will be manifested in the conduct of our Establishment, and as our system thus empowers us to supply the best Goods at a lower price than has hitherto been deemed practicable, as our Customers will be enabled to select their own Cloth at Wholesale prices, from a most varied and extensive stock, we doubt not that our efforts will meet with unqualified success. The peculiar advantages of the system of SAMUEL, BROTHERS, may be practically exemplified as follows.—The average quantity of Cloth for a Coat is 13 yards; suppose that selected be 8s. per yard, the material would cost 104s., our charge for making and trimmings would be 18s., thus a really good serviceable Coat, completed in the best style, will be made to measure for 32s. Again, suppose the Cloth selected to be 12s. per yard, the material would cost 21s., our charge would be 20s. for making and trimmings, thus a first-rate Coat made to measure and completed in the best style will be obtained for 41s., few, if any, charge less than 50s. or 52s. for the same article. The same saving will be effected in every description of Clothing. The extensiveness of our stock enables us to offer Cloths at from 5s. to 21s. per yard. Our charge for making and trimmings for Cloths under 10s. per yard is 18s., and for the higher price Cloths 20s. We have entered into arrangements with the first Manufacturers of Wool Dyed Black Cloths for a regular supply, the wear of which we can guarantee to be superior to any yet made, as they are finished on an entirely new principle. Artists of the First Talent in the Empire are engaged to superintend the Cutting Department, so that we feel certain of pleasing the most fastidious, who will have such superior fitting garments, that they will pronounce them faultless. The greatest attention will be paid to the Workmanship, as well as style of all articles. In quality of Cloths, variety of patterns for Trousers—richness and novelty in designs of Vestings, we flatter ourselves that we have a stock that will please every beholder. Noblemen and Gentlemen on inspecting our mode of transacting business, will be astonished at the saving they may effect in their Liveries,—in many instances nearly one-half. We beg to remind our Friends that the smallness of our profits will not allow us to run the least risk in giving credit, our system compelling us strictly to adhere to Ready Money, but in order to give every satisfaction, we promise that, should an Article (after it has been paid for), not please, we will exchange it, or return the Money, without demur.

Ladies' Riding Habits made in a very superior manner.

Sporting Coats made in the First Style of Fashion. We have a very extensive Stock of Superior Ready-made Clothes, which we offer at such prices as must ensure unqualified satisfaction. We submit the following list as a guide:—Super Cloth Dress Coat, 21s.; Saxony ditto, 26s.; Very super ditto, 30s.; Frock Coats, 3s. extra. Cassimere Trousers, 14s.; Doeskin, 10s. 6d.; Tweed, 7s. 6d.; Vests in endless variety, and at any price.

MOURNING to ANY EXTENT ALWAYS READY.

A New and Extensive Assortment of Boys' and Youths' Clothing at the Lowest possible Prices.—Observe the Address.—SAMUEL, BROTHERS, Tailors, Wholesale and Retail Woollen Drapers, &c., 29, LUDGATE HILL, Two doors from the Old Bailey. Take Notice.—No business transacted from Sun-set on Fridays to Dusk on Saturdays, when business will be resumed until Twelve o'clock.

A Guide for Self-measurement and Patterns sent to any of the Kingdom.

LONDON:—Printed for the Proprietors, by W. M. CLARK, at his Steam-Press, 10, Red Lioncourt; and published by him at 17, Warwick-lane, Paternoster-row; J. CLEAVE, Shoe-lane, Fleet-street; and all Booksellers in the United Kingdom.

No. 3. FOR THE WEEK ENDING JUNE 7, 1845. THREE HALFPENCE.

CONDUCTED BY THE EDITOR OF "THE SPORTING WORLD."

## AN EXCURSION TO EPSOM.

BY MILES'S BOY.

NOW shall Miles's Boy begin his chronicle of the casualties and circumstances of his Epsom Excursion!

Nothing so difficult as a *beginning*  
Except perhaps to *end*,

says Byron and so say we "my bo-o-y!" as Jolly Paul Bedford hath it. And now, as according to the old school philosophy of our venerable papa, who devoutly believes in "Nicholas Culpepper's Complete Herbal," and the prognostications of "Francis Moore, physician," the virtue of all

flowers and simples depends on their being gathered while the dew is on the leaf, so must Miles's Boy eul the recollections of the road, while yet their memory is green and fresh, and catching the manners "living as they rise," scarcely let the sun go down upon his reminiscences.

Doth not the opening of an article into which one has to transfer the pencillings of an artist—to interweave with the texture of one's text the pictured thoughts of another—marvellously resemble the opening round of a fight. All is scientific manœuvring, dodging to see where you shall plant the first blow—eighteen pencillings for as many wood blocks lie before us—Egad, we've got *back*, gentle reader, before we've set out!

To begin then with the beginning—a rule eschewed and scouted by Homer, Horace, and the (h)ancients, but found marvellously convenient by the moderns, we would ask you, reader, how you liked Wednesday morning last, provided you were going to the Derby? For ourselves dad was grumpy, and an American friend (who "wished he might be smashed to everlasting squash if he didn't *destine* himself to see a Darby afore he absquoterlated from Britishers' land") swore a collection of oaths not to be found even in the big dictionary of Citizen Noah Webster; though that work, as we were assured by the same gentleman, "contains all the words as Johnson ever heard on, and an almighty number as he never thought on." Yet there was no remedy. Rain, rain, ceaseless, pitiless rain. "Suppose we stay at home?" suggested the old gentleman: "stay, I'll read you what Nimrod said about it: for surely this rushing off on an Epsom party, despite the elements, is like party in politics, 'the madness of the many for the gain of a few,' and those few extortionate tavern-keepers and jobmasters: mere spoiling of good—"

"Hold, dearest dad, we know you are wise, but pray spare the infliction of your wisdom for some other day than the Derby."

"Boys will be self-sufficient," muttered the old 'un; "well, as you will not hear what I have to say, hear Nimrod, whom you often try to quote:—'What madness, thought I, pervades all the human London race on this day. Thousands on thousands simultaneously rush sixteen miles on the wings of the wind, to see ten or twelve shrivelled little human beings in coloured silk, try which can get *over* a mile and a half hard ground and white rails, and show himself first to a corpulent gentleman who sits under an elevated round *o* in a watch-box.'"

"It won't do, dad; smart, irrelevant, flippant, and what's more garbled. Nimrod, than whom none 'did the *Turf* more service,' was writing in the assumed role of a Sentimental Gentleman when he penned that sentence, which may take its place by the side of Swift's definition of an Angler, Johnson's of a Foxhunter, Byron's silly sneer at old Izaak Walton, and—"

"Very good, boy; but as it still *pelte* down, and after all the sport may prove anything but pleasant, I'll tell you something about this same Derby you're proposing to witness. You recollect you interrupted me last week, graceless?"

Miles's Boy nodded an ungracious affirmative, the wet of the weather was damping his spirits. He consulted the weather-glass while his dad went on, with the precision and prosiness of an F. A. S. "I well remember that the late Lady Derby, formerly Lady Elizabeth Hamilton, gave an absolute refusal to proposals of marriage from the present lord, in hopes of winning the heart of his Grace of Dorset; but no sooner were they baffled, than she brought about a renewal of those addresses she had rejected, and yielded to them. However, to compensate in some degree for not being a duchess, she was resolved to signalise her nuptials with a scene of pleasure and entertainment unparalleled in expense and elegance. A *fête champêtre* was contrived, which astonished the curiosity of the whole nation. The Duchess of Hamilton, her mother, was much blamed for not exerting her authority to prevent such an enormous expense; but her grace found an excuse in that maternal vanity which, as it is generally supposed to be mingled with affection, softens the language of censure. A little ostentation also checked General Burgoyne's prudence on the occasion: *it was that of his muse*; for the darling pleasure of figuring as a man of taste and literary character, suppressed every other consideration. I well remember that the preparations for this festivity astonished even the most extravagant. However, the extent of the proposed plan of operations was kept a profound secret from the earl's father, who, having been informed that something of a *fête* was to grace the nuptials, greatly approved of it, and declared to everybody that he should give a couple of hundreds towards the expense. Poor old man! if he had known how many thousands were unprofitably lavished away on the occasion, he would, in all probability, have new-modelled his will, and not have left him the keys of his coffers! Well, the earl was married in June, 1777; and at the *fête champêtre*, a musical drama (written by General Burgoyne, of Saratoga celebrity) was produced. This sketch was entitled the 'Maid of the Oaks.' Hence the Oaks race, in 1779; and, by the reciprocity of the lady, the Derby, of which we are now talking, was established in 1780, its first winner being Sir Charles Bunbury's Diomed."

"Bravo, dad; that deserves a rosin!" but the old gentleman declined: he was on his hobby, and off he cantered.

"That Epsom was once celebrated for its spa everybody knows. George, Prince of Denmark (Queen Anne's consort), made it a fashionable resort. Seats, villas, &c., &c., sprung up in vast and beautiful variety; amid them, the Durdans. This was formerly in the possession of Lord Guildford; its present owner is Sir Gilbert Heathcote, one of the stewards: a fine, true-hearted English gentleman; a sportsman, in the best sense of that word."

"Colonel O'Kelly too lived at Epsom; and on its Downs, Eclipse (the wonder of the turf) made his first appearance as a racer. Eclipse was the first horse ever vanned. "By-the-bye, Elnathan, do you van in America? because, though I approve—"

"I'm darned if this won't fix into a fine afternoon, or there's no snakes in Virginny. Here's eleven struck, and the Britaka at the door."

"Then off we go together,  
Despite of wind or weather,  
To see the Derby run;

Now dad, to go, or not to go, that is the question."

"Why, boy," replied the venerable, who had powdered his "bladder of lard" till it looked quite aristocratic, and screwed up his pigtail in new silk galloon; "I'll go to the course, of course." Ha, ha, thought we, the old 'un's philosophy, like the fox's reflections on the high hanging grapes, is, after all, but a bam, like most other philosophy; the old 'un, like many a canter, saint, and preacher, merely rails at diversions when they are out of the reach of his participation or enjoyment.

And now we're off; gaily we rattle towards the converging roads, where stands the Obelisk, and as merrily rattles down the rain.

"How do you call this location?" inquired Elnathan Coon; "why here's no cend o' traps, of all sorts, shapes, and sizes as you can calculate, and a few over."

"'Tis the Elephant and Castle, *vulgo* the 'Pig and Tinder-box,' from a

large white animal of the porcine race with a round tower on its back, bearing a striking resemblance to that obsolete article of kitchen economy, which, in times of yore, did duty for a sign. But see the road—there's

life for you; use your eyes and your ears, and you may furnish your brain with knowledge by four passages at once." Need we say, that despite the drizzle, vehicles of all sorts, shapes and

THE ROAD.

sizes, were on the road, four-in-hands, tandems, cabs, omnibuses, and every stage-coach in and out of the metropolis; all pressed in for the Epsom Course.

Vans, waggons, go-carts, with horses that had no go in them, chaise-carts, with eight fellows in each, stern-foremost to the spectators; the "original" ginger-beer fountain multiplied by sixteen, yet each still maintaining its own originality—the splendid drags of the nobility, and the squalid dregs of the mob-lity, all jostled together, nobs and snobs, cobs and cabs, presented to Elnathan Coon, a subject for a scanning fire of queries.

"Ah, here's Kennington-gate," observed Dad.

"What are we sticking at now?" inquired Elkanah, loud enough to provoke a reply from a cabman, who had edged up his "vehicle" till he had overlapped our near wheeler. "The gemman a-head with the moke vouts change for a fl'-pun note at the 'pike, sir. See vot a line on 'em there is."

"It's the 'stationary line' we're in at present," observed we; "and yet it's like an angler's line."

"How do you reckon that up?" inquired Coon.

"Because there's a pike at the end on't." Elnathan burst a button off his "Berdoe."

At length we moved on: received a call to the bar, and passed.

'Twas indeed a moving scene: all sorts, though unassorted. Here's a turn out.

Don't he look spiky; "out for the day," seems written on both his blinkers; those appendages however are in this case useless, inasmuch as it is easy to see that

"There is no speculation in those eyes,"

of wall; although it must have been no bad speculation of the "yard-keeper," who let him out for 40 shillings for the day, which, with another 40 would about sum up his value. Can't you see the daylight under his girth! I'll warrant he's more corns on his feet than corn in

his digester, and that he would much rather "join the League" than go one.

TRYING TO TOOL A TIT.

"Hullo! I'm teetotally conflobgisticated if here aint a case of DRAWING LOTS in a Derby Club, with all the pull against the drawer, (see cut). Surely they ain't 'going down?'"

DRAWING LOTS.

"Of course they are. See Long ears has gone to his devotions already There's a case of mudlark."

"Now, gentlemen, draw yer Jerusalem on one side, or you'll tie a knot in our line. If you want as-sistance you'll find plenty of donkeys on the road," cries a natty bagman, in a light trap and fast trotter. "Yeh-yeh," sneered "one of the mighty fallen," "twig that 'ere stay-maker, in his valebone veskit."

"Egs-ac-ly," replies the chaffee; "but I leaves the shop at home, while you come out and make stays in the highway. Ha! ha! St-st—st—" and away flew the fast trotter.

"Hullo! hello! hooroosh! here he comes! there he goes! he's a rare goer, that he is!" and here's

A PAIR OF BOLTERS.

If the quadruped will keep going that pace—and it's the pace that kills, as Mr. Sarsnet, his rider just now most especially feels—who knows but the noble hanimal, in another week may, after undergoing a mysterious metamorphosis into 'Kidgeney puddin', or 'weal or mutton pie,' make as rapid a bolt down the throat of that wide-mouthed consumer of peripatetic luxuries!

"That's the road to Brixton," observed dad: "before your New Model Prisons, solitary confinement, houses of reformation, and so forth, we used to think that treadmill establishment the *ne plus ultra* of corrective discipline. Oft to that place in days of yore have I seen an unpleasant party got up for the Derby day. (See opposite.)"

But all that's over now. The county omnibuses, and the railroads—"Hullo! halloo!" exclaims a red-faced licensed witler, with a broad green shawl spotted with yellow, round his bull-like neck: "where are you a driving to? I'll pull yer up: you're a polling me!"

"Come, that ere is a good 'un, mister," replies the driver of the furniture van (whereon the public is informed that music, furniture, and glass, are carefully removed, a fact proven by the contents, which consist of a Kent-bugle player, a long deal table, sundry tumblers and baskets, thirteen chairs, and a like number of *behinds* to sit in them)—"that is a good 'un, mister; vy, you've scratched my pole with the back o' your shay!"

Now we go-ahead agen. The rain has given us a slight intermission. "Twill be a fine afternoon" is on every tongue.

On we rattle, "through meadows tended like a garden," till Fig's Marshgate is reached.

THE Derby DAY.

What a delightful thing's a turnpike road!

So smooth, so level, such a mode of shaving

The earth, as scarce the eagle in the broad

Air can accomplish, with his wide wings waving.

Had such been cut in Phaeton's time, the god

Had told his son to satisfy his craving

With a smart four: but onward as we roll,

*Surgit amari aliquid*—the toll!

Still on we go, high and low, lords of high degree, and ladies of no degree, men of character and women of none, dustmen and dandies, piers and prigs, jugglers and higglers, cabmen (with their plates off) as they're beyond the nine miles, gentlemen in carriages, and many gentlemen on horseback, who have no idea of 'carriage' at all. "Give a poor boy a ha'penny! Give a poor boy a ha'penny!" shouts a chorus of young barefooted chawbacons, as they run after your carriage, with their naked legs and feet stained with ruddle, to make them look as if cut and bleeding, another corroboration of the axiom that stern Necessity is the mamma of sharpwitted Invention. And here is one of the world's outcasts, one who has been born into it without his own consent, and who has a right to be

DISCONTENTED WITH HIS LOT.

"Here's a shilling for you, and may all who can well spare one do the same, and you and they will be happier men to-morrow."

"That's rayther a *fast 'oss o' yours*," observes the driver of a four-horse 'bus, to a fellow who had got his chaise-cart with six insiders into a wayside ditch, out of which the jibbing animal defied both plait and whipcord to stir him. "Werry," replied the vegetable-dealer, grinning horribly a ghastly smile.

And now come in sight the groups of gallant cavaliers: the sun shines gloriously, the chalky roads are dry, and we wind up the long, long hill, towards the Cock at Sutton. And there, in full running twig, a suit of white, and buckskin running shoes, goes Jem Tierney, the runner—an old soldier of the 66th, who has covered the distance between here and Bow-street in an hour and forty minutes: pretty smart running for a veteran. But here we are at mine host Lumley's.

"Ha, ha! how do, how do!" and the greeting of cordiality is exchanged. Does it seem a year since we last entered this subscription room, where 'metallic' in hand, many a good man bent on becoming a better, leaves off the worse for the experiment. No! it seems but as a thing of yesterday, since these comparative degrees of the turfite's progress flitted through our brains at the last sight of these book-ish characters. And here an

[Continued on page 138.]

## LONDON VAGABONDS.

## THE MOUNTBANKS.

"A vagabond leads a jovial life,  
 Ever changing his home—  
 Ever changing his wife;  
 What matter, if all the world meet and scoff?  
 He ne'er has a sorrow,  
 Or care for the morrow,  
 But lets every day bring the fruit thereof."—*Old Ballad.*

THE greatest vagabonds that ever existed are to be found among the ancient philosophers; and the most unmitigated sample of the whole lot, was that extraordinary specimen of humanity, Diogenes, whose peripatetic propensity was so strong, that, doubtless, because he had become tired of all other objects of vagabondism, he went poking about with an old lantern, picking up, at night, pieces of wood and iron, under the facitious, though somewhat cynical pretence of "looking for an honest man." Had he lived in the present day, there is no doubt that he would have done the peripatetic with lucifer matches at a halfpenny a box, "each box warranted to contain fifty matches, and each match warranted to ignite with the utmost facility." Aye, he would have done more; he would not only have helped us to raise a blaze on our hearths with his matches, but he would have made his lucifer boxes illumine our understandings, by the bright little scraps of philosophy which would have adorned the labels. And then, had he fallen into the clutches of some ignorant policeman, and become compelled to make an awkward bow to the beak in his chair at Bow-street, what a glorious defence he would have made, and what a feature the newspapers would have made of him in return! But, alas! the vagabondism of the present day is not of such a noble cast, though it displays great cleverness, humour, and ingenuity, and that, we suppose, is the reason why we are disposed to regard it with a sort of sneaking kindness—a feeling of sympathy, which has induced us, knight errantly, to wield our magic wand in its favour, and picture forth, in our mirror of LIFE IN LONDON, a few of what may be called the *facities vagabondianæ Londinensis*. There, there's a high-sounding, classic title to begin with, by way of giving the subject an air of respectability. And now to begin.

The most conspicuous among the London vagabonds are the mountebanks; under which denomination we class tumblers, posture-masters, and jugglers. These are the very butterflies of vagabondism, sporting gossamer finery of all colours, embroidered with tinsel, and having their limbs and feet encased in tight fleshings and sandals. They generally form a sort of peripatetic company, consisting of three or four, in the hope that a combination of talent will bring an increased supply of *tin* to the treasury. They are all clever at tumbling, having, as it were, a facility for that kind of exercise by the extraordinary pranks that Fortune has played with them; but, although at times sadly distressed and jaded by the buffeting they received, and the over-head-and-heels tumbles, and seemingly break-neck falls they have to endure, yet they are sound in wind and limb still. They have learnt, like most of their brethren, to regard the pleasures, pains, and penalties of human life with the most stoical indifference, though they will not refuse good living when it falls in their way. Their only weakness—and it is one of a very pardonable kind—consists in rather too great an attachment to gin, beer, and tobacco; but the fact is that the nature of their profession requires some strong stimulant. It is not at all times that a man can so far overcome his modesty as to exhibit his talent in the streets, and though sometimes the want of a breakfast or dinner, or, perhaps, a night's lodging, may goad him on to the required display, still, it must be universally admitted, there is nothing like gin for wetting (or whetting) a poor devil's mind, and enabling him to give it such a good hard dab as will at once fix it tightly to the sticking-place, however rough, dirty, or otherwise repulsive the same may be. Gin is their mental stimulant, beer their physical stimulant, and tobacco is the only source of solace they have, enabling them to

"Revel in day dreams—puff away care,  
 And blow ev'ry trouble into thin air."

Their vivacity and facitiousness are partly forced and partly natural, for they almost all possess an intense perception and display of humour, though they are not always in the humour to court these qualities. Like butterflies, they seem to revel in the sunshine, and like them too, they commonly frequent such spots as are somewhat of a secluded nature. In London, they are most commonly seen in squares and open places, where they can have plenty of room for display. We last saw them in Leicester-square, and there we fancy that we now see them—a trio of tumblers, attended by a sort of master of the ceremonies, who is the head of the troop; a fellow with a drum and a set of Pandean pipes, and a grotesque looking being, who reminds us somewhat of one of the old chimney-sweeps on May-day. Here they come, led on by the black and his master. They are enveloped in draggle-tailed great coats, partly open, and displaying underneath the flimsy fleshings in which they are encased. The black carries a mysterious looking bag, containing certain professional articles called properties, which, with the dresses, are the joint stock property of all and each—the only sort of property, by-the-bye, that any of them are ever likely to possess.

Now they choose an eligible spot for their performance, and the black, who wears a tawdry cocked hat, which like his coat, is profusely

trimmed with gilt tinsel, proceeds to pull from the bag a piece of carpet that his master very graciously condescends to help him spread upon the ground, while the rest of the troop are divesting themselves of their great coats and hats, which are piled up together in an out-of-the-way spot. Now the overture begins, the drum and the pipes playing a confused medley of comic airs; "Paddy will you now," "Jim Crow," and "Don't I love my Mother?" or some such enlivening musical gems, that are highly popular at the Mogul, and all the cheap concert-rooms in the least fashionable parts of the metropolis. Now a crowd have assembled, and formed a sort of arena, and "Jim Crow proceeds to make them a speech upon the merits of his companions—

"Ladies and Gentlemen,—you are going to behold de wonderful performances of de Circassian cousins, such wonderful performances as you neber saw before, not eben in a teatre, where dey ask you for de browns before dey begin, and you sometimes find you've been done brown by paying to see what was good for nuffin. Now, here you see we likes to do de ting in a much genteeler way; we lets you take just what places you like, and we charges nuffin for 'em, 'cos we can rely upon de spectability of our audience, and we know that we shall get summit handsome out of you before you go away."

MOUNTBANK.—What are you about, sir? playing the fool as usual!

JIM CROW (half-whisper)—Quite t'oder, massa; playing de wise man—making fool of oder people.

MOUNTBANK.—You can't do it, sir; people are too wide awake; they won't be made fools of now, even by the prime minister or members of Parliament. Go along to your place, sir, and let the company see the performances.

And accordingly Jim Crow retires, the drum and pipes strike up a lively air, and the exhibition commences. It consists chiefly of a series of gymnastic feats and posturing, in the course of which the performers take flying leaps over each others' heads, throw themselves into the most extraordinary and most uncomfortable positions, and sometimes make a pillar, or pedestal of themselves, that you see one man walking about and presenting the appearance of three gentlemen at once, there being one on each shoulder. To give a variety to the entertainments, another of the mountebanks, one whose nerves have not been excited by taking part in these athletic exercises, proceeds to make certain displays of manual dexterity with plates, wash-hand basins, &c.; all of which feats, though you have seen them repeatedly before, invariably possess a certain degree of interest, arising, not so much from the cleverness displayed, as from a sort of sneaking fear every one of the spectators entertains, that each time the exhibitor sends a plate or wash-hand basin whirling into the air, and prepares to catch it on the point of his stick, he may fail, and suffer the unfortunate crockery to be smashed to atoms at his feet. But that is a catastrophe we never witnessed. The performances commonly conclude with a display of chin-balancing—a stick with something balanced on the top of it, or an enormous cart wheel, which, if it happened to fall, would probably for ever put an end to the unfortunate mountebank's cleverness. While this is going on, some one of the troop walks round with the cap, and Jim Crow announces that he shall be happy to pick up any browns that may be thrown into the ring, particularly requesting that gentlemen will not be afraid of throwing in too many at once. And then he begins roaring out a piece of doggerl something like the following:—

Now when I was in Americay,  
 The browns came in so fast,  
 We were all obliged to run away,  
 It was too good luck to last!  
 So I turned about,  
 And wheeled about,  
 And did just so,—(Thank'ee, sir.)  
 And every time I turned about  
 I got a brown or two.

And so he does now; and the mountebanks in the ring keep up a slight display of performance just to make their audience believe that the performances are not over, but finding they have got all the money they can, they very coolly proceed to put on their hats and great coats, and depart to some other locality.

In addition to this class of mountebanks, there may occasionally be seen about London slack-rope dancers exhibiting on a stage, besides a couple of flaxen-headed girls who go about on stilts; but owing to the interference of the police, they seldom venture into any but the very lowest neighbourhoods.

A novel kind of performance has recently sprung up among our juvenile mountebanks, who go about at night, in twos and threes, attracting an audience by singing songs while standing on their heads, and beating time to the chorus by striking together the soles of their naked feet. The exhibition is too absurd and revolting to be tolerated, and we wonder that people can be so silly as to find any amusement in witnessing it.

LONGEVITY OF A PONY.—A grey pony, the property of Mr. Robinson greengrocer, of Windsor, near Manchester, recently died at the extraordinary age of 50 years and 8 months, it having been foaled in July, 1795.

## CORRESPONDENTS.

**J. SURTHER.**—Your perfect ignorance is a sufficient excuse for your mistakes, but none for your impertinence. When we say "shortly" for a subject with three or four engravings (which will cost us £5, and a man a week's labour), we don't mean the very next number: if we did, we should say so. As to your observation about "a few shillings' worth of type and wood-blocks," we are sorry for you: will you pay our printer, engraver's, and stationer's bills, and take thirty pounds a week? we'll give it you, and be glad of the bargain, and throw the Editorial labour in.

**SANDOVAL.**—You must not shoot rabbits on your own grounds without a certificate, unless you wish to be fined: it is unjust, certainly, but it is the law.

**L. M. N.**—We suppose, as you are a "constant subscriber," you have read the earlier chapters of the "History of British Boxing," contained in the "Sporting World," of which this is a continuation; if so, your memory must be very treacherous. The battles of Mendoza and Humphries are there given. If you mean you are a "constant subscriber" to the *SPORTSMAN'S MAGAZINE*, of which but one number has appeared at the date of your letter, your constancy has not been much tried.

**GEORGE, Poplar.**—There is *BRITISH BOXING*, a little handbook, similar to *CLARK'S CRICKETER*, at the same price. The sale is a matter of business—say about 3,000—try and make it larger if you wish us well.

**EMERICUS.**—The next fish will be the Pike; we will also give an article on trolling for pike in a week or two, with four engravings of baited hooks, &c.; at present, Erson has thrown us "out of gear."

**SIMMON.** Nottingham.—The term "give-and-take plates," may be thus explained: perhaps this will relieve your doubts:—Give-and-take plates are fourteen hands, to carry stated weights, according to age; all horses above, or under fourteen hands, to carry extra, or be allowed the proportion of seven pounds to an inch. For example, suppose a horse measuring fourteen hands is to carry six stone, and A and B, of the same age, are entered for a give-and-take plate: A measures fourteen hands one inch and a half, and B measures thirteen hands two inches and a half; A will have to carry nine stone ten pounds eight ounces; and B will carry only eight stone three pounds eight ounces; the former being one inch and a half above the fourteen hands, the other one inch and a half below it; the weight is, therefore, added or diminished by the eighth of every inch, higher or lower weight in proportion.

**R. WALLER.**—Pray is not horse-racing illegal, and also gambling?—We don't understand your question, from the ambiguity of its wording: horse-racing is not illegal, neither is it gambling, but betting upon it is.

**G. B.**—The articles will appear in two or three successive numbers; this week it is out of the question. There were no stamps in your letter; but to do as you request would, if acted upon generally, impose as much writing upon us as twenty secretaries could get through. To give you anything like precise and regular instructions for a course of training, would take us best part of a day, and we have not a quarter of an hour to spare. You will receive them in common with 10,000 other readers; we will, however, hasten them forward, to comply with your request as far as in us lies.

**W. ROBERTS.**—If, as we understand your letter, you have made the bet, you have lost. It is "the United Kingdom of Great Britain and Ireland;" Great Britain therefore is England, Scotland, and Wales; and does not, strictly speaking, include Ireland.

**ENTERPRISE.**—Send us the article; if suitable and meritorious, in it shall go.

**B. YOUNGHOUSE.**—The title was changed because it might have involved litigation and expense, when the paper changed hands. It is conducted by the same Editor. Portraits of Cant and Bendigo, with brief sketches of their careers, are in hand. The *Irony or Boxer* will (as its title states) be brought down to the present time. But we have a volume of it to come yet, with details of every noted fight, and portraits of every celebrated pugilist. Your brother must not be backward in coming forward, if he expects to shine in such a pursuit; but he must learn and endure a good deal in his novice before he can hope to shine as a professor. Let him try it on with some of the public second or even third-raters, and perhaps he will arrive at a fair estimate of his own abilities; for without long practice and skill, he has little or no chance.

**ORNTHER.**—The *BULLFINCH* will come next, with a *cut*.

**S. M. Hoxton.**—A and B had a difference of opinion, A told B that he had no money; B said that he had a £5 note at home and could show it to him in ten minutes; A said he would bet him (B) a sovereign that he could not. B accepted the bet, and the two sovereigns were put in his hands; that B was to produce the £5 note in ten minutes on the table in the presence of Who? B went out to fetch the £5 note; A went out also; B returned with the note in five minutes, but A did not return for half an hour. A dispute arose. A says he won the bet, B denies it. Please which am I to give the stake to?—To B; and A deserves to be scouted into the bargain: he is not fit for a respectable man to bet with. He betted that B could not produce the note, he could and did, and A cannot set up his own wilful absence as a proof that B did not produce the note: it is the old contemptible bubble of shutting one's eyes, with a slight difference.

**P. REMINGTON.**—Tom Spring's fighting weight was a little over 13st.—He fought and beat Bill Neate, "the Bristol Champion."—Bendigo beat Deaf Burke, Feb. 18, 1839: Burke was ruptured; of course he wore his truss.

**CRICKET.**—J. BUTCHER, Gravesend.—We think the absence of Mr. A. Mynn on the part of the Bearded gent a great point in your favour. Be moderate, therefore, in the hour of victory, that you may be respected in defeat.

**W. F. B.**—We have received three letters after more than a week's delay. In future, be more circumspect in the address. The match alluded to as being played at the Breck-rack Arms last week, was not lost by the Eagle Club: our contemporary was doubtless misled by the fact that some of the Eagle gentlemen played on that occasion.

**A COUNTRY PLAYER.**—Ought not to have assumed that name until he was aware of two such simple facts as that a wide ball does not count one in addition to runs obtained from it, and that no catch can possibly be made off a ball wide of the striker's reach! Much less should he dictate to a journalist of so high a standing.

**STUMP, Redbourne.**—Twenty-seven inches out of the ground.

**J. S., Cobham.**—Mr. A. Mynn is over 6 feet in height, and considerably more than thirteen stone in weight.—Circumference of a ball, from 9 to 9 and a half inches.

**PHILOS.**—Purchase Clark's "Cricketeer's Handbook," and—read it.

## OUR WEEKLY CALENDAR.

AN EPHEMERIS IN JEST AND EARNEST.

**SUNDAY, JUNE 1st.**—Second Sunday after Trinity.—Lord Howe's victory, 1794.—Brilliant action between the Shannon and Chesapeake, 1813.

**Musical.**—In June, the concert of singing-birds begins to fall short. That delicious soprano, the nightingale, makes his last appearance for the season, but that very high tenor, the skylark, is still ready to oblige any gentleman with a song.

**MONDAY 2.**—Thames Angling commences.

**Hints to Thames Fishermen.**—Roach and barbel-fishing commences, a sport abhorred by the "gentle," but much relished by the "simple." Read the Book of Job, and hire a punt. Lay in a stock of nightcaps and cough lozenges. Go to Crooked-lane, and fully replenish your fishing-tackle stores, and hear for the hundredth time, the solemn assurance of the owner, that the stuffed pike, weighing thirty pounds, was taken with a single hair line and—a hook! Be careful to get your punt moored over the exact spot you have ground-baited the last five years, as the dence is in it if the fish haven't found it out by this time. Contract with the fisherman who has always supplied you for the daily two dozen you take home to show your friends; then bait your lines, and draw your bottled porter. The great amusement consists in taking your line out of the water at the end of every swim; which exciting operation may be performed some hundred times in the course of a good day, and constitutes the sport, though now and then you and the fish may be enlivened by the sight of a rowing-match.—Great Riot of London, 1780: About this period the I. O. way Indians who are riding about town (1844) are greatly struck by the Duke of York's column, who they declare to be a great friend of their tribe, having always been strongly addicted to I. O. ways.

**TUESDAY 3rd.**—The Emperor of Morocco and Abd-el-kader meet, and a joint war is waged

upon the French, 1844; but the French step in, and in return butcher the Moors.

**WEDNESDAY 4.**—Winslow Races.

**To Choose Meats.**—The cheapest and best will be found at all times the most advantageous. Joints, like secrets, are worth little when they are blown; and, like children, should be washed and dressed before appearing at table; occasionally *basting* them will also be found to improve them both.

**THURSDAY 5.**—Extraordinary hot weather, 1844, thermometer 120 in sun: in this "heat," a sporting gent. observes, "he'll pound it that Butter ran first." This is a slippery joke.

**FRIDAY 6.**—Hungerford Races.—Numerous experiments to put down the smoke nuisance, 1844; why didn't they try the Talacre coal?

**SATURDAY 7.**—Royal Exchange first opened, 1566, by Queen Elizabeth.—Reform Bill passed, 1832.

**Literary.**—June is Nature's publishing season, when she sends forth several of her periodicals. That splendid annual the strawberry begins to appear in parts, and the gooseberry comes forth in numbers. Some apples and pears may also be expected, as specimens of some early editions of those beautiful standard works in Nature's library.

## The Sportsman's Magazine.

## FOR THE WEEK ENDING, JUNE 7.

**W**E are short of a leader this week, our EPSOM DRAG having monopolised all our space, time, and nags. We shall, therefore, content ourselves with observing in this place, that our promise of FIFTEEN engravings is redeemed by TWENTY; and that next week we will pull up with our regularly embellished subjects, as by that time the "stiffness" will be out of our joints, and we shall fall into our regular pace.

## A NEW CABINET LIBRARY.

Ministers intend shortly, we understand, issuing a series of volumes on various subjects, for the purpose of enlightening the people, to be called the "New Cabinet Library." The work will be written chiefly by the ministers themselves, so that there will be great variety in the style, and in the mode of treating the various topics handled.

The following will be a few of the volumes that will shortly appear:—  
1. The curiosities of Literature, chiefly selected from intercepted correspondence. By Sir James Graham.

2. How to Live on Fourteen Thousand a year. By the Lord Chancellor.

3. Three Experiments of Living; or, Three Livings at Once, by way of Experiment. By the Bishop of Exeter.

4. The Outcast; The Exile's Return; and other Poems. By Lord Ellenborough.

5. Natural Magic, including several new tricks; with an Essay on Gammon and Backgammon. By Sir Robert Peel.

6. Miscellaneous Essays. By Lord Brougham.

7. The Pauper's Cookery Book; including ten thousand economical recipes, amongst which will be found five hundred different modes of dressing oatmeal, and a plan for roasting a fowl before the fire, in such a way as to make chicken-broth of the shadow. By the Poor Law Commissioners.

8. Confessions of an English Opium-Eater. By one who has swallowed all the dull speeches that have been spoken in the House of Commons for the last ten years.—*Punch*.

**A GENTLE HINT.**—A captain, chattering with his hostess, in an amorous humour, was resolved to give her a hint of his wishes. He placed a guinea upon one of his eyes, and with the other performed most significant optics. The landlady, not unused to such sparks, soon guessed his meaning, and replied, "Captain, you have forgotten your learning: you know Love was blind in both eyes."

**A SLIGHT MISTAKE.**—The late Duchess Dowager of Bedford meeting once a Cambridge student, asked him how her noble relation did. "Truly, madam," says he, "he is a brave fellow, and sticks close to Catherine Hall." (The name of a college there). "I vow," said her grace, "I feared as much, for he had always an hankering after the wenches."

**MORE NOVELTY.**—ROYAL ACADEMY.—"The finest miniature in the room at the Academy is Thorburn's new picture of Field Marshal His Royal Highness Prince Albert. This must be, in consequence, the forty-sixth.—*Punch*."

apropos of the general production of note-books, and the prevalent jotting down of memoranda.

When the Persian Princes were in London, among other Lions they went to Tatt's, where, among the many observable things, the tame fox (we don't mean Richard T., but the quadruped chained in the Temple), old Tattersall himself, and the various two and four-legged curiosities of the place, none seemed to fix their attention so much as the frequent

appearance of the *little books*, in the course of what seemed to them conversation. After some cogitation during the drive home, Mirza thus declared himself:—"Oh, mighty and enlightened nation, where they never go to meet each other on the daily concerns of life without the materials of writing in their pockets, so that they may take down, ere they perish from the tablets of the brain, the wise sayings and learned treasures, which, like honey and rubies, and pearls of price, drop from the lips of their sages.

THE SPREAD EAGLE.

Verily wise are they, for I beheld this day a venerable sage with the snows of venerable age upon his head, eagerly perpetuating with a pencil of adamant point, the sayings of one who seemed scarcely gifted with the beard of man—oh, wise & humble are they, endowed with wisdom: for they care not who or what is the speaker, if he speaketh the words of truth!" The princes had been struck by the late Mr. Tanfield's eagerness in booking a heavy bet with some "young Rapid" of the day.\*

Such were the thoughts that flitted through Miles's Boy's peri. as he rolled his optics round "the room" of mine host of the Expanded Eagle: than whom a better fellow never trod leather, while his wife—but we must leave one of the best specimens of a buxom, obliging, and admirable best half to some better pen. Now, boys, onward again, let us leave the Spread Eagle, and on to the course.

"Well," exclaimed Elnathan, "I'm a gone coon! Here is a sight!" And truly it would be almost *l'ère Majesté*, and an insult to the *manes* of England's first sporting writer, Charles Apperley, to attempt a description of THE DOWNS after his achievement. And lo here it is, as though written for the very occasion; for at "the wee short hour ayont the twal" of noon old Sol shone forth with burnished radiance, checked but for moments by flying clouds.

"The day was lustrous, healthy, invigorating. The sun basked on the Downs, yet there was a fresh and inspiring breeze that wanted with the blue, white, and red flags of the marquees, and flung luxuriant coolness round, fanning, as it were, the sitting sunshine. I took off my hat as I crossed the Course towards the Hill, and dedicated myself, heart and soul, to the sunshine, the air, the turf, and the sky. On a race-course all these assemble as in Congress. The short, well-shorn grass extends widely around you; the white rails which mark the way to victory; the murmur of the crowd is instinct with life; the air careers like a wild and

\* If any sceptic doubt the authenticity of the above anecdote, Miles's Boy replies, that it is good as most well authenticated anecdotes of public characters, which are, as he confesses this to be, made expressly to suit the occasion.

loosened steed; and oh! how the mottled sky bends over all! I could not but become meditative as I wandered on but my meditations were continually broken in upon by the gallop of a passer-by, or the expensive benedictions of some persevering gipsy. The eye of this wandering tribe are indeed enough to 'charm a bird from the trees.' And I gave an extra half crown to an olive minx of seventeen, not of my own free will, but because she positively looked it clean out of my pocket. Not all the deepest dye extracted from all the hazel nuts\* that all the copses of this earth ever produced could have stained those inimitable orbs. But I am wandering—I could almost sigh—for oh!

"Her eyes dark charm 'twere vain to tell  
But gaze on that of the gazelle,  
It will assist thy fancy well;  
As large as languishingly dark,  
But soul beamed forth in every spark  
That darted from beneath the lid,  
Bright as the jewel of Jamschid."

But farewell to poetry, fancy, and fiction; here are prose, facts, and figures; this is THE BETTING RING. (*See opposite.*)

Here's a row, a rumpus, and a rioting! what a Babel of confusion! do they transact business here! Egad, that's what they do, and to a pretty tune too. Everybody that has a taste for bookmaking (we don't mean authorship) is there, speculating and peculating; the pedestrians in the interior, the equestrian order grouped around. But see the company breaks up; some stream off towards the starting post, others to the Grand Stand, or to join their several parties—the great—the eventful two minutes is at hand. And hark to that warning bell; forth come the finely bred creatures, all swathed in clothing, walking lightly on the greensward as the fawn.

"Perhaps nothing in the world" says Nimrod in his matchless prose,

\* Nimrod is here sadly out. It is not the hazel nut, which yields no colour that produces the stain; but the outer fleshy covering of the walnut, or a wild berry.—MILES'S BOY.

"surpasses the beauty of the racehorse, whether in or out of his clothes. The quiet grace with which he moves under his heavy garmenting—the wise radiance of his eye, as seen through his hood—his temporary pause and haughty stare, when roused by some strange sound, or the presence of some too inquisitive stranger—and his easy lapsing again into passive and gentle obedience to the trifle of humanity in loose brown gaiters, seated on his back and hinting with kicks. He walks—wooing the light to dance upon the glossy mirror of his skin—as though

THE BETTING RING.

he could walk before admiring eyes for ever. Looking at the racehorse, you are irresistibly carried back to "Araby the blest!" The desert—the turban—the tents—the cloudless sun, are spelled up before you—and you may fancy you hear the tinkling bells of the caravan, and see the fleet courser of the purest caste, go like an arrow over the sands. To return;—if the passing colt be the favourite—that is, the hoped-for winner in the minds of the sanguine and speculative—every part of his frame is studied like a picture of an old master by a connoisseur; defects are in vain hunted for—beauties start into life at every glance—and victory seems already to have shed its halo around the gallant creature's head. The *goal* winner is looked upon—just searched out in the correct card—his name perhaps ingeniously and carefully mis-pronounced—and his appearance scarcely heeded. The race, however,—the minute speed,—past, and the followed favourite is regarded no more, except where, by one or two, his faults are learnedly detected, and his bleeding sides termed "light;" while crowds follow the haughty breathing winner, extolling his beauty, marvelling at his speed, and as Dennis Bulgruderry says, indulging in that wise prophesy which "foretells a thing after it has happened." Now he is impeded by a burly blue back of a policeman clearing the way—and now he is flattered by the light touch of a violet kid glove, which starts from the crowd like the tongue of a snake, to fall upon the passing victor.

"Time hastens on. The jockeys, with their toy-saddles girted around their waists, begin to cluster, amid their cluster of friends. Though men of first-rate importance, they are in truth

And now anxiety lights up the eyes of thousands—crowds press onwards—and all marks, as the doctors phrase it, a determination of blood to the course;—when that sound breaks simply on the ear of the quiet observer, which strikes like a hammer upon the nerves, and maddens in an instant the pulses of thousands. The bell for saddling! The desperate gambler hears it, in the shuddering inward consciousness that it is

— The knell,

That summons him to heaven or to hell!"

"I could but in my silent mind modernise, and, to my purpose, distort a beautiful passage in Marmion:

Slow o'er the mid-day wave it swung,  
The Warren dells in answer rung;  
To Ashted lone the echoes roll'd,  
Her beads the listening barmaid told;  
The Banstead gipsy raised his head,  
But slept ere half a curse he said;—  
So far the sound had urged its speed,  
The steed sprung up on Ewell mead,  
Spread his broad nostrils to the wind,  
Listed before, aside, behind,  
Then crouched him down among his kind,  
And quaked as though there were a spell  
Of terror in that dismal bell!"

How varying (to dismount to prose) is the effect of that monotonous sound upon those who hear it. Ladies quit for a brief moment their coquetry, adjust their curls, and look out for the horses; peers and grooms take a final sigh as they gallop to the side ropes; the jockeys, in silence and nervousness, unveil their silken jackets and prepare for the flight! The creatures of the wind are led into the open space, and their clothes are smoothed backwards over their glossy hides—and, in all the beauty of strength, pride, and restlessness, they are saddled and mounted. Quietly are they led down to the hollow of the course. They are quiet, because they know what they have to do.

"The sight of the horses before the start is indeed a beautiful one. Here goes a bright chesnut—his warming gallop up the hill—meeting a powerful and gentle brown slowly returning, his jockey knotting his rein! Two or three bays pass like arrows—and the favourite canters before all eyes, as though he knew he was 'the observed of all observers!' The horses pass and repass—walking, galloping, cantering—but at length they all collect. After some manœuvring, they get into a straightish line.

THEY'RE OFF!

[For cut and continuation see page 142.]

"A SCALY LOT."

## THE HISTORY OF BRITISH BOXING, FROM FIG AND BROUGHTON TO THE PRESENT TIME.

PERIOD III. 1786—1798.

FROM THE TIME OF MENDOZA TO THE APPEARANCE OF JEM BELCHER.

### CHAPTER III.

MR. JOHN JACKSON. (Continued.)

We resume the memoir of Mr. John Jackson in the words of the author of *FISTIANA*.

"The high reputation which Mr. Jackson had now attained, and the universal esteem in which he was held as a teacher of his art, led him to establish rooms at No. 13, Bond Street, not only for giving lessons to his numerous pupils, but for the introduction of such men as had either distinguished themselves in combat, or were desirous of seeking fame in the pugilistic arena. Here all the *élites* of the fashionable world—men who have since distinguished themselves in the senate, at the bar, and in the field, and viewed boxing as a national game pregnant with the best consequences, where the manly vigour of their countrymen was to be encouraged and promoted—were daily assembled; noblemen and gentlemen of the highest rank did not disdain to take the gloves with the accomplished Jackson, and the "sets to," even among themselves evinced a knowledge of the science, a power of endurance and a degree of vigour equal, if not in many instances superior, to the public pugilists of the time, with whom they often "tried their hands," and came off victorious; qualities, the value of which, in after life they acknowledged, when the roar of battle, or the death-struggle with the foes of their country, by land or by sea, required the exercise of those energies which the preparative practice of Jackson's Rooms had nurtured and developed. In these associations there was none of the finikin foppery of modern times; there were no apprehensions of the derangement of well curled locks or pretty faces; men, and noblemen too, met foot to foot and fist to fist, regardless of consequences, dealing such blows on each other's heads as often deprived them of momentary self-possession."

To Mr. Jackson did the ring for many years owe much of its high patronage. Associating with the wealthy and the titled, he was enabled to forward the interests of the manly science. A Pugilistic Club was formed, a commissary appointed, to whom the ropes and stakes were committed, and who pitched the ring, chose the ground, and formed the lists, occasionally regulating the mode of admission to the inner and outer circles; he was paid out of the funds of the club for his labours, in which he always found willing assistants.

The Pugilistic Club held its first meeting at the Thatched House Tavern, St. James's-street, on the 22nd May, 1814, Sir Henry Smith, Bart., in the chair. Upwards of fifty members sat down to a sumptuous dinner, to which Mr. Jackson, Mr. Gully, Tom Cribb, Tom Belcher, Oliver, and others, were invited. The scene was altogether most gratifying; and Lord Yarmouth (the present Marquis of Hertford), who was present, in a speech distinguished for sound reasoning and manly eloquence, expatiated on the great advantage of pugilism in a national point of view.

These may be considered as the palmy days of the ring; but previous to this date, and subsequent to the defeat of Mendoza by Mr. Jackson, a great number of pugilists were introduced to the notice of the amateurs, all of whom repeatedly fought, and attracted the attention and received the countenance of men of rank, including the Dukes of York and Clarence, the Duke of Queensbury, the Earl of Albemarle, the Earl of Sefton, the Marquis of Worcester (the present Duke of Beaufort), Sir W. W. Wynne, the Marquis of Tweeddale, Lords Byron, Craven, Somerville, Barrymore, Pomfret, and Fife, Colonel Berkeley, Harvey Combe, Squire Harrison, and others too numerous to mention, but all tending to show the high auspices under which the sports of the Ring flourished and were encouraged.

We must not attempt to disguise, that even in those times strong prejudices existed in the minds of some against pugilistic displays. Fights were often interrupted by the magistrates, many of the professors were arrested and prosecuted, and among so many battles some lives were occasionally sacrificed. These occurrences were purely accidental, and arising from the casualties inseparable from the nature of "the game;" but we doubt whether in other sports more peaceable, such as hunting, shooting, cricket, wrestling, and horse-racing, the proportion of fatal accidents were not at least as numerous, if not much more so, and would have furnished as strong an argument for the suppression of the one sport as the other; for as far as malice was concerned, it must have been known that two men entering "the ring" in fair competition for fame, had as little malice towards each other as two jockeys in a race, or any other two competitors in the exciting sports of our country.

In referring to the descriptions of the doings of the men and their contemporaries, to whom we have alluded, some of the most remarkable battles were fought upon "Moulsey Hurst," which, from its proximity to town and local advantages, being as it were isolated from all habitations, was much frequented; and as an additional reason for this choice, we may mention the proximity of "Bushey," the residence of the Duke of Clarence, under whose fostering wing, for he was frequently present, freedom from interruption was more probable.

The formation of the Pugilistic Club may be said to have commenced a new era, in which there was a combination of order and regularity in the proceedings of "the Fancy," as the followers of the Ring were called, which was productive of great advantage; and although all matches did not originate with the club, their countenance and sanction were sought, and their ropes and stakes, under the guidance of "the commissary," were invariably brought into use.

In 1814, an event occurred which gave additional lustre to pugilism. In that year, during the short peace previous to the return of Buonaparte from Elba, the Emperor of Russia, the King of Prussia, and other illustrious foreigners, paid a visit to the Prince Regent. Among other sports characteristic of our country, they had heard much of our "boxing fame," and expressed a strong desire to witness a sparring display among some of the most celebrated professors of the day. This wish was at once gratified by Lord Lowther, who applied to Mr. Jackson to select the *dramatis personæ*, and a day was fixed for their assemblage at Lord Lowther's house in Pall-mall. On this occasion the Emperor of Russia and Generals Platoff and Blucher were present. This was on the 18th of June, 1814. The setting-to was among some of the best men of the day; and the rules of British boxing were explained in so clear and satisfactory a manner to the distinguished group, that they expressed their warm approbation at so manly and generous a manner of settling personal quarrels; and indeed were so delighted, that they requested the exhibition might be repeated on the following Friday, when, in addition to the above visitors, the King of Prussia, the Prince Royal of Prussia, the Prince of Mecklenburgh, General D'York, and several others were present. Some admirable specimens of the Art of Self-defence were displayed by Mr. Jackson, Belcher, Cribb, Richmond, Ned Painter, Oliver, and others; the sets-to were in general excellent; and the skill of Mr. Jackson excited general admiration, while the symmetry of his figure and fine muscular development did not pass unnoticed. Tom Cribb, then "the Champion of England," also had his share of observation, and particularly attracted the notice of Blucher. The royal guests and their attendants expressed the great gratification they had experienced, and upon taking their departure complimented Lord Lowther as the patron of so manly and praiseworthy a trait of the national sports of his country. Little did this splendid group foresee that, on the first anniversary of that meeting, one of that very class (Shaw), whose evolutions they had then witnessed, would, in the field of Waterloo, and almost under the eye of Blucher, afford an additional illustration of the great advantage to be derived from the preparatory inductions of the prize-ring. We may here remark, that similar exhibitions were subsequently got up for the amusement of other of our foreign visitors; and that a very few years back, at Mr. Angelo's Rooms in St. James's-street, the Prince of Orange and his two sons, at their own particular request, were similarly gratified, and were not less warm in their expressions of approval and acknowledgments of the great advantages to be derived from the promulgation and encouragement of such sports with their noble and manly principles.

To the credit of the professors and patrons of boxing, they were never "backward in coming forward" to aid the work of charity, or to answer those appeals to public sympathy which the ravages of war, the visitations of Providence, the distresses of trade and commerce, or the afflictions of private calamity, frequently excited. Under the active auspices of Mr. Jackson, who was ever foremost in drawing forth the brighter features of his "companions in arms," benefits were frequently got up to meet existing exigencies: thus—"the starving Irish," "the suffering families of the heroes who had fallen and bled on the plains of Waterloo," "the famishing weavers, and the claims of widows, wives, and children, whose misfortunes had been occasioned or aggravated by the casualties of the Ring," with other instances too numerous to detail, afforded opportunities for appeals which were never made in vain. It was then that the generous spirit which warmed the heart of a true British boxer shone forth with its sterling brilliancy; then all selfishness was set aside, and no sooner was the "standard of charity" unfurled, than every man who could wield a fist, from the olden veteran to the youngest practitioner, rushed forward, anxious and ardent to evince the feelings of his soul, and to lend his hand to the work of benevolence. There were then no skulkers, no humbugging apologies; and the difficulty only was to keep within compass the host of talent which stood forth nerved at all points to "do battle" in aid of such purposes. Hundreds and hundreds of pounds have been thus raised, large sums have been handed over to public subscriptions, and in private the tears of the widowed mother and the cries of starving children have thus been dried and hushed by the generous contributions of the boxers of England and their staunch and liberal admirers.

In granting rewards to merit, equal generosity has been displayed. The valiant but unsuccessful pugilist never went without "a healing salve" to his bodily and mental wounds. At the conclusion of every fight, Mr. Jackson went round, "hat in hand," to raise a subscription for the beaten man. Never was this appeal made in vain; and in proportion to the qualities exhibited, his collections became successful, in many instances the loser actually receiving as much as the winner—a proof that honest valour never went without its consideration. Even Mr. Jackson himself participated in this noble trait in the character of pugilistic ama-

teurs, for in the year 1820 a service of plate of the most magnificent description was presented to him, of the value of 300 guineas, to which all ranks contributed, from the prince to the prize-fighter. In like manner were silver cups subscribed for, and presented to the leading members of the Ring, including Tom Cribb, Tom Spring, Ned Neal, Josh. Hudson, and others, which, on all public festivals, at their respective houses, stand prominent in the decorations of their tables, and are often filled with generous wine, and emptied to the ever-welcome toast—"Success to British boxing and its honest and honourable principles!"

From 1814 to 1820, the Pugilistic Club increased in influence and stability, fresh members were constantly enrolling, and Jackson's Rooms were still the most attractive lounge at the West-end of the town. Fight followed fight in quick succession; and the lively scenes and extraordinary display of Corinthian equipages which followed to the scenes of action, gave a brilliancy and a tone to the sport truly English—at once overwhelming the fastidious prejudices of those who "decried but dared not interfere," although occasional informations, laid before magistrates, imposed upon those gentlemen, however reluctant, the duty of interposing, with a view of "preserving the peace" in "this county,"—well knowing that in "the next county" that peace would be broken in spite of them, and often under their own observation; for, dropping "the toga of justice," in their ordinary character, as lovers of British sports, they crowded to witness that which their official duties forbade, but which their good sense told them was doing more to civilize the lower orders, than all the hypocritical twaddle that the ingenuity of sectarians could devise.

It has been already stated, that the Prince of Wales in his youthful days was a staunch patron of boxing; and although he discontinued, by his presence, to give countenance to the sport, yet frequent indications of his desire for its promotion were observable. He was a constant reader of the sporting papers, and was familiar with the names of all the men who in succession obtained celebrity or notoriety, and upon many occasions it was known that contributions came indirectly from him, either to reward the exertions of unsuccessful valour, or to soothe the distresses of those upon whom the hand of misfortune had cast its afflictions. Mr. Jackson was ever remembered with a kindly feeling, and, when seen, honoured with a recognition. If confirmation of these facts were wanting, it was amply furnished at the period of his majesty's coronation in July, 1821. At this ceremonial, the splendour of which admitted of no parallel, an extraordinary degree of excitement prevailed in the public mind, not only from its novelty—upwards of fifty years having elapsed since a similar exhibition had been witnessed—but from an apprehension that the friends of Queen Caroline, who, it will be remembered, was excluded from the throne, might imprudently display their feelings in a way to mar the joyous character of the festival. Independent of these considerations, it was felt, from the vast multitude which would be assembled, and the amount of valuable property exposed, that more than usual care would be necessary to preserve order and restrain the lawless. Of the zeal and loyalty of the military no doubt was entertained; but, as their duties were confined to the exterior of Westminster Hall, it was deemed important to select such men to guard the avenues leading to the interior, as combined firmness and courage with a personal knowledge of the parties (who it was foreseen would seek admission either surreptitiously, or by means of tickets improperly obtained), and whose presence would check unwelcome or designing intruders. For this purpose, under his majesty's sanction, it was determined to employ eighteen of the most distinguished prize-fighters of the day, upon whose humanity, integrity, and loyalty, his majesty was pleased to say, he felt every reliance. To Lord Gwydyr, the lord great chamberlain, the task of making this arrangement was deputed, who immediately sent for Mr. Jackson, to whom his majesty's pleasure was made known. Mr. Jackson lost no time in calling in the aid of Mr. Watson, a well-known amateur, and since the host of the Castle Tavern, at Moorgate, and the following men were selected for the duty, which they undertook with proud alacrity:—Cribb, Spring, Tom Belcher, Carter, Richmond, Ben Burn, Harmer, H. Lee, Tom Owen, Josh. Hudson, Tom Oliver, H. Holt, Crawley, Curtis, Medley, Purcell, Sampson, and Bill Eales. These men were all provided with the dresses of pages, and were stationed at the different entrances, Mr. Jackson, Tom Cribb, and Tom Spring, being at the great doors of the hall, where the former received a condescending notice from his majesty as he passed to the platform on his way to Westminster Hall.

The admirable conduct of these men from first to last, not only during the ceremony, but on the subsequent day, on which the hall was thrown open to the public, when their courage and humanity were prominently exemplified, was universally acknowledged, and letters of thanks were afterwards addressed individually to each man engaged by Lord Gwydyr, his lordship adding a golden coronation medal, which he said he had received from the hands of his majesty expressly for the boxers, and which, after a dinner also provided at his lordship's expense, was raffled for and won by Tom Belcher, who has ever since retained it as a trophy of royal favour, with which he declares he will not part till death forces him to leave all his worldly goods behind.

We here close our memoir of Mr. John Jackson, with the acknowledgment, (for we would render unto Cæsar the things that be Cæsar's,) that this admirable resumé of the history of the ring during the period of Mr.

Jackson's fostering assistance, is condensed from the introductory pages of *FISTIANA*; which we have chosen here to introduce as a fitting episode on the career of Mr. John Jackson, its principal and most active supporter during those years.

Mr. Jackson's mode of instruction was at once philosophical and practical. Himself the most accomplished boxer of his day, he knew the principles upon which attack or defence should be conducted; and by combining conciliatory and prepossessing manners with a good temper, indefatigable practice, a fine athletic frame and first-rate nerve and courage, he for many years maintained the position of the first teacher of the Art, and when he retired in 1820, he carried with him the respect and esteem of those who had the privilege of his acquaintance, which he still enjoys in a green old age.

\* \* Our next memoir will be Tom Owen, with a portrait.

#### ON THE DECLINE OF HORSE EXERCISE, WITH HINTS TO ELDERLY STOUT GENTLEMEN IN PURCHASING A NAG.

BY RINGWOOD.

(Concluded from page 138.)

The tale runs thus:—He left school at the age of seventeen, and entered his father's counting-house: the house had extensive country dealings, and it fell to his lot to visit their different correspondents periodically, and for this purpose he was presented with a four-year-old (to all appearances) thorough-bred mare, about 14 hands high. To use his own words, "she was as elegant and as delicate in appearance as a fawn, and just master of my weight, at that time, 10st. in the saddle: the mare, by good stable management and judicious riding, furnished considerably without losing her blood-like looks, and as my journeys were taken partly through Essex, my mare soon attracted the lynx-eye of old Tom Heskin, the celebrated horse-dealer. Various were the tempting offers he made me to part with her, but to no purpose; so, finding me wedded to my pony, he gave up offering me gold in exchange, but extorted from me a promise that if I ever did part with her he should have the refusal. Two or three years passed away, and whenever I happened to see old Heskin, nothing passed between us but an exulting chuckle from me of 'not quite yet, Tommy.' Now it so happened that I was confined by illness about two months, and on my getting out again and recovering my strength, I began to get enormously stout, till in about three years from this time I went to scale with saddle and bridle very close to 14st. The moment I ascertained my weight, my favourite was condemned, notwithstanding I had constantly ridden her up to the very day without having found out the slightest difference on her part. She had never had a day's illness, never refused a feed of corn, and was still as playful and active as a kitten; but I hated myself for my cruelty, and almost trembled the next time I got upon her. Now I wished to get her into a good berth, and regretted that I had ever promised her to a horse-dealer; but I thought to get out of that scrape (not very honestly perhaps) by asking such a price as would prevent my favourite passing into his hands. But here again I was mistaken. I did not know her value; so, meeting old Tom, I told him I came to make good my promise as I had determined to sell the pony. The apparent apathy with which he received the intelligence after what had passed between us somewhat took me aback (I was young then); and thinking his great desire was somewhat cooled, and that he did not care to purchase her, I asked him a much less sum than I had intended on entering his yard, but still, as I then imagined, an enormous price. He jumped at my proposal in a moment, and the mare was his: and when I received the money from him the same evening over a bottle of wine—for all bargains of this kind in the days to which I allude were in this way completed—Tom thus addressed me: 'Now as our business is settled, pray, young gentleman, will you tell me why you have sold your pony?' The reason, I answered, I 'must, one would suppose, be obvious enough to any one, much more to such a judge as yourself: she can't carry me.'—'And pray, how have you found that out?' said my shrewd inquirer: 'has the pony told you so?'—This interrogation was put in rather a sarcastic tone, and as he coolly lifted a bumper to his lips, he added, 'Your good health, sir.' The colour no doubt mounted quickly up to my eyes, and I answered sharply, 'look at me.'—'I do, sir,' said Tom in the same imperturbable manner; 'and as there is no accounting for the difference in men's opinions, I have bought your mare to carry a gentleman who walks two stone more than you ride.' And she did it with apparent ease to the end of her days, which were long in the land.'

Once more in illustration, look at her Majesty's cavalry. Take, for instance, a light dragoon or a hussar regiment. Have our readers in general any idea of the average weight that these horses have to carry on a march or on regular service? Look the animals over—(the price allowed by government for the purchase of each horse not exceeding *twenty-three pounds*)—and then say, do they look as if they carry 18st., horseman's weight? Yet, as every soldier knows, this is the task imposed upon them; and, comparatively speaking, how few broken-knee'd ones we see in the ranks!

To conclude, we only say, throw away the long-received opinion that nothing but a clumsy fleshy horse can carry a fleshy man. Our principles place before you—on one side, blood, action, and symmetry in a small compass; on the other, a mass of horseflesh, hair, and superfluous bone—*Utrum horum mavis accipere?*—*Sporting Magazine for April.*

THEY'RE OFF! THEY'RE OFF!

bursts from ten times ten thousand tongues! and ere the echo of the full diapason of that vast myriad-piped organ has returned, multiplied from the opposing hill, the brilliant crowd of straining steeds and tulip-coloured riders is half way up the hill—a flight of brilliant insects—a flying rainbow—brilliance, speed, and sound—a human earthquake!

And now, as on they come, the roar deepens into an awful *oneness*; while near at hand you hear—"Ha! the crack's in trouble!—Yes! No! 'tis all up! where's the light blue? (and echo answers, where)?—Ha! there 'tis! green sleeves and cap—no, 'tis crimson and green cap!—no—yes—yes—no! Hurra!"—and here's the winner! (*See opposite.*) In he comes, steered by BELL, who, this day, 'bears the Bell!' In he goes,—and

"— Oh! just such a yell was there,  
Of sudden and portentous birth;  
As if men fought upon the earth,  
And fiends in the upper air,  
Oh life and death were in the shout,  
Recoil and rally, charge and rout,  
And triumph and despair!"

The murmur subsides. See, yonder is the victor steed! And now for a sonnet from Nimrod, for how can prose do justice to such a form of beauty?

## SONNET,

ON MEETING THE WINNER OF THE DERBY AT EPSOM, IMMEDIATELY AFTER THE RACE.

Lo! stand aside! see with what deer-like pace  
The lithe and glowing racer steps along!  
Following his urchin guide with easy grace,  
Just fresh from conquest through that mighty throng!  
Mark his proud neck, his nostrils started wide,  
His full veins, gorged with high ancestral blood!  
His eye dilated, and the embossed stud  
Of silver foam, upon his golden hide!

"HERE THEY COME!"

The strife is over—the wild shout no more  
Thrills in those glancing ears,—but glory throws  
A consciousness his limbs of radiance o'er,  
And in proud idleness he gazing goes;—  
Strange the wind's rival should become thus mild,  
Following its stripling leader like a child.

To say that the winner of the Derby was all unconscious of his triumph, would be to deny intelligence to perfect beauty; and without mind there is no perfection in beauty. He steps like a Wellington after a Waterloo! The intellect of a race-horse, however, is beyond dispute. Holcroft tells us an interesting anecdote of Old Forester; and who can read it without owning a truth and not a satire in Swift's intellectual country of the Houynms! I am not satisfied but that, to be properly represented, Yorkshire ought to return two horses out of its four members to parliament. The other two may be of the usual *genus*, and *Balaam* it as they please. But of Forester; let me revive the anecdote in the wholesome clean English of Holcroft.

"I have mentioned a vicious horse of the name of Forester, that would obey no boy but Tom Watson; he was about ten or eleven years old, and had been a horse of some repute, but, unfortunately, his feet foundered, for the cure of which he was suffered to remain a great part of his time at grass. However, when I had been about a year and a half at Newmarket, Captain Vernon thought proper to match him against Elephant, a horse belonging to Sir Jennison Shafto, who, by-the-by, I saw ride this famous match. Forester, therefore, had been taken up, and kept in training a sufficient time to qualify him to run this match; but it was evident that his legs and feet were far from being in that sound state which such an exertion required, so that we concluded he must be beaten, for the reputation of Elephant arose out of his power rather than his speed. Either I mistake, or the match was a four-mile heat over a straight course; and the abilities of Forester were such, that he passed the flat and ascended the hill as far as the distance post, nose to nose with Elephant; so that Tom Watson, who rode him, began to conceive hopes. Between this and the chair, Elephant, in consequence of hard

THE MERRY MONARCH (Mr. Gratwicke's).

THE WINNER OF THE DERBY, 1845.

Look when a painter would surpass the life,  
In limning out a well-proportioned steed,  
His art, with Nature's workmanship at strife,

As if the dead the living should exceed:  
So did this horse excel a common one  
In shape, in courage, colour, pace, and bone. SHAKSPERE.

whipping, got some little way before him, while Forester exerted every possible power to recover at least his lost equality; till finding all his efforts ineffectual, he made one sudden spring, and caught Elephant by the under jaw, which he gripped so violently as to hold him back; nor was it without the utmost difficulty that he could be forced to quit his hold. Poor Forester! he lost; but he lost most honourably! Every experienced groom, we were told, thought it a most extraordinary circumstance. Tom Watson declared he had never in his life been more surprised by the behaviour of a horse."

The Derby race is over, the course swarms with living human insects,—

"Gay beings,—born to flutter through a day!"

There was, however, an evident decrease of excited anxious horsemen; the fortunate and the unfortunate—the instant wealthy—and the ruined of a moment, were off for lodging or home, to bear success or sadness as best they might. We paced the course, wandered amongst the carriages, and saw feasting going on in all its glory. To us it was clearly manifested that eating and drinking had set in with severity. Nothing was now heard but the loud laugh bursting from the flushed cheek, through the light straw-coloured silk bonnet, the minute-guns of the champagne bottle, and the voices of sturdy vagrants thrown, like well-directed bombs, into the barouches. Our favourite friends, "the souls made of fire, and children of the sun"—the gipsies—were well intermixed with the general crowd, and foretelling, or asking to foretell, the fortune of many a gentle, innocent, and lovely coquette. One thing must not be omitted with the scarlet-robed sibyls; and that is, you must "*tip them with silver*," or your prospects will be sadly clouded by these gifted arbiters of light and shade in the varied and ever-varying landscape of life.

Why dwell upon the minors, when the *one* great actor has left the scene? The Derby for '45 is remembered among the things that were. And now

Once more upon the road, my steed once more,  
and the fun begins again. All are on the move: bottles are cast away hampers corded, the paper waistcoats of sandwiches, the slight and dappled shells of plovers' eggs, dismantled legs of chickens, and "cards in curses torn," lay scattered o'er the turf! Disinterested horse-keepers

in the zeal of generosity and gin, are putting wrong harnesses upon wrong horses, whilst drunken post-boys balance themselves with difficulty, in blue jackets, waiting for their foggy and fearful departure. But where's Elnathan Coon—gone—off—abiquatulated, as he terms it. Well, we can't stand here in the way, for all the vehicles crowd towards the cross road which leads from the course to Sutton. He'll come up doubtless. And now we seek to form three deep on a road-way calculated for two—here and there a reckless driver insists on cutting in. Crash! smash! crash! "Hallo! you sir, your pole's through the back of my trap!"

"Can't help it sir, this waggonbone behind, he's got his'n into my consarn, and that makes it even."

"Does it? Well, I can't see that."

"Now then, old stick in the mud! slip yer tile over yer left ear and pay into the ribs o' that hanimated bit o' cats' meat o' yours; vill yer?" "Vot can I do? you wouldn't have me drive right inter that ere van, would yer?"

"Not a ha'porth on it; you'll never get into the van, your knacker's delight's only fit for the rear division. Kim-aup, vill yer! kl-k, kl-k, kl-k! shove along there;" "Hallo feller, you've grazed my carriage!" "If I'd grazed your nags it 'ud ha' been worry servicable," laughs out the offender.

And now those riding on the off-side line of coaches, as they descend the hill, furnish merriment for those on the near, as the Scotch pines, which here overhang the road, sweep hats and bonnets from the heads of their wearers; in some cases tearing the canopies from the light spring vans. Ha! what have we here?—"a croaker," as I'm alive! Poor beast, a brute, who should have known thy powers, but cared not to overtax them, has wantonly sacrificed thee! Sterne was sentimental over a dead ass—a dead horse is surely more dignified. There he lies, stretched, a stiff and unsightly corpse, his last gasp sent forth with the blood from his ruptured lungs, which lies in a pool beneath his distorted jaws and bloodstained and grinning teeth. But hallo! here's a nag with too much life in him; here he is, by no means a *la Chiffney*, or Jem Robinson,

[Concluded on page 146.]

## CRICKET.

## HINTS TO CRICKETERS.—No. 5.

## ON BATTING, OFFENSIVE AND DEFENSIVE.

of playing

N pursuance of the plan laid down, we this week give two sketches to illustrate the positions assumed, or which ought to be so, by those who aspire to the name of graceful and successful players; confident that more can be shown by this means, than half a page of description could convey. The first figure correctly represents the batsman in the act

FORWARD,

at a length ball straight at the wicket, and is, perhaps, one of the most free and natural positions assumed throughout the game; yet, strange to say, considerable difficulty is experienced by instructors in inculcating this almost fundamental lesson. To a beginner, the upward-turned position of the inside of the right wrist, and the advance of the left elbow, feels cramped and uncomfortable, and he experiences a consciousness of weakness, and want of power over the bat; but with a little practice he will get over this difficulty, which wholly arises from his not loosening his shoulders, elbows, wrists, and knees, which should all work easily together. Besides, he should recollect that when playing a good length and straight ball forward, he is doing well to stop it, without hitting it away for runs. The above position should be assumed at once, and with decision, or at least as soon as possible after perceiving the necessity of it. The learner cannot be too careful in keeping his left hand well forward, with the under or inner part of his wrist inclined outwards, and the elbow so elevated as to incline the handle of the bat towards the bowler, and the face towards the ground. Should he play with an upright bat—or, worse still, with his right hand advanced instead of the left—he must not be surprised if he elevates the ball, and places it in the bowler's hand somewhat sooner than he could wish, and without the intervention of the wicket-keeper; for it is a natural consequence that in such a position the ball must be *hit up*, whereas if the proper one be adhered to, it will be found that it will be played on to the ground, thus avoiding all danger of a catch. This is a principal point as regards the *DEFENCE* of the wicket, and we cannot too strenuously urge its adoption and sedulous practice. We would recommend the hands to be somewhat closer to each other than our artist has depicted them above, as a far greater degree of power will be obtained thereby.

Our next figure is intended to illustrate that effective, but somewhat difficult point,

THE DRAW,

and may be said to belong more to the system of OFFENCE than DEFENCE, inasmuch that it never should be attempted with a ball straight at the

wicket. It will easily be seen that the wrist is the principal agent in giving effect to the draw, guided, as is almost indispensable, by a correct eye, and a steady nerve. Practice alone can bestow excellence in this respect. Especial care should be taken that your bat is not too flat, or too round on the face: if the former, your best attempts will be comparatively abortive, and if the latter, you will be very likely to "draw" the ball into the hands of wicket-keeper, long-stop, or even square-leg, if there be one placed there to save the single run, which is now frequently the case. We shall enter more fully into the subject at another opportunity, the importance of some proposed alterations in the laws of the game now under discussion by the Committee of the Marylebone Club calling for a considerable portion of our allotted space. NED RUB.

## MARYLEBONE CRICKET CLUB.

## PROPOSED ALTERATION OF THE PRESENT LAWS.

At a meeting of the committee recently held, the following propositions were brought under their notice, and will shortly be discussed. As regards their merits we can only say that we look favourably on any alteration that will tend to equalise the power of the ball and the bat, or more distinctly define any point that at present is left too much at the discretion of an umpire. His duties are arduous and onerous in the extreme, and unless protected by strictly defined laws he never can discharge them with satisfaction to himself or his employers; and this is the reason why we cannot altogether concur with the proposed amendment of the tenth law, which would, in our opinion, leave too much power in an umpire's hands, and add considerably to his already heavy responsibility. When a *doubt* has hitherto arisen in the mind of an umpire, he has generally followed the venerable Old Bailey practice, and "given the offender the benefit of that doubt," but here that rule is reversed. We, however, in common with every lover and follower of cricket, have the most implicit reliance on the knowledge and experience of those noblemen and gentlemen with whom the affair rests, and shall certainly not embarrass them with such wise suggestions as those alluded to in our "Correspondence," and that of a gentleman who advises the *enlargement of the wicket*! He would make it a perfect wicket to the Giant's Causeway. We subjoin the proposed amendments:—

Proposed by Sir John Bayley, Bart., and seconded by Lord Charles Russell, that the 10th law stand thus:—

"The ball must be bowled, not thrown or jerked, and the hand must not be above the shoulder in delivery; and whenever the bowler shall so closely infringe on this rule in either of the above particulars, as to make it difficult for the umpire at the bowler's wicket to judge whether the ball has been delivered within the true intent and meaning of this rule or not, the umpire shall call 'no ball.'"

Proposed by the Hon. F. Ponsonby, and seconded by R. Kynaston, Esq., that the following law be substituted for the 12th:—

"If the bowler shall toss the ball over the striker's head, or bowl it so wide that in the opinion of the umpire it shall not be fairly within the reach of the batsman, he shall adjudge one run to the parties receiving the innings, either with or without an appeal, which shall be put down to the score of wide balls; such ball shall not be reckoned as one of the four balls, but if the batsman shall by any means bring himself within reach of the ball, the run shall not be adjudged."

Proposed by Lord Charles Russell, and seconded by the Hon. F. Ponsonby, that the following addition be made to the 37th law:—

"The umpires shall change wickets after each party has had one innings."

Proposed by Sir John Bayley, and seconded by Lord Charles Russell,

"That a general meeting of the club be summoned for Monday, the 2nd of June, at five o'clock, to be held in the Pavilion, to take the above alterations into consideration."

ROGER KYNASTON, Jun., Hon. Sec.

## RAILROAD MELODY.

AIR—"The harp that once through Tara's halls."

The coach that once from Charing-cross  
To distant counties sped,  
Unvarnished now bewails its loss—  
Both guard and coachmen fled.  
So falls the pride of Chaplin's team;  
No crowds his coaches cram,  
Since all the world now goes by steam  
To visit Birmingham.

No more fat dames, with parcels light,  
The drags of Nelson fill;  
The horn which used to sound by night,  
Is now for ever still.  
Post-horses now are voted slow;  
The only work they get  
Is, when some boiler bursts, to show,  
The coaches are upset.

**WEAK LEGS, KNEES, and ANKLES.**

Surgeons in England, Ireland, and Scotland, continue to recommend BAILEY'S ELASTIC LACED STOCKINGS, KNEE-CAPS, and ANKLE-SOCKS. They are light, cool, and warranted to wash. Since the reduction of postage, afflicted persons in the country can have any bandage by post for a few pence, by forwarding their measure. The particular property of the Stocking is to give constant support in varicose veins, weak, swollen, or dropsical affections of the legs, or in any case requiring equal pressure. The Knee-cap will be of great service where the knee-joint requires support, from accidents to the pan of the knee, after inflammation, rheumatism, or gouty affections, or in any case where, from weakness of the part, support may be required. Laced Stockings, 18s. 6d. to 21s.; Knee-caps, 10s. 6d. to 12s. 6d.; Sock for Ankle, 10s. 6d.; TRUSSES, 7s. 6d. to 10s. 6d.

**RUPTURES.**—BAILEY'S TRUSSES are declared by many eminent Surgeons to be the best: they are light and easy to wear, and if a cure is to be obtained they will effect it. The patient is also carefully attended to by Mr. Bailey or his assistants during 12 months for One Guinea (the Truss included); by this means, a proper adjustment being always preserved, the inexperienced will be enabled to effect their cure in the shortest time possible. Trusses may be had as low as 7s. 6d. and 10s. 6d. Ladies attended by an experienced female assistant.

Bailey's, 418, Oxford-street, London.

**BEST VELVET HATS, 13s.**—Gentlemen desirous of obtaining a good, cheap, and serviceable Hat at 13s. to 18s. will find a most extensive assortment to suit contour, at PERRING'S, CECIL HOUSE, 85, STRAND, and 251, REGENT STREET. Also, the Best Beaver Hats that can be made, at 21s.; Light ventilating Velvet, Silk, and Beaver Hats, at 8s. 6d. to 9s.; best Livery Hats, at 16s.; Gosamer Hats, Youths' and Gentlemen's Hats and Caps, of every description, at the lowest remunerating prices.

**PARR'S LIFE PILLS.**—The extraordinary success of this Medicine is the wonder of the age; it has been tried by hundreds of thousands as an aperient, and has in every instance done good; it has never, in the slightest degree impaired the most delicate constitution. Tens of thousands have testified that perseverance in the use of PARR'S LIFE PILLS will completely cure any disease, and are living witnesses of the benefit received from this invaluable medicine.—Sheets of testimonials, and the "Life and times of Old Parr," may be had, gratis, of every respectable Medicine Vender throughout the Kingdom.

Beware of spurious imitations of the above medicine. None are genuine unless the words, "PARR'S LIFE PILLS" are in WHITE LETTERS ON A RED GROUND, engraved on the Government Stamp, pasted round each box; also the fac-simile of the signature of the Proprietors, "T. ROBERTS and Co.," London, on the directions.

Sold in boxes at 1s. 1d.; 2s. 6d., and family packets, at 11s.; by Edwards, 67, St. Paul's; Barclay and Sons, Farringdon-street; Sutton and Co., Bow Churchyard, London; Motterhead and Co., Manchester; and J. and R. Raines and Co., Edinburgh; and by all respectable druggists, and patent Medicine retailers throughout the Kingdom.—Directions are given with each box.

The first complete and uniform Edition of **THE WORKS OF M. EUGENE SUE**, closely printed in large 8vo., price 6d. each part, containing 64 pages, equal in amount to a twelve volume. **THE MYSTERIES OF PARIS**, is now nearly complete.

This is the only cheap, complete, and faithful translation from the latest Paris Edition, with explanatory notes by the Editor. All other cheap issues of this work are from the spurious Belgian editions, pirated from the Paris newspapers, previous to its revision by M. Eugene Sue himself.

**PEOPLE'S EDITION OF COOPER'S NOVELS.** Each Novel, containing 20 Engr-

avings, complete for One Shilling, and comprises the following:—

- I. THE PILOT,
- II. THE SPY,
- III. LAST OF THE MOHICANS,
- IV. LIONEL LINCOLN,
- V. THE PIONEERS,
- VI. THE PRAIRIE,
- VII. THE RED ROVER,
- VIII. THE WATER WITCH.

All Orders should specify "People's Edition." A beautiful Ornamented Case, to bind the above, price 1s. 6d. Or the work may be had in one very handsome Volume, price 10s.; consisting of nearly 1000 Octavo Pages, and 200 Engravings. Beautifully printed in Nonpareil type. Originally printed in 24 Volumes, at Twelve Guineas.

**A BOOK FOR THE MILLION!** To be completed in Sixty Numbers at One Penny, or Twelve Monthly Parts at Sixpence each. A new and elegant Periodical, consisting of sixteen closely-printed pages, double crown, and embellished with several superb Engravings, by Landells and others, entitled,

**TALES OF SHIPWRECKS and ADVENTURES AT SEA.**—Containing talented sketches of the Sea and Seamen, and truthful Narratives of Shipwrecks, Fires, Mutinies, Famines, and every Danger of this Life of Peril, rendering it the handsomest, largest and best Publication ever offered to the public.

Just published, in One Volume, 8vo., handsomely bound, price 6s., with nearly Seventy Engravings, an entirely New Edition, revised, and nearly re-written, of the popular Romance of **DICK TURPIN, THE HIGHWAYMAN.** By HENRY D. MILLS.

The following **SPORTING HANDBOOKS** are all uniformly bound in cloth, gilt edges, price 8d., or post free, 1s. each. Embellished with an outline Engraving of a Ground and Players.

**CLARK'S CRICKETERS' HANDBOOK.**—Containing the History and Origin of that manly Game,—an account of celebrated Players, and remarkable Matches; instructions to Young Cricketers, and the

**NEW LAWS OF CRICKET.** **WRESTLING AND PEDESTRIANISM,** With full Instructions in Training for Athletic Sports and Exercises; with Engravings.

**MODERN BOXING,** Containing the History and Practice of Pugilism, Illustrated with Numerous Engravings. **SPORTING SONGS.**

Containing upwards of 100 of the most approved Sporting Songs extant.

**EVERYBODY SHOULD ASK FOR TURPIN'S RIDE TO YORK!** Splendidly Illustrated. Complete in Eight Numbers, at Twopence each, or neatly done up for Eighteenpence. The Illustrations commence with the start from Kilburn Wells, after the death of Tom King.

The second plate shows his flying leap over a donkey-cart and driver. The third plate represents his leap over the toll-bar. The fourth, his stoppage of the York Mail. The fifth, his interview at the foot of the gibbet. The sixth, his race with the Phantom! and the seventh, the death of the faithful Bess, close to the gates of York, and the escape of our hero. **THE BEAUTIFUL SET OF PLATES**, with an Emblematical Frontispiece, may be had separately, price One Shilling plain, Three Shillings coloured. London: Cleave, Shoe-lane, Fleet-street; Clark, Warwick-lane; Vickers, Holywell-street; Purkiss, Compton-street, &c. &c., and all Booksellers.

**NEW AND INTERESTING WORKS.** **A GUIDE TO THE GAME OF CHESS AND DRAUGHTS;** by the help of which the amateur may become a crack player of those elegant games. (Profusely illustrated by appropriate diagrams, &c.) Price 8d.

"This unique little work is really what it professes to be—a perfectly, simple, and, therefore, easily-to-be-followed 'Guide to Chess and Draughts.' As such we heartily commend it to every would-be player of those best of in-door recreations."—LIFE IN LONDON. Also, as Companions to the above, price Threepence each,

**A DRAUGHT BOARD,** AND COMPLETE SET OF MEN, AND

**A CHESS BOARD,** WITH MEN, ETC., COMPLETE. London:—W. M. CLARK, 17, Warwick-lane, Paternoster-row. Sold by every Bookseller in the kingdom.

**ON ENTIRELY NEW PRINCIPLES. TAILORING, WOOLLEN DRAPERY, AND OUTFITTING ESTABLISHMENT,** No. 29, LUDGATE HILL, SAMUEL, BROTHERS, Proprietors.

**THE** novel principle on which we intend to conduct the business of this Establishment, constitutes an entirely new Era in our line of business, it will afford another incontestable, cheering and triumphant proof of the wisdom to be effected in the world of commerce by the union of Judgment, Capital, and Experience.

We confidently and positively assert, that our system will effect a greater saving to the Public in the article of Dress, than has ever yet been realised, we rely not alone on its novelty, for it only needs to be once tested to be universally encouraged. We are aware that there is a general impression that lowness of prices necessarily involves inferiority of quality; but we unhesitatingly say, that with the facilities fortunately at our command, we can secure Lowness of Prices with every other concomitant advantage. The Establishment of Samuel, Brothers, is the first (we may say) in the world which has originated the judicious plan to which publicity is now given, a plan which cannot fail to be hailed with admiration, because, while it rears the most sanguine hopes of the economist, it will be a source of pride to its inventors, based as it is on the most enlightened views, and conducted as it will be upon the most honourable principles.

We will now state in what the novelty consists, though simple in its details, it is most beneficial to the public in its operation, and is neither more nor less than this.—Every customer will be enabled to ascertain the Value and Quantity of material required for every variety of Garment. Each and every Cloth, Cassimere, Doeskin, &c., being marked in plain figures at the price per yard, such price being the same as would be charged upon the purchase of the material by wholesale. We shall explain to our Patrons the exact quantity that will be necessary for the particular article of dress wanted, and we shall charge separately for the making and trimmings. This system (as a trial of its operation will abundantly demonstrate) will effect a saving of fully one-third of the expense in the articles required in Gentlemen's dress. Our unlimited command of Capital secures to us the advantage of making our purchases for Cash—our knowledge of the best Markets—our connexion with the most respectable and extensive Manufacturers—our position in the estimation of our friends—our anxious desire to merit more extended patronage—the enormous expense we have incurred in rendering our Stock as varied and complete as that of any House in London, are so many distinct and certain pledges to the public of the fidelity, ability, and zeal, which will be manifested in the conduct of our Establishment, and as our system, and we shall charge separately for the making and trimmings. This system (as a trial of its operation will abundantly demonstrate) will effect a saving of fully one-third of the expense in the articles required in Gentlemen's dress.

Our unlimited command of Capital secures to us the advantage of making our purchases for Cash—our knowledge of the best Markets—our connexion with the most respectable and extensive Manufacturers—our position in the estimation of our friends—our anxious desire to merit more extended patronage—the enormous expense we have incurred in rendering our Stock as varied and complete as that of any House in London, are so many distinct and certain pledges to the public of the fidelity, ability, and zeal, which will be manifested in the conduct of our Establishment, and as our system, and we shall charge separately for the making and trimmings. This system (as a trial of its operation will abundantly demonstrate) will effect a saving of fully one-third of the expense in the articles required in Gentlemen's dress.

The peculiar advantages of the system of SAMUEL, BROTHERS, may be practically exemplified as follows.—The average quantity of Cloth for a Coat is 12 yards; suppose that selected be 3s. per yard, the material would cost 14s., our charge for making and trimmings would be 18s., thus a really good serviceable Coat, completed in the best style, will be made to measure for 32s. Again, suppose the Cloth selected to be 12s. per yard, the material would cost 21s., our charge would be 20s. for making and trimmings, and thus a first-rate Coat made to measure and completed in the best style will be obtained for 41s., few, if any, charge less than 50s., or 52s. for the same article. The same saving will be effected in every description of Clothing. The extensiveness of our stock enables us to offer Cloths at from 5s. to 21s. per yard. Our charge for making and trimmings for Cloths under 10s. per yard is 18s., and for the higher price Cloths 26s. We have entered into arrangements with the first Manufacturers of Wool Dyed Black Cloths for a regular supply, the wear of which we can guarantee to be superior to any yet made, as they are finished on an entirely new principle. Artists of the First Talent in the Empire are engaged to superintend the Cutting Department, so that we feel certain of pleasing the most fastidious, who will have such superior fitting garments, that they will pronounce them faultless. The greatest attention will be paid to the Workmanship, as well as style of all articles. In quality of Cloths, variety of patterns for Trousers—richness and novelty in designs of Vestings, we flatter ourselves that we have a stock that will please every beholder. Noblemen and Gentlemen on inspecting our mode of transacting business, will be astonished at the saving they may effect in their Liveries,—in many instances nearly one-half. We beg to remind our Friends that the smallness of our profits will not allow us to run the least risk in giving credit, our system compelling us strictly to adhere to Ready Money, but in order to give every satisfaction, we promise that, should an Article (after it has been paid for), not please, we will change it, or return the Money without demur.

Ladies' Riding Habits made in a very superior manner. Sporting Coats made in the First Style of Fashion. We have a very extensive Stock of Superior Ready-made Clothes, which we offer at such prices as must ensure unqualified satisfaction. We submit the following list as a guide:—Super Cloth Dress Coat, 21s.; Saxony ditto, 26s.; Very super ditto, 30s.; Frock Coats, 3s. extra. Cassimere Trousers, 14s.; Doeskin, 10s. 6d.; Tweed, 7s. 6d.; Vests in endless variety, and at any price.

**MOURNING TO ANY EXTENT ALWAYS READY.** A New and Extensive Assortment of Boys' and Youths' Clothing at the Lowest possible Price.—Observe the Address.—SAMUEL, BROTHERS, Tailors, Wholesale and Retail Woollen Drapers, &c., 29, LUDGATE HILL, Two doors from the Old Bailey. Take Notice.—No business transacted from Sun-set on Fridays to Dusk on Saturdays, when business will be resumed until Twelve o'clock.

A Guide for Self-measurement and Patterns sent to any part of the Kingdom.

COMING IN WITH A RUSH.

Thus wiling away time with hearing chaff, and seeing casualties—for every calamity that horseflesh is heir to is food for mirth upon the road from the races—we crawl down that seemingly interminable hill. Although many of the prads were quite *knocked up*, their drivers were remarkably *fresh*, and hence fun and disasters, synonyms on a Derby-day, were multiplied. The Babel ceased as the road slightly cleared, and taking a bye-road, we avoided the throng till we again came on them at the Cock at Sutton. Here our venerated dad got learnedly into a discussion upon the folly of fancying this, that, or the other horse; proceeding to discuss the favourites of every year since 1780, and throwing away a vast quantity of good advice against

LAYING THE (H)ODDS ON THE FAVOURITE.

Laying the (h) odds on the FAVORITE: a subject which I told him, in my point of view, had better be discussed at the *Bricklayers' Arms*, for which the above conceit might serve as a sign. The ould 'un also commented upon the running: telling how this horse was a winner by a head, how that was

A LOSER BY A NECK.

while we quietly blew a fragrant cloud from our Woodville in deep meditation as to what could have become of brother Jonathan. "He'll turn up," quoth dad, as we reached Sam Holden's White Hart, where we changed our steeds, looking meanwhile at the fun of the road. A cab stopped, and out stepped our "absquoterlated" Yankee friend, Elnathan Coon.

"I've had an adventure, if I ain't, split me into shingles, and tile a meeting-house with my rivings. I've jist chopped on to the first-cousin of Pickwick's cab-man. I've read Dickens, d'ye see, but that was afore he dared to say crooked things about the smartest nation in all crea-

tion and a large piece to spare.' Well, as I was gaping about, I lost sight of the spot where I'd left our carriage; so I strayed into a booth. I was out off from supplies, and felt wolfish, so I dropped into some lobster-salad. Coming out I saw Cabby, who asked if I wanted a cast back, we agreed; and as I was in no hurry, he went into a more humble booth, where I treated him to a feed: he had a plate of beef, washed down with the usuals. 'What's to pay?' said I. 'Half-a-crown,' said the dirty-looking waiter. Cabby protested against the extortion, but the charge was made, and must be paid—and so it was. We took to the road, and now came the cream of the jest. We had done three miles, when our horse, who had been dropping his ears and carrying his head in a studious manner, as if reading something on the gravel, suddenly stopped. 'Ah, the blessed creatur,' he knows the distance, sir, you see!

"What distance?" says I. 'Three mile,' says the fellow, 'the blessed cretur knows as well as I do, that he's done my distance for a drain.' Cabby roined and he went on, his 'blessed cretur' certainly pulling out with increased activity, as though aware of his master's refresher. 'May I be so bold as to ax, sir, whether you *did* pay half-a-bull for that bit o' cat's meat I bolted, sir?' 'To be sure I did,' replied I. 'Vell, it vos a shameful himposition, sir, acos they seed a svelt vos a goin' to pay. I vish your half-bull, sir, had been a bad 'un.' 'But why perplex yourself about it so much; I've paid it, and don't grumble.' 'Vell, sir, I *hates* himposition; they sticked it into us, sir, and I'll maintain it. I can't bear anything as is wrong, so I vas determined as *ve* wouldn't come off second best, so,' said he, popping his hand under the seat of his vehicle—'here it is; this 'ill make us sqvare with them; I've nailed the booth cove's dandy (dandriff) brush, and that's worth *three bob*, any day.' That was 'cute, wasn't it?' observed Elnathan. We could not refuse a laugh to Elnathan's characteristic cabman, for there was full as much in the matter as the manner of his anecdote. He joined us, we were again *en route*;—but why repeat a thrice-told tale? The Kennington stoppage, the rows of gleaming gas, as day sunk into the shades of night, and lastly the cheerful home, where over a tumbler of right cognac, we discussed the merits of give-and-take plates, of weight for age, of running two-year-olds, of that much-decried description of race, a handicap. Then came Scott's lot, the merits of

JOHN DAY,

and lastly we talked of the certainty with which the rolling hours must soon bring round that ominous period, the

SETTLING DAY.

And here we paused for lack of argument: having come to the conclusion, from the best information we had been able to obtain, that the result had so utterly floored the knowing ones, that *everybody had lost money*, therefore *nobody could* have won!

The old gentleman's pigtail hung listlessly and limp on the collar of his coat, and an occasional grunt, a dubious compromise between an affirmative and a snore, was his sole reply to various interrogatory boostings of Elnathan, who was maundering about 'mint juleps' and 'sherry cobbles'; so MILES's BOY called for his chamber-candlestick, and retired to dream of

THE DERBY DAY.

LONDON:—Printed for the Proprietors by W. M. CLARK, at his Steam-Press, 10, Red Lion-court; and published by him at 17, Warwick-lane, Paternoster-row; J. CLAY, Shoe-lane, Fleet-street; and all Booksellers in the United Kingdom.

No. 4. FOR THE WEEK ENDING JUNE 14, 1845. THREE HALFPENCE

## HISTORICAL REMINISCENCES OF EPSOM.

BY OLD MILES.

**B**EDE, the Venerable, who got that name few know how or why, tells us that Epsom, was so called in honour of EBBA, the abbess of the nunnery there, who, to save her chastity, "with all her sisterhood, cut off their noses and lips, lest they might attract the lustful desire of the Danish invaders, who notwithstanding this did burn both themselves and their house." "In memory of whyche they do call the place Ebbesham, Ebbisham, or Epsome," says another old file. Now, though virtue is a great treasure, Old Miles cannot help thinking that "cutting off your nose to be revenged of your face," has not in these more modern times been thought worthy of high honour; perhaps these ladies thought differently. Whether this anti-Taliacotian operation\* was efficacious in preserving their virtue or not does not appear on record; but it is clear they did not save their "sticks," for they were obliged to "cut them," and, in honour of this cut-nose foolery, was Ebbesham named, or else—which is much more probable—tradition lies.

Jumping from Ebba and her noseless nuns, we come from the purification of the soul to the purification of the body. During the seventeenth and eighteenth centuries the mineral spring, situated on the common about half a mile west of the village, became a place of fashionable resort. In a "Ramble through the Rookery," in a former number of this publication, my Boy has made some observations on the scrofulous memory of Tory Queen Anne, which, to say the least, were unbecoming and flippant. Whether he is right or not I care not; but certain is the fact that Queen Anne was a terrible patroness of all sorts of stinking sulphates and soapy carbonates wherever she could find them, and so was her husband, Prince George. According to the best—and bad in these matters is the best—account, the spring was discovered in 1618, yet it has since been found out by some poring F.A.S. that the water was mentioned in Elizabeth's reign; now, as Elizabeth (*vide Almanac*), died in 1603, the discovery, I take it, must have been before 1618; but this I leave to the chronologists and antiquaries; for me it suffices that it has been found out—to the high disgust, doubtless, of many a wry-faced urchin.

Strangers were quickly attracted, and the lord of the manor, "for their accommodation," (says the history writer) and his own profit, "erected a building and enclosed the pond formed by the spring." What funny fellows these "historians" are: he enclosed the pond for "the accommodation of the public!" Well, about 1640 the fame of these waters had spread into France, Germany, and other countries; and from them were prepared salts, for which, though sold at "five skillings an ounce," (doubtless also "for the benefit of the public") the demand was greater than could be supplied. About 1692, the concourse of families and foreigners resorting to the well was so great, that Mr. Parkhurst, the then Lord of the Manor, enlarged the first building, by erecting a ball-room, and planted a long walk of elms from the London-road with avenues leading in various directions. The village increased, many lodging-houses were erected, and yet the place would not contain all the company; so that neither Bath nor Tunbridge exceeded it at that time in splendour, or could boast of more distinguished visitors. About the beginning of the last century, these waters gradually lost their reputation, through the *knavery* (?) of one Levingston, an apothecary, (we should like to hear Levingston's defence), who, having purchased a piece of land here, built a large house, with an assembly-room, and sunk a well. By means of concerts, balls, and other diversions, he contrived to allure the company from the old well; and at length getting the lease of the latter into his hands, he locked the place up. The new water, however, was found not to possess the virtue of the old, and Epsom began to be deserted. At the expiration of the lease, Mr. Parkhurst repaired the buildings of the old well; and if the town was not

so much visited by strangers, it was, at least, frequented by the neighbouring gentry, and had a public breakfast here every Monday in the summer. This practice was, at length, wholly superseded by the new fashion of sea-bathing. In 1804, the old building was pulled down, and a dwelling-house erected on its site. The well is preserved.

The Manor of Ebbisham belonged, at the time of the Domesday survey, to the abbey of Chertsey, the monks of which were licensed to have a park here, shut up whenever they pleased. This is supposed to be what is now called "Woodcote Park," about a mile southward of the village. It was long the residence of the Lord of the Manor, till given, towards the conclusion of the seventeenth century, by Mrs. Evelyn to Lord Baltimore. The last possessor of that family led a dissolute life, and in March, 1768, was tried at Kingston for a rape on Sarah Woodcock, a milliner, whom he had sent to his house here. He narrowly escaped being convicted; soon afterwards he sold his estate at this place, went abroad, and died at Naples, in 1771.

Respecting this nobleman, the following anecdotes are given in a periodical, entitled "Olla Podrida for 1785:"—"Lord Baltimore, who published 'Remarks on Constantinople and the Turks in 1768,' and 'A Tour in the Levant in 1669,' determined to keep constantly travelling that, as he said, he might not know where he should be buried. In 1769 he travelled with eight women, a physician, and two blacks, who were entrusted with the superintendence of his little seraglio. With the assistance of his Esculapius, he made some singular experiments upon his hours; feeding such as were inclined to be fat on acid aliments alone, and those of a contrary disposition with milk, soups, and nutritious diet. On his arrival with this retinue at Vienna, the inspector of police begged to be informed which of the eight ladies was his wife? He returned this message, that 'he was an Englishman, and wherever he was called to account about his marriage he immediately left the place, unless an opportunity was afforded him of fighting it out.'"

The mansion and park of Woodcote were purchased by the late Lewis de Tessier, Esq., and his descendant, the Baron de Tessier, is the present liberal and excellent steward of the races.

"Durdans" (the seat of the worthy Sir Gilbert Heathcote, whose nags and stables are identified with the name of Epsom) is said by Aubrey to have been built by the Earl of Berkeley, with the materials of "Nonsuch Palace," when it was demolished by the Duchess of Cleveland, but is erroneously stated by him to have been the scene of the intrigue of Lord Grey of Werk, and his wife's sister; which was not carried on at Durdans, but at another house of the Berkeley's, at the west end of the town, where the workhouse now stands. Durdans was once inhabited by the father of King George III.; being destroyed by fire, a new mansion was erected by Mr. Dalbiac.

In the church is interred Sir Robert, eldest son of the celebrated lawyer, Sir Edward Coke, who died in 1653; and Robert Coke, Esq., whose father was the sixth son of the Lord Chief Justice. Here are several monuments by Flaxman: among the rest that of the Rev. John Parkhurst, author of a Greek and Hebrew Lexicon, who resided at Epsom, and died in 1797. On the tombstone of one of the same family, in the church-yard, is the following whimsical inscription:—

"Here lies the carcase  
Of honest Charles Parkhurst,  
Who ne'er could dance or sing,  
But was always true to  
His Sovereign Lord the King,  
Charles the First."

Ob. Dec. XX., MDCCIV. Etat. LXXXVI.

And here I bid farewell to Epsom, its antiquities, and remembrances; having for the year of grace, 1846, the next say concerning this dull, quiet village, which so seldom awakes from its lethargy, that the quarian fever of its four days meeting is now proposed to be reduced to a tertian, and that three days should restrict its annual excitement—the Derby crisis being on the first Tuesday. "So mote it be; unless," as the Yankees say, "they can fix it 'better' with the Home Secretary as to the amusements to be offered on the course."

[Concluded on page 159.]

\* See Hudibras, Canto I:—

"So learned Taliacotius, from  
The brawny part of porter's —," &c., &c.

## CRICKET.

Then since we yet have cricket left, in which we can rejoice,  
Let's sing its praises cheerily, as with a cricket's voice;  
And if your critic catch me out, I've only this to say—  
My hand though worn by many years, is ready to make play,  
To guard my wicket merrily, and boldly bowl away.—THOMAS DIRDIN.

## HINTS TO CRICKETERS.—No. 6.

LILLYWHITE.—JOHN NYREN V. ROUND BOWLING.—HIS INSTRUCTIONS TO YOUNG BATSMEN.

THE truly English game of Cricket has the strongest claim on the esteem of every admirer of popular sports, for it is in every sense a game of the people generally, from the prince to the peasant. The annals of the sport we have again chosen for illustration, can count royalty in its records. George the Fourth formed a cricket-ground adjoining the Pavilion at Brighton, in which he often figured both as batsman and fieldsmen; and in which the original of the subjoined sketch,

LILLYWHITE,

the pride of the Sussex bowlers, often displayed his prowess. It cannot be controverted that he has been the most successful bowler of his day, despite the querulous croakings and deeply-rooted prejudices of John Nyren and others, who have stigmatised all our modern professors as *throwers* and *jerkers*. Great allowance must be made for a man, who like John Nyren, had been one of the chief ornaments of the olden style; and who naturally looked on the modern innovation as the means of plucking the hard-earned laurels from his brow, and that at an age, too, that left him no chance of regaining them. We shall not enter into the comparative merits of the two styles here, as it is our intention to lay before our readers an elaborate article on the subject. The triumphs of our little hero have been many and great, in every quarter of the kingdom, and

though many good judges have expressed a doubt as to his occasionally limiting his hand to the prescribed height in the delivery, but few umpires have been found hardy enough to "call him." He is an excellent judge of the game, hale and active even for a youth, and one who can be ill spared from that *sphere* (we intend no pun) in which he so long and so successfully laboured.

In reference to the royal and noble patronage our sport has enjoyed, we may instance the late William the Fourth, to whom the Royal Clarence Cricket Club, at Hampton, owes its birth and name. The Duke of Richmond and the Duke of Hamilton, the Duke of Dorset, the Earls of Tankerville, Verulam, and Winterton, Lords Frederick Beauclerc, Grimstone and his noble brothers, and Glamis, with an almost interminable list of the best and noblest in the land, were and are not only admirers of the game, but most of them first rate practitioners; and the late Duke of Bedford patronised it as a sport calculated to keep up the manly vigour and character of the people; his opinion was worthy of his patriotism and his discernment. We know of no game better calculated than cricket to bring together the ardent, the active, and the dexterous of every grade, and to encourage and foster the best of feelings between every rank, from the peer to the ploughboy.

The southern counties of England were formerly pre-eminent in their practice of this delightful game, but its attractions have spread it through most parts of England (more especially the north), Ireland, and Scotland. Nay, we have lately heard of its triumphs in France, among our countrymen; and even on the burning soil of India the vigorous sons of Albion have pitched their wickets, and shown their deep-rooted love of their national game in the tangible forms of bats, balls, batters, bowlers, and scouts.

As an addenda to the instructions given in our last with respect to "forward play," we quote John Nyren on the subject, who with all his prejudices against modern bowling, was a most excellent preceptor at all points of his dearly cherished pastime.

## TO STOP A LENGTH-BALL STRAIGHT TO THE WICKET.

"Place the bat down, upright, on the mark made to cover the middle stump, and the feet in their proper situation. Immediately before the ball is delivered, raise the bat steadily till you see where the ball will pitch. Then move the left foot forward, about three feet, keeping the right foot behind the popping-crease. Now move the bat as far forward as you can reach, so as to present its full face to meet the ball; keeping the bat upright, or rather, slanting the *handle* towards the bowler to an angle of about twenty-two degrees. In order to maintain an upright position of the bat, the *left elbow* must be turned up. Let me urge the *young* young batsman not to neglect this direction of turning up the left elbow, for he cannot play his bat upright without doing so. It is likewise the best and safest way for hitting, as well as stopping; for, if a stroke be made with the left elbow in the position stated, and the bat at the same time well upright, the ball cannot rise. I need not point out the advantage of this. The reaching in to stop a length-ball will prevent it from rising or twisting. It will also save the hands, and, better than all, prevent the batter from being caught out. In reaching in, too, be especially careful that the right foot remain firmly in its place *behind* the popping-crease; for, in the eagerness of playing at these balls, the foot will unconsciously draw in. Be careful, therefore, as to this point, for should you miss the ball, a clever wicket-keeper will surely stump you out."

Here is food for reflection and practice for a whole season, and he makes no slight progress in the science who masters thus much in so short a time.

## CRICKETERS' EPITAPHS.

## ON A BOWLER.

SILENT and lonely, 'neath this sacred mound,  
Lies one who erst within these shades was known;  
The finest bowler in the country round,  
From whose strong arm the leathern sphere has flown.

Long had he been his native hamlet's pride,  
Yet scarce had manhood o'er his temples past,  
When Death with envy his green laurels eyed,  
Seized on the ball, and bowled him down at last.

## ON A BATSMAN.

HERE lies a batsman who each ball could nick it,  
Till Death turn'd bowler, and put down his wicket;  
A good long-stop, too, though it doth appear,  
Death would not let him make a *long stop* here.

## ON OLD J. BURDEN, A SOUTHGATE CRICKETER.

Earth and I were both even from birth,  
As any full plainly may see;  
I once was a *Burden* on earth,  
Now earth is a *burden* on me.

NED RUB.

# REFRACTION,

WINNER OF THE OAKS.

**The Property of the Duke of Richmond; trained by Kent, and rode by H. Bell.**

## PEDIGREE OF THE WINNER.

REFRACTION is a brown filly by Glaucus, out of Prism. Her performances are as follows:—In 1844, at Goodwood, when two years old, carrying 8st 4lb, she won the Ham Stakes by two lengths, beating Winchelsea, 8st 10lb; Hersey, 8st 7lb; and the following not placed:—Colt by Bay Middleton, out of Miss Whip, 8st 7lb; the Merry Monarch, 8st 4lb; Bastion, 8st 10lb; Jezail, 8st 4lb; As-you-like-it, 8st 7lb; Stitch, 8st 11lb; and Nightcap, 8st 4lb. Same day ran third to Maid of Orleans; and, carrying 5lb extra, ran second to Nutbourne, beating Tisiphone, Pulci, Stitch, Plaudit, Bretwalda, the Rasher filly by Elis and Hersey, and same meeting divided a stakes with Maid of Orleans. At the Newmarket Second October Meeting, won the Clearwell Stakes by a neck, beating Hersey, Sir Francis, and the following not placed:—Arthur, Plaudit, Prologue, Energy, and Tunic. In 1845, when three years old, Refraction ran third to Lyons, Prologue being second, for the Coffee-room Stakes, in the Newmarket First Spring Meeting. At Epsom won the Oaks, beating 20 others.

## THE FISHER'S CREEL.

## THE HALF WATER.

## A SKETCH.

THERE are about two miles of water running by the side of the Long Meadows, in which the right of fishery is divided between us and the Laughton's. It is the finest pike fishery I know. The water is about eight feet deep, well weeded, with here and there a deep hole and gull, followed by good gravelly scours and swift shallows; where, of course, there is excellent casting for roach, dace, and gudgeon. The stream is not so swift, neither is it so dull: for lying between Penn Stauch and Alanford, every day, and frequently oftener, there comes down a staunch water which sets the fish on the move and ensures us excellent sport. Well, we always fish the Half Water for the first time the first Monday in July, for several reasons. Pike never bite well at trimmers until July. The water is best calculated for trimmering and ill-adapted for trolling from the same cause,—the weeds: which, while they form the finest and surest haunts for large pike, and being cut in holes, afford splendid sport for a trimmer, but effectually block the troller from doing much good, fish with whatever hook he may. I do not mean to say that the arrow-gorge—the common old gorge-hook, and several modern hooks, may not be worked, and well worked, and with good success too, amongst weeds; but in the Half Water they are so thickly bedded and so interminable—that we always trimmer here and troll elsewhere in summer. A hint which may not be amiss in regard to many other waters.

Now, the old and excellent method of trimmering among weeds is to cut holes with a small hook or sithe at about twenty yards asunder, and then fixing the living bait with a good sized bullet, and sinking the roller with a stone, to set a mile or half of a mile of water on one side or both once a fortnight. Perhaps there is no better method, but there is another plan which a trial will speak for better than I can. It is to cut several runs through the weeds, about three feet in width and thirty or forty feet in length, making a circular cut at each end, and there placing a trimmer. We had an enormous pike in Half Water last August, and as his haunt was as well known to us as possible, we had several set for him, but all failed. At length I thought of this mode of fishing; and no sooner thought than done, I got the boat and weed-hook, and cutting a lane through the weeds, made two good sized holes at each end. I then left the place quiet for three weeks. One Thursday morning there was a fine southerly wind and very little sun, and the governor having a party that day I told him what was up and went to work. With a moderate roach baited in either hole I fixed myself waiting on the shore, waiting patiently while angling for perch, the issue of my manœuvre. About an hour had elapsed and I heard him strike—five minutes more and he flung out of water a yard, if he sprung an inch. The hook was in his gullet; he was mine! I had never taken my eye from the spot after I heard the strike until I saw his plunge, and then packing up my perch tackle, and gathering my fish together, I got into the boat and went in quest of my prize. About a quarter of an hour had elapsed, and I knew he was mine, unless some untoward event had spoilt all. "To the boat and row steady, Ned," quoth I; "and where's the line?" The first grope with the sprit missed it, but it came the second, taught as a cable. He had run far in the weeds; it is astonishing how a large pike imbeds himself in weeds when he is deeply hooked; but quietly and cautiously clearing them from the line and coiling it carefully in the boat, by-and-bye we came up with him, and after the usual plunge, splash, and struggle, he was safe in the punt thirty-two inches from eye to fork. Since that day, whenever I mean mischief, I cut a dozen lanes or weed paths, and then, after giving a week or ten days to the pike to use them in security, with two dozen trimmers, am safe of a splendid day's sport. Thus, if all's well, I figure in print, while he is quietly at work in the Half Water amongst my lanes and holes. A kind of "city of the sea" is thus around me, broad street and ample squares for the habitants of the waters, and I the architect of all. And so the love of fields and flowers, and waters, which belongs to country life, and lends to fishing and shooting half their zest and enjoyment, may find a fresh fund of pleasure and amusement in the mimic scene of artificial towns in the Nene, the Welland, and the Cam.

May 26th, 1845.

GEORGE AUSTIN, JUN.

## PIKE FISHING IN CANADA.

I HAD heard much of the muskanungee, a kind of mammoth pike, in the Canadian lakes and rivers, and I subsequently discovered that my old shipmate had kindly requested his brother officer to organize a day's sport in honour of my visit. Of strong and excellent tackle there was no lack; our rods short and stiff, such as are generally used for dead snap fishing; one or two of the lines of plaited silk, the rest of whipcord; our bait consisted of small trout, very large minnows, and a bright little fish something between a dace and a bleak, which some urchins of the village had been deputed to catch in the brooks. As soon as we were in deep water, and had approached the spot where our cicerone had predicted we should be sure of "a run," our rods and lines (wound on large salmon reels) were put together, and the live bait impaled *secundum artem*. Acting under Captain Browne's advice, I selected one of the captivating and lively white fish for my bait, and had good cause to thank him for the judicious recommendation, for my hook and

gym had not been lowered to the prescribed depth (about seven or eight yards) more than two or three minutes, ere my reel was spinning like a Manchester jenny. "Strike now," called out Captain Browne; and strike I did, and then came "the tug of war." I have hooked and played a shark many a time on the broad Atlantic in calm weather, but my arms never ached more from exertion than on the occasion I am recording. Having incautiously handled my rod after the European fashion, my fingers were cruelly cut by the line being whisked through them with such extraordinary velocity; the excitement as well as the novelty of the affair prevented my noticing the inconvenience at the time. I shall never forget the sensation I experienced on feeling such a monster at the end of my line. "Gently does it"—"now wind up"—"now let him go," were the alternate cautions given me by the experienced troller at my elbow. "By the powers! he's a big fish, and I'm right glad you've got him," continued Captain Browne; "he'll give us some trouble yet; he's a forty pounder at least." Many minutes elapsed before I caught a glimpse even at my splendid prize; but at length this fresh-water monster, having been exhausted by the resolute game I had played, came within view of our party in the boat; three hearty cheers greeted the aldermanic pike, which vociferous compliment by the way, was not received with a very good grace, for the disgusted captive abruptly turned tail, carrying with him as many yards of line as I could well afford him. He tried all sorts of dodges; but the tackle was too stout, and he had been too firmly hooked to admit of his giving us the slip. Having run to the end of his tether, my friend remained quiet for a minute or two. "He's sulking now," said Captain Browne; "give a pull at him before he gets his second wind." Following my monitor's instructions, I went to work after the fashion of an Italian boy with a hurdy-gurdy, and wound away to some tune. For the succeeding quarter of an hour, we kept up a very animated game of "pull devil pull baker;" but as I had the best of it, I felt but little inclination to show any quarter—the race of the muskanungee was run; the sand of his piscatorial existence was ebbing fast, thanks to the stout gym and honest steel that held him fast by his formidable jaws. A fiercer or more resolute customer I never battled with; he fought nobly, and died, as all well-conditioned pike of Patagonian dimensions should do—game to the last, and snapping at every object, animate or inanimate, within reach of his molars. My experienced coadjutor gaffed my prize most dextrously, as soon as the colossal fish was brought to the surface, and in a trice he was floundering in the boat, lashing right and left with his ponderous tail, much to the discomfiture of the cornet, whose immaculate ducks and polished boots were awfully bespattered.—*The Sportsman in Canada, by F. Tolfrey, Esq.*

## THE FORTHCOMING FIGHT FOR CHAMPIONSHIP.

TUNE—"Betsy Martin."

The fistic world's alive  
For that grand day to arrive,  
When Bendigo and Ben Caunt in the ring will strip,  
To display their art and mettle,  
And their disputes to settle,  
And to show who's most entitled to the championship.  
It's twice they've fought  
Together, and show'd sport;  
When into each other they most gallantly did slip.  
They alternate victors were,  
So now it is but fair  
That they should see who's most entitled to the championship.  
In eight hundred thirty-five  
They first met in fight to strive,  
When Ben Caunt rushed in rather wild and quick,  
And his own chance he did brown,  
Striking Bendigo while down;  
But then they were not fighting for the championship.  
The next fight you must know,  
Was lost by Bendigo,  
Who without exchange of blows to the ground did slip;  
Let us hope, when next they fight,  
That it will go on all right,  
And end more satisfactorily for the championship.  
A twelve stone man is Bendigo,  
Caunt some two stone more or so;  
September's the month when these pugs will strip,  
Most bravely to contest,  
And see who is the best,  
And the most entitled to the championship.  
In age they're 'bout a par,  
In the prime of life they are,  
And when they go to battle may they have a pleasant trip,  
Let's hope in this affray  
The best man may gain the day,  
And prove himself worthy of the championship.  
Old-street, St. Luke's, May 30th, 1845.

S. MUSGRAVE,

## THE ROYAL YACHT SQUADRON,

UNDER THE COMMAND OF THE RIGHT HON. CHARLES ANDERSON PELHAM, EARL OF YARBOROUGH, ETC., ETC., ETC.

Boast not of the fields we have won,  
The glory we there have acquired,  
The feats that our soldiers have done,  
Although by the million admired:  
Those fields might undoubtedly claim  
A warm panegyric from me;  
But ENGLAND if wealth be thy aim,  
*I'd have thee look well to the sea!*

Fine troops in their "gorgeous array,"  
And mounted on proud "barbed steeds,"  
Are things that, I'll venture to say,  
No right-thinking Englishman heeds,  
'Tis all very pleasant to prate  
Of being from slavery free;  
But ENGLAND! if thou would'st be great,  
*I'd have thee look well to the sea!*

Thy foes, my dear country, are strong,  
Ambitious, rebellious, and shrewd;  
And may, peradventure, ere long,  
Thy vigilant spirit elude:  
They hate thee for curbing their sway—  
For making their myrmidons flee;  
Then if thou would'st keep them at bay,  
*I'd have thee look well to the sea!*

Be, therefore, the friend of the school,  
Distinguish'd by Yarrow's name;  
For that serves to strengthen thy rule,  
And add to thy maritime fame:  
Fine soldiers are baubles for kings  
To play with; but if thou would'st be  
Surrounded by more useful things,  
*I'd have thee look well to the sea!*

'Twas there we first gather'd renown—  
'Twas there we extended our fame—  
And, but for its tenure, the Crown  
Would long since have been a mere name!  
'Tis that foils our enemies' spite,  
However terrific it be—  
And, therefore, to baffle their might,  
*I'd have thee look well to the sea!*

What nursery then can compare  
With that to which Pelham belongs—  
What heroes may still be rear'd there,  
To match with their Nelsons and Strachans!  
'Twas men of their valour that gave  
Such greatness, my country, to thee!  
And if thou would'st not be a slave,  
*I'd have thee look well to the sea!*

How many fine spirits adorn  
The Squadron that Yarrow leads—  
How many that yet are unborn  
Will there learn what gallantry needs!  
There, formed to make insolence quail  
New Duncan's and Nelsons shall be—  
Hence, England! if thou would'st prevail,  
*I'd have thee look well to the sea!*

That gave us the strength we possess—  
Without it we quickly must fall—  
Our soldiers have had some success,  
But tars are the men after all!  
Encourage then, Yarrow's fleet,  
Though slight in its structure it be,  
For that will do much that is meet  
*To keep thee the Queen of the Sea!*

**WONDERFUL DISCOVERY OF COIN.**—A penny, of the reign of Victoria, was discovered last week in the toll-box of the Waterloo Bridge. The toll-keeper is quite puzzled to explain how it could have got there, as he does not recollect ever seeing anything of the kind since he has had the exclusive possession of the bridge. The supposition is, the penny must have been dropped into the toll-box by some charitable individual who had mistaken it for a poor-box. However, we congratulate the shareholders upon their sudden accession of property.

**A ROYAL HEIR LOOM.**—At the dinner recently given by the Goldsmith's Company to Prince Albert, His Royal Highness Prince George of Cambridge remarked, "That it would always afford him the greatest satisfaction to meet his fellow-citizens at their hospitable board." It is by little touches of this sort, that we recognise in the son all the genius of the father!

## NEW BANK FOR STEALINGS.

IMPORTANT TO ROGUES AND VAGABONDS.

THERE is a by no means inconsiderable class of persons whose interests have, for a long time, been very grievously neglected—we allude to the disreputable portion of society. This has been partly the fault of the body in question; for it is an old-established maxim that when good men unite, characters of an opposite description should combine; whereas lamentable disunion has existed among the furtive community. It has long been a reproach to roguery that it never prospers; a fact which is owing to the improvidence which generally accompanies want of principle. Numerous examples in Church and State, as well as in the commercial world, prove that it is possible for a prudent rogue to get on as well as anybody else. Organisation is as necessary as honour among thieves; and an eminent pickpocket has accordingly suggested the propriety of establishing a Stealings' Bank to be conducted on the principle of Savings' Bank, for the accumulation of the earnings of dishonest industry, as a provision for the depredator's declining years. The direction of the Stealings' Bank will be vested in a chairman, whose name, for obvious reasons, it were inexpedient to publish, as he is the greatest rogue in England. This gentleman (if we are justified in using that expression) will be assisted by an unlimited number of vices of the lowest grade. The smallest deposits will be admissible; and plunder in kind will be regarded as an investment, and receive a fair monied equivalent; whereby it is hoped an end will be put to the extortions of marine-store dealers. The Bank will be open to yards of ribbons and bits of tape, and even to rags and bones. To sharp shop-boys having access to tills, no less than to the footpad and highwayman, this institution will be available, and will receive any amount of booty, from the smallest theft to the highest burglary, swindling, or forgery transaction. No distinction will be made between common thieves, sharpers, and pickpockets, and speculators in Government or other official situations, so that to all dishonestly-disposed persons holding ministerial appointments, or berths in the Excise and Customs, the Stealings' Bank holds out peculiar temptations; as also to individuals of the same description, in positions of trust, having the control of corporate or parochial affairs; magistrates' clerks, also, and officers of certain law courts, whose fees come decidedly under the head of impositions, will find an appropriate receptacle for their gains in the Stealings' Bank. Open from ten o'clock at night till four in the morning. Further particulars will be duly announced.

## GREAT FOOT RACE.

(From Punch.)

THE great event in the political sporting world has been the match between little Jack Russell and Bob Peel, the former known as the Whig Pet, and the latter as the Carlton Slasher. The subject of the contest was a race to decide the speed of the two men, in getting to Free Trade, which was fixed upon as the winning-post. Considerable interest had been excited by the announcement of the match, for, though the parties had often sparred together in the Parliamentary prize ring, a race in the same direction between the two men was a bit of sport which none but the very knowing ones had ever dreamt of witnessing.

Before the match, betting was in favour of Jack Russell, who knew something of the ground, and had been over a part of it before, though he had never had the courage to try his powers to any extent, so that it was really difficult to say how he would get along over it. Bob Peel, on the contrary, had invariably walked in quite an opposite direction, and the ground was so new to him, that many wondered at his boldness in undertaking a match where every step must be quite out of the track he had all his life been accustomed to. What, however, he wanted in the way of habit, was more than compensated by his hardihood—or, as it is technically termed, "pluck;" and as Jack Russell had sometimes shown himself timid in going on when he had once started, his antagonist became rather the favourite. At a given signal the men went away, but the Carlton Slasher made one or two false starts, and it was for some time doubtful whether he was really in earnest, and intended to complete the match, or whether he had been merely trifling. At length, however, he slipped off, and though the Whig Pet was a little beforehand with him, the Carlton Slasher struck away at such an unexpected speed that his own backers were more surprised than any one. Jack Russell now began to step out, and managed to get side by side with Peel for some little time, but the latter soon distanced the former, who was allowed by his own friends to have been fairly beaten in the Free Trade foot-race by the Slasher.

## REMARKS.

The race was on the whole a very good one, and Jack Russell might have had the best of it if he had gone fairly and honestly to work at once, instead of wavering, as he did in several instances. Bob Peel showed considerable game, and a good deal of tact, for he evinced consummate skill in getting to the right side at the right time, and turning so as to make the very best of his ground that was possible.

**CRUEL EXERTION.**—The cream-coloured horses of the royal sttd have been practising every day for the last week with several pieces of ordnance placed inside the state carriage, so that they may be strong enough to carry down to Parliament the QUEEN'S Speech.

## CORRESPONDENTS.

- R. DENNISON.—You ask for a brown cornish. The best we know, but it should not be put on anything that is oiled, is: spirits of wine half a pint, seed lac an ounce and a quarter; dissolve the lac two days in the spirits, keeping it most part of the first day within a moderate distance of the fire.
- A. YOUNGSTER.—The fieldfare is only a visitor in these islands. It makes its appearance about the beginning of October, to avoid the rigorous winter of the north, and leaves us about the end of February or the beginning of March, according to the forwardness of the season.
- B. TODRUNKER.—Firing is the application of a red-hot iron to the skin, so as to burn it without penetrating it: cauterising a horse's legs in this manner rouses the absorbents into action, and hence callosities, and even bony swellings are sometimes dispersed.
- R. BAWELL.—There is an excellent Latin phrase, which has passed into a proverb; it says, "*Festus lente*," which interpreted, meaneth, it is safest to "make haste slowly." R. S. will understand this hint: if he be not "a blind horse," to which "a nod is as good as (and no better than) a wink," as another proverb saith.
- HARRY.—We once heard a stage-struck wight, who ambitioned histrionic laurels, thus deliver himself while playing the "Distract Dane":—"Where be your gibes now? Your flashes of merriment that were wont to set the table in a more?" We trust "Harry" has no such intention through the medium of these columns.—*Perb. sap.*
- J. W., Gosport.—Spring and Langan fought twice; first, at Worcester, Jan. 7th, 1824; 2nd, near Chichester, June 8th, 1824. Both men are living now. Ned Painter beat Spring in their second and last fight. Ned Neale beat Ned Baldwin (Whiteheaded Bob) Oct. 19th, 1824; fought a drawn battle with the same, in April, 1828; and finally was beaten by him in May of the same year. Your former letter never came to hand.
- F. B., Cheltenham.—This is the first time we have seen your handwriting. The first number of the "*Sportsman*" was never been out of print. If your newsmen addresses him order to Mr. Clark, he can have No. 1 directly; it has always been on sale.
- G. R. C.—There is sparring at Owen Swift's on certain nights, which you will find advertised in *Bell's Life*, under the head of "The Ring," towards its conclusion. We should be liable to a charge from the Stamp-office for evading the advertisement duty, if we told you the terms and the hours. A glass of brandy-and-water will about frank you.
- W. T.—Your friend has deceived you, either intentionally or ignorantly. Lord Brougham's Act only limits the number of weeks' rent recoverable from a weekly tenant who has been duly declared insolvent or bankrupt. The fact of your paying your rent by a weekly sum, constitutes you a weekly tenant in law; and therefore your landlord can demand extra rent after giving you a weeks' notice, but not until the expiry of the week following.
- P. B.—The subject of recipes for distemper is a wide one. Perhaps *Cecil's* remarks in an extract you will find in another page, may be found serviceable. In the meantime if your case is urgent take the following:—So soon as you are convinced by the symptoms of the disorder, give an ounce of castor oil, and so soon as its operation has ceased, the following powder, mixed with butter, every two hours, keeping the dog warm, and supplying him frequently with warm milk, or water-gruel. Should the medicine occasion sickness or purging, the quantity and frequency of the doses to be reduced.
- White antimonial powder, 6 grains  
Crocus metallorum 6 grains  
Calx of antimony 10 grains
- for each dose. This is enough for a pointer or fox-hound. Vary accordingly to suit size of dog. Another remedy is one grain and a half of calomel, and five grains of rhubarb, repeated every other day. Turpith's mineral is the keeper's pet remedy, but the medicines for distemper are "*Legion*," the specific none.—We will give you a say on this subject, more at large, anon. Emetics and sulphur, and emetics and jalap, have our own strong favour.—The second question is easily answered; the complete obliteration of one testicle, though it does not always entirely destroy desire, invariably produces impotency. The Plute will be some weeks before it will be in a state even to announce, for when the announcement is made, we intend to be punctual.
- ROBERTUS.—Ingils, (the featherbed-maker) who beat Ned Turner, but was in turn defeated by him, was called "the Phenomenon," as well as the late Young Dutch Sam.—You are confounding O'Neal (with the big O), with Ned Neal, (once the Streatham Youth), Jem Burn never beat Ned Neal, but was beaten twice by him.
- "SCAWDRIVER."—Harry Holt was never deficient in pluck, but he was beaten in his last three fights by Randall, D. Hudson, and Scroggins.
- CRICKET.—By an oversight of the compositor the circumference of the ball was stated to be from 9 inches to 9 and a half—its extreme girth is nine inches and a quarter.
- C. FENSHUR.—There are several clubs within easy access of the point you mention, but Lord's, at St. John's Wood, is the only one directly within that locality, where two or three juvenile clubs are held. Apply for the other points of information to Mr. Dark, on the ground. Highgate, Hampstead, Islington, and Camden Town, all give upon the point you mention, and boast some very excellent clubs. Should these suit, apply to Mr. Garratt, Copenhagen House, or Mr. H. Bromley, Brecknock Arms, Camden Road, Camden Town.
- S. P. Q.—We dislike anything in the shape of a quibble. Give up the point; it will gain you much esteem at little cost.
- G. BELL.—Out: you had no right to go off your ground.
- WICKET.—Had you attended to our suggestions on the selection of umpires, such an unpleasant occurrence would have been avoided.
- BOS, Watford.—The Stanmore bowler alluded to is occasionally given to "throwing," but we should not call him an unfair bowler altogether. Many very celebrated men have, unfortunately, set a bad example in this respect.
- NED CON.—We shall be glad to hear from you, old fellow. Your Essay is *con-nect*.

## OUR WEEKLY CALENDAR.

AN EPHEMERIS IN JEST AND EARNEST.

SUNDAY, JUNE 8th.—Third Sunday after Trinity.—Mrs. Siddons died, 1831.

JUNE.  
The mowers now bend o'er the bearded grass—  
The ploughman sweats along the fallow vales—  
The shepherd's leisure hours are over now,  
No more he litters 'neath the hedge-row bough;  
With whistle, barking dogs, and chiding scold,  
He drives the bleating sheep from fallow fold  
To wash-pools, where the willow shadows lean,  
Dashing them in, their stained coats to clean;  
Then on the sunny sward, when dry again,  
He brings them homeward to the clipping pen.

CLARENCE'S Shepherd's Calendar.

MONDAY 9.—Swallowfield Fair.—Lilly the Astrologer died, 1821.

Anything.—In June, roach, dace, minnow, bleak, gudgeons, eels, barbel, ruffe, perch, pike, and trout, are in season. Carp, tench, bream, and gudgeons spawn. The white gnat, cock-tail, gold spinner, governor, blue gnat, whirling dun, hares' ear, and kingdom flies, make their entrance. The gold-spinner, governor, and kingdom flies continue till August; the blue gnat for about a fortnight, and the other flies in this month's list, during the summer.

TUESDAY, 10.—ABOUT RACES.—Oxford, the pot-boy, shot at the Queen, 1840;—for which he has been taken care of like a gentleman ever since, instead of bread and water and a good whipping once a year.

WEDNESDAY 11.—St. Barnabas' week—this is a standing line in all almanacks.—Shrewsbury Fair.—Wat Tyler killed in Smithfield, 1381.—*Historical questions for youth.*—*What Tyler was stated by a Lord Mayor?*—And what Mayor unlaid St. Stephen's, Walbrook?THURSDAY 12.—The Ascot Cup Day.—Many *sable legs* stagger from the effects of a *cup* too much.—Trinity Term ends.FRIDAY, 13.—We publish our Ascot Number, with the Winner and the Cups.—We hope by this *cupping* to bleed our subscribers.—The British take the Bogus Ports in the Canton River, 1841.SATURDAY, 14.—Battle of Marengo 1800.—Electrical Rods affixed to the Duke of York's Column, 1844: *arithmetical question for youngsters*—"how many of

these rods go to his Royal Highness's perch?"—Mr. Mazzini and Mr. Thomas Duncombe complain to the House that Sir James Graham has been peeping into their letters, 1844: this occasions Sir Peter Laurie to make a con—"as follows:—Why is the Home Secretary like Ould Ireland, as described by Mr. Daniel O'Connell? D'ye give it up?—Because he's "First Jim of the sec."—We can hardly see the joke, it is decidedly C. D.

## The Sportsman's Magazine.

FOR THE WEEK ENDING, JUNE 14.

THE PIKE.

OW can we better devote the space of the Leader, in these, our crowded columns, than by occupying its place with the "fresh-water shark," the tyrant of the flood? Let this, then, be our apology for dashing at once in *medias res*, in preference to dilating *de omnibus rebus et quibusdam aliis*, for so true as "Jack's alive," the pike will bite, if you attend, tyro, to these plain observations and directions.

## SEASONS AND HAUNTS OF PIKE.

Captain Williamson informs us that "the pike generally spawns in March, though sometimes in the last week of February, or in the early days of April, according as the weather may be more or less mild. At this period the female retires among the heavy masses of weed generally growing at the edges of the waters in shallow places, where she casts her spawn, the male attending her with apparent solicitude. So soon as the spawning is over, both return for a few days to the deep water, and during the middle of the day lie on the surface, basking in a state of torpidity, enjoying the warmth, and for the most part with their faces towards the sun. In this state they are frequently taken by what is called 'halter-ing' or 'snaring.'"

The pike is fond of quiet, shady, unfrequented water, and lurks in the midst of weeds, flags, or bulrushes; yet he often makes excursions from these, and ranges about in search of prey. In winter and cold weather he lies deep, and near the bottom, but as the weather grows warm he frequents the shallows. In a very hot, clear, sultry day, he may be seen lying on the surface of the water, but then you cannot tempt him with any bait. It is observable that pike generally swim single, as they prey upon each other, and all other fish, except the perch, fly from them. His best biting-time is early in the morning and late in the evening, when there is a brisk wind, and where the water is clear.

## TROLLING FOR PIKE.

The mode of angling named *trolling* (which is derived from the old French, *troller*, to walk) is precisely similar to minnow-fishing for trout. The trolling-rod has several small rings fixed on every one of its joints; upon the butt-joint is fitted a reel with its winch. On the reel are wound twenty, thirty, or forty yards of silk line, which pass through the rings on the rod, and are then fastened to the gimp with which the hook is

armed. The hook itself is a compound of two small perch-hooks put back to back. Between the hooks hangs a little chain, and at the end of the chain a small plummet. The plummet is to be sewn into the mouth of a dead fish, roach or gudgeon, the hooks being left without, exposed to sight.

Gorge hook and baiting needle.

To bait a gorge hook, take a baiting needle, and hook the curved end to the top of the gimp, to which the hook is tied; then introduce the point of the needle into a dead-bait's mouth, and bring it out at the middle of the fork of the tail, by which means the piece of lead which covers the shank of the hook, and part of the connecting wire, will lay concealed in the interior of the bait: the shank will be in the middle of its mouth, and the barbs on the outside turning upwards. To keep the bait steady on the hook, fasten the tail part just above the fork to the gimp, with a silk or cotton thread; or a neater method is, to pass the needle and thread through the side of the bait, about half an inch above the tail, so as to encircle the gimp in the interior. The baits used vary in weight from one to four ounces, and the hooks must be proportioned to the size of fish with which they are to be baited. The barbs of the hook ought not to project much beyond the sides of the mouth, because, as the pike generally seizes his prey sideways, and turns it before it is pouched or swallowed, if he feels the points of the hooks, he may cast it out entirely.

The bait, thus fastened, is to be kept in constant motion in the water, sometimes suffered to sink, then gradually raised; now drawn with the stream and now against it, the better to counterfeit life. "After trying closely," says Salter, "make your next throw further in the water, and draw and sink the baited hook, drawing it straight upwards near to the surface of the water, and also to right and left, searching carefully every foot of water, and draw your bait with the stream, because you must know that the jack and pike lie in waiting for their food with their heads and eyes pointing up the stream, to catch what may be coming down; therefore experienced trollers fish a river down, or obliquely across; but the inconsiderate as frequently troll against the stream, which is improper, because they then draw their baited hook behind either jack or pike when it is stationary, instead of bringing it before his eyes or mouth to tempt."

#### SPINNING.

A clever writer who signs "Titus" in Blackwood's Magazine, says, "you may spin if you please instead of trolling; and, where you have a wide water, not more than six or eight feet deep, and a great extent, so that the fish do not haunt particular little spots, but rove abroad, especially towards mid-day, spin by all means; it is the most killing style of fishing in the world. Here, again, you use the dead-bait, but not exactly as you do in trolling; and, if the weather be warm, and the season early, if any thing attracts jack, or a large trout, you seduce them in this way. Put on two swivels at least. Your bait you must be taught to fix upon the hook by an adept. Newton could not give the figure of it on paper. Let your fish spin rapidly, and as evenly as if it turned upon a spit put through it, not swerving and wabbling from side to side as it passes through the water. Throw twenty yards of line or you do nothing. So!—from the bank here—right over, under the osiers (or, as the cockneys call them "hosiers," on the other side! now draw diagonally—half against, half across, the stream towards you! See how it spins;—if there is a jack—a trout—a chub within forty yards either side—if he has but as many eyes as a tailor's needle, he cannot miss it."

#### SNAP-FISHING.

Though pike is one of the most voracious fishes, it is found sometimes that it will play with the bait rather than swallow it, in which case, the snap is to be used. The snap tackle may consist of a single hook, larger and stouter than any within the register, which being fastened to strong gimp, is inserted at the mouth of a gudgeon, or other small fish, (the smaller, indeed, the more certain,) and brought out either at the middle of its side, or just before the vent.

But the treble-snap is by far the best; being made of three such hooks tied fast together, and secured to a piece of gimp; which being inserted by means of a baiting needle, at the vent, and carried out at the mouth, which is afterwards sewed up and perforated by a lip-hook, the three hooks being spread into different directions, it is a thousand to one but that the pike is hooked.

a, dead snap with three hooks; b, the same baited.

Let the hook thus baited swim down the current, and when you perceive the float to be drawn under water, you may conclude the pike has laid hold of it; therefore give it a small jerk, and without allowing him time to play, keep your line always straight, drawing him towards the shore as soon as you can without breaking your tackle, and then with your landing-net throw him out of the water. It will always be the most prudent method to have gimp or brass wire next your hook, and your line to be rather shorter than the rod.

Whatever may be the length or thickness of your line, you will always find it useful to have a small swivel on it; if within a yard of the hook the better. Without this it will not be easy to manage the line properly.

#### TRIMMING FOR PIKE.

Trimmer baited.

There are several sorts of trimmers. One is made of flat cork, or any light wood painted, seven or eight inches in diameter, turned round, with a groove in the edge large enough to receive a fine whipcord or silk-line twelve or fourteen yards, or, at least, five yards longer than the depth of the water: a small peg, two inches long, is fixed in the centre, with the end slit; a small double hook fixed to a brass-wire link. Insert the baiting needle under the side-fin of the bait, (for which gudgeons of an ounce weight or more are superior to all others), and keep it just within the skin of the side; bring it out beyond the back-fin, drawing the wire after it, and the hook, when drawn home, will be partly covered by the side-fin. This method, performed carefully, will preserve the fish alive for many hours longer than any other; one end of the line is of course fixed to the cork, the other to the loop in the wire; the line is slightly put into the slit of the peg to keep the bait at a proper depth (from three to four feet), and to prevent its untwisting the line out of the groove. The trimmer should always be started on the windward side of the pond, and the rougher the water the better sport; if not seized in one trip, it must be taken up and re-started from the windward side again.

Other trimmers are also of cork, and are to be baited and used as above; their form is triangular, this being best adopted to go easily through weeds when taken by the pike; after the line is run off they will follow in the shape of a wedge, and will not long be kept from appearing on the surface in the weediest places: a hole is burnt through one corner of the cork, by which with a cord it may be made stationary to the side of any water; and which method is sometimes preferred where a boat cannot be readily commanded. No species of fishing does more execution than this: in windy weather, at all seasons of the year, and both day and night, the trimmer presents itself as the pike's most deadly foe.

#### LIVE BAIT FISHING.

"You cannot be supposed," says Titus in Blackwood, "to be in the middle of all the brightest and fairest of the creation, and yet be contented to go spooning on, dipping in and out, groping the bottom of the river without an eye for a whole day together, without attending for a moment to any of them: why, you should use the 'Live Bait,' make a good gudgeon fish for you, while you look on and take the credit of his exertions: that's the way! Now this is to me your real style of fishing, when fishing is worth having; that is, when the water is just half bright, just grey, just the colour of a quaker girl's frock, and on a quiet, half frosty morning."

Live bait fixed on a hook.

The bait may be, for clear water, either a dace or a tolerable sized gudgeon; but, when the water is rather coloured, a roach with its silvery gloss is most attractive. When a single hook is used, and one is enough, either pass the point and barb of the hook through the lips of the bait, toward the side of the mouth, or through beneath the base of the fore portion of the back-fin. When a double hook is used take a baiting needle, hook its curved end into the loop of the gimp, and pass its point beneath the skin of the bait from behind the gills upwards in a sloping direction, bringing it out behind the extremity of the back-fin; then draw the gimp till the bends of the hooks are brought to the place where the needle entered, and attach the loop to the trolling line.

## TOO NEAR TO BE PLEASANT.

**T**HE Bundlunds may justly be styled the wilderness of India. No human hand has ever endeavoured to recover the jungle-covered land from its primitive wildness, overgrown with closely-tangled brushwood. Its swampy soil is reckoned so unhealthy, that few wretches, however poor, have as yet been found hardy enough to settle here. Through this district, however, the military officer is sometimes compelled to pass to arrive at the head-quarters of his regiment. Such was the fate of Arthur Mactavish, who related to me the following adventure, which there befel him.

Mac, having grown dreadfully weary of his long confinement on board the little boat in which he was slowly voyaging through the Bundlunds, determined on landing near the first spot which should present to his eye the agreeable view of a human habitation. Aware that the whole country around him was swarming with ferocious wild animals, he wisely refrained from going on shore on many of the beautiful but solitary spots by which he passed. At length he came to a little knot of Indian hovels, which stood some half a mile from the banks. Arthur here desired his head dandy (boatman) to *lugow* (the act of fastening the boat to the shore), and instantly shouldering his Manton, started for the native village. On his approach being perceived, a couple of Indians, divested of every strip of clothes except their small *lungotes* (the very smallest rag which decency requires), hastened to meet him, and warn him of the many pitfalls around him. From these men he learnt that their only occupation was that of digging holes, resembling human graves, about eight feet deep, which they covered with small branches of trees and brushwood. By these means they ensnared the wild animals, who, unconscious of the trap thus artfully set, would often tread on the seeming firm ground, and in the next instant find themselves prisoners at the mercy of their captors, who instantly despatched them, selling the skins of some, and claiming from the authorities the price set upon every tiger's head. Of these animals they had captured above twenty during the preceding twelvemonths. Two of their party, it is true, had been destroyed by these ferocious beasts; but as the natives considered that it must have been their *nusseed* (pre-ordained fate), they appeared little affected by the circumstance. It was now late in the day; so, desiring them to go and fetch his sleeping mats, he determined on remaining in one of these huts for the night, as they promised him, in this case, that at break of day they would point out some splendid sport to him. To obtain what they described, he would willingly have gone half round the world, so he unhesitatingly accepted their offer, and determined on passing the night there.

After partaking of some rice and ghee, having cleaned his gun (one barrel of which he always charged with ball, the other with shot), and arranged his ammunition and shooting apparatus for the following morning (in places where we have few companions to divert us, this is half the sport), he laid himself down to rest, taking care, however, to bar the door as well as he could, for he rather disliked the manner of one of the villagers, and already began to repent that he had thus left himself completely in their power. His servants, whom he now regretted not having brought with him, were full half a mile off. The few natives around him were strong athletic men, accustomed to struggle with wild beasts, and almost as ferocious in their natures as the animals they were in the habit of hunting. At liberty to change from spot to spot, enabled in the fastnesses of the Bundlunds to elude the most diligent search, proverbially avaricious, thinking little of the sacrifice of life, why should not these men fall on him, and murder him? He had foolishly displayed his purse to them, filled with rupees, and had vaunted the goodness of his gun, an object to them more precious than gold itself. What, then, was to prevent their making themselves masters of all these? Nothing. He felt this, and revolving it in his mind, fell into a light, uneasy slumber.

It must have been about one o'clock in the morning, when he was awakened by hearing several voices conversing in suppressed tones close to the little window of the hut, which was ill-blocked up by a *cuskos tattio* (a blind or shutter made of dried grass.) Mactavish stealthily crept towards it, and, to his utter consternation, heard them thus explain their bloodthirsty intentions.

"How long," demanded a strange voice, "is it since you got him in?"

"Just before nightfall."

"Have you since listened, to ascertain if he is stirring?"

"I have, and suspect he is fast asleep."

"Then this is the best time to fall on him. But as you say he is powerful, we had better go prudently to work. How do you propose to attack him?"

"I think," replied one of his entertainers, "the best way will be to fire at him through the crevices with poisoned arrows."

"But, suppose he bursts forth!"

"Oh! then we'll despatch him with our knives."

"Have you got them with you?"

"Not yet."

"Well, then, be quick," said the apparent leader; "be off and fetch them, and we'll get the job over as soon as possible. I'll return in five minutes," and Mactavish heard them suddenly go off in different directions.

With a panting heart Mac listened as their footsteps died away; then, seizing his gun, he determined to endeavour to escape, or, at all events, to sell his life as dearly as possible in the open air, whence the report of his fowling-piece might be heard by those on board his budgerow. In another instant he was out of the door, and with the speed of lightning he started off in the direction (at least so he supposed) of the place of anchorage, where his boat was lying.

The moon was brightly shining as poor Arthur rushed along, heedless of any danger but that of being followed by the inhospitable murderers amongst whom he had thus unluckily fallen.

The cries of the jackal and the fayo, the roar of the larger animals, and the screams of wild birds, suddenly disturbed from their roosting-places, lent additional horrors to the scene as Arthur flew madly along. Presently a sudden bound was perceptible amongst the jungle. The crackling underwood was heard to yield beneath the pressure of some weighty beast of prey. A savage growl, accompanied with a peculiar cat-like, hissing noise, a pair of flashing eyes, gleaming brightly even through the darkness, at once told the unfortunate fugitive that a tiger was springing after him. Poor Mactavish gave himself up as lost. For about twenty yards he kept ahead of his fearful pursuer. Another bound, however, would place him in his power; he had no time even to offer up a prayer. He gave one spring in despairing energy, and, as he did so, he felt a violent shock; bright sparks of fire appeared to flash from his eyes; every joint seemed dislocated. Arthur had fallen into one of the pit-falls, over which, as he fell, the tiger leaped safely.

Relieved for the moment from his fears, Mactavish now ventured to look up. By the light of the moon, which shone brightly, he perceived the tiger crouching down at the edge of the pit, watching with savage wakefulness the wretched being, he evidently seemed to think now within his power. His glaring eyes were steadily fixed on his victim, who crouched down as low as possible, to be out of the reach of the monster's destructive paw.

As Mactavish's eyesight began to get accustomed to the place, he perceived, to his horror, a long black snake attempting to crawl up the sides. Foiled in this, the serpent seemed to hesitate whether he would renew his endeavours to escape, or turn upon the intruder, who now sat trembling before him. At last it seemed to determine on the latter; for it suddenly began to rear itself, and fixing its eyes, which seemed to be of fire, upon poor Mac, prepared to spring. Arthur started up. As he did so, he suddenly felt the flesh torn from his shoulder, which he had unthinkingly exposed to the claws of the tiger by raising himself within reach of his outstretched limb. The animal, in making the movement, had disturbed the branches at the edge of the trap. The gun had dropped through, and now fell into the pit at the feet of Mactavish, who, bleeding and in agony, had yet sufficient presence of mind to catch it up, and instantly discharging it, destroyed the serpent as it kept moving about, preparatory to its final dart. The report seemed to render the tiger more ferocious, who now even attempted to creep down into the trap. Poor Arthur began seriously to consider whether it were not better to yield himself at once to the jaws of the animal, than remain to die a lingering death by starvation in this living grave. His head reeled; desperation seemed almost about to drive him to madness. Well he knew that the snake's mate would probably ere long return to its consort. Already the earth began to crumble down under the scraping paws of the impatient tiger. Human nature could last out little longer, when suddenly a dying roar is heard! the savage animal turns over in the agonies of death, transfixed by several poisoned arrows! In another moment poor Mactavish's late host and his friends appear, and lift him out of the pit. They shout with joy at again seeing him safe. They welcome him, and express their delight at saving him. What, then, could their previous conduct mean? The mystery was soon cleared up; as they conducted Arthur back to his budgerow, they explained to him that they had been engaged in destroying a leopard which had fallen into one of their pit-falls, and about which they were conversing when he overheard them. They were returning from this expedition when they heard the report of his gun, and, rushing to the spot whence the sound had proceeded, had happily succeeded, as I have related, in saving him, and restoring him to the service, in which he has since risen to high rank and honours.—*From Hours in Hindostan, by H. R. Addison.*

**PROPER RETRIBUTION.**—Prince Albert has been very harshly condemned for visiting the Royal Academy on a Sunday, when that particular day was chosen by him, we have been told, with the kindest motive. It was the wish of his royal highness, knowing the alarm it would create among the artists who had pictures at the Exhibition, to keep the circumstance of his visit a profound secret. The circumstance, however, having most indelicately transpired, and been commented upon in a most ungracious spirit, Prince Albert has thrown aside all further consideration for the artists, and has since made one or two purchases. We hope this will be a timely warning to the ungrateful R.A.'s.—*Punch.*

## MATHEMATICAL EXAMINATION PAPER.

Q. What is an eccentric angle?

A. To fish for salt herrings in soda water.

Q. If 114 D represent a member of a force, required how long will he have a constant area?

A. As long as Betty smuggles joints from the kitchen.

## A HINT ABOUT HORSE-DEALING.

BY HARRY HIEOVER.

IN some Repositories (but certainly never in respectable ones) many a man is mounted for a ride, who, if seen, is riding the horse on trial, or trying to ride. I can mention an instance. One of these on-trial fellows had a horse out, and it was known he would not be back for some time: the owner unexpectedly and unfortunately (for the Nick'em of the place) came in. A fool or an honest man, if he had been induced to do wrong, would be taken aback on such an occasion: not so Nick'em: the Gentleman was told at once "his horse was sold and gone," and that the next day he might have his money. He came, but the money did not: "the horse had shied, thrown and nearly killed the Gentleman; but supposing he did recover, Nick'em would lose one of his best customers: the Gentleman was a capital horseman, but no one could sit a horse that reared and fell backwards."

No man can deny the truth of the latter truism: it is a summary sort of ejection of an unpleasant occupant of the back, which, if horses were oftener to adopt, would be much to their advantage, and not unfrequently give society a fair chance of reaping advantage also. Besides it would save a vast deal of trouble in plunging, kicking, &c., which does not always succeed: the retrograde manœuvre always does. People, like horses, often take a great deal of trouble to do that which might be done by some most simple process. I have seen a terrible scuffle made to get a troublesome fellow out of a house: this is bad taste and bad tact: how easy the thing is to be done! Put the poker into the fire (if it is not there already); wait till it is a fine glowing white heat; present it within a foot of the to-be-ejectee's nose, quietly and in a courteous manner follow him, keeping your poker at the charge (no charge will be required); my life on it my Gentleman makes off in any direction.

This reminds me of an anecdote of a servant of mine: it may on a similar occasion be useful to ladies, so I will mention it. My wife had once been so long tormented by a milliner as to finishing a bonnet, that she determined to have it home finished or unfinished: she sent a note to this purpose by George (Old George as he was called), acquainted him with its purport, with directions not to return without the bonnet. On handing in the note, a written answer was handed to him: Old George knew a bonnet could not be contained in a small note, so demanded the former: as an accompaniment he was told to "go about his business"—this, to do him justice, was a useless order, for he never neglected it.—He considered his business in this case was to get the bonnet, and have it he would if any human being could get it. This his mistress well knew, and this he took upon himself verbally to let Mademoiselle know. He then quietly sat down in the passage: he was of course ordered out: Old George only grinned a ghastly grin (I never knew him laugh). He was threatened with expulsion by some man to be called in: Old George only grinned more ghastly than before, for he was one who would have made most men grin who had tried this with him. He was at last told to "sit there till he was tired:" he only grinned at this either. Now George (whenever he could indulge in it) was a smoker, not one of your small Thames smokers; no, he was a regular Great Western, Great Liverpool, nay Great Britain herself, and always went provided for a cloud. Presently Mademoiselle and half her coterie came running down. There was Old George quietly but energetically puffing away, nearly invisible in the dense cloud, which had ascended, till, as a hive of bees, he had fairly smoked them out. Words were useless, excuses were equally so: he "only waited for Missus's bonnet." To send it home unfinished was annoying to Mademoiselle, but the smoke was intolerable; so of course the bonnet was produced, and Old George gratuitously gave one of his best Sunday grins by way of a *dormez vous bien, Mademoiselles!* Poor George! if I was to direct or advise any man how to be most faithful and most honest, I would say follow thy example: a grateful master offers this small tribute to thy memory.

I am free to confess I have made tolerably free hitherto with Master Nick'em, notwithstanding I had the law of libel before my eyes; but like many men professing heroic feelings, I am heroic when no danger threatens; for who is Nick'em? If any man or men choose to stand up and defend him, why then I say, "Bucks, have at ye all." Honest men will not: they will say, "let the galled jade wince, our withers are unwrung." Poor Nick'em! sometimes, like the never-to-be-forgotten pack of Osbaldeston, with the immortal (would that he was!) Squire at their side, we have rattled thee along at the pace "that kills;" when at others, like the old Southern Bluemottles of Dorking or Leatherhead notoriety, true to the scent, we have followed thee through many of the doubles thou hast made in any particular chasé we have alluded to: but where the shifts of all sorts of game are combined in one, I know not the kind of hound adapted to the sport.—*Sporting Magazine.*

**A TARNATION FIX.**—America, it is reported, is desirous of settling the Oregon question by the simple and pacific process of tossing up, and is only, we understand, prevented from making a proposition to the British Government to that effect, by the fear of having to borrow a dollar for the purpose.

**MAIDS AND MAGNETS.**—The onion, it is said, destroys the attractive property of the magnet. It has the same effect with young ladies.

## THE HORSE WHISPERER OF MALLOW.

A horse-trainer of this town claims some notice, not so much from his own as his father's fame. He is Sullivan, son to the celebrated whisperer, and inherits a portion, at least, of his father's mysterious power over the horse, which I saw him exercise on the Fermoy racecourse. The father was a farrier, and acquired such an influence in subduing the spirit of the most vicious and refractory horse, as to become a celebrated character, and obtained the *sobriquet* of "The Whisperer." He is described as an awkward, ignorant rustic of the lowest class, and was paid generally according to the distance he was summoned to tame a vicious beast. When he reached his destination, he performed the operation in secret, causing himself and the animal to be shut up together in the stable, the door not to be opened until he had given a signal to. After a *tete a tete* of a half hour's duration, during which little or no noise was heard by those anxiously listening, or "airing their eye at the keyhole," the signal made, the door opened, presented the horse lying down and the man by his side, familiarly playing with him, like a child with a young dog. The spirit, hitherto so untractable as to defy the ordinary rough riders, was completely broken; the steed, from which the boldest rider shrank as dangerous to mount, a child might ride in safety. The Rev. H. Townsend relates:—"I once saw his skill tried on a horse which never before could be brought for a smith to shoe. The day after Sullivan's half-hour lecture, I went, not without some incredulity, to the smith's shop with many other curious spectators, when we were eye witnesses of the complete success of his art. This, too, had been a troop horse, and it was supposed, not without reason, that after regimental discipline had failed, no other would be found availing." Another gentleman mentions a horse of his so thoroughly and irreclaimably vicious, that he would have taken five pounds willingly to get rid of him, though a noble figure, and of great powers of action. He heard of Sullivan, and sent for him. This was an opportunity of testing the accuracy of the stories told respecting his mysterious power, as the horse was quite wild and unbroken. Two guineas fee being agreed on in case of success—no *puisque*, no pay—the pair were left *tete a tete* in the stable. At the expiration of some fifteen or twenty minutes, the door was opened, and the horse utterly changed in temper and deportment. The skittish and fiery brute had disappeared, and a patient tractable animal, fit for a middle aged gentleman, was led forth. When exposed to view he was in a profuse perspiration, as if he had been galloped, and seemed to tremble as through fear. The fame of the whisperer was realised; he placed a child on the horse's back, and the light hand curbed him; nay, more; he placed the boy under the animal's feet, and he neither kicked nor stirred while the child lay within reach. The gentleman kept the horse in use, riding him without danger, and disposed of him for fifty pounds. Sullivan would have realized quite a fortune if he had been prudent, but affection for hunting and love of whiskey were his ruin.

## RAILWAY SHARE HOLDERS.

The night was stormy and dark. The town was shut up in sleep; Only those were abroad who were out on a lark, Or those who'd no beds to keep.

I pass'd through the lonely street, The wind did sing and blow; I could hear the policeman's feet Clapping to and fro.

There stood a potato-man In the midst of all the wet; He stood with his 'tato-can In the lonely Haymarket.

Two gents of dismal mien, And dank and greasy rags, Came out of a shop for gin, Swaggering over the flags:

Swaggering over the stones, These shabby bucks did walk; And I went and followed those seedy ones, And listened to their talk.

Was I sober or awake? Could I believe my ears! Those dismal beggars spake Of nothing but railroad shares.

I wondered more and more: Says one—"Good friend of mine, How many shares have you wrote for? In the Diddlesex Junction line?"

"I wrote for twenty," says Jim, "But they wouldn't give me one;" His comrade straight rebuked him For the folly he had done;

"O Jim, you are unawares Of the ways of this bad town; I always write for five hundred shares, And then they put me down."

"And yet you got no shares," Says Jim, "for all your boast;" "I would have wrote," says Jack, "but where Was the penny to pay the post?"

"I lost, for I couldn't pay That first instalment up; But here's taters smoking hot—I say Let's stop my boy and sup."

And at this simple feast The while they did regale, I drew each ragged capitalist Down on my left thumb-nail.

Their talk did me perplex, All night I tumbled and tost, And thought of railroad specs, And how money was won and lost.

"Bless railroads everywhere," I said, "and the world's advance; Bless every railroad share In Italy, Ireland, France; For never a beggar need now despair, And every rogue has a chance."—*Punch.* SREC.

KILTS.—"I shall be off to the Highlands this fall; but cuss'em they hante got no woods there; nothin' but heather, and that's only high enough to tear your clothes. That's the reason the Scotch don't wear no breeches, they don't like to get'em ragged up that way for everlastingly, they can't afford it; so they let'em scratch and tear their skin, for that will grow agin, and trousers won't."—*Sam Slick in England.*

## BRITISH SONG BIRDS.—No. VIII.

THE BULLFINCH.

**T**HOUGH pretty generally distributed throughout Britain, it is not as a wild songster that the bullfinch generally attracts notice: it is as the educated cage-bird that he holds the high place to which his docility, affection, and soft flute-like voice fully entitles him.

The bullfinch, in its wild state, seldom associates with other birds, but keeps in small flocks of a single family. Its flight is quick and undulated, its ordinary note a soft plaintive whistle, its song short and mellow; and during the greater part of the year it lives in the thickets, hedges, and woods, betaking itself occasionally to the fields in their neighbourhood, in search of seeds, and in spring and the early part of summer to gardens and orchards, where it commits great havoc among the flower-buds of the fruit-trees and gooseberry-bushes. The substances generally found in its crop and stomach are small seeds of various kinds, and particles of quartz; indeed it has not been clearly ascertained whether, in destroying buds and flowers, the bird is searching for insects, or feeding on these substances. Judging from the structure of its digestive organs, it is doubtful whether such crude vegetable matters as buds could afford it sufficient nourishment.

The flight of the bullfinch is undulated, and capable of being protracted on occasion; but it seldom flies to a great distance when pursued, and in winter may sometimes be seen flitting along the hedges and roads, scarcely evincing more shyness than the chaffinch. At the same time, it is an active and lively bird, and on account of the beauty of its plumage is a general favourite.

About the beginning of May, it begins to construct its nest, which is rather loosely formed of small dry twigs, with a lining of fibrous roots, and is placed at no great height in a bush, frequently of hawthorn, or on the horizontal branch of a spruce. The eggs, four or five in number, are of a rather broad oval form, nine and a half-twelfths long, seven and a half-twelfths in their greatest diameter, of a bluish or purplish-white colour, spotted and streaked with purplish-grey and reddish-brown.

As the Germans are most celebrated for training these little warblers, having in Hesse and Fulda express schools for teaching these feathered musicians, which form at certain seasons a profitable article of inland commerce and of export, we shall here quote from Dr. Bechstein's book on CAGE-BIRDS, the account of this interesting process:—

"There are some of these little birds which can whistle distinctly three different airs, without spoiling or confusing them in the least. Added to this attraction the bullfinch becomes exceedingly tame, sings whenever it is told to do so, and is susceptible of a most tender and lasting attachment, which it shows by its endearing actions; it balances its body, moves its tail from right to left, and spreads it like a fan. It will even repeat words, with an accent and tone which indicates sensibility, if one could believe that it understood them; but its memory must not be overloaded. A single air, with a prelude or a short flourish to begin with, is as much as the bird can learn and remember, and this it will execute to the greatest perfection. These little prodigies would be more interesting and agreeable, if their Hessian instructors possessed a little musical taste, but these are generally tradespeople, employed about the house with their different occupations and trades; and hymns, airs, and minuets of a hundred years old, public-house songs, or some learnt of their apprentices, in general compose the whole of their music.

"The bullfinch can also imitate the songs of other birds; but in general it is not permitted to do so, that it may only learn to repeat the airs which are taught it.

"Different degrees of capacity are shown here, as well as in other ani-

mals. One young bullfinch learns with ease and quickness, another with difficulty and slowly; the former will repeat, without hesitation several parts of a song; the latter will be hardly able to whistle one, after nine months' uninterrupted teaching. But it has been remarked that those birds which learn with most difficulty remember the songs, which have once been well learnt, better and longer, and rarely forget them, even when moulting. Mr. Thiem, bird-seller, at Waltershausen, near Gotha, sends annually to Berlin and London one or two hundred bullfinches, instructed in this manner, at from one to several pounds sterling a-piece, according as they are more or less accomplished, whilst a wild one would cost only two or three pence. These, however, are also kept in the room and prized, both on account of their beauty and the great ease with which they are tamed; they soon learn to fly on the hand, to receive their food, or will even take it from the mouth, and become at last as familiar as if they had been reared from the nest. The following are the means which are employed to tame them:—As soon as a bullfinch is caught and brought into the room, it must be put into a cage with food sufficient for the first day only; for the loss of its liberty does not prevent its eating as soon as it is disengaged from the lime twigs or noose. The next day a band must be put round the body and wings, like that which bird-catchers put round a decoy bird, which they let run about out of doors; by means of this band the bullfinch may be fastened by a piece of packthread, a foot in length, to some place from which it cannot fall; this will prevent its beating itself to death with its wings; a little bell may be fastened to a box, which when filled with food must be given to the bird, at the same time ringing the bell; it must be then left that it may eat; this must be repeated several times in the day; the same must be done when it is given anything to drink. The poor little captive will not at first either eat or drink in any one's presence; it is therefore necessary to retire for the two first days after having given it the box, and only approach it by degrees, till it is accustomed to eat in the presence of its master, which it will soon be, for generally on the third day, as soon as it hears the bell and sees the box, it hops forward, and eats without the least shyness. Then the distance must be increased by degrees to make it come farther and farther, when, as soon as it has eaten, it may be taken on the hand and carried here and there, though it may seem a little frightened, but not being able to escape it will soon become used to this treatment, and will even begin to come to eat on the hand by continuing to do this for the third and fourth days; it will fly of itself at the sound of the bell to the hand which holds the box; after this the fastening may be loosened, and if one only moves from the bird gradually, it will fearlessly approach and perch on the hand. Should it escape, however, it must be again confined and left without food for some hours. By this means a wild bullfinch will in eight days become accustomed to fly immediately to the hand, or wherever it hears the bell; in order to finish its education, it is well to increase the difficulty of getting at his food, by putting it in a small bag with a very little opening; it must also only have rape seed in the cage, keeping the hemp seed, which it likes best, for the hand or little bag. It may be taught to drink out of one's mouth by keeping it without water for five or six hours. It may even be accustomed to go and return, provided the house is not too near a wood. The surest means of preventing too long an absence is to put a female bullfinch in a cage in the window, or to leave her in the room with her wing clipped; its affection will soon bring it back to her, and it will certainly never abandon her altogether.

"Tame bullfinches have been known (says Buffon) to escape from the aviary, and live at liberty in the woods for a whole year, and then to recollect the voice of the person who had reared them, return to her, never more to leave her. Others have been known, when forced to leave their first master, have died of grief. These birds remember very well, and often too well, any one who has injured them. One of them having been thrown down, with its cage, by some of the lowest order of people, did not seem at first much disturbed by it, but afterwards it would fall into convulsions as soon as it saw any shabbily dressed person, and it died it one of these fits eight months after the first accident."

"Although they do not warble before they can feed themselves, one need not wait for this to begin their instruction, for it will succeed better, if one may say so, when infused with their food; since experience proves that they learn those airs more quickly, and remember them better, which they have been taught just after eating. It has been observed several times, that these birds, like the parrots, are never more attentive than during digestion. Nine months of regular and continued instruction are necessary before the bird acquires what amateurs call firmness, for if one ceases before this time, they spoil the air, by suppressing or displacing the different parts, and they often forget it entirely at their first moulting. In general it is a good thing to separate them from the other birds, even after they are perfect; because, owing to their great quickness in learning, they would spoil the air entirely by introducing wrong passages; they must be helped to continue the song when they stop, and the lesson must always be repeated whilst they are moulting, otherwise they will become mere chatters, which would be doubly vexatious after having had much trouble in teaching them."

Thus much by way of generalization, in our next number we shall proceed to detail the MODE OF TAKING, BREEDING, DISEASES, AND FOOD of this favourite cage-bird.

(To be concluded in our next.)

TOM OWEN.

## THE HISTORY OF BRITISH BOXING, FROM FIG AND BROUGHTON TO THE PRESENT TIME.

PERIOD III. 1786—1798.

FROM THE TIME OF MENDOZA TO THE APPEARANCE OF JEM BELCHER.

## CHAPTER IV.

**T**OM OWEN, though living only in the memory of the present generation as a landlord combining liquor and literature, some fancy, more fun, a certain amount of old-school pugilism and much pretence, deserves a niche in the third period of the History of British Boxing.

True it is the clumsy bespattering of praise with which, in bad English and worse taste, his name is loaded in Boxiana, may induce many of better judgment to turn from his biography, yet is there enough to furnish matter well worthy the pen of the chronicler of deeds of courage and of skill.

Tom Owen, was a native of Hampshire, being born at Portsea, on the 21st December, 1768.

Of the apocryphal rigmaroles which disfigure BOXIANA we shall not condescend to take any account, suffice it to say, that after several provincial encounters with the Smiths, Joneses, Greens, and Browns of his vicinity, Tom Owen came to London, where he followed the occupation of an oilman; a calling which the reader will perhaps condescend to remember was much more followed than now; for, as Byron says, "in those days we had not got to gas."

Well, a casual turn up, caused an introduction to Mr. Jackson, who, perceiving the germ of future greatness in Tom, took him in hand, and fancying his style, he was matched against the then celebrated BULLY HOOPER, for 100 guineas.

On the 14th of November, 1796, he for the first time met his formidable antagonist, who it must be remembered (with the exception of his fight with Big Ben) was hitherto unconquered. The battlefield was near Harrow; Owen was seconded by Joe Ward and Jack Bartholomew, and Hooper by Symonds and Paddington Jones. The battle lasted one hour and four minutes, occupying fifty rounds. Owen won it with moderate advantage; his hands being the most hurt.

Some ten weeks after, Hooper not being satisfied with the result, another match for 100 guineas was made, the battle coming off, transposed within half-a-mile of Harrow. Joe Ward and Bill Warr se-

conded Owen; Symonds attending upon Hooper. Owen won this battle in equally good style.

The fame of Owen now spread, and a match for 25 guineas a-side was made between Jack Bartholomew and Tom, which took place at Moulsey-hurst, August 22, 1797. George Maddox and Goff seconded Owen upon this occasion. It was a desperate battle, and highly spoken of at the time, for the courage displayed on both sides; but here Tom was forced to succumb; Bartholomew overfought him, both at close quarters and out-fighting, and the contest was finished by Owen being hit out of time.

On September 2, 1799, Tom entered the lists with one Houssa, a Jew, for 10 guineas a-side, on the race-ground, at Enfield. Joe Ward was second to Owen. But here again Owen was so desperately beaten, that, after a struggle of 40 minutes, he was incapable of coming to the scratch, and the Jew was the conqueror.

At the Surrey Sessions, in January, 1805, Owen was indicted for a riot and conspiracy, on Putney common, in aiding and abetting Bourke and Pearce to fight a pitched battle. The Jury found Owen guilty, and he was sentenced to three months' imprisonment, in Horse-monger-lane.

From this period Tom figured as a trainer and second, and his judgment was generally considered good in all matters pugilistic; he also figured immensely in the benefit-taking line, and was, as "the historian" terms him, "fly to every movement on the board."

We shall decline transferring the trash of "the historian," of whose apocrypha of Boxing no trace is to be found in the "canonical books" which we take to be, the journals of the time. Leaving him, therefore, as a blind guide, we proceed to the contest with Mendoza, which, although, a very foolish affair, as the follies of great men, even in pugilism, outweigh in interest the wiser doings of lesser ones, is our only reason for giving Owen a place in the History of Pugilism, despite the immense, intense, and absurd gaggery of his injudicious admirer.

In 1820 (Tom being no bad judge at match-making) he proposed to Daniel Mendoza a "passage at arms" to settle an old grudge. Dan,

like an old war-horse at the sound of the trumpet, though physically but a shadow of his former self, met the 12st. Tom Owen. Thirty-three years had elapsed since the "Star of the East" had first peeped in the lists, and fourteen since his last appearance. Although, however, his deeds were even to the existing generation of ring-goers, rather matter of tradition than evidence, the fame of Mendoza made him the favourite at six and five to four. Owen was known to be a good man, but it was thought he had not science enough to oppose the accomplished Israelite. Hence a great number of the oldest amateurs were induced to be present. It is worthy of note, that Sir Thomas Apreece, Bart., who was Mendoza's umpire at Odiham, acted in that capacity on this occasion.

Owen, attended by Cribb and Josh. Hudson, threw up his hat first; and Mendoza, followed by Randall and Harry Lee, repeated the token of defiance. Mendoza was loudly cheered, and backed five to four. Mendoza was quickly ready, and walked about the ring with a coat thrown over him. Owen was a considerable time preparing himself, and in making his shoes right; instead of drawers, he fought in a pair of nankeen breeches.

Mendoza's colours were a blue silk bird's eye, and tied over Owen's.

Round 1. Mendoza, on stripping, exhibited a fine manly bust; his eyes sparkled with confidence, and there was altogether an appearance about him that seldom characterises an individual of fifty-five years of age. Owen, on the contrary, looked thin; and his general appearance was rather meagre than otherwise. On setting-to, both the old ones were extremely cautious, and a minute elapsed before a hit was made. Owen at length let fly, but without any effect. Some exchanges took place, when they closed at the ropes, and after an attempt to fib on the part of Mendoza, which was frustrated by Owen, a struggle for throw ensued: in going down Dan was the undermost.

2. Mendoza ran in with great alacrity, made a sort of push forward, and got Owen on the ropes; the latter went down, and his neck got scored from them. [Great applause for Mendoza. While Tom was on the knee of Josh. the latter said, "Master!" Owen, smiling—"What says my boy?" "Have you brought the pepper castor with you?" "Yes, my lad, and the mustard and vinegar cruet too!"]

3. The Jew behaved very handsomely, and showed some good fighting; but Owen planted a tremendous hit on his left cheek, just under the eye, whence the claret flowed copiously: Mendoza went down, yet jumped up gaily. [Randall told Mendoza he should not have done so. "Let these old ones alone," said Josh.; "they know more about fighting than you and I do." Even betting, but Owen for choice. "I say, Master," says Josh., "you furnished Danny with some sour crout then!"]

4. Owen now showed the spectators that he was the younger man. Mendoza was again nobbed, and the claret profusely running down his cheek. In going down Owen was undermost. ["When am I to have the tobacco-stopper, master?" cries Josh. "Leave it all to the cook yet!" Owen smilingly observed.]

5. Mendoza now showed he was completely gone by as to any superiority of fighting, and Tom Owen displayed talents that astonished the ring. Mendoza received a dreadful fall.

6. Owen, in retreating from his antagonist, ran against the stakes, but the latter again planted a heavy facer. In struggling, both went down.

7. Here Tom was the hero of the tale. He nobbed Mendoza, and got away with all the dexterity of a youth: it was now only Mendoza by name; his excellence as a fighter had evaporated, and his hits were generally short. Owen, in a close at the ropes, held Mendoza as firm as if the latter had been screwed in a vice, and pummelled him at the back of the neck so dreadfully, that Dan at length fell exhausted.

8. Mendoza came to the scratch bleeding, and almost in a state of stupor, from the severity of the last round. Owen planted such a tremendous hit on Dan's face, that he went back, and slipped down at the corner of the ring. The Jews were still backing Mendoza with confidence.

9. Long sparring: Owen convinced the spectators that he was a perfect master of the art. He hit Mendoza in the eye, jobbed him also in the face, and at the end of the ropes held Mendoza by the arm, and punished him till he went down. [Two to one on Owen.]

10. The appearance of Mendoza's face was much changed; his left eye was encircled in claret. Owen got away from his antagonist in good style. Mendoza was punished all over the ring; Owen threw his opponent, and fell heavily upon him.—[3 to 1. Indeed, it was any odds.]

11. Owen was determined not to give a chance away; and he also appeared determined not to have any more body blows. He accordingly kept at out-fighting. A short but sharp rally occurred, when Owen fell; and Mendoza, likewise, at about two yards' distance, came heavily down upon his face on the turf.

12th and last. Mendoza was quite abroad, and hit short, and at the ropes he was again held by Owen and fibbed down. Mendoza said he would not fight any more, as he could not win it. He was terribly punished, and defeated in fourteen minutes and twenty-seven seconds and a quarter; while, on the contrary, Owen had not a scratch on his face. The latter was carried out of the ring by Cribb and Hudson, amidst the cheers of the spectators.

Mendoza, while being dressed, seemed sensibly affected at his defeat. He had not the least idea of losing the battle.

Mr. Jackson collected 20*l.* on the ground for Mendoza, who was put into a coach. Owen soon returned to the ring, decorated in all the paraphernalia attendant upon conquest. Mendoza's blue trophy was hung round Owen's neck, surmounted by the yellow-man of Hooper; now doubly won.

This battle hardly deserves comment, after the observations we have

already given under the memoir of Mendoza: yet is it valuable as a warning. The merits of the combatants remain, except in the balderdash of "the historian" of the P. R., just where they stood previous to the fight.

From this period Tom was known only as a pleasant companion, a good convivial singer, and the landlord of a house on the ground now occupied by the basin of St. Katharine's Docks, whence the hand of improvement compelled him to migrate; and for several years he was well known as the landlord of the Shipwright's Arms at Northfleet, where the fancy of all grades found him a civil, pleasant, and obliging host. Owen died at Plumstead in 1843.

#### A FEW THOUGHTS ON DOG-MEDICINES.

The numbers of valuable dogs which fall victims to the distemper, urge the necessity of resorting to every precaution that can possibly be thought of. At the age of three months, puppies should have gentle doses of physic administered to them, and a similar course persevered in at intervals of two months, or thereabouts; it is a plan which will most effectually cause them to thrive, and when they are attacked by the distemper, it will be in a much slighter degree. Various medicines have their advocates. Some persons prefer jalap, with the occasional addition of some calomel; which last drug I believe to be a most important remedy for worms, and as an alternative when the system appears deranged. It acts powerfully on the liver, which, in cases of distemper, is always sympathetically affected. Dogs are particularly liable to the jaundice or yellows, especially those which have been seriously attacked by distemper. I must, however, observe that, not being capable of undertaking to write on the medical treatment of dogs, I cannot go beyond the recommendation of such remedies as are calculated to prevent acute disorders. As a purgative, jalap is sometimes uncertain, and is often violent and drastic in its operation. Calomel should never be given but in small doses, not exceeding two or three grains, and I prefer giving it by itself in the morning, and working it off with aloes administered six or eight hours afterwards; this is, I am convinced, a much more effective method than that of combining it with purgative medicines. Aloes may be given in doses from fifteen grains to half a drachm, made into a bolus with ten grains of ginger and a scruple of hard soap. A safe and effectual aperient is also composed of the following ingredients:—castor oil, three parts; syrup of buckthorn, two parts; syrup of poppies, one part; these to be mixed together, and one or two table-spoonfuls to be given as a dose. Castor oil and syrup of buckthorn are aperients well calculated for the canine species, whose intestines are easily susceptible of the irritating properties of many drugs. Calomel is a dangerous medicine in large quantities; a man will take as much at one dose without experiencing inconvenience as would destroy two large dogs, and yet a dog will take twice as much aloes as would prove to be highly dangerous, if not fatal, to a strong constitutioned man; such are the peculiarities in the bowels of men and dogs.—*Cecil, in Sporting Review for June.*

**WATERLOO BRIDGE REPORT.**—This document is more than usually encouraging. It states that there has been a distribution of three-and-twopence amongst the annuitants, and a division as usual among the proprietors—as to the mode of managing the affairs of the company—being the only division of which they have yet had the benefit. An allusion was made to the Hungerford concern, and it was suggested they should now buckle on their armour; upon which a proprietor wished to know whether it was meant by buckling on their armour to put the man at the toll-gate in a helmet and breastplate, in order to attract passengers. A proposition was also brought forward on the subject of toting; and it was under discussion for some time, whether men should be employed to hoot all persons going over Hungerford Bridge, and "chaff" the tollkeeper of the rival concern. It was, however, agreed, that the Suspension affair would only be brought into notice by this sort of thing, and it would therefore be better to leave it alone, so that it would be better to leave it alone, so that it might "hang itself in its own chains," as a mortgagee of ten shares in Waterloo prettily expressed it.

**MORTALITY AT PARIS.**—Died, last month, at her residence in the Jardin des Plantes, the Giraffe. A too plentiful repast of gingerbread nuts is supposed to have hastened her death. She has left a large number of cakewomen, whom she maintained by her appetite, to deplore her loss. The Giraffe is to have the honour of stuffing paid to her remains, and will shortly be laid out in straw in the *Musée d'Histoire Naturelle*.

**TOO CIVIL BY HALF.**—The Duke of Grafton being fox-hunting, near Newmarket, a Quaker, standing upon an adjoining eminence, pulled off his hat and gave a "view halloo!" The hounds immediately ran to him, and being drawn off the scent, were consequently at fault, which so enraged the duke, that, galloping up to the offender, he asked, in an angry tone, "Art thou a Quaker?" "I am a friend," replied Broad-brim. "Well, then," rejoined his grace, "as you never pull off your hat to a Christian, I will thank you in future not to pay that compliment to a fox."

## WINNERS OF THE DERBY FROM ITS INSTITUTION IN 1780.

Yr.	Owner.	Winner.	Rider.
1780	Sir C. Bunbury	Diomed	S. Arnall
1781	Mr. O'Kelly	Young Eclipse	Hindley
1782	Lord Egremont	Assassin	S. Arnall
1783	Mr. Parker	Saltram	Hindley
1784	Mr. O'Kelly	Serjeant	J. Arnall
1785	Lord Claremont	Aimwell	Hindley
1786	Mr. Panton	Noble	J. White
1787	Lord Derby	Sir Peter Teazle	S. Arnall
1788	Prince of Wales	Sir Thomas	W. South
1789	Duke of Bedford	Skyscraper	Chifney, sen.
1790	Lord Grosvenor	Rhadamanthus	J. Arnall
1791	Duke of Bedford	Eager	Stephenson
1792	Lord Grosvenor	John Bull	Buckle
1793	Sir F. Poole	Waxy	Clift
1794	Lord Grosvenor	Dædalus	Buckle
1795	Sir F. Standish	Spread Eagle	A. Wheatley
1796	Sir F. Standish	Didelot	J. Arnall
1797	Duke of Bedford	Br c by Fidget	J. Singleton
1798	Mr. Cookson	Sir Harry	S. Arnall
1799	Sir F. Standish	Archduke	J. Arnall
1800	Mr. Wilson	Champion	Clift
1801	Sir C. Bunbury	Eleanor	Saunders
1802	Duke of Grafton	Tyrant	Buckle
1803	Sir H. Williamson	Ditto	Clift
1804	Lord Egremont	Hannibal	W. Arnall
1805	Lord Egremont	Cardinal Beaufort	Fitzpatrick
1806	Lord Foley	Paris	Shepherd
1807	Lord Egremont	Election	J. Arnall
1808	Sir H. Williamson	Pan	Colinson
1809	Duke of Grafton	Pope	Goodison
1810	Duke of Grafton	Whalebone	Clift

1842	Mr. Marshall	Our Nell	T. Lye
1843	Mr. Ford	Poison	Butler
1844	Colonel Anson	The Princess	Butler
1845	Duke of Richmond	Refraction	H. Bell

GOOD MANNERS.—Sir Edward Bulwer, being in conversation with a gentleman in a street in the city of New York, returned the salute of a negro who was passing. "Sir," said the gentleman, "do you descend so far as to salute a slave?" "Why yes," replied Sir Edward, "I cannot suffer a man of his condition to exceed me in good manners."

"BENEFITS OF A BAZAAR."—The gals in Parson Longtext's church got up a rag fair last fall, for the benefit of the poor. Made up a whole lot of odd contraptions; hearts stuck full of pins, paper baskets, and other queer notions; the consarnedest lot of trash you ever did see. Then you see the chaps all went a shopping; paid a dollar for sixpence-worth, and had a stare in the bargain. It's a positive fact that forty-nine matches (not locofocos, but genuine love ones) were concluded on the strength of that 'ere fair. Joe Lutestring, a dreadful nice young man in the dry goods line, fastened on old Sall Sparks kase he disklivered she had a slick way of taking the flats in. They do say her dad thought the same thing, for the piece of goods had got kinder shop worn, and the old man thought he'd never get her off his hands; but, gals, keep up your hearts, gals, every Jack has his Jill.—*Sam Slick*.

THE COUNTRY FIDDLER.—A rustic Paganini was so fond of accompanying his performance on the violin *con spirito*, that it frequently brought him into many *scrapes*, as well as distress. A gentleman meeting him one day, looking very *dobro*, said, "Why, Jack, what ails you, isn't your fiddle in tune?" "No, Zur," replied Jack, "It be in *pown*!"

## ADVERTISEMENTS.

# ROWLAND'S UNIQUE PREPARATIONS.

Under the Patronage of our GRACIOUS QUEEN, and the ROYAL FAMILY; and the several SOVEREIGNS and COURTS OF EUROPE, together with the whole "elite" of the ARISTOCRACY and "HAUT-TON."

Ladies visiting the Race Course, Travelling, or otherwise exposed to the scorching rays of the sun, or heated particles of dust, will find in

## ROWLAND'S KALYDOR,

Arenewing, and refreshing Wash, dispelling the cloud of languor from the complexion and immediately affording the pleasing sensation attending restored elasticity of the Skin. Cutaneous Eruptions, Sun-burn, Tan, Freckles, and Discolourations, yield to its specific qualities, and are succeeded by a smoothness and transparency of the skin, truly grateful to its possessor. Sold in half-pint bottles, at 4s. 6d. each; and in pints, at 8s. 6d. each, duty included.

**CAUTION.**—BEWARE OF DELETERIOUS COMPOUNDS, under the title of "Genuine" KALYDOR, containing mineral astringents utterly ruinous to the Complexion, and by their repellent action endangering health. The only genuine article is enclosed in the *Envelope*, as detailed above.

## ROWLAND'S MACASSAR OIL.

This ELEGANT, FRAGRANT, and TRANSPARENT OIL, in its preservative, restorative, and beautifying qualities for the Human Hair, is unequalled over the whole world.

**CAUTION.**—Each genuine bottle has the words ROWLAND'S MACASSAR OIL engraved in two lines on the Wrapper; and on the back of the Wrapper nearly 1,500 times, containing 29,028 letters—without this "None are Genuine."

## ROWLAND'S ODONTO, OR PEARL DENTIFRICE.

A Fragrant White Powder, prepared from Oriental Herbs of inestimable virtue for preserving and beautifying the TEETH, imparting the most pure and pearl-like whiteness; and for giving sweetness and perfume to the breath.—Price 2s. 9d. per box, duty included.

**CAUTION.**—To protect the Public from Fraud, the Government Stamp is affixed on each box, with A. ROWLAND & S<sup>ON</sup>, 20, Hatton Garden, engraved thereon.

\* \* BEWARE OF SPURIOUS COMPOUNDS under the same names, some under the implied sanction of Royalty. It is highly necessary to see that the word "ROWLAND'S" is on the Wrapper of each Article. All others are FRAUDULENT IMITATIONS. The Genuine Preparations are sold by the Proprietors as above, and by Chemists and Perfumers.

ON ENTIRELY NEW PRINCIPLES,

## TAILORING, WOOLLEN DRAPERY,

AND OUTFITTING ESTABLISHMENT,

No. 29, LUDGATE HILL. SAMUEL, BROTHERS, PROPRIETORS.

THE novel principle on which we intend to conduct the business of this Establishment, constitutes an entirely new Era in our line of business, it will afford another incontestable, cheering and triumphant proof of the wonders to be effected in the world of commerce by the union of Judgment, Capital, and Experience.

We confidently and positively assert, that our system will effect a greater saving to the Public in the article of Dress, than has ever yet been realised, we rely not alone on its novelty, for it only needs to be once tested to be universally encouraged. We are aware that there is a general impression that lowness of prices necessarily involves inferiority of quality; but we unhesitatingly say, that with the facilities fortunately at our command, we can secure Lowness of Prices with every other concomitant advantage. The Establishment of Samuel, Brothers, is the first (we may say) in the world which has originated the judicious plan to which publicity is now given, a plan which cannot fail to be hailed with admiration, because, while it realizes the most sanguine hopes of the economist, it will be a source of pride to its inventors, based as it is on the most enlightened views, and conducted as it will be upon the most honourable principles.

We will now state in what the novelty consists, though simple in its details, it is most beneficial to the public in its operation, and is neither more nor less than this.—Every customer will be enabled to ascertain the Value and Quantity of material required for every variety of Garment. Each and every Cloth, Cassimere, Doeskin, &c., being marked in plain figures at the price per yard, such price being the same as would be charged upon the purchase of the material by wholesale. We shall explain to our Patrons the exact quantity that will be necessary for the particular article of dress wanted, and we shall charge separately for the making and trimmings. This system (as a trial of its operation will abundantly demonstrate) will effect a saving of fully one-third of the expense in the articles required in Gentlemen's dress. Our unlimited command of Capital secures to us the advantage of making our purchases for Cash—our knowledge of the best Markets—our connexion with the most respectable and extensive Manufacturers—our position in the estimation of our friends—our anxious desire to merit more extended patronage—the enormous expense we have incurred in rendering our Stock as varied and complete as that of any House in London, are so many distinct and certain pledges to the public of the fidelity, ability, and zeal, which will be manifested in the conduct of our Establishment, and as our system thus empowers us to supply the very best Goods at a lower price than has hitherto been deemed practicable, as our Customers will be enabled to select their own Cloth at Wholesale prices, from a most varied and extensive stock, we doubt not that our efforts will meet with unequalled success. The peculiar advantages of the system of SAMUEL, BROTHERS, may be practically exemplified as follows:—The average quantity of Cloth for a Coat is 13 yards; suppose that

selected be 8s. per yard, the material would cost 104s., our charge for making and trimmings would be 18s., thus a really good serviceable Coat, completed in the best style, will be made to measure for 32s. Again, suppose the Cloth selected to be 12s. per yard, the material would cost 156s., our charge would be 20s. for making and trimmings, and thus a first-rate Coat made to measure and completed in the best style will be obtained for 41s., few, if any, charge less than 50s. or 52s. for the same article. The same saving will be effected in every description of Clothing. The extensiveness of our stock enables us to offer Cloths at from 5s. to 21s. per yard. Our charge for making and trimmings for Cloths under 10s. per yard is 18s., and for the higher price Cloths 20s. We have entered into arrangements with the first Manufacturers of Wool Dyed Black Cloths for a regular supply, the wear of which we can guarantee to be superior to any yet made, as they are finished on an entirely new principle. Artists of the First Talent in the Empire are engaged to superintend the Cutting Department, so that we feel certain of pleasing the most fastidious, who will have such superior fitting garments, that they will pronounce them faultless. The greatest attention will be paid to the Workmanship, as well as style of all articles. In quality of Cloths, variety of patterns for Trousers—richness and novelty in designs of Vestings, we flatter ourselves that we have a stock that will please every beholder. Noblemen and Gentlemen on inspecting our mode of transacting business, will be astonished at the saving they may effect in their Liveries,—in many instances nearly one-half. We beg to remind our Friends that the smallness of our profits will not allow us to run the least risk in giving credit, our system compelling us strictly to adhere to Ready Money, but in order to give every satisfaction, we promise that, should an Article (after it has been paid for, not please, we will exchange it, or return the Money without demur.

Ladies' Riding Habits made in a very superior manner. Sporting Cloths made in the First Style of Fashion. We have a very extensive Stock of Superior Ready-made Clothes, which we offer at such prices as must ensure unqualified satisfaction. We submit the following list as a guide:—Super Cloth Dress Coat, 21s.; Saxony ditto, 20s.; Very super ditto, 30s.; Frock Coats, 3s. extra. Cassimere Trousers, 14s.; Doeskin, 10s. 6d.; Tweed, 7s. 6d.; Vests in endless variety, and at any price.

### MOURNING TO ANY EXTENT ALWAYS READY.

A New and Extensive Assortment of Boys' and Youths' Clothing at the Lowest possible Prices.—Observe the Address.—SAMUEL, BROTHERS, Tailors, Wholesale and Retail Woollen Drapers, &c., 29, LUDGATE HILL, Two doors from the Old Bailey. Take Notice.—No business transacted from Sun-set on Fridays to Dusk on Saturdays, when business will be resumed until Twelve o'clock.

A Guide for Self-measurement and Patterns sent to any part of the Kingdom.

## WEAK LEGS, KNEES, and ANKLES.—

Surgeons in England, Ireland, and Scotland, continue to recommend BAILEY'S ELASTIC LACED STOCKINGS, KNEE-CAPS, and ANKLE-SOCKS. They are light, cool, and warranted to wash. Since the reduction of postage, afflicted persons in the country can have any

bandage by post for a few pence, by forwarding their measure. The particular property of the Stocking is to give constant support in varicose veins, weak, swollen, or dropsical affections of the legs, or in any case requiring equal pressure. The Knee-cap will be of great service where the knee-joint requires support, from accidents to the pan of the knee, after inflammation, rheumatic, or gouty affections, or in any case where, from weakness of the part, support may be required. Laced Stockings, 18s. 6d. to 21s.; Knee-caps, 10s. 6d. to 12s. 6d.; Sock for Ankle, 10s. 6d.; TROUSSES, 7s. 6d. to 10s. 6d.

**RUPTURES.**—BAILEY'S TRUSSES are declared by many eminent Surgeons to be the best: they are light and easy to wear, and if a cure is to be obtained they will effect it. The patient is also carefully attended to by Mr. Bailey or his assistants during 12 months for One Guinea (the Truss included); by this means, a proper adjustment being always preserved, the inexperienced will be enabled to effect their cure in the shortest time possible. Trusses may be had as low as 7s. 6d. and 10s. 6d. Ladies attended by an experienced female assistant.

Bailey's, 418, Oxford-street, London.

## IMPORTANT TO ALL VENDERS OF CHEAP PUBLICATIONS.

As all clean unsold Copies will be exchanged. With a very liberal allowance to the trade. Lots of Fun for Everybody.

Just Published, No. 5, of

**BELL'S LIFE GALLERY OF COMICALITIES,** containing the greatest fund of Amusement, with Riddles, ever published at the price. Nos. 1 to 4 are now reprinted, and contain upwards of two hundred and fifty splendid Engravings, by Corkscrew, Chatfield, Alken, the late Seymour, and other celebrated characters. Only one Penny each. London: Published by W. Caflin, 31, Oxford-street, near Mile-end-gate, and sold by every Bookseller and News-vender in the kingdom.

LONDON:—Printed for the Proprietors, by W. M. CLARK, at his Steam-Press, 10, Red Lion-court; and published by him at 17, Warwick-lane, Paternoster-row; J. CREAVE, Shoe-lane, Fleet-street; and all Booksellers in the United Kingdom.

**PARR'S LIFE PILLS.**—The extraordinary success of this Medicine is the wonder of the age; it has been tried by hundreds of thousands as an aperient, and has in every instance done good; it has never, in the slightest degree impaired the most delicate constitution. Tens of thousands have testified that perseverance in the use of PARR'S LIFE PILLS will completely cure any disease, and are living witnesses of the benefit received from this invaluable medicine.—Sheets of testimonials, and the "Life and times of Old Parr," may be had, gratis, of every respectable Medicine Vender throughout the Kingdom.

Beware of spurious imitations of the above medicine.

None are genuine unless the words, "PARR'S LIFE PILLS" are in WHITE LETTERS ON A RED GROUND, engraved on the Government Stamp, pasted round each box; also the fac-simile of the signature of the Proprietors, "T. ROBERTS and Co.," London, on the directions.

Sold in boxes at 1s. 1d.; 2s. 9d., and family packets, at 11s.; by Edwards, 67, St. Paul's; Barclay and Sons, Farringdon-street; Sutton and Co., Bow Churchyard, London; Motterhead and Co., Manchester; and J. and E. Raines and Co., Edinburgh; and by all respectable druggists, and patent Medicine retailers throughout the Kingdom.—Directions are given with each box.

LIFE IN LONDON

No. 5. FOR THE WEEK ENDING JUNE 21, 1845. THREE HALFPENCE

## THE FISHER'S CREEL.

### A FEW ODDMENTS.

BY PISCATOR.

SOME HINTS TO THOSE WHO TRIM THEIR OWN FLIES.

The chief thing to be attended to in trimming flies is to get the proper colours, which is not so much attended to as neatness in the formation of the fly itself, though the latter is by no means to be neglected. The fault I have generally discovered in the flies purchased at the fishing-tackle shops is, that a sufficient difference is not made in the proportions of the different insects they are intended to represent, as we not unfrequently see a cow-dung fly and blue dun with bodies of the same proportions, and wings of the same form; whereas the former has, as we all know, a short thick body with flat wings, like the common blue-bottle, and the latter a remarkably slight body, with the wings erect, like those of a butterfly. Most indeed of the artificial flies sold in the shops are made by persons who not only have never fished, but who in fact have never cast their eyes upon the flies they attempt to imitate, which are merely taken from artificial patterns, each copy becoming less like nature, till at last they bear about as much resemblance to the original insects, as the shipping we sometimes see in young ladies' drawing-books bear to the originals they purport to represent.

"When sailing o'er the boundless deep."

HOOKS.

Speaking of the form of the hooks on which the flies are to be trimmed, all ephemeral flies should be made on Limerick hooks, as the insects can be better imitated by them than on any other; the reason of this is, that the sharp extremity of the Limerick hook, if the wings are tied far enough back, gives an admirable imitation of the two fore feet of flies of this description, which it seems they only employ as arms, never making use of them in walking or to rest upon, but usually projecting them forward in a kind of praying attitude before their heads; which forms so distinguishing a feature in the general character of insects of this kind, that unless this effect can be produced, the imitation can never be a close one."

THE ROD.

But minute matters are oft of great importance, and depend upon it a well-ringed rod is almost as essential to an angler's success as to his comfort; for as a valuable horse may be ruined outright for the want of one nail only in his shoe, so may the enjoyment of a good day's sport be utterly frustrated by the loss of one ring only on a fly-rod, particularly when it occurs on the top, as the uneven strain caused by the wide gap between the rings may enable the first weighty fish to snap it asunder, which perhaps may prove irreparable, as the greater number of persons who style themselves anglers are as capable of repairing a fracture of this kind as they are of discovering the longitude; and yet the greater part of these sportsmen never dream of the result of inattention to these minute matters till they suffer the inconvenience incurred in consequence of it. Whenever, indeed, I have inspected the fishing rods of my acquaintance I have generally found that, after the first shine is taken out of them, it is as rare to see one possessing a complete equipment of rings as to meet with a fading beauty who has retained her full complement of teeth; though the deficiencies in both these instances, if only to a limited extent, frequently escape the notice of casual observers. Rods, after the shine is rubbed out of them, do indeed sometimes retain all their rings, and beauties on the wane sometimes all their teeth, but these are rare occurrences, and therefore, the more remarkable when they happen.

TAKING A TROUT.

Now we will suppose ourselves by the river side attentively watching the manœuvres of two anglers, both duly rigged out, and with an

apparently but a tyro: the other undoubtedly a cunning adept in the mysteries of angling. The day is, upon the whole, a favourable one for their purpose; the sky slightly overcast, though sometimes the sun peeps out, but only soon again to be obscured by a passing cloud; a brisk breeze ruffles the more open waters, whilst every now and then a fresh burst flits over the more sheltered deeps, for a short interval casting a dull ripple over their glassy surface, but as transiently it passes away, and they again become calm and tranquil as the face of a polished mirror. We will also suppose the river on whose banks our fishermen are standing contains a fair supply of lusty trouts; one of which we may even now detect in the act of poking his greedy nose above the water to devour a little ill-fated ephemeral fly that was floating gladly down the stream, having but a moment or two before cast off its grub-like slough, emerging full of grace and beauty into its new and perfect state of existence, and preparing to wing its flight to join in the joyful gambols of its fellows in the air; no more anticipating its untimely doom than is its fell destroyer that a lure, as like it as the skill of man can put together, beneath whose attractive form there lies the fatal hook, is at this very moment held in the bend of the left hand between the finger and thumb of the tyro—whom we will call the scholar—and is, pursuant to the directions of the cunning adept—whom we will distinguish as the old angler—to be cast most temptingly before his (Mr. Trout's) eyes, as soon as that dark cloud shall have obscured the glaring rays of the sun, and the fleeting breeze that already agitates the adjacent foliage shall have crisped the water sufficiently, to hide the fall of the line by which he is designed to be secured. 'Now's your time!' exclaims the old angler. The deceitful lure drops on the rippling waters, 'What a splash you make, but I'll have you for all that,' says the trout to himself as he closes his jaws upon his supposed prize, when he discovers its utter worthlessness, and at the very self-same instant feels the sharp prick of the hook as it is driven beyond the barb into his flesh, and becomes firmly fixed in his tongue. In vain does he attempt to eject the deceitful morsel from his mouth, or to free himself from the line to which it is attached. In very fury he tears and plunges, hopelessly striving to rend the line asunder, when he suddenly catches a view of the powerful monster he has to contend with, and actuated by extreme terror, he rushes on with mad impetuosity he knows not where, but finds his course impeded by a power which, though apparently yielding to his force, yet speedily exhausts his strength. He then endeavours to make for the bottom to hide himself amongst the weeds and stones, but still the same power keeps him in check; and as he looks hopelessly around for succour, he encounters the eye of his foe gazing intently upon him; he can read no mercy there—it is, indeed, fearful; far too fearful to look upon, and he tries in vain to avoid a gaze so dreadful; but there is no escaping from it—all his efforts are fruitless—the pliant rod has subdued all his energies, and he is dragged passively down the current, so exhausted as to be unable to resist being drawn to the surface of the stream, whose waters rushing rapidly through his mouth and gills produce a feeling of suffocation; a faint and sickly dizziness obscures his senses, and he is hauled powerless towards the bank. A hand is extended, and roughly seizes on the line to guide him towards the fatal landing-net. The dead strain causes the barbed steel to penetrate more deeply into the lacerated wound, the pain of which again awakens him to consciousness; he makes one weak effort in very desperation from the agony—he feels the flesh torn away—he is FREE! and is borne safely onwards by the friendly current, far beyond the power of the relentless monster who so lately held him captive. 'I tell you what, my fine fellow,' says the old angler, who still holds the unwetted landing-net, 'if you hadn't touched the line, the chances are you would have caught that fish.'

BAIT-FISHING.

Though not a fashionable mode of angling, is one by no means to be despised, and a great deal of the unmerited disrepute into which it is fallen is owing more to the narrow-minded prejudices of those who have never practised it, than to any want of success in this branch of the art.

followed or understood, except by a few cunning old anglers, who keep the secret to themselves, and profit by it accordingly.

#### HOW TO CLEAR YOUR LINE.

Should your hook get entangled in the bottom or side of a river, don't stamp your foot on the ground, or swear, after the manner of some who shall be nameless; nor drive the spike of your rod furiously into the earth, as I have known others do, smashing their reels to pieces with the concussion; neither take off your hat and dash it forcibly to the ground—for none of these things can avail you anything. But if you feel angry at the occurrence, count ten—if very angry, twenty: count the numbers in a solemn and distinct manner, and whilst so employed, look around you to see where you can cut a forked stick (if not already provided with one), which, having made fit in the upper ferrule of your rod, having first unshipped the top for that purpose, holding your line in your left hand, run the cleft of the forked stick down with your right, till it reaches the hook, then give a gentle push forwards, and unless the hook has had a turn round, or is otherwise entangled, you will at once clear it; and if it is entangled, by pushing with a little more force you may break off the gut close to the hook, and so save the greater part of your tackle.

THE TENCH.

**T**he second of pond fishes, we give the tench a place next to the carp. "He is," says quaint old Izaak, "the physician of fishes, and is observed to love ponds better than rivers, and to love pits better than either." This pithy remark will serve the observant angler as a direction where to fish for him, as well as a volume of observations. The tench is considered to be a wholesome and nutritive fish. When found in rivers, he prefers weedy pools, and such as are overhung by trees; the spawning time is from June till September. It is best in season from the end of September till the end of May. The tench is leather-mouthed, and will bite at a well scoured red-worm, a maggot, a young wasp-grub boiled in milk, or a green worm from the boughs of trees.

His best season for biting is from the beginning of April till the end of May. The hook, from No. 3 to No. 6, should be whipped on silk-worm gut, with two or three shots on the line, for pond-fishing, with a goose-quill float.

His hours of feeding are eight, twelve, and four. Be sure to throw in a few maggots at the taking of each fish, which will keep them together.

As these are all the directions for the tench which we think necessary, we shall stand excused doubtless for a little extension of this article by a few samples of the amusing credulity of our forefathers relative to this fish, in common with most other objects, natural history then but little explored.

In every tench's head there are two little stones which foreign physicians make great use of, but he is not commended for wholesome meat, though there be very much use made of them for outward applications. Rondeletius says, that at his being at Rome, he saw a great cure done by applying a tench to the feet of a very sick man. This, he says, was done after an unusual manner, by certain Jews. And it is observed that many of those people have many secrets yet unknown to Christians; secrets that have never yet been written, but have been since the days of their Solomon, who knew the nature of all things, even from the cedar to the shrub, delivered by tradition, from the father to the son, and so from generation to generation, without writing; or, unless it were casually, without the least communicating them to any other nation or tribe; for to do

that they account a profanation. And yet, it is thought that they, or some spirit worse than they, first told us that lice swallowed alive were a certain cure for the yellow jaundice. This, and many other medicines, were discovered by them, or by revelation; for, doubtless, we attained them not by study.

Well, this fish, besides his eating, is very useful, both dead and alive, for the good of mankind. But I will meddle no more with that—my honest humble art teaches no such boldness; there are too many foolish meddlers in physic and divinity that think themselves fit to meddle with hidden secrets, and so bring destruction to their followers. But I'll not meddle with them any farther than to wish them wiser; and shall tell you next, (for I hope I may be so bold,) that the Tench is the physician of fishes, for the pike especially; and that the pike being either sick or hurt, is cured by the touch of the tench.\* And it is observed that the tyrant pike will not be a wolf to his physician, but forbears to devour him, though he be never so hungry.

And here we take leave of the Tench, premising, that against next week we will prepare another "dish of fish" for the reader.

#### RAILWAY INTELLIGENCE.

We have much pleasure in laying before the public a prospectus of a new railroad scheme, which bids fair to open out quite a new era in railroad annals. The intelligence has reached us from a correspondent who "begs leave to trouble us with a line," the merits of which will be best understood by the following—

##### PROSPECTUS

*Of the Grand Antipodean and Hemispherical Junction Railway, between Glasgow and Sydney.*

The projectors of this railway have determined on carrying out the recommendations of the Board of Trade in favour of the most direct lines, and on taking a terrestrial globe—such as those used at schools—it will be found that an iron rod stuck into it at Glasgow and driven completely through, will come out at Sydney. It is, therefore, obvious that the most direct road to the antipodes would be a straight tunnel carried through the centre of the world direct—forming a great truck line, from which branches might be carried to all the mines in every part of the earth, so that gold could be brought straight from Golconda to Glasgow, and thence by railway to the London market.

The benefit to the potteries can only be conceived by those who know the value of clay brought up in its pure state from the centre of the earth. While the chance of all the precious metals which may be come upon in the course of the cuttings will be another of the peculiar advantages of this undertaking. It is obvious that the principle of gravitation will cause the trains to travel at a rate hitherto wholly unattainable, as far as the centre of gravity, to which point it is proposed to carry the line at present. There will consequently be a succession of down trains only, in the first instance, but the up trains will be put on as soon as a magnetic apparatus, now under consideration by the provisional committee, has been completely organised.

It will be seen that no steam being necessary, no explosion need be apprehended, and there being neither smoke nor hot water,—the latter being often productive of bubbles,—the usual fate of many railroad projects cannot in this instance be looked for.

Parties desirous of spending a short time at the centre of gravity,—for the purpose of inspecting the interesting relics with which that favoured locality abounds,—will have an opportunity of doing so, but there will be fast trains running right through without stoppage, the momentum acquired in the descent of the down trains being quite sufficient to convert it into an up train without any additional power.

Further particulars may be obtained of Fudge, Brothers & Co., Brokers, Glasgow. April 1st, 1845.

**THREE WONDERS OF WOMEN.**—First, at fifteen they wonder who they shall take. Second, at twenty-five they wonder they are not taken. And third, at thirty-five they wonder who they can find that will take them.

**MURDER IN SPORT.**—From the statement of Mr. Grantley Berkeley, it seems that the killing of game, on the part of anybody but the proprietor, is nothing more nor less than murder. Could not the honourable gentleman take a rather more lenient view of the matter and make it game-slaughter? It would be rather hard to hang a poor labourer for shooting a hare, even though he committed the act with hunger-pen-pence. Mr. Grantley Berkeley, we presume, will maintain that shooting at game with intent to kill, whether you hit it or not, is the next thing to murder. If so, and could his views become law, what a number of cockney sportsmen would be transported merely for wasting powder and shot! We should like to know whether Mr. Berkeley considers a clerk, or a medical student, who dines off jugged hare at an eating-house, an accessory after the fact; and also, whether he looks in the in the same light at anybody who sups on a poached egg.

\* This must be quite a fancy.—EDITOR.

## MILES'S BOY'S VISIT TO ASCOT.

THE DRIVE TO ASCOT. THE LONG WALK, WINDSOR PARK.

**E**IGHT Royal Ascot, this week we greet the annual assemblage on thy verdant plain! Here, where the royalty of the earth, emperors, kings, queens, princes, and princesses, hold their courtly "tryst;" doth Miles's Boy, making one in the glittering throng with pen and pencil, sketch the doings.

The neighbourhood of "Windsor's regal towers" has aye made Ascot a gay meeting; nay, to this may be attributed the common error on the continent of placing this meeting above Epsom in racing importance. Residing, as did the last two Georges, William, and the present lovely and gracious occupant of the throne at that noble pile "the Castle," they, as well as the Second Charles, oft honoured Ascot Heath with the countenance of royalty. There, as saith the quaint old ballad of "Sir Bevis of Southampton," speaking of "Datchet Mead,"

"A cours do they make on a daye,  
Steedes and palfrey for to assaye  
Which horse that best may run."

As soon as the period of Ascot Heath races is fixed, the people set it down in their note-books as the one to which they are to look forward for a meeting with their queen; the busy note of preparation is commenced to be sounded by all ranks: by the humble, the holiday apparel is again brought from the coffers, the best "bibs and tuckers" are placed in the hands of the sempstress; whilst, by the rich, the pomp and pride of dress is culled from metropolitan sources, the new chariot is launched, the bits of blood harnessed, the lacqueys are fresh liveried, the silken-jacketed postillions are engaged; horses are bespoken, gigs bought, and places booked; and all to throw up the cap, and wave the hat, and cry, "Long live our gracious queen!" and a little—it may be—to cut a dash at Ascot.

The arrangements of Ascot leave no intermediate days, "flat, stale, and unprofitable," by reason of any dearth of sport; on the contrary, each day affords an admirable bill of fare, both in quantity and quality, to all who have appetite to enjoy the sport. And who has not? Echo answers, who?

Who, with health's blessing, means, and free to roam,  
Would miss the pleasure, and remain at home?

So thought we, as we turned over in our bed while the clock was striking

eight. Out we rolled, and, having performed our ablutions like a devout Mussulman, toggled ourselves as became a gentleman, and disposed of a substantial breakfast after the fashion of a fox-hunter, we made way for the Paddington terminus, from whence at ten o'clock precisely, we were put in motion by the mighty power of steam, and whirled off by the Great Western train (the best and safest in principle of all rail conveyances throughout the kingdom) for Slough, which place, eighteen miles distant, we reached in twenty-seven minutes! Shades of our grandsires! whose corporeal substances were wont to travel by easy stages from London to Hounslow, and to endure the fatigue of a week's procrastinated journey to Bath, hear this—and if ever your ghostly natures should again be permitted to visit the scenes of your terrestrial vagaries, try a trip by rail. The station at Slough is on an extensive scale, and affords every accommodation to the passengers. Immediately in its neighbourhood, and on an eminence commanding a fine view of the surrounding country, is the Royal Hotel, kept by Mr. Dotesio, a structure of magnitude, whose magnificent exterior might well convey the notion that any one venturing within its walls for the purpose of refreshing his inward man, or to avail himself of the accommodations of the establishment, must have previously prepared himself with a more than ordinary supply of the viaticum or sterling medium. Curiosity led us to have a peep at the interior, and, in our small way, to test the accommodation, and discover the rate of charge. In our research we were not surprised to find that the arrangements of the place embodied all our conceptions of style, comfort, and convenience; for such might naturally be looked for in an establishment having so important a locality; but we were astonished to find that the charges were regulated by the most strict observance of fair economy; in reality and truth, that a man might fare sumptuously, and in a very superior style of accommodation and attendance, at a charge beyond expectation reasonable. And now, having said a word of recommendation, and paid to the merits of the respectable landlord a just tribute, move we on to the scene of Ascot.

From Slough to Windsor is (in fine weather) an agreeable ride or walk, as may be preferred, of about two miles, leading through the village or hamlet of Eton, whose classic college forms one of the most picturesque and striking features of the whole route. In its immediate vicinity may be seen a crowd of young students, chiefly sons of the aristocracy.

[Continued on page 166.]

## BRITISH SONG BIRDS.—No. VIII.

## THE BULLFINCH.

(Concluded from page 156.)

Resume the consideration of the Bullfinch as a cage bird from the point where we last week broke off.

## MODE OF TAKING.

There are few birds so easily attracted by the decoy-bird as bullfinches. They may also be taken by any of the usual means. In winter numbers may be caught by a noose, by hanging to it such berries as the bird likes; in spring and autumn they may be caught in the area or barn floor trap; and provided they see berries there, the decoy bird is not wanted; it is sufficient if one imitates their soft cry of "tui, tui," in the hut.

## BREEDING.

These tenderly affectionate birds can hardly live when separated from one another. They incessantly repeat their call with a languishing note, and continually caress. They can sometimes be made to breed in the house, like the canary, but their eggs are rarely fruitful. In the wild state they breed twice every year, each time laying from three to six eggs, of a bluish white, spotted with violet and brown at the large end. Their nest, which they build in the most retired part of a wood, or in a solitary quickset hedge, is constructed with little skill, of twigs which are covered with moss. The young ones are hatched in fifteen days. Those which are to be taught must be taken from the nest when the feathers of the tail begin to grow; and must be fed only on rape seed soaked in water and mixed with white bread; eggs would kill them or make them blind. Their plumage is then of a dark ash-colour, with the wings and tail blackish brown; the males may be known at first by their reddish breast; so that when these only are wished to be reared they may be chosen in the nest, for the females are not so beautiful, nor so easily taught.

## DISEASES.

Those bullfinches which are caught in a snare or net are rarely ill, and may be preserved for eight years or more; but those reared from the nest are subject to many diseases, caused by their not having their natural food, or by those injurious delicacies which are always lavished on favourite birds; they rarely live more than six years. The surest means of preserving them healthy for a long time, is to give them neither sweets nor tit-bits of any kind, scrupulously to confine their food to rape seed, adding now and then a very little hemp to please them, and a good deal of the green food mentioned. The bottom of their cages should be covered with river sand, as the bird there finds some stones which aid the functions of the stomach. Their most frequent diseases are moulting, costiveness, diarrhoea, epilepsy, grief, and melancholy, in which case they are quite silent, and remain immovable, unless the cause can be discovered. They must not be given any delicacy, and must be fed entirely on soaked rape seed. A clove in their water, proper food, and particularly a good deal of refreshing green food, enables them to pass the moulting time in good health.

## FOOD.

When wild the bullfinch does not often suffer from the failure of its food; for it eats pine and fir seeds, the fruit of the ash and maple, corn, all kinds of berries, the buds of the oak, beech, and pear trees, and even linseed, millet, rape, and nettle seeds.

In the house those which run about may be fed on the universal paste, and, for a change, rape seed may be added; those which are taught must be fed only on poppy seed, with a little hemp seed, and now and then a little biscuit without spice. It has been remarked that those which are fed entirely on rape seed soaked in water live much longer, and are more healthy. The hemp seed is too heating, sooner or later blinds them, and always brings on a decline. A little green food, such as lettuce, endive, chickweed, water-cresses, a little apple, particularly the kernels, the berries of the service tree, and the like, is agreeably and salutary to them.

The following varieties of the Bullfinch are noted by Bechstein:—

1. The *White Bullfinch*, which is of an ashy white, or wholly white, with dark spots on the back.

2. The *Black Bullfinch*. These are most generally females, which become black, either with age, when they are only fed on hemp-seed, or with having been kept when young in a totally dark place. Some resume at their moulting their natural colours; others remain black; but this black is not the same in all; some are of a brilliant raven black, others dull, and not so dark on the belly; in some the head only is of a raven black, the rest of the body being duller; in others the black is mixed with red spots on the belly, or the latter is entirely red. I have seen one in which the head and breast, as well as the upper and under parts of the body, were of a raven black, every other part of a dull black, with the wings and tail white; it is a very handsome bird, rather larger than a redbreast.

3. The *Speckled Bullfinch*. It is thus called, for, besides its natural colours, it is spotted with black and white, or white and ash colour.

4. The *Mongrel Bullfinch*. It is the offspring of a female reared in the house from the nest, and of a male canary. Its shape and colour partake of those of the parent birds; its note is very agreeable, and softer than that of the canary; but it is very scarce. This union rarely

succeeds; but when tried, a very ardent and spirited canary should be chosen.

5. The other varieties are the *Large Bullfinch*, about the size of a thrush, and the *Middling*, or *Common*. As to dwarf birds, which are not as large as a charfinch, it is a bird-catcher's story, for this difference in size is observed in all kinds of birds. I can affirm it with the more certainty, having had opportunities every year of seeing hundreds of these birds, both wild and tame. I have even in the same nest found some as small as redbreast, and others as large as a crossbill.

## THE DERBY!

(From the "Illustrated London News.")

THE race! well, what about the race?

It's hardly worth showing one's Knowledge; when all are knowing now  
How it has bit the knowing ones.

How one Day promised foul to spoil  
Another fair for Gully!  
And all that Tattersall turmoil  
Reported now so fully!

How brave Old England, who was fix'd  
As being fit for knackers,  
Had nearly got the knack himself  
O' winning for his backers!

How Merry Monarch came in first  
(An understood outsider),  
And play'd Old Harry there—and rang  
Bell's joy for Bell, the rider!

How Annandale, whom Marson rode,  
In truth began to Mar soon  
The funny looks of fools of Turf,  
Who flabbergasted are soon.

How many a fair Adonis there  
Made grievous calculation,  
While Young Eclipse bit both his lips,  
In "Doleful" "Desperation."

How Clear-the-way had nought to say,  
Except that 'twas clear'd for him;  
How Jingle-Pot no coin had got,  
Pigeon—(but we abhor him!)

Was pluck'd! where wise Columbus came,  
A riddle each man throws up;  
While Laundress—if it's all the same—  
Will give up getting clothes up!

The Libel's punished; Weather-bit  
(The race was bit by weather)  
Bridles his rage while Cabin Boy  
Is unbuck'd altogether!

Miss Whip, poor thing, has lost her thong,  
No winning-post abutting;  
It's very plain to all of us—  
She couldn't win by cutting!

And Worthless too was worthless all,  
He went so very slow in;  
It's very plain to all of us—  
He couldn't win by going.

Its going off so fast we mean,  
As any winner need do;  
What would the Laird o' Cockpen gie  
To cock a pen as we do?

But now no more, the race is o'er,  
The winners all are jonnock,\*  
So, ere we go, our horn we'll blow,  
And drink the Merry Monarch!

A TREAT.—Miss T.: Excuse me, Sir Gilbert, I have to feed my little family. Sir Gilbert: Madam!—Miss T.: Gold fish, Sir Gilbert, gold fish. Pretty things! So tame, and so intelligent! You should see 'em swallow a live fly from my fingers! 'Tis, I may say, quite a treat! Sir Gilbert: For the fly, madam, or the fish?—*Time Works Wonders.*

We ha' got trees on the banks of the Kessakementus so everlastingly high that it takes two men and a little boy a standing on one another's heads to see up to the first branch.

GIVEN IT UP.—The Millenniunites, or second advent men, have fairly given it up! They think, however, that the world will come to an end some time or other.

\* One of the most glorious expressions of an improving civilisation, signifying "jolly."

## CORRESPONDENTS.

**SIMPSON, Leeds.**—We answered your question in the second number of the *SPORTSMAN'S MAGAZINE*.

**A. YOUNG FISHERMAN.**—No. There is a fine of 40s., according to certain regulations, to which, any one fishing in the Thames or Medway is liable. It was made in 1785, by the Corporation of London and conservators of the Thames, and signed by the judge of the land. Convictions have taken place under this regulation within these three or four years.

**SAWELL, Northallerton.**—The lines, though containing some comic humour, are too coarse and vulgar for print. Can you not be droll without being dirty?

**SEMPER IDEM.**—We gave a recipe for ticks in the dog a few weeks since; we repeat it, as it is short. "Rub your dog over with oil; *probation est*."

**WIDE-O', Exeter.**—Tincture of benzoin is made by digesting gum benzoin (vulgarly called Benjamin) and aloes in rectified spirit. Tincture of squills is made with vinegar, not alcohol. Friar's balsam (so much used for wounds, &c.), is the same as compound tincture of benzoin.

**HENRY HASTINGS.**—Upon our veracity we don't know: what a hurry you're in. The week before last we enlarged this paper four pages, lest the advertisements should trespass on the readable matter, and have given an additional page each week of "that same." Do you know that the *white paper* costs us wholesale, within a fraction of a halfpenny, what we receive from the trade vendors for the sale of this publication, and that fraction *must* pay editor, artist, engraver, and all the expenses of printing? now guess how many thousands must we sell to reimburse ourselves?

**If the gentleman** who forwarded us the engraved figure of "the Problem" experimental yacht, will send the wood block or a cast therefrom, to our office, 10, Red Lion Court, Fleet-street, it shall be inserted with a notice of this marine novelty.

**YOUNG PISCATOR, Manchester.**—You will see by our last number that the cuts for the minnow-fishing article were in hand previous to the receipt of your letter. We are obliged to you, and will probably make use of it in some other form. Could you not give a description of some good "Fishing Locality" in your neighbourhood, with a picture of the spot, or of some good house in the vicinity, or perhaps tell us where we could find an engraving to copy?

**S. R. B.**—We cannot pin our faith on the printed account: our American brethren are given to shooting with the long-bow. "Travellers see strange things," and tell them, too. We don't believe that taking the *elite* of pedestrians, wrestlers, or boxers of England, that the best "article" of those classes to be found in savage life could at all compete with them. Poets and romance writers have, of course, a wide scope, which we do not wish to deprive them of, but the nonsense in the American magazine article referred to, is not worth refutation: we take it to be written by some new world "cockney" dry-good dealer, or romantic tailor.

**W. DILLON.**—The following flies for chub can be recommended:—The bee is an excellent general fly, tied very full, and will kill all through the season. The golden palmer tied full and gaudy, with plenty of flat gold tinsel, and the body composed of bright peacock herl. The red palmer, of a very large size, the body scarlet, ribbed with gold, and double hackled. As chub, however, are not particularly fastidious, any large gaudy fly, tied buzz fashion, will take in water where these fish are plentiful.

**J. REMMANT.**—If you had read either the life of Mendoza in the History of Boxing published in this paper, or looked at the Chronology given therewith, you could not have missed seeing the answer to your question. We fear you are one of those "constant readers" who never know anything about the utility of a paper, except to ask questions of its editor.

**SKELLINGERN.**—Young Dutch Sam fought Tom Gaynor £300 to £200; there were 17 rounds, occupying 2 hours and 5 minutes, long-winded manoeuvring certainly. You don't suppose two men can be fighting all that time, do you?

**E. W. B.**—Certainly Gill of Coventry is Paddy Gill, he was beaten by Norley, (George Hall, of Manchester). What's the use of saying you cannot find his fights in *FISTIANA*, we referred in order to test your positive assertion, and there they are! Either you have not the book, or your eyesight is very imperfect; we take the former to be the case.

**A. B. C., Leeds.**—In a week or two we will give an article on *THE FERRET*, with an engraving. As a native of a warmer climate (Africa) than the polecat, it is very inferior in ability to procure its subsistence: indeed those which are lost in rabbit burrows perish at the approach of cold weather, at least, we have never known them breed except in captivity and kept warm. Beds of flax, bran, bread, and milk, seem their best diet. An equable temperature as far as procurable, and the diet we have mentioned, we take to be the best preservatives of their health; but with regard to remedies for their diseases, we really are as ignorant as yourself as to the medicines best suited to the disorders of these irascible, hot-blooded vermin.—"Salter's Angler's Guide," (the 5th edition), for practical directions in Angling:—"Ronalds" or "Hoffland" for Fly and general Fishing.—We will see presently about Lake Trout Fishing.

**CRICKET.**—T. S. C.—Balls, certainly; are there not two? Years ago there were but two stumps, consequently instead of two, as at present, they were crossed by one ball only. Legal phraseology cannot bear on the point. There the term, ball, is understood in the plural number.

**SILAS M., Nunhead.**—You should not wonder were you caught out twice as often, if you play such balls in the manner you describe. Practice forward play, and you will soon find the benefit of it; at present you hit *under* instead of *over* the ball, and consequently she must inevitably mount.

**H. BETTS, Hornechurch.**—The umpire was right. Although the bowler designedly drew the batsman off his ground by the pretended intention of delivering the ball, and although the bowler was over the bowling-cresce when he put the wicket down, still the batsman was out. The ball being in hand for the purpose of delivery, was *in play*, and the batsman had no business off his ground.

**VINCENT.**—We have our own reasons for thinking otherwise. You can, however, apply to Mr. Denison himself, who, of course, can settle the question definitely.

**G. S. S.**—We intend shortly to publish a list of competent umpires. Parties duly authorised can send their names and addresses to 10, Red Lion-court, Fleet-street.

**S. M. C.**—Every advertisement inserted by ourselves, or any other paper whatever, is liable to a charge of one shilling and sixpence for each such advertisement; and a penalty, if a copy of the publication is not sent in and the duty paid by a certain time. S. M. C. will therefore see the unreasonableness of asking us to advertise him, and pay the duty into the bargain.

## OUR WEEKLY CALENDAR.

AN EPHEMERIS IN JEST AND EARNEST.

**SUNDAY, June 15th.**—Fourth Sunday after Trinity.—Magna Charta signed, 1215: as twenty-four of the Barons could only "make their marks," the "Schoolmaster" appears to have been very much "abroad" at this period.

**MONDAY 16.**—The Royal Thames Yacht Club's match for the Grand Challenge Cup.—Sutton Park Races.—Twenty-four boys expelled from a national school in Ireland for wearing the "Repeal button": the buttons being considered as "double guilt."

**TUESDAY 17.**—Grimsby Fair.

*On the Management of the Sponge.*—The best way to manage a sponge is to be "at home" only on cold shoulder days. A house in the country is a protection against the frequent appearance of the sponge, especially if the omnibus fare is equal to a coffee-house dinner. Should the riding charge, however, be a plate of soup under the price of an "ordinary," the sponge may be looked for with certainty. An excellent mode of eradicating the sponge is to wear a temperance medal round your neck, which will excuse you placing anything stronger than toast-and-water upon the table; and as sponges are invariably wet, and thrive like fungus, best in a cellar, you will find the "pledge" an admirable cold water cure.

**WEDNESDAY 18.**—HAMPTON RACES.—The Battle of Waterloo, 1815.  
*Cricket.*—This truly English game of strength and activity is now in its zenith, and all the cricket clubs are open for the season. Formerly, cricket was almost confined to the southern counties: Kent, Sussex, and Surrey, more especially, have always been famous for skill in it. Of late years it has spread a good deal

in the northern quarter of the island; there is scarcely a county in England without its regularly established cricket club; and in Scotland, where, a few years back, cricket was altogether unknown, it is now making a surprising advance.

**THURSDAY 19.**—Cricket.—The Marylebone Club against the University of Oxford.—This is the great month for Otter-hunting. The pomp and circumstance of the olden Otter-chase were very striking: the huntmen sallied forth arrayed, in vests of green, braided with scarlet, their caps of fur encircled with bands of gold, and surmounted with ostrich plumes. Boots, much of the fashion of those known to modern hunting-fields, reaching to the tops of the thighs, and water-proof, encased their lower limbs, and were ornamented with gold or silver tassels. Their spears were also embellished with carving and costly mountings; the whole set-out of the higher classes engaged in these water-huntings being of a very picturesque and imposing character. Towards the latter end of the last century, otter-hunting was one of the most popular of our field sports, and the list of establishments supported for its pursuit would have, probably outnumbered those devoted to hunting in any of its other forms. Regular packs of otter hounds were kept in almost every parish, and an otter-pole was as common an instrument in the peasant's hands as a walking-stick. It was much more simple than the spear now in use; it was merely a stick of straight ash, shod with a common iron barb head, or a fork of two prongs, also arrow-headed. With these weapons in their hands, and a motley group of miscellaneous curs at their heels, the village rustics would hie them to the neighbouring streams, to chase, in humble imitation of their betters, the *Mustela lutca* of the naturalist.

**FRIDAY 20.**—Accession of Queen Victoria.—June is the grand racing month; the first Arabian, which had ever been known as such in England, was purchased by the royal jockey, of a Mr. Markham, a merchant, at the price of five hundred pounds. That illustrious master of the science of equitation the Duke of Newcastle, in his treatise, describes this Arab as a little bay horse, of ordinary shape, and judges he was good for nothing, because, being trained and started, he could not race, but was beaten by every horse which ran against him.

**SATURDAY 21.**—The longest day: the Income Tax imposed, 1842, which seems likely to last out the longest day yet known.

## The Sportsman's Magazine.

## FOR THE WEEK ENDING, JUNE 21.

**IF** we started the *SPORTSMAN'S MAGAZINE* as candidate for the GRAND STAND STAKES of popular favour, we pledged ourselves, that as we found the patronage of that public responsive to the exertions made, so should those efforts increase. The enlargement of this paper *one-fourth*, the multiplication of the number of its engravings, and other alterations (we would fain hope, improvements), have occasioned a largely-increased expenditure; may we ask of those who wish to see (to quote a phrase used by ourselves in our introductory article,) "sporting literature advanced to an equality with other departments of general reading," to recommend and circulate this little miscellany? We love to be plain, straightforward, and aboveboard. Of old subscribers we retain our original number; of new ones, since the increased expenditure in paper, print and engravings, we have acquired so few, that unless an augmentation of circulation follows, within a week or two, we must in self-defence do one of three things, either of which will be distasteful and hurtful to our feelings. 1, reduce the size of the paper, and the number of the engravings; or 2, raise the price of the paper to twopence; or 3, discontinue the publication altogether. The latter we shall most reluctantly adopt, as we know from an intimate acquaintance of some years with the press, and the peculiar advantages we possess, that if we cannot publish a cheap class paper like the present, in which both quality and low price are combined, that *no other person can, except at a ruinous loss.* These words we write with a perfect assurance of their truth.

And now one word as to the easy condition whereby a cheap sporting miscellany may be secured to the public, and we be, at least, reimbursed, to say nothing of remunerated, for surely the labourer is worthy of his hire? Let each of our 7,000 regular subscribers recommend this paper to a friend, and let but 3,000 of these recommendations prove successful, and we pledge ourselves not only to keep up the quality of *THE SPORTSMAN'S MAGAZINE*, but to improve it. At present (as it is our wish to be candid), we plainly and unequivocally inform the reader, and can prove it by figures, that for three weeks the expenses have exceeded the returns (to say nothing of editorial labour) by several pounds per week. Let those subscribers, then, who wish well to this little venture, recommend it to their friends, and by this cheap mode of increasing the sale, they may serve us, and also, we hope, minister to their own edification and entertainment.

ocracy—statesmen and warriors in embryo—all in full enjoyment of the scene, and cracking their jokes and witticisms on the moving multitude. Proceeding on we reach Windsor, its castle towering above the town in lofty and irregular grandeur. This residence of the sovereigns has been so repeatedly noticed in all the varied and elaborate powers of artistic description, that it would be presumptuous to intrude on our readers any weak attempt of our own. The town of Windsor, also, is equally familiar to the public, and in this, as in all former weeks of Ascot Races, received an enormous influx of population. The two principal inns were, as usual, full from their basements to the attics, with beds beyond precedent engaged in the town for the accommodation of their regular visitors.

Vehicles of every description, from Moody's crack four-in-hand to the donkeyman's dilly, were in request; and, spite of the wet, some hundreds paced their way on foot through the green retreats of the park and forest. The road from Windsor to Ascot presents to the traveller, at this season of the year, a scene of the richest imaginable beauty.

The whole leafy forest stands displayed  
In full luxuriance to the sighing gales,  
Where the deer rustle through the twining brake,  
And the birds sing concealed.  
The country far diffused around  
One boundless blush—one white empurpled shower  
Of mingled blossoms.

And here, we have its picture. (See page 163).

The journey alone is recreative of health and pleasure—every breath is perfumed with spring's delicious odours, which, thanks to Providence, are imparted alike to the olfactories of the prince and the nasal sensibilities of the peasant.

But the heath—the heath—what of the heath? (By which is meant the course). Having taken our stations, let us look around and observe if any, and what, changes have taken place in the arrangements of the course. We shall find there have been several, and all improvements. The stands, betting-post, &c., are admirably located; these, and other improvements, have been brought to practice through the care and exertions of the stewards and the clerk of the course, and we now consider Ascot almost perfect as to turf-accommodations. Then the arrangements connected with the running, they, too, are for the most part admira-

ble, and being more peremptory than in preceding years, become more effective.

But the bell has rung, the crowding populace are quietly, and in good order, arranging themselves on either side; far off shouts are echoing upon our ears, huzzas, loud and long prolonged, increase upon us; there is a goodly pageant pacing majestically up that green road; there are gallant steeds, and chase-liveried riders, coursers such as few beside can match; and there are royal chariots and splendid company, lords of degree, and noble ladies; and in the midst rides a Queen and a Mother! Her presence is the signal for the "pastime" to commence, and ere the "Majesty of England" can complete her gracious acknowledgments to an applauding people, behold the horses that are about to contend for the Royal Vase are here. Of this magnificent piece of plate, the pressure of engravings and matter this week compels the postponement, but in our next number this and "the Hunter's Cup" shall be both given. To our stamped contemporaries have we the chronicling of the sports.

Tuesday and Wednesday are passed, and now comes the day, "big with the fate of" the noble gift of the Autocrat of all the Russias; and here behold it! Is it not, reader, a gift worthy of an Emperor? (See engraving.) But it would be imperfect without a picture of its winner; so here we present you with The Emperor.—(See opposite page.)

DESCRIPTION.  
The intrinsic value of this massive piece of plate is £500. The selection of the design for this, the first of these munificent annual gifts, was entrusted to Baron Brunow and Lord Rosslyn, who appointed Messrs. Hunt and Roskill (late Storr and Mortimer), of Bond-street, to effect its execution, a task they have accomplished in a manner creditable to their establishment. The principal feature of the model, which is exquisitely wrought, is the colossal statue of Peter the Great, at St. Petersburg, placed on a rock of granite. It is a miniature copy of the original. The statue, and the rock on which it is placed, stand on a triangular base, with five basso-relievos, including "The Imperial Palace at St. Petersburg," "The Kremlin at Moscow," and "Windsor Castle," all chased in the most finished style. In the panels above these representations are first, "St. George of Russia;" next, "Citizen Minin and Prince of Pojarski; and, lastly, over Windsor Castle, the Latin inscription

THE EMPEROR OF RUSSIA'S GIFT.

given in our drawing, which we thus translate:—"Nicholas, Emperor of all the Russias, in memory of the Ascot festivities of June, 1844, at which he was present as the guest of Queen Victoria, founded this annual prize for equestrian rivalry." On the corners of the base are three soldiers

of the Russian army—a cuirassier, a Cossack, and a Circassian, all of the Imperial Guard, and then follow the names of the stewards:—The Earl of Rosslyn, the Earl of Stradbroke, the Marquis of Exeter, and the Hon. Colonel Anson. It weighs 600 ounces, and stands 40 inches high.

## THE EMPEROR.

WINNER OF THE EMPEROR OF RUSSIA PLATE AT ASCOT, 1845.

### TOPICS OF THE WEEK.

THE principal topic of the week in domestic circles has been the state of last year's summer attire, which the fine weather has drawn forth to light and life from the rough-dried box of the careful housewife. Of twelve pairs of white trowsers, the following analysis, made by Mr. Papsy, of Islington, is not without interest.

	Pairs.
Shrunk too small and fitted for his next brother, three years younger	3
Gone at the straps	2
Require letting out, having a hem sufficiently broad to do so	4
Won't stand much more washing	2
Available for Sundays	1
	12

Miss Sarah Jane Myrtle finds her *barege* in a satisfactory state, and good for Ascot; but does not think that the *mousselin-de-laine* will dye again. The satin polka pelisse has been carefully put by in its place, covered with cedar shavings, and pasted up in brown paper to keep away the moths.

Another topic of the week has been, the best way of getting back the money spent on the Derby. Mr. Fitzrobinson—the gentleman who created such a sensation by his solo on the post-horn during the halt at the tarapike—will dine for the next two months at Berthollini's, instead of the Cafe de L'Europe, by which he calculates a saving of from sevenpence to a shilling a day will be effected in the article of meat alone; and Mr. Snobbins has taken to black his own boots, with paste blacking at a penny per pot, instead of paying his landlady a shilling a

week to do so. He has also changed his second floor chambers for a salubrious third pair in Norfolk-street, which will still further reduce his expenditure, and the six-guinea surtout he intended to have of a fashionable west-end tailor has been countermanded for a "registered palitot" at two guineas, which he is assured combines the several advantages of a frock coat, a Tweed Taglioni, a macintosh, and a cab or umbrella in unfavourable weather. In consequence of these monetary stratagems, it is expected, for the next few months, where the individuals do not boldly rush into credit, that the run will be upon the celebrated "Gent's Albert Highlows," and canary-bird-coloured "Berlins," which appear flying about the windows of the haberdashers' shops like so many butterflies, after the fashion of their infantile brethren at the Lilliputian Warehouse in New-street. The canary tint is, however, like the bird, very apt to fly, especially after washing.

The dust has been also a very principal topic of the week, the wind having thrown it into the eyes of every body, causing them to be exceedingly perplexed, except they have been railway shareholders, when they have been so habituated to having dust thrown into their eyes unceasingly by the directors, that they do not mind it any longer! The common phrase, "none so dusty," has caused much difference during the past week amongst etymological professors, as to whether it could be considered as an agreeable or disadvantageous attribute of anything. The members of Tattersall's complain a little of dry weather at present (although they had, in all truth, had a sickener of the last *Raining Rain*), because it has prevented their sporting friends from coming "down with the dust," as they wished to have seen them doing after this late Derby. But if the rain will not come down handsomely, we hope the losers will.

## THE ALLEGORY OF THE FOUNTAINS.

(From Punch.)

"Since the fountains of Trafalgar-square have begun to play, a well which the Union Club sunk at a great expense is quite dry."—*Times*.

The clubbists of the Union sunk a well  
Deep, deep into the bowels of Pall Mall;  
The rushing water gurgled in the shaft,  
And all the footmen washed, and all the members quaffed.

Two wondrous fontanels arose to grace  
Lord Nelson's column and Trafalgar-place;  
Deep in the bosom of the earth below,  
The builder digg'd to make his fountains froth and flow.

Up, up to heaven Trafalgar's fountains rose,  
Their spray bedewed the Duke of Bronte's nose,  
George's fat statue, and St. Martin's rail,  
And bathed in silver dew Northumbria's lion tail.

Down, deeper down, the Union's water's sank,  
No more the footmen washed, the members drank:  
Ask ye the fatal reason of the drought?  
The Union wells were sold, and up Trafalgar's spout.

A moral from those fountains twain I drew,  
(Each thing in life a moral hath, or two.)  
And thought St. Stephen's chapel could compete  
With those two aqueducts of Cockspur-street.

The Liberals sought and found the spring and sank it—  
It was the cunning Tories came and drank it;  
'Twas Russell bade the water rise and flow,  
Through Robert's brassen pipes it issues now!

## HINTS ON BETTING.

In the advice which we are about to give upon betting, we address ourselves chiefly to those who have no exclusive means of information, but who devote a little of their time, and risk a little of their money in turf speculations. A man of prudence, in making up his mind and his book, on any of the great races, will in the first place consider well the circumstances which have advanced a horse to his position in public favour. A horse may rise in estimation either from his public running, from his appearance backed by his blood, from confidence in his stable, or by being strongly supported by his owner or some powerful party. The first, no doubt, is the best criterion, and it affords to every man an equal opportunity of knowing what he is about, but the public in general make at least a sufficient allowance for this; and before you back a winner of the autumn for the great races of the ensuing year, you should be very careful in considering many points connected with his past triumphs. The later in the year that he has appeared the better, and, if he has won more than once, be careful to ascertain whether his last race was won as cleverly as the first, whether, in fact he is a rising or a declining horse. Observe in particular his performances in any races which he may have run of a greater length than the usual two-year-old-distance. This is of the more importance, as, with Newmarket horses as least, you have no opportunity of seeing them, as three-year olds, perform any thing like a fair trial as to distance and severity for Epsom. It is generally against a horse to have been brought out as a yearling, or early in the second year, and the winner of a race in April is often worse than no winner at all.

There is a great inducement to have yearling races in the neighbourhood of training grounds, and the practice is carried to a great extent in the North, at Catterickbridge, Malton, &c., where it is much more easy to procure a good field of young horses than to bring together a tolerable lot rising Leger age. The feather-weight for yearlings, allowed at most Spring meetings, for Craven stakes, is highly injudicious, as it gives them an unfair chance for the day with their elder competitors, and frequently ruins their after prospects. A consideration of the course on which a horse has won is almost as material as of the horses which he has beaten, though this applies perhaps less to young horses than any other, as care is generally taken, however intricate a race-course may be, that the best part of it is selected for the T.Y.C. Even here, however, a horse and a jockey who know the course, have a manifest advantage, and you may place more confidence on a winner on a strange course than at home. Where horses of different ages have run, it is more difficult to determine the merit of any in particular. So many circumstances may be more favourable to one age than another, that before you come to a conclusion you must weigh well the state of the weather and the course, with a variety of other particulars, which, if they relate to country races, are not always easy to obtain. It requires very considerable judgment to estimate properly the speed displayed in running a race. The swiftest horses, running for any considerable distance, may make a very slow average pace, when there is no disposition to make play early with any of them; whereas very indifferent cattle as to speed, with good bottom, by starting at score, may get round the course in a very short space of time. The severest and best contested races are frequently those which are commenced in a canter. It has once or twice, to be sure, been our luck to see a race well contested over the whole of the Beacon, but such events are of extremely rare occurrence; and with young horses, in nine cases out of ten, any one might

be the winner fifty yards from home. The jockey is a matter of not less consideration than the course; and it is necessary to take into consideration not only those who have rode a horse at the various preceding races, but also who is likely to ride him for the race on which you stake your money.

In these times also, you have to consider not only a jockey's skill but his honesty, and so ticklish is this consideration, that if there were no other reasons, this alone would almost be sufficient to deter persons from standing to win a large sum on one horse, and that a great favorite when they could hedge their book so as to have many smaller winners. What with the fraudulent riding and bad paying, a man who acts fairly, has hard work enough to make the turf a profitable speculation; and we are of opinion that sufficient severity has never yet been exercised against those who have, in either of the above ways, played false to the public.

Few people are rogues enough to make up their minds to risk a sum which they cannot pay, but many enter into engagements far beyond their means, in the expectation of hedging to advantage, and the failure of this expectation places them in a situation that they must run all hazards. If they get clean out of the scrape all is well; if not, they bolt, to the great disarrangement of your accounts. For this reason it is desirable not only to bet with those of whose honesty you have some opinion, but to ascertain as well as you can what previous engagements they have. For it is of little moment to have a good bet on paper, if you know or suspect that this or that horse winning may put payment out of the question. We do not like a man who makes his book by commission, for it shews that he looks to gain only, and has not the feelings and interests of a true sportsman; but at the same time it may frequently be necessary, when you have made bets to a certain extent yourself, to get some one to complete your account, and this is a matter of extreme nicety. You must well know the man whom you entrust with such a commission, for many are the modes in which you may be deceived. It is, no doubt, easy to detect him if he takes much under, or bets much more, than the fair odds, but it is not so easy to detect a transference of a rail account. For instance, the person employed may have an advantageous bet or two with some one in whose solvency something may have arisen to shake his faith. How easy is it for him to transfer these bets to you, who look only to odds, and not to the responsibility of the party. We have known the practice, indeed, carried even further, and money received for the difference of odds between a bet transferred and the current rate at Tattersall's, when it was shrewdly suspected by the person who received the difference, that the chance of payment was not worth a farthing, and when the result of the transaction has proved that his anticipations were but too correct, to the discomfiture of his confiding dupe. It is in fact better, in most instances, if you want to bet against two or three horses before you close your book, and have not an opportunity of doing so in person, to offer to some person of known responsibility half a point above the market price, rather than to commission any person on whom you cannot place the same absolute dependence. We have known a young practitioner buy a ready-made book, cast it up in all ways, calculate all chances and flatter himself he must be a winner. The result of the race has proved the correctness of his calculations; but, alas! the day of settlement has proved to him the fallacy of his hopes.

We shall be happy if these hints are of any practical service. We have made them general rather than minute, and we would recommend our readers in, taking advice from others, to receive with diffidence information as to this horse or that, where he knows not whether he may not be advised by an interested party; but much information may be picked up from attending to the maxims of persons of experience on the turf, when they are founded on general principles. Your object should be to make use of the experience of others, not by gaining specific information from them, but by rendering you more competent to judge for yourself.

And now a few practical words on the operation of

## MAKING A BOOK.

"Making a book," or "betting round," is the plan pursued by what are called the "knowing ones," of the "betting ring," who are early in the field, and generally possess the best information from head quarters of every circumstance relating to the favourites in betting races.

The method of betting has been thus described by the best sporting authorities. "The really knowing man is one who 'bets round' in other words, makes a book on the race: his system is to lay out a definite sum against all the horses in the betting, and the more the better; should he be lucky to 'get round,' and at an average of 20 to 1 against 25 horses he must win, and this is very frequently the case. To make it clear that the favourite is a bad horse for the knowing ones, we will suppose that a race is about to be run, that 10 horses are in the betting and that W. B. has made a £1000 book on the following terms, specifying the horses by the first ten letters in the alphabet, he will stand thus at the commencement of the race:—

1000 to 500 (2 to 1)	...	...	...	...	against A
1000 — 333 (about 3 to 1)	...	...	...	...	— B
1000 — 250 (4 to 1)	...	...	...	...	— C
1000 — 167 (about 6 to 1)	...	...	...	...	— D
1000 — 125 (8 to 1)	...	...	...	...	— E
1000 — 100 (10 to 1)	...	...	...	...	— F
1000 — 83 (about 12 to 1)	...	...	...	...	— G

1000 — 70 (about 14 to 1)	...	...	...	— H
1000 — 50 (20 to 1)	...	...	...	— I
1000 — 40 (25 to 1)	...	...	...	— J

Now it is obvious that the favourite A is the worst horse in the race for W. B., and should it win, he clears, after paying £1000, only £218 (this sum is made by casting up the amounts won on the others, minus the £1000 he has paid), whereas, should the outsider (I) win, he nets £678 after paying the £1000 to the backers of the successful horse. Supposing that more than the 10 ran, and that one of those not mentioned came in first, W. B. would then win every one of his bets, £1718, the horses not mentioned being technically termed his 'field.'

"From this it will be seen that the correct system to be followed by the 'book maker' consists of betting the odds against all the horses in the field, always taking care, however, that he does not bet a larger sum against any one horse that may win than would be covered by the amount gained on the others which lose.

"But the better, in making his book, does not always confine himself to merely 'betting the odds,' for, although he avoids backing a favourite, he does not refuse to take 'long odds' against such horses as he fancies, and here his judgment, knowledge, and experience come into play. It will often happen that an outsider, on which he has taken the odds at the rate perhaps of 25 to 1, say £1000 to £40, when it first came into the market, will, at some period before the race, rise to be quoted with only 4 to 1. This affords the better an opportunity of betting £250 to £1000 against it, in which position he risks nothing, but has a chance to win £750; this part of betting is technically called 'hedging,' and is thus described by Nimrod:—

"Let us then suppose A, beginning to make his Derby book at the commencement of the new year. B bets him (about the usual odds) 20 to 1 against an outsider, which A takes in hundreds, viz., £2000 to £100 against him. He is now on velvet, he cannot lose, and may win £1000. In fact, he has £1000 in hand to play with, which the alteration of the odds has given him. But, mark! he is only playing with it; he may never pocket it, so he acts thus. The outsider, we will call him Idas, comes out again, wins another race, and the odds are only 5 to 1 against him: A bets £500 to £100 more against him, and let us now see how he stands.

If Idas wins, A receives from B. . . .	£2000
He pays to C. . . . .	£1000
Ditto to D. . . . .	500
	1500

Balance in A's favour by Idas winning	£500
---------------------------------------	------

If Idas loses, A receives from C. . . .	£100
Ditto from D. . . . .	100
	£200

A pays B £100. Deduct . . . . .	100
Balance in A's favour by Idas losing. .	£100

"But is there no contingency here?

Yes, Idas might have died before A had 'hedged,' and then he must have paid his £100; but, on the other hand, he would have been out of the field, which might have been worth all the money to him in his deeper speculations on other horses. Let us, however, suppose our colt to have remained at the original odds, viz., 20 to 1; in that case A must have betted £2000 to £100 against him, and then no harm would have arisen, except that it not unfrequently occurs that parties whose books show a profit on settling day have found themselves, to their great mortification, losers, instead of gainers, owing to the defalcations of those with whom they have betted."

#### EXECUTION OF DAWSON, THE HORSE POISONER.

[As several correspondents have at different times made inquiries relating to the facts detailed in the following article, we here append the authentic details of the case of Daniel Dawson, executed at Cambridge for maliciously poisoning race-horses.—Ed.]

In the First Spring Meeting, at Newmarket, in 1809, several race-horses in Mr. Steven's stables were poisoned, by arsenic being put in the trough at which they were watered. A reward of 100 guineas was immediately offered for the discovery of the offenders, who, however, succeeded for that time in eluding the pursuit of justice; but in 1811, emboldened by their success, they again perpetrated a similar offence, and were apprehended and punished, as we shall presently proceed to show.

At the commencement of the First Spring Meeting at Newmarket, in 1811, Spaniard, Peronette, The Dandy, and Sir F. Standish's Eagle colt died in consequence of Arsenic having been put into the troughs at which they were watered. Two horses, Reveller and Colebs, who drank some of the poisoned water recovered. This atrocious act created general indignation, and a reward of 500 guineas was immediately offered by the Jockey Club for the discovery of the guilty party.

On the 15th of August 1811, Daniel Dawson, a notorious "touter," was apprehended at Brighton, and committed by Mr. Conant, the magistrate of Marlborough-street, to Cambridge gaol; a true bill having been found against him by the grand jury, for poisoning horses at the Newmarket Spring Meeting, in 1809.

At the ensuing Cambridge assizes Daniel Dawson was tried for this offence, Mr. Sergeant Sellon being the counsel for the prosecution. The learned sergeant dwelt much on the enormity of the offence with which the prisoner stood charged. He said this was not an offence recognised at common law, but was founded on the statute of the 9th Geo. I., c. 22, which was enacted for the purpose of punishing persons maliciously wounding, maiming, and killing of cattle. The learned counsel was well aware that the mere killing would not support this indictment without an object attached to it. The statute upon which this indictment was founded did not specify further than unlawfully and maliciously killing animals, but the motives by which the killing and maiming were to be considered. If it be proved that the horse, the subject of this indictment, was killed by poison, then it would be necessary also to prove pre-existing malice, "and," said the learned sergeant, "let us see what the law terms malice in this case. If a man kill or maim an animal in the moment of anger the offence would not be recognised by this statute, as revenge or malice to the animal alone would not be sufficient without an object. The malice must be against the owner, and it was not sufficient to apply direct malice against the owner even, but, as in this case, the law implied malice when the animal was killed for an object of gain or reward, though the offender had never seen the owner." The case for the prosecution rested on the evidence of Cecil Bishop, who had been apprehended with Dawson, and was now admitted evidence for the crown.

This man, who had been brought up to the trade of a chemist and druggist, deposed that at the instigation of Dawson he had prepared a strong solution of arsenic, which he had injected by means of a crooked syringe into the watering-troughs on Newmarket-heath, by which means the horses mentioned in the present indictment were poisoned; he deposed, moreover, that he had been tempted into this crime in the expectation of receiving a share of the gains which were to be realised by a confederate of the name of Trist, who was to bet heavily against the horses thus made safe. Upon the conclusion of the evidence for the prosecution, Mr. King, the counsel for the prisoner, took an objection to the indictment, which charged the prisoner with being a "principal" in the alleged act of poisoning, when, in point of fact, he was an "accessory before the fact." On these grounds the judge immediately directed his acquittal, but refused to accept bail for the prisoner, which was tendered immediately on the conclusion of the trial. Dawson was accordingly sent back to Cambridge gaol, to take his trial at the Autumn Assizes on another indictment, charging him with poisoning two brood mares, the property of Mr. Northey; and a hack, belonging to Mr. Adams, of Royston, at Newmarket, in 1809. His trial on this indictment took place at the assizes in July, 1812, before Mr. Justice Heath.

The prisoner was indicted under the act 9th Geo. I. c. 22, for feloniously, wilfully, and maliciously infusing white arsenic into a watering trough at Newmarket, on the 10th of July, 1809, and thereby poisoning certain horses and brood mares, &c.

The charges laid in the indictment having been proved as clearly as circumstantial evidence will permit, Mr. King, for the prisoner, contended that no offence, in point of law, had been committed sufficient to constitute a felony. No malice had been proved against the owner, inasmuch as Bishop's evidence (this accomplice having been again heard as evidence for the crown) did not state that there was any wish to go to the extent of killing the animal. The learned judge, however, thought to the contrary, and over-ruled the objection.

The jury having found a verdict of guilty, sentence of death was pronounced, and Dawson was executed at Cambridge on the 8th of August, 1812, and, although he confessed his guilt, did not mention his having had any accomplices in the crime, as had been generally supposed.

This criminal was prosecuted at the expense of the Jockey Club, at an expense of £1,500.

This trial clearly established the fact that, by the statute of the 9th Geo. I. c. 22, the offence of poisoning or maiming race horses so as to gain money by incapacitating them from running a race is made a capital felony, and punishable accordingly.

#### LITERARY PEERS.

It is, we believe, in contemplation by the English Government to follow the example of France, and raise a few writers to the peerage. The following will, we are told, be among the earliest elevations:—

MR. W. H. AINSWORTH, to be *Baron of Blueskin*.

MZ. BENJAMIN D'ISRAELI, to be *Marquis of Coningsby*.

MR. JAMES GRANT, to be *Earl of Cornhill, in the Great Metropolis, and Baron of Hey down-hey-down-derry, in Ireland*.

Other titles will, it is expected, be soon conferred, but the above are all at present decided on.

A GOOD REASON.—Everybody is astonished at the little progress made by the railway committees. In this, however, there will appear not much to wonder at, when it is considered that railways must be made in right lines, and that the House is little lines, and that the House is little accustomed to straightforward proceedings.

RE-CONCILIATION HALL.—Since the affecting scene at the Repeal meeting, where there was such violent weeping, Mr. O'Connell and Mr. Davis have been called the Irish "*Thiers party*."

## HENLEY REGATTA.

THE OXFORD UNIVERSITY BOAT.

THE CAMBRIDGE DITTO.

## FINAL HEAT FOR THE GRAND CHALLENGE CUP.

Reflecting, as in a mirror, the people's sports, it would be an unpardonable oversight for the *SPORTSMAN'S MAGAZINE* to omit the sport which, next to horse-racing, is deservedly one of the most attractive, exhilarating, and delightful. Hail, then, to Fawley-court, to Henley crowned with "antique towers;" and last, and not least, hail to "sedge-crowned Father Thames!"

The clear breezy morning—the beautiful views on

"The silver stream in emerald margin set—"

the gay company assembled—and the orderly and excellent arrangement of the whole—eminently entitle the regatta of this year to our most un-

THE GRAND CHALLENGE CUP,

qualified praise. The beautiful reach of Henley, its delightful meadows and banks, and in fact every spot from which a sight of the river could be obtained, was crowded to excess by admiring and delighted spectators. We should not care to possess that man's spirit who could quarrel or complain of the philosophy of such sport as this. There can be little of the milk of human kindness—little of the good feeling and fellowship which should exist between man and man, in one who sees in harmless

THE TOWN CHALLENGE CUP,

For Oared Boats (withdrawn in consequence of the death of Mr. Plumb).

amusements sought but a relief from the dull routine of every-day life, and escapes, though it be but for a day, from the everlasting walls of brick of the city, to the brighter sunshine and purer air of the lovely slopes and vales of Henley. With some degree of pride, and with con-

siderable pleasure, we present the trophies strenuously contended for and bravely won on the smooth-flowing course between the delightfully picturesque island at Fawley-court, and the much admired bridge of the happily-situated town, a view of which heads the opposite page.

Henley is entered from the London road by a very handsome stone bridge, of five arches, as appears in our illustration, the keystone of the centre arch being ornamented by sculptured masks, from the elegant chisel of Mr. Damer. The prospects from this spot are in the highest degree picturesque and beautiful. The church is a very handsome building, of Gothic structure; its tower is lofty, having a taper turret at each angle, which surmounts the battlements of the town to a considerable height. Henley, with its attractive and enticing bill of fare—was the loadstone on Friday and Saturday last; and its regatta, though yet num-

the artist decided that these pretty little subjects of honourable emulation were scarcely sufficiently interesting to be made the subjects of drawings. They are accordingly left until another rolling year shall bring round the agreeable excitement and the healthful diversions of another Henley Regatta; may its glories, its success, and its attractions increase, *in secula seculorum*, as the parsons say.

THE STEWARD'S CUP.

(Dead heat between Oxford University Club and St. George's Club of London.)

bering but eight summers, has already fixed its annual recurrence, as an epoch of important interest in aquatic annals. As a popular recreation, there can be but little doubt that river sports, congenial as they are to the notions of this sea-girt isle, deservedly rank next to the sports of the turf; and, indeed, where they are conducted upon the principles of the races at Henley, and with practitioners of such a quality, may even lay claim to superiority. In horse-racing, from time immemorial, there have been certain great stakes periodically run for; but in boating there has been nothing, until late years, which possessed the feature of a great display. While the one sport could boast of its Craven, its Epsom, its Ascot, Goodwood, Doncaster, and many other meetings, the river had but little or nothing to recommend it to the attention of the pleasure-seekers, save perhaps its Silver Sculls' contest, or occasionally 'a struggle between the rival universities. Henley, it is true, had been the chosen spot for gentlemen of the colleges to occasionally dispute the aquatic pride of places, but until eight years since, there was no fixed or great meeting, when the then residents, aided by the patronage of some of the leading gentlemen upon the river, got up a succession of prizes in two days sport, and so conducted as to leave no doubt that with the same degree of attention and regularity apparent in their arrangements, that it must be in future looked forward to as one of the great aquatic events of the season.

Thus far as mere matter of record, for which we doubt not many of the readers of the SPORTSMAN'S MAGAZINE will thank us. We had thought of giving engravings of the "Silver Wherry" and Diamond Sculls; but upon second thoughts, influenced also by the crowded state of our columns,

THE DISTRICT CHALLENGE CUP.  
(Won by the Henley Aquatic Club.)

#### A VOICE FROM THE PEA-AND-THIMBLE.

TO SIR JAMES GRAHAM, BART.

"SIR JAMES,—I'm just come back from Epsom, broken-hearted! It isn't the skeleton—no, not the ghost of what it was! Its glories is gone: there isn't a thimble to be seen—there isn't a pea moving: for I count as nothing the one little table that I saw under a hedge, where a poor fellow, with all his eyes in his elbows, looking out for the police, was trying to get a bit of honest bread for his family. And you have done this! For shame, Sir James! you, who owe so much to pea-and-thimble; only you play the game in such a different way! How often, in the House of Commons, do you hide the pea—how often do you shift the thimble—and how often is John Bull done by your dodging! But then, thimble-rigging in the House of Commons is a grand thing, because it's for thousands: when it comes to a race-course for a few shillings or so, why then it's wicked and infamous. Are we honest thimble-riggers to be persecuted, because we can't all be Home Secretaries? It would seem so.

"I tell you, Sir James, the thimble-rig was, I may say, the very life-blood of the Derby. I should like to know what harm it did. People—respectable, steady-going people, came down once a year with five or ten pounds in their pocket, a purpose to lose it. They knew they should be done, and they was done, and they always seemed to like it, for they was as safe to come agin the next year, safe as the green leaves.

"Thimble-rigging, Sir James, in some way, is a part of what people call the human mind. They must have it some way or the other, or they give themselves up to solitary drinking and swearing at the Income-tax: hoping, therefore, that if only for a fellow-feeling, you'll next year restore to us the freedom of our tables, I remain,

"For myself and brothers, your humble servant,

"PETER SWEETPEA."

"P.S. If you won't let us set up our tables again, will you at least buy 'em? For they're of no use to us, and you'll be sure to want 'em."

SUPERFLUITIES OF LIFE.—A lawyer and a physician much obstructed the hilarity of a very jovial company, by introducing a long-winded conversation on the superfluities of life, and how many were its needless wants. A merry fellow, vexed to be thus annoyed exclaimed, "Very true, gentlemen; I am myself an example of the justness of your remark, having lived all my life without wanting either a lawyer or a physician."

## GROUSING IN THE NORTH OF ENGLAND.

ANY, perhaps, may not be aware that in many of the northern counties of England grouse are found in almost as great an abundance as on the average of most of the Scottish moors, of course excepting those preserved by some of the lairds and wealthy landowners, and where they often literally swarm. In Northumberland, Cumberland, Durham, and nearly all Yorkshire, and a large proportion of Lancashire, Cheshire, and Derbyshire, grouse are tolerably plentiful, and in some parts, where they are carefully preserved, as good shooting may be had as the most fastidious sportsman would desire. As a proof of this, upon a small moor, not a dozen miles from Manchester, and not more than 300 or 400 acres, the keeper told me that on the 12th ult., thirty-eight brace were brought to bag. A large proportion of the moors in the counties which I have enumerated are let by subscription tickets of £10 and £15 each, to parties of twenty and thirty in number, and the shooting upon these, as may be supposed, is invariably the worst, from their being so incessantly beaten. Those who do not possess moors of their own, or any accommodating friend who do, generally purchase tickets of this description; and it can readily be imagined, that eight or ten different parties, with dogs and markers, beating a moor of perhaps not more than 1,500 or 2000 acres, backwards and forwards, day after day, are enough to drive every bird out of the country. With so many continually on the look out, the packs have no sooner settled from their flight, than they are marked down, and again sprung; and thus, after the first week or ten days, shooting, they have become so wild, that they will hardly ever lie to a dog, but rise at a couple or three hundred yards' distance directly they are disturbed. To this may, in a great measure, be attributed their preservation; as, were they not to take such good care of themselves, they would be soon shot down to a bird. When they have become so wild as to be unapproachable in the usual way, another method is often resorted to, not in many places, fortunately; and it would be well were all owners of moors to discountenance the practice most strongly, as it is one both unfair and unsportsmanlike, and tending to make the birds wild for another season—I mean that of driving; and as many may not be aware of the way in which it is managed, I will briefly mention it. The tracts of country in which grouse are found are generally intersected by loose stone walls, to mark different boundaries, and to portion it out into different divisions for sheep and cattle. Behind these walls, or concealed amongst the heather, if it is sufficiently high, the sportsmen are stationed, at intervals of from fifty to a hundred yards apart, and, of course, the more guns there are the better. A party of beaters are then sent off, who fetch a sweep of sometimes a mile or more, in a semi-circular direction, and drive the birds towards the battery awaiting them. Grouse, when they are sprung, generally fly in the same direction, and thus are tolerably sure to be exposed to the fire of one or more of the guns in ambush. Driving is mostly practised in the latter part of the autumn, when the grouse are all full grown and strong on the wing; and the shots obtained in this manner are always the most difficult, as they glide past like lightning; and a man who can occasionally pull down a bird to each barrel, may consider himself a first flight shot. I must confess that, on several occasions, I have joined driving parties, and killed birds in this manner; but then we were anxious to procure some birds "*coulé qui coulé*," and it was also at a period of the year, the beginning of December, when game generally (long bills excepted) was becoming select. It is certainly a hard case for the poor birds, after they have been harassed and driven about, perhaps daily for the first fortnight or three weeks, and repeatedly afterwards, that they are not allowed to remain in peace until the ensuing season. Were they permitted to do so, the increase of game resulting from the change would be an ample repayment for the loss of the comparatively trifling amusement which the practice of driving affords, and the old birds would lie much better to the dogs. The grouse hold too distinguished a place amongst the game birds of our country, both as to its size, plumage, and localities, for its preservation not to be an object of great interest to the sportsman, and this more particularly in the northern part of England, as the great facilities now afforded through the cheap and rapid transition by the rail from nearly all parts of England, for enjoying a little grouse at a moderate expense, would bid fair to their total extinction at no very distant period. Besides this, the grouse is the only indigenous game bird we have, whose actual feeding is attended with no expense. Their food is chiefly the shoots of the young heather, together with the whortle and cranberry; and although when these fail, they will descend to the cultivated lands, and pick up a scanty subsistence, yet it is then at a time when they can hardly commit any damage.

Another method of obtaining birds is often practised at this period of the year, and not only a most unfair one, but also attended with the loss of many more wounded than those actually killed, as the object is to secure as many at a shot as possible. It is called *stalking*, and the plan is this:—Grouse are very fond of sitting on the tops of walls, in rows of sometimes of a dozen, or more, for the purpose of sunning themselves in summer, or of huddling together for the sake of warmth in winter. In this position they are easily perceived, both from their elevated position, and also the noise made by the crowing of the old cock birds; and then,

by hiding near one of their usual haunts, or creeping quietly along the side of the wall, shots of a most deadly description are often obtained raking them "fore and aft," in nautical phraseology, after a very remorseless and anti-sportsmanlike manner. To the present predilection for the quantity of game produced after a day's sport, rather than for the amusement afforded in finding, and the skill in bringing it down, may, in a great measure, be attributed the increasing scarcity of it in so many parts of the country.

The late discussions, however, as to the proposed repeal of the present game-laws, have been, certainly, productive of some benefit in this respect; although I, for my part, cordially hope that they will continue unaltered. In this respect, the outcry raised against them will prove beneficial. It will be the means of bringing before the public instances of some of the large game-preservers, who, by the ravages committed upon the property of the tenants by the game, and the non-satisfaction of their just claims, have brought down odium upon themselves, the existing laws, and the whole community of sportsmen. If the battue system was abolished, sporting carried on in a fair and moderate manner, and cases of poaching from dire necessity, or very strong temptation, treated not too rigorously, all would feel the benefit of it. The attraction of preserves, over-stocked with game, would be withdrawn, the tenants would no longer complain of their losses, and, instead of a couple of days' slaughter in the course of the year, as many days' moderate sport in the week might be obtained; and this is, I think, the prevailing opinion throughout the country.

From the present appearance of the spring, an excellent supply of birds for the ensuing season may be anticipated. Although there was a very fair average amount of sport last year, yet, from the earliness of the season, and, consequently, the full grown size of the bird, popular expectation, as is often the case, exceeded the reality, and the returns of the various game lists at the end of the season were certainly smaller than, from the number and size of the different packs, were generally expected. The consequence is, that there are now a much larger proportion of old birds remaining, than for many seasons past has been the case; and, unless we have some heavy weather towards the end of the spring, a very abundant supply for both moor and stubble may be reckoned upon for the forthcoming season; and may we be all able to enjoy it thoroughly when it arrives!—*Sporting Review for June.*

## ANGLING FOR LADIES.

(From Punch.)

Sir,—I will not say that my motive for thus addressing you is purely disinterested, because, although I am a single man at present, I do not know what I may come to one of these days. At present I am wedded, alas, only to my profession; a circumstance which I mention because it has induced me to have my name on my door, or rather, between you and me, on my landlady's. A little humbug, you know, sir, is necessary in these times. My brass-plate—brass is a great thing—has procured me, I assure you, credit for many things; among others for being a husband. The other day, a letter was left at my lodgings for Mrs. PETER JOHNSON. I broke open the envelope addressed to that imaginary being. It contained a circular from a furrier's at the West End. You will think, perhaps, there was not much in that. Sir, there was a great deal in it; much to complain of. There were four woodcuts in it, elaborately executed, with the superscriptions following,—“The Polka Pelisse;” “The Marquise Pélérine and Muff;” “The Czarina;” and “The Spanish Mantilla.” Under each there were some five lines of letter-press, severally commending “this graceful and luxurious habit;” “this magnificent fur suit;” “superb dress,” and “wonderfully improved modification of the Spanish cardinal.” This insidious appeal to female vanity, being addressed to a creature of the furrier's brain, was of course harmless as far as I was concerned; but suppose, sir, that I had been married? I might have been teased out of my life for some of this finery, or my wife might have quietly gone and ordered it, or what is vulgarly termed “tick.” I want to know what right furriers or any other persons have to angle in this way for ladies! It is exactly like whipping with artificial flies for trout. The baits which they expose in those lady-traps, their shops, are quite mischievous enough. Persons about to marry of course expect domestic bliss; but how are they to obtain it if designing individuals are to go about putting Polka Pelisses and what not into their wives' heads? I call them downright promoters of unreasonable desires, fomenters of discontent, and disturbers of conjugal felicity. In the hope that by inserting the above, or something better, you will put the wedded public on their guard against these and other such like machinations,

I remain, Sir, yours indignantly,  
PETER JOHNSON, M.R.C.S.

VERY SIMPLE.—A gentleman lately became a member of the Royal Humane Society, under the impression that he could have one of their Drags to go in to Epsom Races.

MAYNOOTH GRANT.—GIBBS IN THE CHAIR.—Aldeiman Gibbs took the Chair at the city gathering against the Maynooth Grant. This was to be expected, seeing that the purpose of the meeting was to refuse putting down the cash.

# THE HISTORY OF BRITISH BOXING, FROM FIG AND BROUGHTON TO THE PRESENT TIME.

PERIOD III. 1786—1798.

FROM THE TIME OF MENDOZA TO THE APPEARANCE OF JEM BELCHER.

## CHAPTER V.

TOM (otherwise PADDINGTON) JONES.

**A**MONG the heroes of the Third Period, though his memory yet survives, owing to the protracted period to which his connexion with the ring was extended, Paddington Jones deserves a place, and with him we shall close this division, commencing the Fourth Period with the exploits of JEM BELCHER, whose first metropolitan competitor Tom had the honour to be.

Paddington Jones, including his numerous *outside* or *bye* affairs, is supposed to have fought more battles than any other pugilist. The Ring in Hyde Park was the principal arena of his contests, which in his noviciate were chiefly with roughs and commoners.

Paddington gave birth to this hero, from which place he derived his pugilistic title. Tom commenced boxer when quite a youth, and from the intuitive science which he displayed at that early period, attracted the notice of the veteran Tom Johnson, who pronounced him to be a promising pugilist.

Tom's first regular contest was about the year 1786, with one Jack Holmes, in Harley Fields, near where Cavendish-square stands, for the important sum of *half-a-crown*, and it appears it was as well-contested as if one hundred pounds had been the stakes—but Jones being a mere novice, and quite a stripling, and Holmes a full-grown man, the latter proved the conqueror.

A match was made between a one-eyed sailor, a most determined boxer, and Tom Jones, for ten guineas a-side, in February, 1786, which was decided in the Ring, in Hyde-park. The contest proved a desperate one. The sailor was considered as ugly a customer as ever stood up for a mill; but, in the event, Jones was declared victor. This hardy son of Neptune was not satisfied with the first broadside, and soon afterwards entered the lists for another ten guineas, when he was again vanquished—yet, like a perfect true blue, he was valiant enough to endure a third engagement, in which he was also beaten. The sailor displayed great bottom, and was punished severely before he gave in.

In the course of a twelvemonth, however, smarting under the recollection of defeat, Tom challenged Holmes to a second trial, (half-minute time) for a guinea and a half, when Jones obtained an easy conquest. This was on the 19th of December, 1786.

Aldridge, the Life-guardman, who had been vaunting of his great deeds of pugilism at Tom Johnson's house, near Lincoln's-inn-fields, was told by Joe Ward that he would produce a boy who should soon take the conceit out of him: accordingly, a match was made for two guineas against a watch, and Paddington Jones was brought forward as the man to accept the challenge. It was to have been decided in the street, in the first instance, but was removed to Harley-fields. On stripping, the guardsman smiled with contempt at his boy-like antagonist, and from his long arms, had the advantage at the first part of the battle, dealing out some sharp punishment; but the science and bottom of Tom soon stopped his career. After a most desperate conflict, which was witnessed by most of the celebrated pugilists of that day, who were astonished at the intrepidity displayed by Jones. The boy succeeded in milling his opponent in sixty rounds. Joe Ward seconded Jones.

Shortly after the above circumstance in the same fields, Jones fought one Jack Blackwell, a lime-burner, for ten shillings; and, although the latter showed complete ruffianism in the battle, was easily disposed of by Tom. Tom Burley, a companion of Blackwell, thought he could now vanquish Jones, and had the temerity to enter the ring, immediately on the fight being over, and challenge him for the like sum. Tom instantly accepted the cartel. Burley was also a complete ruffian, and tried what downright force could effect; but Jones so completely foiled his attacks, and returned blows with so much science and effect, that Burley was perfectly satisfied. These contests were rendered somewhat conspicuous, from the celebrated Major Hanger and his black servant performing the offices of second and bottle-holder to Jones.

Jones, in company with Pardo Wilson, anxious to witness the fight between Hooper and Bunner, at Bentley-green, walked down to Colchester, and was extremely stiff from the effects of his journey. The following day, a man of the name of Abraham Chalice, standing six feet high, and weighing fourteen stone (a perfect terror to the inhabitants of that part of the country from his great strength), observing Tom Jones upon the race-ground and to show his dexterity, out of mere wantonness, endeavoured to trip-up Jones's heels, and otherwise insulted him, also threatening to give him a good hiding. Tom, notwithstanding the great disparity between them, was not to be insulted with impunity, and, perhaps, with more pluck than prudence, instantly showed fight, to resent the unmanly conduct of this overgrown ruffian, who valued himself upon no other consideration but that of his uncommon strength. Chalice laughed at him with the most sovereign contempt, bidding him get along for "a boy," or he would kick his breech for his impudence. The spec-

tators were alarmed at the youthful appearance of Jones, who weighed but ten stone five pounds, and begged of him to desist, as the consequences might prove of the most serious nature; but Tom was not to be deterred, and soon pulled off his clothes. Upon setting-to, Chalice had the advantage from his superior strength, and kept it for three rounds; but in the fourth, Jones put in a hit under Chalice's ear, that knocked him down, when Tom Johnson offered to back Jones for one hundred pounds. Chalice, on standing up, appeared much confused, and Tom served him out in the same style, and continued punishing him every round till he could scarcely move, and who soon acknowledged he had never received such a complete milling before. The farmers and others, who witnessed the contest, were so pleased that this insolent fellow, who had rendered himself so disgusting about that neighbourhood, had received a good thrashing, immediately made a subscription purse, which soon amounted to thirty guineas, and presented it to Jones for his bravery.

The next day a countryman, well known in the neighbourhood of Bentley-green under the name of "Leather Jacket," mounted the stage, and, with considerable vaunting, publicly challenged any Londoner to enter the lists with him: the words had scarcely escaped from his lips, when up jumped Tom, without any consideration for his hands, which were bruised from the effects of the severe punishment he had bestowed upon the nob of Abraham Chalice the preceding day, and instantly began to prepare for action. The countryman seemed almost thunder-struck with astonishment, and with faltering speech exclaimed, "Na! na! you be the man that beat Ab. Chalice yesterday—I mean any one but you!" and made a hasty retreat from the stage, amid the laughter and sneers of the spectators at Leather Jacket's vain boasting.

On May, 14, 1792, immediately after the fight of Mendoza and Ward, in Smitham Bottom, near Croydon, upon the same stage, Jones fought Caleb Baldwin. The battle was for a purse of twenty pounds, but a dispute arising between the parties, although Caleb claimed the victory it was declared a drawn battle.

Soon after the above contest, Jones entered the ring in Hyde Park, with Dick Horton, a baker, for twenty guineas. The latter was considered to have some pretensions to pugilism; but Jones dealt out his hits so hard and fast, that the baker was glad to cry out enough!

Jones beat Keely Lyons, the Jew, at Blackheath, on the 10th May, 1794, for a purse of twenty guineas. Tom Johnson was second to Jones; it was a well-contested battle, in which much science and bottom were displayed on both sides.

In a second attempt on a stage at Hounslow, June 22, 1795, Jones disposed of the same boxer in 9 rounds, occupying 16 minutes. Lyons was a courageous pugilist, and a boxer above mediocrity.

On the renowned Jem Belcher's appearance in the metropolis as a pugilist, Tom Jones was the man selected to have the trial set-to with him. This came off at Old Oak Common, Wormwood Scrubs, on April 12, 1799.

Belcher was seconded by Bill Warr, and Bill Gibbons acted as his bottle-holder. Jones had for his attendants, Joe Ward and Dick Hall. Belcher was, at this period, only nineteen years of age. The odds were six to four upon Jem. The spectators were much interested upon the commencement of the battle, from the very high character which had been promulgated by Bill Warr, on the astonishing abilities that his pupil possessed, and the feats which he had achieved at Bristol. The first round considerable science was displayed upon both sides—the experience and skill of Jones were well displayed; and the dexterity and new mode of fighting, so exclusively Belcher's own, was soon exhibited; on the termination of the first round Belcher was knocked down. The advantages in the second and third rounds were perfectly reciprocal; but in the fourth and fifth Jones was levelled. In the sixth and seventh rounds Jones showed off in most excellent style: skill, manliness, and fortitude, no shifting, nothing shy, hugging out of the question, and hauling not resorted to: it was a clean fight throughout, stopping and hitting were the order of the day, and it might be deemed a model for pugilists in general to follow. Belcher, with all the gaiety and confidence of youth, now exhibited a new feature as a boxer. The odds had changed five to four on Jones. The eighth and ninth were spiritedly contested; but, in the tenth round, Belcher put in some tremendous hits, with the rapidity of lightning. This immediately altered the appearance of things, Jem was looked upon as the favourite, and the odds were laid accordingly. Yet Jones nobly contested for victory for the space of thirty-three minutes, before he gave in. Jem weighed twelve stone six pounds; and Tom Jones but ten stone five pounds weight. It should not escape the memory, that Jones stood up to Belcher (before that distinguished pugilist lost his eye) a considerably longer time than any other man ever did.

Simpson, a pupil of the late Tom Johnson, upon whom considerable expectations had been raised, was matched against Jones, for ten guineas a-side, which battle was decided on the Green, near Putney, in June, 1804. It was termed a good fight; and Tom proved the conqueror.

(To be concluded in our next.)

DEEDS NOT WORDS.—The members of Conciliation Hall are so earnest for a dissolution of the Union, that they have got up a *split* among themselves.

## THE EARL OF ALDBOROUGH

CURED BY

## HOLLOWAY'S PILLS.

The Earl of Aldborough cured of a Liver and Stomach Complaint.

Extract of a Letter from the Earl of Aldborough, dated Villa Messina, Leghorn, 21st Feb., 1845.

To Professor HOLLOWAY.—

SIR,—Various circumstances prevented the possibility of my thanking you before this time, for your politeness in sending me your Pills as you did. I now take this opportunity of sending you an order for the amount, and, at the same time, to add that your Pills have effected a cure of a disorder in my Liver and Stomach, which all the most eminent of the Faculty at home, and all over the Continent, had not been able to effect; nay! not even the waters of Carlsbad and Marienbad. I wish to have another Box and a Pot of the Ointment, in case any of my family should ever require either.

Your most obliged and obedient servant,

(Signed) ALDBOROUGH.

A Wonderful Cure of Dropsy of Five Years' standing.

Copy of a Letter from Mr. Thomas Taylor, Chemist, Stockton, Durham, 17th April, 1845.

To PROFESSOR HOLLOWAY.

SIR,—I think it my duty to inform you that Mrs. Clough, wife of Mr. John Clough, a respectable farmer of Acklam, within four miles of this place, had been suffering from Dropsy for five years, and had had the best medical advice without receiving any relief. Hearing of your Pills and Ointment, she used them with such surprising benefit that, in fact, she has now given them up, being so well and quite able to attend to her household duties as formerly, which she never expected to do again. I had almost forgotten to state that she was given up by the Faculty as incurable. When she used to get up in the morning it was impossible to discover a feature in her face, being in such a fearful state. This cure is entirely by the use of your medicines.

I am, Sir, yours, &c., &c.,

(Signed) THOMAS TAYLOR.

This wonderful medicine can be recommended with the greatest confidence for any of the following diseases:

Ague	Inflammation
Asthma	Jaundice
Bilious complaints	Liver complaints
Blotches on the Skin	Lumbago
Bowel complaints	Piles
Colics	Rheumatism
Constipation of bowels	Retention of urine
Consumption	Sore throats
Debility	Scrofula, or King's evil
Dropsy	Stone and gravel
Dysentery	Secondary symptoms
Erysipelas	Tie-douloureux
Female irregularities	Tumours
Fever of all kinds	Ulcers
Fits	Venerical affections
Gout	Worms of all kinds
Head-ache	Weakness, from whatever cause, &c., &c.
Indigestion	

These truly invaluable Pills can be obtained at the establishment of Professor HOLLOWAY, near Temple Bar, London, and of most respectable Venders of Medicines throughout the civilised world, at the following prices:—1s. 1½d., 2s. 9d., 4s. 6d., 11s., 22s., and 33s. each Box. There is a considerable saving by taking the larger sizes.

N.B.—Directions for the Guidance of Patients in every Disorder are affixed to each Box.

THE TRULY WONDERFUL CURES OF ASTHMA AND CONSUMPTION, COUGHS, AND COLDS, Which are everywhere performed by

**DR. LOCOCK'S PULMONIC WAFERS,** have long established them as the most certain, perfect, and speedy remedy in existence for all disorders of the breath and lungs.

The following testimonials will be read with interest:—

From Mr. J. S. Weir, chemist, 1, Lowgate, Hull.

"April 9, 1845.—Gentlemen,—The following unsolicited testimony in favour of your inestimable medicine has just been received; this case, however, is only one among many which constantly pass under my notice.

"Yours respectfully, JOS. S. WEIR.

ANOTHER CURE OF A FOURTEEN YEARS' ASTHMATIC COUGH.

Read the following extract of a letter just received from Mr. Edward Preston, coal-merchant, Paragon-street, Hull, dated April 6, 1845:—

"Sir,—Grateful for the relief my wife has experienced by the use of Locock's Pulmonic Wafers, from a distressing asthmatic cough, with which she was afflicted for the last fourteen years, I feel a great desire that her surprising cure should be made known, for the benefit of those suffering as she did.—Yours, &c., EDWARD PRESTON."

ANOTHER EXTRAORDINARY CURE.

From Mr. J. Waterhouse, surgeon, &c. Broad-street, Halifax. April 1, 1845.

"Gentlemen,—I can conscientiously bear testimony to the general good effects of Dr. Locock's Wafers, as very many after a trial have called upon me to express their satisfaction and gratitude. The following case is but a sample of many others in which the medicine has surprised the patient by its rapidity in working a wonderful cure.

"A female residing in the neighbourhood of Halifax had long been subject to a confirmed asthmatic cough, when her husband applied to me. He said he was persuaded she could not live many days, as from cough and want of rest she was so much enfeebled; and the use of medicine, in which she had persevered for many months, had given her no relief. The very first dose of the Wafers wrought a surprising change; they soothed her cough, and gave her a comfortable and refreshing sleep; and by persevering in their use, her strength has returned, and without the aid of any other medicine, the patient, who had been a long and apparently hopeless sufferer, is now fully restored to health.

"This case I can vouch for, and can satisfy any inquiries by reference to the parties. Yours, &c., J. WATERHOUSE."

The particulars of many hundred Cures may be had from every agent throughout the Kingdom and on the Continent.

DR. LOCOCK'S WAFERS give instant relief, and a rapid cure of asthmas, consumptions, coughs, colds and all disorders of the breath and lungs, &c. &c.

TO SINGERS AND PUBLIC SPEAKERS they are invaluable, as in a few hours they remove all hoarseness, and increase the power and flexibility of the voice. They have a most pleasant taste.—Price 1s. 1½d., 2s. 9d., and 11s. per box.

AGENTS.—DA SILVA and Co., 1, Bride-lane, Fleet-street, London.

CAUTION.—To protect the public from spurious imitations, Her Majesty's Honourable Commissioners have caused to be printed on the stamp outside each box, the words "Dr. Locock's Wafers," in white letters on a red ground, without which none are genuine. Sold by all Medicine Venders.

Now Publishing, in Weekly Numbers, price 1d., and in Parts, price 6d.

**THE HISTORY OF THE CONSULATE AND EMPIRE OF FRANCE,** under Napoleon, by M. THIERS, Author of the "History of the French Revolution," late President of the Council, and Member of the Chamber of Deputies.

CONDITIONS.—The work will be neatly printed in two columns, royal octavo, from a new and beautiful type, and on fine paper.

It will be uniform with "The People's Edition" of Thier's History of the French Revolution, forming, together, four handsome volumes.

On the completion of the Work, a general Preface, introductory to the History of Napoleon, with Titles, Index, &c., will be given, thus forming a

complete standard classical book of general reference, and interesting perusal.

Of the vast interest connected with the important national events which took place during the consular and imperial rule of Napoleon there can be no question. In undertaking to record the events of this momentous period, M. THIERS, from his high position in the state, had the good fortune to obtain possession of a multiplicity of original and official documents which embrace the minutest details of all the instructions, orders, &c., dictated by Napoleon himself to his Ministers of State, Privy Councillors, Prefects, Marshals, and others. Of the success of his undertaking, the rapid sale of the three first volumes, which were issued at Paris on the 15th of March, amounting to 16,000 in one day, and the numerous editions which have been published at Brussels, Leipsic, and other places, afford the most splendid testimony.

London:—G. VICKERS, Holywell-street, Strand.

In One Volume, neatly bound, price 5s., a new Historical Romance, by a highly popular writer, illustrated with fine Engravings, founded on fact, entitled

**WILL WATCH; A TALE OF THE COAST.** This highly interesting Work is founded on popular facts, and abounds with scenes and incidents of the most thrilling description, portrayed in a bold and masterly style.

The first complete and uniform Edition of **THE WORKS OF M. EUGENE SUE**, closely printed in large 8vo., price 6d. each part, containing 64 pages, equal in amount to a twelve volume. **THE MYSTERIES OF PARIS**, is now nearly complete.

\*. This is the only cheap, complete, and faithful translation from the latest Paris Edition, with explanatory notes by the Editor. All other cheap issues of this work are from the spurious Belgian editions, pirated from the Paris newspapers, previous to its revision by M. Eugene Sue himself.

**A BOOK FOR THE MILLION!**

To be completed in Sixty Numbers at One Penny, or Twelve Monthly Parts at Sixpence each.

A new and elegant Periodical, consisting of sixteen closely-printed pages, double crown, and embellished with several superb Engravings, by Landells and others, entitled,

**TALES OF SHIPWRECKS AND ADVENTURES AT SEA.**—Containing talented sketches of the Sea and Seamen, and truthful Narratives of Shipwrecks, Fires, Mutinies, Famines, and every Danger of this Life of Peril, rendering it the handiomest, largest and best Publication ever offered to the public.

Just published, in One Volume, 8vo., handsomely bound, price 5s., with nearly Seventy Engravings, an entirely New Edition, revised, and nearly re-written, of the popular Romance of

**DICK TURPIN, THE HIGHWAYMAN.** By HENRY D. MILLS.

The following **SPORTING HANDBOOKS** are all uniformly bound in cloth, gilt edges, price 8d., or post free, 1s. each. Embellished with an outline Engraving of a Ground and Players.

**CLARK'S CRICKETERS' HANDBOOK.** Containing the History and Origin of that manly Game,—an account of celebrated Players, and remarkable Matches; instructions to Young Cricketers, and the

**NEW LAWS OF CRICKET.**

**WRESTLING AND PEDESTRIANISM.** With full Instructions in Training for Athletic Sports and Exercises; with Engravings.

**MODERN BOXING.** Containing the History and Practice of Pugilism, Illustrated with Numerous Engravings.

**SPORTING SONGS.** Containing upwards of 100 of the most approved Sporting Songs extant.

London:—W. M. CLARK, 17, Warwick-lane, Paternoster-row. Sold by every Bookseller in the kingdom.

LONDON:—Printed for the Proprietors, by W. M. CLARK, at his Steam-Press, 10, Red Lion-court; and published by him at 17, Warwick-lane, Paternoster-row. J. CLAVE, 8, Fleet-street; and all Booksellers in the United Kingdom.

# THE Sportsman's Magazine & LIFE IN LONDON

No. 6. FOR THE WEEK ENDING JUNE 28, 1845. THREE HALFPENCE

## SOME ODDMENTS ABOUT ASCOT.

BY OLD MILES.

**R**Y Boy having last week shot his bolt, it is but proper that I should, take my turn in the ensuing one: and to this the recent glorious meeting on Ascot Heath gives me an unwonted fillip. The road and "all that sort o' thing," (as my friend, the late Charles Matthews, used to say in the days, or rather nights, when he was "at home" at the Lyceum—now Mrs. Keeley's resuscitated domicile) I leave to younger pens; be it mine to talk, twaddle if you will have it so, of "auld lang syne," and so come down to times present. Here, upon the brown heath, in the times of the Georges and William, was exhibited many "a goodly pageant," as the old chroniclers term it; but none, even Old Miles candidly admits, that exceeded, if they equalled, the royal splendours of last Tuesday and Thursday.

Despite the "black sheep," and legs of a ditto colour, the turf stands high as ever, and long will it remain so in the esteem of every Englishman; and, we feel sure, of Englishwomen too; else why so fair, so lovely a muster as that we have just witnessed? In company it was superior to all, in sport to most, and those who delight in beholding a patriotic queen surrounded by a faithful people, a splendid nobility, mixing with their brethren—for every man is our brother in public life—a well-kept course, good racing, smiling faces, should have done as we did—have gone and witnessed the sport at royal Ascot.

There is one point whereon Old Miles has not seen the scribes of the press comment. It is this: he does not think it an omen of good that trainers &c., should so extensively become proprietors of race-horses, or that jockeys should turn betters, which it is notorious so many of them are. These practices open a door for speculation and humbuggery: a field for booty, play, and sham-abraham. Jockeys are, in my opinion, like opera squallinas and players termed "stars," paid too highly; and, if they win a race, are feed exorbitantly. Fair remuneration, and even an additional reward for clever winning, I would grant them:—50*l.* for instance, for a Derby: but when we hear of hundreds being given, I pity the folly of the giver, and dread the effect it may have upon the receiver. In no case should Jack be as good as his master.

Let me now, for it must be interesting to sportsmen, take a retrospective glance at the transactions of the turf, and mark, the progressive alterations which have taken place, and the immense increase in the number of horses for the last fifty years.

In 1793, the race-list of Epsom, for instance, presented a different aspect from that of the 1845. The races at Epsom, in 1793, commenced on Tuesday, the 14th of May, and the only race on that day was for a 50*l.* plate; three horses were entered, and three started. **FOUR MILE HEATS!** This constituted the *whole business* of Tuesday.

On Wednesday, a similar plate; **FOUR MILE HEATS!**

On Thursday, there were three races, viz. the Derby stakes, a 50*l.* plate, and a match.

On Friday, two races, the Oaks and a plate of 50*l.*

The sport concluded on the following day, Saturday, with a handicap plate of 50*l.* for which the Duke of Queensbury's ch h Bustler, walked over the course, and a Hunter's Sweepstakes, of 10 *gs.* each (*four mile heats*), three subscribers, and which won by Mr. Durand's b h by Phlegon, beating Mr. O'Kelly's Blue and Buff and Mr. Turner's Maria.

In the same year Ascot-Heath races took place on Tuesday, the 11th of June (one lunar month after Epsom). The list presented a much more extensive bill of fare than that for the former place. Four races, for the first day, appeared on it, the first being "His Majesty's Plate of 100 *gs.* for hunters, *four mile heats*;" for which three entered and started.

Then followed the "Prince's Stakes of 50 *gs.* each;" for which Lord Egremont's b f by Mercury, walked over.

The "Macaroni Stakes of 20 *gs.* each," for which Mr. O'Kelly's Musician walked over.

The business of the day concluded by a subscription of 10 *gs.* each; three subscribers. Won by Mr. O'Kelly's h by Doge.

There were *five days' races* at Ascot, as at Epsom; but there were a greater number of races, and the entries were more numerous. The most inveterate stickler for old usages will not, I apprehend, assert, that we have "reformed" this slow-coach system altogether.

It was on Ascot course that I last saw the late Frederick, Duke of York. There he sat on his sturdy dapple-grey cob, his riding-stick resting straight upon his left foot, his green hunter's coat, buttoned close up to his neck, his black military stock stiff as a soldier upon drill, despite the hot day, and his jolly features beaming good nature on the scene: there he sat, Lord George Cavendish patting his steed's mane, and Mr. Greville waiting for a hearing in the centre of the railed course. We could paint him from our mind's eye. But who the deuce could form an idea of him, "in his habit as he lived" by staring at that brass image in a winding-sheet, stuck on the top of a huge stick of peppermint in Carlton-gardens? No one: any more than they could "realize" George the Fourth, from the lump of metal enveloped in a damask table-cloth, which sits shoeless at the corner of Trafalgar-square. But Old Miles is digressing. So now, by a hop, step, and jump, we come down to present days, and give a few

## RECOLLECTIONS OF THE ASCOT CUP.

Fashion, the second nature of man's pleasures, has for some score of years last past decreed that the Cup at Ascot should rank next to the Derby at Epsom in popular favour. It was either Dr. Johnson or somebody else who said, that a concert would be one of the pleasantest things in the world only for the music: thus the course at Ascot on the Cup day would be one of the pleasantest places in the world for an old gentleman who loves staring at pretty women, only for the racing. No sooner is it noon of Thursday in the Ascot week, than the course, from the Royal Stand to the distance chair, becomes a bright particular mass "of fair women and brave men." There they sparkle their ambrosial lives, all shewn within and without, caring as little for race-horses as horse-marines, when

Hark! from the weighing-stand peals forth the bell,  
And "clear the course" dissolves the gorgeous spell.

Then the whole paradise of Houris is put to the rout, that four or five horses may exhibit their graces and their paces.

In 1840 the Ascot Cup was won by St. Francis, the property of Mr. Gurney, a horse that run for all his engagements in the name of Pettit, who trained, and continues to, for that gentleman. On this occasion seven started, but only the winner, Montreal, Bloomsbury, and Flambeau were placed. This was a very interesting contest, as it brought together the best horses of the year, including Bloomsbury, the celebrated winner of the Derby in 1839. St. Francis had carried off the Queen's Vase on the preceding Tuesday, and was a great favourite at starting. He made a waiting race of it to the distance, according to the tactics of Sam Chifney, who rode him; then came with his rush, and won a splendid race by a short length. The number of subscribers was seventeen.

In 1841 the winner was Lanercost, a north country horse, who ran third to Don John for the St. Leger, and, perhaps, on the day, the finest looking three-year old ever brought to the post. In this instance six started, all of whom were placed. The winner, Flambeau, St. Francis, Bokhara, Bloomsbury, and Teleta. It was a very spirited affair, and so resolutely contested, that Flambeau and St. Francis made a dead heat for second place. The number of subscribers was fifteen; Noble rode the winner.

In 1842 the Cup was looked forward to with much interest, inasmuch as it was regarded as a trial of excellence between the north and south country stables, and the issue was in favour of the former, the champion being Mr. Orde's famous mare Beeswing.

Five started, viz., the winner, The Nob second, St. Francis third, Eringo fourth, Lanercost fifth, and beaten off. The mare made the running at very severe speed, was never caught, and won by half-a-length. St. Francis, who waited as usual, waited, they said, too long; and Lanercost was

beaten, according to his owner, in consequence of being made safe. The number of subscribers was eleven: Cartwright rode the winner.

1843, was the dullest Ascot for many years, not from the lack of sport, but from the absence of Royal sunshine, and the rain of heaven being too plentifully present instead of she who "reigns over us." Ralph was the winner, as our table shows, only four coming to the post, viz., Ralph, St. Francis, Robert de Gorham, and Vulcan.

Of the details it only remains to say, that, at starting, James Robinson took him away in front, out-paced his horses every yard, was never caught,

THE QUEEN'S VASE.—WON BY MR. HILL'S SWEATMEAT.

and won in a common canter, hard held. St. Francis was second, the other two as we have placed them. It was never even an apology for a race.

And now we come to the lustrous 1844. Upon the principle that when things come to the worst they must mend, Ascot Races, which had been going to the dogs for several years, evinced symptoms of revival when Lords Kinnaird and Errol held the office of master of the buckhounds; and, under the auspices of Lord Rosslyn, they burst forth like a giant refreshed.

The Autocrat of all the Russias was brought by her Majesty, to view the splendid and truly national sight, and hence resulted the extinction of the Ascot Cup, to arise in a new and more magnificent form. And here Old Miles cannot but remark on the way they do the "Pictorial" papers, and likewise do their readers. One of the six-penny children's books actually described the Queen's Vase, as "THE ASCOT CUP!" and another stated its winner last year to be ALICE HAWTHORN! So much for newspaper accuracy: the sporting papers can alone be trusted on sporting affairs. As we last week gave the Cup in its new form as the Emperor of Russia's Gift, we here append a list of the

#### WINNERS OF THE ASCOT GOLD CUP.

(NOW REPLACED BY THE EMPEROR'S PLATE.)

Winner.	Owner.
1807 Master Jackey ... ..	Mr. Durand
1808 Brighton ... ..	— Fermor
1809 Anderida ... ..	General Gower
1810 Loiterer ... ..	Lord Lowther
1811 Smallhopes* ... ..	Mr. Ashmole

\* In consequence of the owner having omitted to make stakes, the cup was given to Mr. F. Craven's Jannette, the second horse.

Winner.	Owner.
1812 Flash ... ..	Lord Lowther
1813 Lutzen ... ..	Mr. Trevanion
1814 Franks ... ..	— Batson
1815 Aladdin ... ..	Duke of York
1816 Anticipation ... ..	Mr. Thornhill
1817 Sir Richard ... ..	— Blake
1818 Belville ... ..	Lord Darlington
1819 Anticipation ... ..	Mr. Goddard
1820 Champignon ... ..	— Fraser
1821 Banker ... ..	Duke of York
1822 Sir Hildebrand ... ..	Mr. Ramsbottom
1823 Marcellus ... ..	Lord Darlington
1824 Bizarre ... ..	Lord G. H. Cavendish
1825 Bizarre ... ..	Lord G. H. Cavendish
1826 Chateau Margaux ... ..	Mr. Wyndham
1827 Memnon ... ..	Lord Darlington
1828 Bobadilla ... ..	Mr. Molony
1829 Zingancee ... ..	Lord Chesterfield
1830 Lucetta ... ..	Sir Mark Wood
1831 Cetus ... ..	Sir Mark Wood
1832 Camarine ... ..	Sir Mark Wood
1833 Galata ... ..	Lord Exeter
1834 Glaucus ... ..	Lord Chesterfield
1835 Glencoe ... ..	Lord Jersey
1836 Touchstone ... ..	Lord Westminster
1837 Touchstone ... ..	Lord Westminster
1838 Grey Momus ... ..	Lord G. Bentinck
1839 Caravan ... ..	Capt. Berkeley
1840 St. Francis ... ..	Mr. Pettit
1841 Lanercoast ... ..	— Ramsay
1842 Beeswing ... ..	— Orde
1843 Ralph ... ..	Lord Albemarle
1844 The Emperor ... ..	Lord Albemarle
1845 The Ascot Gold Cup discontinued, and its value given to augment other stakes; and in its stead, the Emperor of Russia's Gift, won by—	

The Emperor ... .. Lord Albemarle

And here Old Miles layeth down his pen, talling his article with "cunynge representations craftely ymprinted on woodde," (as saith his old friend "Wynkyn de Worde,") of the QUEEN'S VASE and the ROYAL

THE ROYAL HUNT CUP.—WON BY LORD STRADBROKE'S EVENUS.

HUNT CUP, according to the promise made by his Boy in Number five of this paper.

THE QUEEN'S VASE.—WON BY MR. HILL'S SWEETMEAT.

The splendid piece of plate under this name consists of an elegantly-shaped vase, the body of which is covered with an ornamental pattern in *cinque centos* style. The cover is surmounted by a group representing the conversion of St. Hubert, the patron of huntsmen. The royal arms of her Majesty and Prince Albert form a portion of the stem, which is composed entirely of rich *alto relievo* ornaments. The chief beauty of the vase, however, consists in the elegant group which surmounts the lid. St. Hubert is on his knees in adoration, having dismounted on seeing, according to the legend, a stag of noble appearance, elevated on a rock, bearing a crucifix of light betwixt his antlers. The horse, as well as the hounds, appear quite unconscious of the mysterious presence of the miraculous stag; for the former is represented leisurely grazing, and the hounds are quietly resting at their master's feet. This group, though of small dimensions and very simple in its composition, is one of the most attractive ever executed by Mr. Cotterill. The horse is finely proportioned, and its lineaments, as well as those of the stag and hounds, are exquisitely beautiful. The figure of St. Hubert is graceful, and his expression is strongly indicative of his new-born piety. In short, the whole group is one of the most picturesque ever executed in the precious material of which it is composed.

THE ROYAL HUNT CUP.—WON BY LORD STRADBROKE'S EVENUS.

This cup was modelled and cast in silver at the establishment of Messrs. Hunt and Roskell (the successors to Storr and Mortimer,) of Bond-street. It consists of a group of four figures and a horse, representing the conflict between King Robert Bruce and three men employed to assassinate him, as he retreated from the battle of Glendochart, near Tayndrum. The history of this event is described at length by the historian Barbour, and was the subject of one of the prize cartoons exhibited in Westminster-hall. The assassins watched the king until, being alone, he had entered a narrow pass between a lake and a precipice, and where he had scarcely room to manage his steed. They sprang upon him at once; one seized his bridle, but was cut down by a blow that hewed off his arm; another grasped Bruce by the stirrup and leg, and endeavoured to dismount him. The king put spurs to his horse and threw the man down, still holding by the stirrup. The third assassin, taking advantage of an acclivity, sprang up behind the king upon the horse. Bruce, however, whose personal strength is uniformly mentioned as being immense, extricated himself from his grasp, threw him to the ground, and cleft his skull with his sword. By similar exertion he drew his stirrup from the grasp of the man he had overthrown, and killed him with his sword as he lay under the horse's feet. All this is represented in the group. The figures are full of fire and character, and the composition is perfection.

ROYAL THAMES YACHT CLUB.

MYSTERY. VIXEN. BLUE BELL.

PRIMA DONNA.

MATCH FOR THE CLUB CUP, ON MONDAY, JUNE 16TH, 1845.

[The PRIMA DONNA (C. R. Tatham, Esq.) finally passing the BLUE BELL in Gravesend Reach—the VIXEN and MYSTERY in the distance.]

I sing not of battles, of storms, or the like,  
Of heroes who've triumph'd, or cowards who strike;  
No,—my theme, honest hearts! is the science of sailing,  
Where pleasure, with health, is combined without railing,  
Yet victories many my verse shall unite,  
R.T.Y.C. matches, and the sport off "the Wight;"  
The trumps of the Yacht Club, the race for the Cup,

The fair Prima Donna who distanced,—who bravely bore up,  
Defeating the Mystery and Blue Bell so fleet,  
Who, though iron in heart, were doomed to defeat.  
Then loudly let's raise to her honour the strain,  
While I sing of the lads who sport o'er the main;  
Of right jolly fellows, true blue jackets all,  
Tight vessels, in trim, whether cutter or yawl.

## CHEAP TRIPS ROUND THE WORLD.

(From *Punch*.)

THE rapidity with which locomotion is now carried on has led, we believe, to a project for a cheap trip round the world, that is to take place in the course of the ensuing summer. We presume there will be handbooks for the travellers who start on this expedition: and a little brochure, to be called—"Every Man his own Columbus," would not be inappropriate.

We have not yet heard the particulars of the intended cheap excursion: but as it is to be "round the world," the party will probably start from London Bridge, go along by Blackwall, Greenwich, Gravesend; and having gone fairly round the world, will come down the other way, through Putney Rridge, and so on, by Battersea and Vauxhall, to the Old Swan Pier, where the fourpenny boats lie at anchorage.

For our own parts, we should prefer stopping at home, and letting the world go round us, to going round the world; but taste is everything. It would not be a bad spec. to send up a monster balloon, with a good supply of provisions, to accommodate a party that might be desirous of remaining stationary in the air to witness the world's going round; and the earth's revolution being complete, the party could pop down again on to the very spot they had started from.

This would enable one to see quite as much of the world as if one went round it, and the trouble would of course be nothing in comparison. The treat would be similar to that of witnessing a grand moving panorama, which is much better than running from one end to the other of a tremendous picture in order to look minutely into every part of it.

Among the promised advantages of the cheap trip round the world, is perpetual summer; but how the projectors intend to manage this part of the business we are quite at a loss to conjecture, unless they take a cargo of summer weather out with them. Where the article is to come from we really don't know, for the summer has been so long due that it appears to be keeping out of the way to avoid its creditors.

We presume there is a Sunshine Company at the North Pole; for if it is possible to have a Wenham Ice Company in full play in the Strand during the dog-days, it may be perfectly practicable to establish an emporium for heat in the coldest climates.

## A COOL PROJECT.

A concern has lately started in the Strand, under the title of the Wenham Lake Ice Company. The stock of the company appears to consist of large blocks of ice, so that great care must be taken not to melt the whole of the capital. We do not quite understand what the object of the company may be, or whence the profit is to be derived; but the enormous lumps of ice look as if they were intended to pave the streets, and the ice would, no doubt, prove a formidable rival to the wood, if the former should be brought into competition with the latter. The only question would be, as to the durability of the ice, though its hardness seems to denote that it has many of the properties of frieze-stone.

By the way, the Wenham Lake Ice Company might make a very excellent speculation of laying down the Serpentine, or some other popular river, with ice, for the benefit of skaters between the bathing and the skating seasons. We recommend the directors to look to this as speedily as possible.

## ANOTHER NEW SPEC.

Among the speculations at present in progress is a Great Libyan Desert and West End Junction Arabian Sand Association, for the purpose of supplying England and the Continent of Europe with sand paper. Tables have already been prepared, showing the daily consumption of this useful article in the metropolis alone; and it is suggested that by the manufacture of scouring paper also, the company will be able to take advantage of the present rage for travelling, and put it in the power of any person of moderate means to scour the whole of the Continent. A sample of the sand may be seen at the company's temporary (very temporary) offices in Tooley-street.

**ELECTION NEWS.**—As a proof of the importance which is attached to the Registration, we may mention that we saw at the door of a marine store shop, an iron grate having on it in large letters the word, "REGISTER."

**HIGH LIVING.**—A Yankee friend of ours had a present of game sent him from the country, which was so 'tarnal high that he was obliged to go to the top of the church steeple to eat it.

**AN INCURABLE COMPLAINT.**—The Royal Albert and Victoria Yacht is still on the sick list. She was recommended sea-bathing some time back, but she shook so violently when she went into the water, that it thought that the remedy would be the death of her. She has been laid up at Portsmouth ever since, and great fears are entertained whether she will ever recover the shock.—*Punch*.

**MASTER WOOD.**—We saw advertised the other day, in the "*Times*," a "*Mahogany child's chair*." We have heard of wooden-headed boys who won't or can't learn at school; but we should be curious to see this mahogany child whose chair is announced for sale.—*Punch*.

**AMUSING IRONY.**—Some Birmingham workmen have presented Prince Albert with a watch, key, and seals, in admiration of "his patronage of the Fine Arts! This is the first time we ever knew the Brummagem people were giving to joking.—*Punch*."

## CORRESPONDENTS.

**A REGULAR READER, Huddersfield.**—Your letter was overlooked last week. We will take a dip into Christie Whyte's History of the Turf, and tell you something about the horses named; but fear that the master, which will involve some research, will be considered very dry by many. We do not recollect the exact time and number of race, but will make a search, and if successful, insert the answer.—*Tom Ward* was born Dec. 26, 1806, and is therefore almost 46 years of age. He was beaten by Peter Cayway, and by Josh Hudson, and drew a battle with Abbott.—The Ledger winners will be given, when the race comes off, as in the case of the Derby, Oaks, and this week of the Ascot Cup.

**ROBERT.**—Alice Hawthorn never started for the Lager.

**AQUATARS.**—The three days of the Thames Regatta, the 24th, 25th, and 26th of the present month, are almost equally attractive. Of course the final heats are the most provocative of general betting.

**YOUNG SCOTLAND, Edinburgh,** does not exhibit much of that clearness of intellect for which we have always given "Auld Scotland" credit. We doubt if he knows his own meaning: "A History of Barriar Boxing, is surely plain English; and how the deuce would he have history written, but by beginning with bygone times, and coming down to the present? Suppose he was told (to compare little things with great) "while sipping his ale or blowing a cloud," that a person wrote thus to David Hume the historian. "Sir,—The first volume of your History of England is all very well; but what's the use of telling us about the Romans, Danes, and Saxons, the Norman conqueror and his successors? you should have begun your history with the American War, and all about General Burgoyne, David Garrick, and the riot at last Brentford election, that's what the people here want; nothing else goes down; and if you'd just put in the particulars about the execution of the two Perreaus for forgery, depend on it your history would sell better here." Now would you not think the writer fuddled? He takes up a history and expects to find it a newspaper, the blunder lies not with the writer, but himself. We can't help your feeling no interest in reading the doings of the old school, and "such like old rubbish," but better informed people do, and the shortest innde will be for you to have a paper printed for yourself.

**R. SAUNDERS.**—Rabbits do not fall within the definition of game under the act of 1 and 2 William IV., chap. 32, nor the previous act of 9 George IV., chap. 69; but, except when acting under the "command or direction" of the warren owners or tenants, the same restriction applies to killing them as to a hare or pheasant, viz., the necessity of having a certificate.

**ROBIN.**—990 is an even number. The cipher is a figure, and a very important one, when placed after another figure, although nothing when before it.

**INQUIRER.**—There is no grammatical inaccuracy in the phrase "the man was hung," nor in "the man was hanged."

**A READER.**—A horse is not a mare, although a mare may be a horse. Is the question worth a penny's worth of postage, or the answer the two lines it occupies?

**B.** had better send his questions to an agricultural magazine. We have not space; and if we had, the subject is rather theoretical than useful.

**A TRIO.**—A and B play a game at cribbage thus:—A plays a queen, B a nine, A an ace, B a deuce, A a three, B a deuce, A a deuce, B a deuce. What does A score?—Three for the sequence. How many does B score?—Eight; six for the pair royal, and two for thirty-one.

**KNOWNOTHING.**—Cotherstone broke down at Goodwood last year in the race for the 300 sovs. sweepstake, which was won by Aristides in the commonest of canters. The Gold Cup was won by Alice Hawthorn, who had it all her own way from end to end; Cotherstone, who had gone the day before, was not in the race.

**R. DONAH.**—Thanks for your suggestion about the portraits.—It shall be attended to when there are authentic originals to be got at. We will give you a few words next week, at present, time and space press us.

**X.Y.Z.**—Arbroath.—We have just received your letter, as we received the proof of the very article you ask for. The hooks mentioned, we should think fit for Scottish streams. We will give shortly a numbered engraving of a series of hooks from 1 to 13 inclusive of the proper size.

**CRICKET.**—T. A. R.—You will perceive we have already complied with your request.

**TIMON.**—You are quite right; the new rules, will, in our opinion, have anything but a good effect on the generality of clubs; and even at Marylebone we have, since their passing, found that they have not been strictly adhered to. The duties of an umpire require a clearer definition than they seem likely to get, and ought not to be mystified and rendered uncertain by additional and uncalculated responsibilities. How is the fact to be accounted for, that in the match between the M. C. C. and Ground and the Western Counties, Dakin was allowed to bowl, or rather throw, all one day, and yet for the same thing be called four times in succession on the next? Either great injustice was done him on the second day, or he was palpably favoured on the first.

**TOM THUMB.**—A man of your inches ought never to attempt such a thing, but little men are proverbial for possessing great souls, and are almost to be pitied that their corporeal power will not enable to compass the promptings of their mental aspirations.

**P. Q.**—Four, five, or six balls, as may be previously agreed. At Lord's, four constitute an over.

**FAZ.**—Apply to *Bell's Life*.

**T. S.**—What is the duty for a four-wheel carriage; wheels under thirty inches, and a pony not exceeding thirteen hands in height?—The duty on the carriage will be £3 5s., and that of the pony £1 1s., with an addition of 10 per cent. upon each. The liability of the horse to be taxed involves also the carriage with it. The purpose for which it is used is immaterial.

**N. B. Warwick.**—If the horse was declared not to start before the time you made the bet, it does not stand good.

\* \* The FIRST PART of "THE SPORTSMAN'S MAGAZINE" for June, containing forty-two engravings, and upwards of fifty pages of letter-press, in an embellished wrapper, may be had by order of all book-sellers. ALL the numbers of the SPORTSMAN'S MAGAZINE are in print, and procurable. We shall in a week or two, as soon as the arrangements are completed, publish a STAMPED EDITION, to forward by post. Price 2½d.

## OUR WEEKLY CALENDAR.

AN EPHEMERIS IN JUNE AND HARVEST.

**SUNDAY, June 22.**—Fifth Sunday after Trinity.—Dr. Akenside died of an affection of the heart, 1770; as he came into the world with an aching side, he went out with the same accompaniment:—oh, dear! that vile joke is enough to give one the stick.

**Regulations Respecting Elections, 1845.**—Notice to receive claims for votes must be given by overseers on June 30.—Lists of electors must be made by July 31.—Persons objecting to claims for votes must give notice by Aug. 25.—Barriers must hold their revision Courts between Sept. 15 and Oct. 31.—Lists to be copied into books, and the books to be delivered by Nov. 30; and such books to be considered the register of the electors between 1st Dec. and 1st Dec. following.

MONDAY 23.—NEWCASTLE-ON-TYNE RACES.—Ministers suffer a defeat on the Sugar Duties, 1844, but a few nights afterwards Sir Robert makes them unvote their votes, and say they are sorry they didn't vote against their consciences—several promises to be good boys in future, and do as they are bid—but "young Ben" and others kick and bite: Sir Robert was beaten by *Ailes*, yet he was determined to keep Cobden and the rest at a "League's" distance.

TUESDAY 24.—MIDSUMMER DAY.—THE THAMES GRAND REGATTA, this and the two following days.—Battle of Bannockburn, 1315.

WEDNESDAY 25.—BIBURY CLUB RACES.—*Quid pro Quo*—the prize comedy—won't draw though from the hand of *Gore* it lacks life-blood, and the public refuse to be led by the authoress, of the Haymarket lessee, who seems in a fainting state.

THURSDAY 26.—STOCKBRIDGE RACES.—*Custom House Fraud*.—A passenger by the *City of Boulogne* steamer, succeeds in landing a bottle of French brandy concealed in his stomach!

FRIDAY 27.—TAUNTON FAIR.—Dr. Dodd, executed, 1777.—Several Tribes in Algiers submit to the Troops of General Bugeaud, 1843. The Algerines (like Mr. James Grant after Six Lessons) finding it impossible to *Master the French*.

SATURDAY 28.—Queen Victoria crowned, 1838.

FOR THE WEEK ENDING, JUNE 28.

## THE FISHER'S CREEL.

**T**HOUGH Racing, Yachting, and Rowing, have been whirling our thoughts and bodies in all directions, east, west, north, and south, this number, we trust, will show that we have not forgotten "the Contemplative Man's Recreation" amid the more bustling scenes which summer crowds into the leafy month of June. Though "in populous city pent,"—or elbowed and thrust hither and thither in the heat, dust, and confusion of a race-course throng—or amid the popping of champagne corks and the demolition of sandwiches and lobster-sallads—or sailing-barge in the broad reaches at a R. T. Y. C. match—or wherever else sport and the Fates, or the Fates' sport, may carry us, Fancy, miracle-working Fancy, can quickly carry us to the babbling brook side, the sedgy river, the ruffled mere, or the swift gravelly stream, and thither by Rapid waters, to whose falls Melodious birds sing madrigals, will Miles's Boy transport himself, while he discourseth on sundry matters initiatory, which he "proposeth," as saith venerable Izaak, "to render both pleasant and profitable to the honest angler."

And imprimis, of

## Minnow Fishing for Trout.

This we take in hand somewhat at the request of a correspondent, promising that, for liveliness and activity, it holds a middle place between bottom and fly-fishing. True it is, that some zealous bigots for the fly, will hardly allow any one to think, talk, or write upon aught but their high and fly-tie notions on that branch of fishing, voting all others as "slow," "snobbish," &c. &c.; yet, by their leaves, there are times when minnow-fishing is the better sport. But come we to the matter in hand.

In former numbers we have said a good deal on fly-fishing generally, we shall, therefore, to avoid repetition, adhere tenaciously to "the fish" we have "in hand."

The rod required for minnow-fishing should be shorter and stiffer than that used for the fly, and the tackle the same as that for salmon, with this difference, that it must be much finer, with a stout single silkworm gut at bottom, and the hooks Nos. 2, 3, or 4, according to the size of the trout in the waters fished, for those caught by this process are generally those of the largest size. The middle-sized and whitest minnows are best; and you will find those caught in streams far brighter than those procured from ditches or stagnant waters.

Various hooks are recommended in minnow fishing; one much patronised consists of a large hook with two very small ones fastened back to back to a piece of gut about two inches long, with a small hook to another gut somewhat shorter, to fasten the head of the minnow; these pieces of gut are so attached to the link, that the two small hooks may be about the middle of the minnow when baited, and the other reach the head, a small lead cap, which renders other weight needless, slides upon the link, keeps the short pieces of gut close, and falls upon the head of the minnow. The patrons of this place boast of the certainty of hooking the trout with the two small hooks. "This may be

true," says an angler of no mean skill, "but if these small hooks (which seldom exceed No. 12,) are sufficient to kill a trout of any size, the other hooks are entirely useless from the situation in which they are placed." Another objection is that when the gut to which they are tied has been a short time in the water, it will not sustain the weight of the hooks, but they will sink below the minnow, and continually get foul of weeds at the bottom; besides, the lead cap, falling upon the minnow's head, totally conceals the eyes, parts which add life and attraction to the bait.

The angler may permit the minnow to be carried by the current under bushes, &c., this will be effected by his suffering the stream to gain upon it when he pulls it back, which also prevents its sinking to the bottom, and entangling the hooks. As he draws it gently against stream, favouring the direction in which he could have the bait driven, it will if he use two or three of the swivels, of which we give an outline below, spin round very quick, and this is the moment the trout usually takes it: if you hold the rod firmly, the fish will infallibly hook himself, and will spring out of the water several times with surprising strength and activity, in the endeavour to get rid of the hook. The angler must not be too hasty, but lower his right hand, which will raise the top of his rod and keep it bent; thus the trout will be rapidly tired, though you must not be in too great a hurry with the landing net; the best way therefore instead of bringing the fish to the surface, to the peril of the rod, line, or hook, is to keep him as deep in the water as possible.

Artificial minnows, made with mother of pearl, may be bought at the tackle-shops; but the best is the fresh minnow, which may be caught with the hook No. 13, baited with a small red worm, or caddis worm, or with a net; or by embaying a shoal of them in a small pond, as is often done by boys for amusement. When the minnow is put on the hook, the belly fin of one side, and the breast fin on the opposite side, ought to be cut off, to make it play better in the water. The minnow should have the hook entered by the mouth and pointing out at the vent, so as to keep the tail a little bent, which makes it play much better. The mouth should be stitched up, unless the minnow should be so hooked as to close the mouth, which may be done by first putting the hook in at the lower side of the under chap, and also quite through the upper chap, then drawing it two or three inches on the line, and again putting the hook into the mouth and bring it out near the tail. It ought then to be tried by drawing it across the water, and if it do not turn well, the tail may be bent to the right or left till it is right.

The minnow is chiefly used when the water is beginning to clear after a flood, or while it is rising, and a swift stream is best for giving the minnow a natural motion. The line is to be drawn pretty rapidly up the stream, and near the surface. A reel will be indispensable to let the fish run out when he has taken the bait; for he will seldom be caught if struck when he first bites.

Whatever may be the length or strength of your line, at all times have thereon two or three of the swivels, the figure whereof we here present you, within a yard of your hook, otherwise you will not manage your line easily. And lastly we give you the picture of the

lest the verbal description should not be sufficiently intelligible and explicit. Thus much, for the present, of minnow fishing, next a few paragraphs on

Minnow hook baited,

BAIT-FISHING FOR TROUT, or rather ground angling, and lastly a few wrinkles in Natural History, "anent and concerning" various common flies and insects, wherefore we hope to have the young piscator's thanks.

This is not so elegant an art as fly-fishing, yet no man who disdains it is a true angler; there is a fashion in most things, and in none more than in the affectation of high and mighty skill and acquirements, to which the writers in weekly papers and monthly magazines addict themselves. For Miles's Boy nothing that is useful is too humble, and he can see as wonderful contrivance and almighty skill in the grub, the caterpillar, and the dunghill worm, as in the gaudiest fly that ever fluttered its brief existence over the sparkling surface of the sunlit waters.

Ground-fishing for trout will often succeed when the water is too dark or thick for the fly, and for years we had surprising sport in this way during the early season, usually patronising the common earth-worm for a bait.

It is requisite to lead the line, so as to make it touch the ground, entirely resisting the force of the current, the lead about ten inches above the hook. A good hook for worm-angling should have a long, rather than a short shank, with a moderately deep barb or wilter; hooks No. 2 and 3. In whipping the hook on to the line keep the link

on the inside of it, and along its shank a hog's bristle, to hinder the bait wriggling down over the bend.

A clearing ring.

When the stream is clear, gravelly, and open, the line should be a foot or two longer than the rod; but where trees or bushes are frequent, or the water is thick and muddy, the line may be as much shorter than the rod. In an open river it is best to let the point of the rod go before the body, keeping the lead upon the gravel. Carry the top of the rod even with the hand, beginning at the head of the stream, and letting the bait run downwards, as far as the rod and line will permit, the lead dragging and rolling on the ground. No more of the line must be in the water than will permit the lead to touch the bottom, yet the line is to be kept as straight as possible.

In ground-fishing, as well as in most sorts of angling, the line will often get entangled among weeds or rubbish, in which case it is necessary to run a clearing ring down the line, for the purpose of disengaging it.

And now of baits. "Earth-worms of various sorts are to be procured by digging in garden ground, turning up stones or the droppings of cattle, amongst rotten thatch and in dunghills. Gentles, again, are the maggots of flies, which, as well as the maggots of bees and wasps, the grubs of beetles, and the caterpillars of moths and butterflies, may be all used as bait. The earth-worms should be of middle size, and are not so good when they have a knot near the head. They are improved as bait by keeping them without any earth, in moss wetted with milk; but this is not necessary for the brandling, a worm streaked with rings of red and yellow, found in rotten tan, leaf mould, or hog's dung, and

B the earth bob.

A the brandling.

which we have marked in the cut with a letter a. The upper figure b, is the earth bob, which is neither more nor less than the grub of the common cockchafer. Both these are good baits, but nothing exceeds the caddis and common red worm. Of the first named curious insects we purpose to say a few brief words.

For the details of this branch of the subject, I must acknowledge my obligations to the "Insect Architecture," of Professor Rennie.

Fish derive a considerable supply of food from insects which frequent the water, more particularly the grubs and maggots that live therein. The grubs are the young of beetles, of day flies and caddis flies with four wings, and the maggots are the young of gnats and crane flies with two wings. As these grubs themselves lead a predatory life, and are exposed to the attacks of their own kindred as well as of fishes, they are provided with various means of eluding their enemies, either by living in the recesses of water-plants, under stones, or at some depth in clay or mud; or by constructing for themselves a dwelling-place into which they can retire securely, when danger threatens. Though these grubs and maggots, therefore, may be in great profusion, the fish can only take them by surprise, and would fare but scantily if they had no other resource.

As these baits open up a fine variety to the angler, it may be useful to describe and figure a few of them, to enable the young fisherman to find and recognise them in the water.

The grubs, which are known by the name of caddis worms, case-worms, ruff-coats, cad or cod bait, are the young of flies, which are usually of considerable size, with four large dull-coloured wings, lying in a sluggish-like manner along the back. The various species of these are known to anglers by the name of stone flies, dun-cut, granam or green tail, alder fly, willow fly, spring fly, and caddew fly.

One of the grubs in question forms a pretty case of withered leaves glued together lengthwise, but leaving an opening sufficiently large for the inhabitant to put out its head and shoulders when it wishes to look about for food. Another employs pieces of reed cut into convenient lengths, or of grass, straw, wood, &c., carefully joining and cementing each piece to its fellow, as the work proceeds; and he frequently finishes the whole by adding a broad piece longer than the rest to shade his doorway over head, so that he may not be seen by any fish above. Another of these aquatic architects makes choice of the tiny shells of young fresh-water muscels, and snails, to form a moveable grotto, and as these little shells are for the most part inhabited, he keeps the poor animals close prisoners, and drags them without mercy along with

him. These grotto building grubs are by no means uncommon in ponds; and in chalk districts, such as the country about Woolwich and Gravesend, they are very abundant. One of the most surprising instances of their skill occurs in the structures of which small stones are the principal materials. The problem is to make a tube about the width of the hollow of a wheat straw, or a crow quill, and equally smooth and uniform. Now the materials being small stones full of angles and irregularities, the difficulty of performing this problem will appear to be considerable, if not insurmountable: yet the little architects, by patiently examining their stones, and turning them over on every side, never fail to accomplish their plans. In other instances, when the materials are found to possess too great specific gravity, a bit of light wood, or a hollow straw, is added to buoy up the case. The grubs themselves are admirably adapted for their mode of life, the portion of their bodies which is always enclosed in the case, being soft like a mealworm, or garden caterpillar, while the head and shoulders, which are for the most part projected beyond the doorway in search of food, are firm, hard, and consequently less liable to injury than the protected portion, should it chance to be exposed. These grubs when taken from their cases, make excellent baits for almost every sort of fish.

Figures of caddis-worms in their dwellings. a, b, shell case worms. c, a case of straw, sticks, &c., the grub holding his anchor-stone to keep himself from being carried away. d, caddis with house of sand and gravel.

The grubs or young of the day flies or Ephemera known by the various names of duns, drakes, and May flies, such as the dun drake or March brown, the blue dun, the green drake or green May fly, are often found in considerable abundance about the roots of water-plants, and in the clay forming the banks of ponds and canals, in which they excavate burrows for themselves under the level of the water. The excavations are always proportioned to the size of the inhabitant; and consequently, when it is young and small, the hole is proportionably small, though, with respect to extent, it is always at least double the length of its body. The hole being under the level of the river, is always filled with water, so that the grub swims in its native element, and while it is secured from being preyed upon by fishes, it has its own food within easy reach. "It feeds," says Professor Rennie, "if we may judge from its *egesta*, upon the alime or moistened clay with which its hole is lined. In the bank of the stream at Lee, in Kent, I found an old willow stump full of holes stuffed with clay, in which the grubs in question nestled securely."

The subjoined figure well represents their curious habitations.

a a, perforations of the grub of the Ephemera, or day-fly. b, the grub itself. c, grub of the dragon fly.

"Several grubs which do not excavate holes like the preceding, are not very unlike them in general appearance, though usually much larger, such as the grubs of various species of beetles, and of dragon flies, of which the one marked c is an example. These usually trust for safety to the protection of the roots of weeds or a temporary covering of mud; and what are termed blood-worms, are found in the same position.

"I mean here water blood-worms, and not the smaller bright red earth-worms sometimes so named in books on angling. These water blood-worms, which are not much thicker than a stocking thread, are the maggots of a small gnat, very abundant near water. These blood-worms are an excellent bait, and it is no doubt on account of their general resemblance in colour to these, that most fish will eat earth-worms, which cannot possibly be their natural food, since they can only

come into the water by rare accident. The same may be said of the beetle grubs of the cockchafer and of the dung beetle."

And now having said a pretty long say upon a subject, we would fain hope both interesting and instructive to many, we make our bow, and proceed to the series of fish, of which the one before us we find to be the DACE.

THE DACE.

**H**IS brilliant, active, little fish is a great breeder, and during summer very fond of frolicking near the surface. It is social and gregarious, its scales smaller than the roach, and altogether a handsomer fish. When the weather is not very warm, it haunts the deeper waters near the piles of bridges, shady pools, and beneath the masses of collected foam caused by eddies. In the warmer months of the year they also congre-

gate in the shallows. They rise at a variety of flies, and are likewise angled for with red worms, brandlings, and the like. In the Thames, above Richmond—near where Miles's Boy will next week be found, on his way to Hampton Races, with note-book and pencil in hand—so soon as he weeds begin to rot, a grasshopper used as an artificial fly will be found very successful in hot weather in the shallows. This mode can only be practised from a boat, with a heavy stone to serve as an anchor, fastened to about a yard of rope. The boat drifts gently down the stream, and the stone is dropped whenever the angler considers himself in the neighbourhood of a likely place. Standing in the stern, he first throws directly down the stream, and then to the right and left; and after trying for about a quarter of an hour in one spot he again weighs anchor, and proceeds to another station.

Dace may also be taken with flesh flies, or small house flies, which may be kept in a phial stopped with a cork. With these, especially about seven or eight o'clock in a summer's evening, repair to a mill stream, and having fixed three or four hooks with single hair links, not above four inches long to your line, bait them with the flies, and angle upon the surface of the water, on the smoothest part, at the end of the stream; the dace will rise freely, especially if the sun does not shine on the part of the water where you cast your flies, and you may take two or three at a time. This sport will continue as long as daylight will permit you to see the flies. In the same manner dace will also rise at the ant-fly upon the surface of the water, if used in a morning at the foot of a current or mill-stream. If you angle where two mill-streams are going at the same time, let it be in the eddy between the two streams. First use the plummet; if the water is deep, angle within a foot of the bottom, but if it proves to be shallow, that is, about the depth of two feet, or not exceeding three, the sport may be better; bait your hooks with three large gentles, use a cork float, be very attentive, and strike at the first bite; if there are any large dace in the mill pool, they will resort to the eddy between the two streams.

A species of fish called the graining, similar to dace, is found in the Mersey in Lancashire.

And now gentle reader, farewell, until next week; and don't forget to recommend this little paper, which increased in sale by your good word, will be enabled to increase the quantity of its pictorial embellishments by the additional means thus placed at our command.

### TATTERSALL'S ON THE SETTLING DAY.—(For article see next page.)

## TATTERSALL'S ON THE SETTLING DAY.

ULLY intending to give a pen and ink sketch of "The Corner," wherein we shall hit off both "the Tatts." with numerous of the *habitués* of this "high-change" of betting, this "Rialto" of the Turf, we shall here be brief as "the poesy of a ring," and short as "woman's love," or, to descend from stilted metaphor to plain English, a donkey's gallop.

And this is "Settling-day."—The Tuesday following the eventful Derby of the year of grace, 1845.

With what widely different feelings is this important event anticipated by the "round better," who has had the good fortune to make "a profitable book," and the chapfallen speculator, who has stood to win upon a favourite that comes out, and is either beaten by the superior capabilities of his competitors, or is deprived of every chance by the insidious workings of the nobbling system! The one hails its approach with a calm joyful confidence: the other looks forward to it with gloomy and irritable anxiety. None but those who have witnessed it can form an accurate idea of the scene which the important day of settling for the Derby and Oaks presents. A stranger passing Hyde-park Corner about 3 o'clock in the afternoon has his attraction by a number of cabriolets, gigs, and saddle-horses congregated in the neighbourhood of a gateway adjoining St. George's Hospital, in Grosvenor-place. This is the entrance to the celebrated establishment of Messrs. Tattersall and Son, known to the sporting world as "The Corner." There, amidst a crowd of jockeys, grooms, stable boys, and helpers, and an indiscriminate mob of "outsiders," the touts of the betting ring, and speculators "in a small way," may be seen peers and members of parliament, honourables and right honourables, elbowing their way down an ill-paved narrow lane towards the point of attraction: The Subscription Room, a remarkably plain building, out of which Ledbitter, one of the last of the old Bow-street *attachés*, exhibits his good-humoured face; and the "faithful Thomas," whose duty it is to admit none but subscribers, keeps watch and ward at the door.

Inside the scene is infinitely more striking. On entering you behold a tolerably spacious room, without the slightest attempt at adornment, if we except a painted *libel* of the celebrated "Eclipse," done in a single colour on the wall over the fireplace.

In the middle of the room is a narrow circular "lounge desk;" the open space in the centre being, as we guess, some three or four feet in diameter. Around this desk they who have bets to pay or receive are collected. There are other small tables in the room, at which some of the Rothschilds of the turf have established themselves, that they may be enabled to arrange with less interruption the heavy transactions on their books. Nevertheless, when the weather is fine, a great portion of the business of settling is carried on out of doors, on a flagged terrace adjoining the subscription-room, and on long deal tables placed at the foot of the terrace.

What most strikes a person present for the first time on the great settling day, is the business-like regularity with which large sums change hands; books involving the payment and receipt of thousands of pounds are balanced with a few strokes of a pen or pencil, and yet for none of these large sums does the creditor hold either bill or bond, nor can he by any legal means recover them; his only security, therefore, is the honour of the debtor, which, considering the extent and number of the betting transactions on turf matters, is much less frequently violated than the legal compacts made in the commercial world.

It is true there are black sheep to be found in almost every flock, and unprincipled and fraudulent men have cast disgrace upon the whole body of turf speculators, but the records of the Bankruptcy and Insolvent Courts reveal to us schemes of deeper villany and robberies of greater extent, committed under the sanction of the law, in the trading world, than have ever been perpetrated by the most notorious blackleg on the turf. The promptitude and good faith with which racing bets, irrecoverable by law, are generally paid, redound highly to the honour of the gentlemen of "The Corner," who have, in innumerable instances, made incredible sacrifices rather than forfeit their reputation on the turf by becoming "Levanters."

**BUYING BARGAINS.**—It is said of a gentleman in Boston, that he had a passion for the purchase of second-hand furniture at auctions, and that in making "good bargains," he had filled his house with antiquated and almost useless articles. Upon one occasion his wife took the responsibility, without consulting or apprising her husband, to have a portion of the least useful removed to an auction-room. Great was her dismay, and extreme her astonishment, when, on the evening of the day of sale, a majority of the articles came back to the house. The husband had stumbled into the auction-room, and, not knowing his own furniture, had purchased it at better bargains than at first!

**NEW COINAGE FOR IRELAND.**—O'Connell, being *de facto*, if not *de jure*, king of Ireland, is about to issue a new coinage. Its impress will be borrowed from that of Laputa—with a difference. The Laputa coin, Swift tells us, bore the figure of a king clothing a beggar. The coin of Dan will bear a king taking a beggar's rags (in the way of rint).

## CRICKET.

## HINTS TO CRICKETERS.—No. 7.

E this week redeem our promise of furnishing a list of the authorised umpires of England, and being anxious to place every information in our power in the hands of the followers and promoters of this manly game, have added a list of the best tradesmen to apply to for its necessary adjuncts. Since our last, we have seen enough on the Marylebone ground to convince us that our surmises are very likely to be borne out in reference to the alterations of the laws passed on June 2nd.

## A LIST OF THE PRINCIPAL PLAYERS AND UMPIRES.

Adams, Gravesend.  
Bayley, Lord's and Mitcham.  
Barker, Nottingham and Lords.  
H. Bentley, Hereford.  
Bodle, Southampton.  
Box, Hanover Arms, and Royal Gardens, Brighton.  
G. Brockwell, East Sheen.  
Butler, Nottingham.  
W. Barden, Sherborne, Dorset, and Camden Town.  
Caldecourt, Lord's, and 1, Townsend-road, St. John's Wood.  
Clark, Trent Bridge Ground, Nottingham.  
Chester, Kingston.  
Day, Southampton.  
Dean, Lord's and Duncton, near Petworth.  
Dorinton, Lord's and Town Mallory.  
J. Evans, Woolwich.  
Fenner, Cambridge.  
Good, Lord's and Melton Mowbray.  
Guy, Nottingham.  
Hawkins, Petworth.  
Heath, Pitt-street, near Elephant and Castle, Newington, Surrey.  
Hillyer, Leyburne, Kent, and Lord's.  
Lillywhite, Lord's.  
Martingell, Woodchester, Gloucestershire.  
Mills, Benenden, Kent.  
Mortlock, 3, Grove-place, Kennington.  
Paul, Gun Tavern, 55, St. John-street.  
F. Pilch, Canterbury.  
— Redgate, Nottingham.  
Royston, Lord's.  
T. Sewell, Lord's and Mitcham.  
E. Wenman, Cranbrook, near Benenden, Kent.

## A LIST OF THE PRINCIPAL BAT MAKERS.

M. Dark, Lord's Ground.  
Allen (successor to Cobbett), North-street, Lisson Grove.  
H. Bentley, Hereford.  
Box, Hanover Arms Tavern and Royal Gardens, Brighton.  
Caldecourt, 1, Townsend-road, St. John's Wood.  
M. Clapham, 8, High-street, Eton.  
Day, Southampton.  
Edwards, Cambridge.  
F. Pilch, Canterbury.  
E. and M. Page, Kennington.  
Thompson and Son, Peasod-street, Windsor.

## CRICKET BALL MAKERS.

R. Dark, Tennis Court, Lord's Ground.  
W. Caldecourt, 1, Townsend-road, St. John's Wood.  
Duke, Penshurst, Kent.  
E. and M. Page, Kennington.

**A BROAD HINT.**—An ancestor of Sir Andrew Agnew was famous for giving broad hints. The nature of them will be best ascertained by the following anecdote:—Sir Andrew having for some time been pestered by an impertinent intruder, it was one day remarked to the baronet by a friend, that this man no longer appeared in his company, who asked how he contrived to get rid of him, "In troth," said the baronet, "I was obliged to give the cheld a broad hint." "A broad hint," replied the friend; "I thought he was one of those who could not take a hint." "By my faith, but he was forced to take it," answered Sir Andrew; "for, as the fellow would not gang out of the door, I threw him out of the window."

**MARCH OF INTELLECT.**—A gentleman the other day, visiting Mr. Wood's school in Edinburgh, had a book put into his hand for the purpose of examining a class. The word "inheritance," occurring in the verse, the querist interrogated the youngsters as follows:—"What is inheritance?" A. "Patrimony."—"What is patrimony?" A. "Something left by my father."—"What would you call it if left by a mother?" A. "Matrimony."

**THE BULINO PASSION.**—The lawyers have had a part of Lincoln's Inn-square laid out as a garden; simply, because, as lawyers, they like to make the most of all that's green.

## A TIGER HUNT—DEATH OF A NATIVE.

LITTLE do European sportsmen know—whose sport is confined to shooting partridges, pheasants, or grouse, or hunting the timid hare, the shrewd fox, and swift deer—the perils attendant on the chase of the royal tiger, the panther, or majestic lion of the Indian jungles. As with—

"The gentlemen of England, who live at home at ease, How little do they think upon the dangers of the seas;"

—so it is with northern sportsmen, who only now and then glean slight information upon the subject of hunting the most terrific and ferocious of the savage tribe of animals. The Indian sportsmen do not always return home after the chase, and the animating sport is often purchased with many regrets, and the shedding of copious tears. Sometimes an extract from an Indian officer's letter, or a paragraph in an Indian newspaper gives a few brief details of these enterprises, which are always read with avidity, but the following particulars are from the pen of an experienced foreigner—of whom it may be said that he has hunted from pole to pole, for he pursued the tiger of North Africa, and that which so frequently visits the Caffres and Hottentots of the south; he has also pursued the leopard jaguar, of Chili, or Paraguay—has chased that monarch of the forest, the American lion; and, also, the jaguar with the *guachos* of Montevideo; and, lastly, the royal tiger of Hindostan. Of the latter he gives us the following interesting adventure, arising out of a tragical occurrence, the death of a native, by one of these ferocious beasts. He writes:—

"Our party consisted of five Europeans, three Englishmen, one Irishman, and myself—besides four Malays, two Sepoys, and eight hounds, of which latter they had spoken wonders. The heat was oppressive, without a breath of air; our light apparel afforded but very slight protection from the sultry rays of the meridian sun, and the innumerable flocks of birds sought shelter from the heat beneath the thick foliage of the tamarind and palm trees. These we passed unnoticed almost, because in India, when you are making preparations for a perilous expedition, all objects of smaller sport no longer occupy your mind. Good-sized balls, steel harpoons, lances, and well-tempered sabres would be of little use in attacking the clouds of birds of every plumage we saw around us. Besides, a very powerful motive forced us to respect them, particularly when we are at some distance from a village or a plantation. The report of our guns would not only awaken the echoes of these vast and imposing solitudes, but arouse from the jungle and morass the repose of the lion, the alumber of the tiger; and for such like visitors our arms must always be in a state of readiness. Like us, they have instinct of peril; more than us they have that of danger. When the ball whistles they guess, if they do, not understand (because we deny them the possession of reason), that they can then pounce upon their prey with greater safety.

"It is in these scenes of carnage and desolation, as with tempests at sea, you are no sooner in them than you wish to be out of them. In starting in chases of the lion, tiger, or rhinoceros, you are all smiles and gaiety, and fear no danger; but when, from the shadow or bristling of the long grass you perceive the approach of your adversary—oh! then you begin to doubt if you will ever return, and wish you were safe at home again. This is the feeling of most persons, but it is seldom acknowledged.

"At mid-day we had arrived at the delightful residence of Mr. M—, whom we found very low spirited, but who made us no less a hearty welcome. The evening before a panther had leaped over the wall enclosing his garden, and devoured the son of a Malay, his servant, who was asleep in an outhouse. The garden wall was thirteen feet high, and the run which the beast could take was very limited, and the ground broken."

Owing to a tempest the party pass the night here, and then, continues the writer—

"On the morrow, before it was yet daylight, we commenced our march, reinforced by the brother and sister of the murdered Malay, who vowed they would in person be revenged on the offending panther or tiger. The dogs in our front we kept close together, penetrating a thick forest, which our guides told us we should not be long before we passed through. Arrived at a spacious open plain, we sat down to breakfast; but the tiger did not allow us much leisure. At the first frightful growling, the dogs which, we had been told were so courageous, slunk behind us, their tails between their legs, and with looks imprinted with the most stupid fright. Neither the whip nor the stick, neither menaces nor caresses—nothing could make them move on, and we resolved to pass before them. A second frightful growl, shorter and more loud, told us that the tiger was approaching; we looked to our primings, and put ourselves into order of battle, the Malay three paces in advance, his sister at his side, each armed with a pistol and an iron spear or harpoon, the point of steel being barbed. At length the creature appeared. It was a beautiful full-grown tiger, his glossy coat striped like a zebra. He appeared with half-opened and foaming mouth, more surprised than frightened at our presence; stood stock-still at first, issuing forth deep and deafening growls, his eyeballs flashing fire, and licking his lips with a rough red tongue. He was a magnificent sight.

"We made some steps towards him, he made some few towards us; and all at once, as if they were ashamed of their pusillanimity, the dogs,

without being excited to it, ran and placed themselves in our front, close to each other, eager, and silent. At the sight of them the tiger drew back, and elongated himself like a serpent, whipping his flanks with his tail, and shaking the foam from his mouth. He took no notice of us, no more than if we had not been present—the dogs were to be his first victims, who dared to bay him. They advanced together at first, then separated to attack the ferocious beast before, behind, and on his flanks. The tiger kept his eye on the most daring of the dogs, and in a moment he had one enemy the less—the dog was crushed at a single bite. We wished to help the others, who had drawn back a few steps, but the Malay made a sign of the hand to reserve our fire: he wished to *lasso* the animal himself. His sister showed great intrepidity and sang *froid*; with her vigorous hands she held her spear before her, and I remarked that the yellow colour of her face became gradually of a red tint, nearly of copper.

"The field of battle was not above fifty paces at most in extent. At the call of the Malay, and the imperious look of his sister, the dogs renewed the attack on all sides with great courage—the redoubtable quadruped crushed his opponents one after the other with his claws. The conflict was bloody; he, too, was bleeding from numerous wounds, and became more furious from his great pain. All the dogs were *hors de combat*, three alone survived and seemed to implore our aid; the Malay advanced, we followed and fired; the tiger roared, made an attempt to leap, but fell to the ground like an *aerolyte*. The young girl discharged her spear, which was left rankling in the wound; another general volley gave the animal his *coup de grace*.

"On our return, nothing particular occurred until we had got half way, when we were alarmed by the loud cries of the two Malays, who preceded us. We redoubled our steps, and soon found the brother and sister on the ground kissing with raptures the mutilated remains of a human being! It was the skull of their young brother, which they recognised by a slight scar on the forehead. The affliction of these people, at the sight of the mangled remains of their relative, was most distressing to us to all."—*Sunday Times*.

[Thus far the foreign gentleman: the story is prettily worked up, but without place, date, or the name of the writer; we therefore insert it as we find it, just as an amusing little bit of home-manufactured "bunkum,"—vide "Sam Slick;" we should like to see some of the foreign gentleman's dogs; where did he get them, and what was their breed?—Ed. *Sportsman's Mag.*]

## RAILWAY RACES.

(From *Punch*.)

As the rail is rapidly superseding the road, it is to be expected that the engine will soon annihilate the horse, or—to use a figure that would have suggested itself to the old wags—put the horse completely *hors de combat*. Instead of encouraging the breed of racers, the sporting world will be employed in improving the build of locomotives; and we shall hear of BRAITHWAITE's lot being backed against the PANKLEBANKON IRON WORKS' favourite, for the Oaks or the Derby. We shall be having thorough-bred engines winning by half a turn instead of by a neck and the great patrons of the turf will abandon the study of horse-flesh, for the cultivation of a knowledge of iron.

We have heard of high-mettled racers, and of horses showing their mettle; but when the racers are made of metal altogether, the sport will of course be beautiful. The task of training will necessarily devolve on those who are accustomed to railroad trains; and when riding the race, the substitute for whip and spurs will be a scuttle full of coals and a poker.

If the system of railroad racing should be adopted, *Punch* will probably go upon the turf with a splendid stud of locomotives, and will be prepared to back his own lot against the field to any amount, and for any distance.

The following is the sort of account that might be given of our run for the first *Sweepstakes*. The race is supposed to be between ourselves and one or two individuals who are a good deal addicted to political sporting:—

"After two or three false starts, the whole lot got fairly off, and PEEL went at a slapping pace on Free Trade—his two-year-old boiler; but he was a good deal encumbered by the Conservative ruck, who were fearfully tailing him till he went slap away, and left them nowhere. BROUGHAM now made all the running, but went very wide, and in going down the hill, was lost sight of altogether. *Punch* now came up on his four-year-old, and went slap in among the lot winning cleverly by several heads, to the delight of the assembled multitude."

THE QUEEN'S BALL.—The *Morning Post* says, that "the Pompadour silks, which have already been purchased for the court ball, would cover many acres." We wonder how many wisecracks will be found among the acres that the silks are destined to cover.

FATHER MATHEW'S PRINCIPLE.—To such an extent does Father Mathew carry out his principle, that he has cut a man because he was called a "rum fellow;" and a person in his neighbourhood styled "Old Tom," to oblige the great apostle of the pump, has changed his name.

TOM (otherwise PADDINGTON) JONES.

## THE HISTORY OF BRITISH BOXING, FROM FIG AND BROUGHTON TO THE PRESENT TIME. PERIOD III. 1786—1798.

FROM THE TIME OF MENDOZA TO THE APPEARANCE OF JEM BELCHER.

## CHAPTER V.

(Concluded from page 173.)

Jones was matched in London to fight George Nicholls (since the conqueror of Cribb) a man whom he had never seen. Mendoza and Johnson took Tom down to Lansdown, near Bath, for that purpose: but upon the combatants stripping, and just as they were about commencing the set-to, the following singular circumstance occurred:—Nicholls cried out, "Stop!" and observing that Jones was above his height, declared he would not fight him, and *sans ceremonie*, immediately left the ring, to the great astonishment and disappointment of the spectators. After some years had elapsed, upon Nicholls arriving in London, a match was made for twenty guineas, and they tried their skill at Norwood. Three rounds were well contested, and considerable science was displayed; but, in the fourth, Nicholls ran furiously in, and getting his head between Jones's legs, and catching fast hold of both his ankles, threw Tom with considerable violence—this was deemed an infringement upon the articles, and completely deviating from the rules of pugilism, by the friends of Jones—a considerable interruption was the consequence, and the fight was at an end. The stakes were demanded on the part of Jones; but Bill Warr, who seconded Nicholls, would not suffer them to be given up. Respecting which was the best man, it was impossible to form anything like a decision. Jones, on his road home, had a turn-up with a man of the name of Carter, who had insulted him about the battle with Simpson. Tom, who was not much hurt from the above contest, set-to with good pluck, and so soon convinced Carter he was in the wrong, that he sheered off.

August 6th, 1805, Tom Jones fought another *Lyons* (known as the *Yokel Jew*) at Hounslow, for ten guineas a-side. This was one of the most terrible conflicts in which Tom had been engaged. Yokel was a desperate punisher, and Jones suffered severely in the fight; but, notwithstanding, Yokel gave in.

George Stringer challenged Jones for five guineas a-side. The battle was decided in Paddington Fields. Stringer contended hard to obtain the victory; but he fell, like many others, beneath the potent arm of Jones.

A man of the name of Jem Smith, a carpenter, who was not unac-

quainted with the principles of pugilism, fought Jones for twelve guineas, at Lisson-green, Paddington. But poor Chip was so milled, that he was scarcely able to leave the ground.

Isaac Bitton, the Jew, a pugilist of considerable celebrity, entered the lists with Tom Jones, upon Wimbledon Common, for twenty guineas a-side, on July 31, 1801. Jem Belcher seconded Tom. It proved a well-contested fight—and some very excellent displays of the science were exhibited—but Jones, not being able to come to time (half a minute) the battle was decided against him.

Notwithstanding the numerous lists of battles which have been mentioned, it does not appear that Paddington Jones ever made pugilism his peculiar profession; but industriously followed through life his occupation, much respected by his friends for his civility and good nature. Jones was a good-looking man, of prepossessing manners. In height above five feet seven inches, and in weight ten stone five pounds, for a long series of years was well known as master of the ceremonies at the Fives and Tennis Courts, as a second, and an attendant upon sparring exhibitions.

As a pugilist, Jones is entitled to honourable mention; to a respectable amount of skill, he united game of the first quality. He has turned out several good pupils. His guard was good and his position ready, with his left arm firm and extended to protect his body from assault, while his right was on the alert to give the return. Tom was a hard hitter, used both his hands with equal facility, stood well upon his legs, and met his man with fortitude.

Notwithstanding the evident disadvantages that Jones had to contend against in his battle with Jem Belcher—the disparagement of having been severely punished in numerous battles, and other hurts from skirmishes, contrasted, with Belcher, who had scarcely been pinked, and blooming from the country, Tom's conduct was far above mediocrity, and ought not to be forgotten.

No man appeared oftener in the character of a second than Tom Jones, and few understood that duty better than himself. In most of Randall's battles Tom performed that above office.

It is impossible that we can take our leave of Paddington Jones without characterising him as a brave pugilist, and well deserving to oc-

cupy a niche in the temple of fame, as a straightforward, courageous, and deserving man. JONES died at his birthplace, Paddington, August 22nd, 1833, at the age of 62.

## CHAPTER VI.

## BILL HOOPER—(THE TINMAN.)

KNOWN AS "BULLY HOOPER," AND THE "LION-HEARTED HOOPER."

As a slight space remains this week, ere we give the portrait and life of JEM BELCHER, we shall devote it to a brief notice of Hooper, whose career may well serve to point a "moral," which successful pugilists would do well to remember in the days of patronage, prosperity, and success.

Among all her pugilistic heroes, Bristol never turned out a more determined boxer than Bill Hooper. Fear, it would seem, never formed any part of his composition. In all his contests he appeared confident of victory, and his feelings never suffered any sort of depression, from either the size or strength of his antagonists. The patronage of the well-known Earl of Barrymore unfortunately proved his destruction. Participating in the festivities of Wargrave, and sharing the eccentricities of that depraved nobleman, he became so intolerably overbearing as to render himself, in most companies, not only insolent and disgusting, but to stamp his character as a pugilist with disgrace. His mind was not strong enough to sustain the sudden transition from obscurity to a more prominent situation in life—and ultimately poor Hooper, from the dissipation and violent excesses he had committed in the sunshine of his prosperity, became, some time before his melancholy end, the miserable victim of disease and wretchedness.

Hooper's first set-to in the metropolis was on the 19th of August, 1789, with Bill Clarke, the plasterer, in Bloomsbury Fields, a plot of ground now covered with streets and squares, in the neighbourhood of Tottenham Court Road, in which place Hooper followed his business as a tinman. The battle was well contested, and the conflict for some time doubtful; but the intuitive skill and fearless courage of Hooper, rendered him irresistible, and he soon rose rapidly into fame.

On September 5, 1789, he had a desperate contest on Barnet Common, with one Cotterell, for ten guineas a-side, which continued above half-an-hour, when Hooper proved the conqueror.

In a battle with Wright, a carpenter, who was backed by Lord Falkland, which contest took place at Wargrave, in Berkshire, December, 3, 1789, the seat of Lord Barrymore, who had become his patron, Hooper distinguished himself considerably, Wright, who was looked upon as a good boxer, was severely punished in twenty minutes.

Hooper was now called upon to enter the lists at Langley-close, near Salt-hill, Feb. 17, 1790, with a pugilist of the name of Watson, of good pluck and great activity. The contest proved extremely long, and the advantages, at different times in the fight, were varying and doubtful. Considerable altercations took place as to the propriety of blows, that the two chosen umpires were compelled to call in a third, for a final decision. The odds, generally speaking, were in favour of Hooper, who knocked down his antagonist several times. Watson evinced considerable game throughout the battle, which lasted two hours and thirty minutes, the number of rounds being one hundred, when it was decided in favour of Hooper, from Watson striking foul.

Hooper attempted to fight Big Ben, as already related; but it proved a complete mockery of boxing, and was declared a drawn battle.

He was next challenged by one Bunner, for fifty guineas; the battle came off on a stage 18 feet square, at Bentley, a few miles from Colchester, on Sept. 4, 1792. Bunner possessed considerable strength, and at the beginning of the fight, the odds were, upon that account, in his favour; but the science of the Tinman soon rendered it unavailing, and Bunner proved an easy conquest, having his arm broken by a fall in the sixth round.

George Maddox, a boxer of great celebrity, and afterwards well known as the antagonist of TOM CRIBB, entered the ring on Sydenham Common, Kent, on Feb. 10, 1794, with the Tinman, for twenty-five pounds a-side. George had proved himself, upon most occasions, a game man; and considerable expectations were raised from the well-known abilities of Hooper. Numerous amateurs attended to witness the contest, anticipating a most excellent display of the art, among whom was to be seen the late Duke of Hamilton. Maddox was the favourite, and the odds, upon setting-to, were 5 to 4 that George was the conqueror. Joe Ward was second to Maddox, and Bill Gibbons his bottle-holder; Tom Johnson and Jack Butcher were the attendants upon Hooper. Maddox took the lead for some time, and showed himself well acquainted with the principles of pugilism; but the Tinman full of game and confident of success, contested the battle heroically for nearly an hour, when Maddox, with considerable reluctance, gave in.

Immediately after this victory, Hooper rose so much into fame, that he was matched to fight Mendoza upon a 24 feet stage, for fifty guineas, within a month. But Mendoza preferred forfeiting his deposit of twenty pounds, to having anything to do in the pugilistic way with the then renowned Tinman.

Hooper had now to encounter that determined pugilist Wood, the coachman, who had distinguished himself in several good fights. The scene of action was Hounslow-heath, the day, June 22, 1795; and it

proved one of the most desperate conflicts in which Hooper had been as yet engaged. In a furious contest of 16 minutes, various turns of success appeared, and the bets were continually changing. Wood fought with his usual vehemence and resolution, and appeared almost certain of victory; but the Tinman's terrible hard hits completely stunned him, and by contriving to plant his favourite blow under the left ear, he reduced Wood to a complete state of stupor. Previous to setting-to, Wood was the favourite; and, for the first part of the fight, his superiority was so prominent, that 20 to 1 was laid he would prove the winner; but the courageous spirit of Hooper, and his knowledge of the science, not only reduced the bets to a level, but, before the fight was half over, 20 to 1 was laid that the Tinman proved the conqueror.

But he was at length doomed to experience the reverse of that good fortune which had so often cheered him, and he was to be defeated by a boxer almost a stranger to the Prize Ring. Tom Owen, who did not want for strength, and also possessed some knowledge of the science, challenged Hooper. The fight took place at Harrow, November 14, 1796, for £50 a side; and Owen turned out a much better boxer than had been anticipated. After fighting sixty-four minutes, during which time 50 rounds had been contested, Hooper dislocated his shoulder. The event was then still doubtful; but after this accident Hooper gave in. Hooper was now but a shadow of his former self; dissipation, luxury, and debauch had spoiled him.

Hooper in point of appearance was by no means formidable, scarcely exceeding the middle stature of men. His height was about 5 feet 7 inches and a half, and neatly made; but his courage was truly astonishing; and it is only justice to remark of him, that he was a first-rate boxer. Previous to his obtaining the patronage of the late Lord Barrymore, he followed his business as a tinman, in Tottenham-court-road, and possessed the character of a civil, well-behaved, smart young man. Transplanted from making saucepans to a nobleman's country-seat, proved too great and sudden an elevation for him. The advantage of mixing with some of the first characters of rank in the country, was far from producing the improvement derivable from an intercourse with superior company, who, amid all their foibles and eccentricities, it should never be forgotten, are gentlemen.

Few men are more obnoxious to the smiles and frowns of fickle fortune than the pugilist; victory brings him fame, riches, and patrons; his bruises are unheeded in the smiles of success; and, basking in the sunshine of prosperity, his life passes pleasantly, till defeat comes and reverses the scene. Covered with aches and pains, distressed in mind and body, assailed by poverty, wretchedness, and misery, friends forsake him—his fame waxes dim—his character is suspected by the losers—no longer the "plaything of fashion," he flies to inebriation for relief, and a premature death puts a period to his misfortunes. Thus it was with Hooper: sheltered under the wings of nobility, he became pampered, insolent, and mischievous. His courage was undoubted, and though his frame was but small, it contained the heart of a lion; big men struck no terror to his feelings, and he opposed them with all the hardihood of an equal competitor, determined to conquer. The late Lord Barrymore, whose eccentricities would fill a volume, was his patron; and at his country-seat he principally dwelt. His lordship was fond of larking and practical jokes, and whenever he could not come through the piece in style, Hooper appeared as his bully—his name overawed, and, many a time, saved his patron a deserved thrashing. At length his lordship cast him off, which, as he had cast himself away before, is not surprising. Hooper soon afterwards became wretched, disease overtook him, repeated intoxication brought him to the brink of the grave. One evening he was found insensible on the step of a door in St. Giles's and conveyed to the watch-house; on inquiring who he was, he could but faintly articulate, "Hooper—Hooper—" Being recognised as the miserable remnant of that once powerful pugilistic hero, he was humanely taken to the workhouse, where he immediately expired!—*Sic transit gloria athleta!*

## END OF PERIOD III.

PROMPT REPLY.—"Why did Adam bite the apple?" said a schoolmaster to a country lad. "Because he had no knife," said the urchin.

RINGING THE CHANGES.—Master Jones rang on Friday night several peals on seventeen different bells in Fitzroy Square. This he cleverly effected, without any apparent fatigue, by running from No. 1 to No. 17, and pulling the area-bells violently one after another. The tones are very distinct, and a beautiful echo of each was heard in the drawing-rooms of the respective houses. Master Jones, who is only nine years of age, wound up his masterly performance with a grand triple bob-major on the visitors' and servants' bells of No. 18.

WIT OF THE HOUSE OF LORDS.—When Brougham the other night attacked the Duke of Newcastle for interrupting the Duke of Wellington in his speech on the Maynooth Bill, Lord Lyndhurst tagged Brougham familiarly by the skirt of the coat, observing, "Newcastle is warm; he is flaring up; don't add fuel to fire."—"I can't help it," replied Brougham.—"My dear fellow," continued Lyndhurst, "adding fuel to the fire is in this case literally taking coals to Newcastle." The joke was too powerful for Brougham to resist; so he laughed, and sat down.

## OBSERVATIONS, FROM PRACTICAL EXPERIENCE, ON OLD ENGLISH SPORTS.

BY THE HON. GRANTLEY F. BERKELEY, M.P.

Now that the hunting season has drawn to a close, some men exclaim, with much satisfaction, "We have had our pleasure—we have hunted—we have enjoyed the sport afforded by large establishments—and with the winter ends our chief expense; while masters of hounds must still disburse throughout the summer, having no fun for their money:—we are better off than they are."

In many instances, the gentlemen who thus exclaim are wrong. To the master of hounds in whose breast the *real science* of the noble art is seated, and who *truly loves* woodcraft in all the grades through which it passes to perfection; each season, whether of rest or of activity, brings with it a just proportion of pleasure. To the mind of a true sportsman, whose income is sufficient, without embarrassment, to meet the heavy demands consequent on a pack of foxhounds, there are a thousand calm and contemplative pleasures, arising from the study of the animals in whose beautiful kingdom, throughout the summer, he is the humane dispenser of health and restful happiness. To him—to the master hounds—the close of the season for the chase is *not* the conclusion of his amusement. The arrival at his kennel, from their walks, of the creatures he has bred, and the comfortable arrangement of hutches and hurdled lawns for the reception of the dappled litters, almost hourly presented to his view, afford him immediate occupation, with a grateful recollection of the past services of the sire and dam, while they hold out a brilliant promise for the future.

Independent of the field of natural history, which the intimate knowledge of the habits of the hound, the horse, and fox, opens to the mind of the *real sportsman*, there is the true old English and gratifying reflection that, while he is amusing and improving himself by a study from nature, the beautifully blending charm and hue of which the passage of years cannot entirely destroy, at the same time he expends upon his estate the produce of its acres, and affords an honest, ample, and lucrative employment to the surrounding poor.

It has often been my lot to hear one of the self-dubbed champions of the people rise in his place in the Commons, House of Parliament, and, when speaking of taxation, demand that "large establishments of horses and dogs should be taxed to meet the exigencies of the times." Now this demand is a mere vulgar claptrap, and not one of useful recommendation. It may sound well in the ears of poor individuals, who are thinking only of themselves, and that from which they suffer, but when regarded as an applicable remedy for the grievances of a widely spread poverty, it carries with it a worse infliction than it assumes to cure. Let any practical politician, or useful reasoner, refer to the large establishments kept by noblemen and gentlemen in the country—let them go to Belvoir, to Badminton, and to Berkeley Castle, or to hundreds more that I could mention, and ascertain the number of poor who are employed by these establishments, and dependant on them for the bread of life. They would find that, with a view to the better condition of the poor, it would be advantageous, in the way of premium, to the resident English gentleman, to have his immense establishment more lightly taxed than to cripple the means of his useful expenditure among the people of his vicinity. In London—in cities and in manufacturing towns—the legislative views of the local representatives of the masses of inhabitants are apt to be confined by the smoke of their immediate districts, and forgetful of everything but their own world, they call for changes that would dangerously affect the wider fields beyond it. Their local recommendation and attention is praiseworthy and good, but at the same time too frequently inadmissible with a view to general prosperity.

I may, on some future day, sum up the number of poor dependant on one of these establishments, and then institute an inquiry if those gentlemen, who rail at the large proprietor, and who do not keep many "horses and dogs," and yet have houses in the country, with sufficient income, pay, in the way of expenditure on the poor, their fair share of value. The public would then be enabled to judge whether, in regard to the maintenance and better condition of the people, the large establishment alluded to does not do more, rather than less, than its duty.

But to return to the pleasures attendant on the chase. It is a sunny day, and the reader will accompany me to the stable and the kennel. Strip the horses, and let us look at them; feel their legs, and determine on their treatment for the summer. Leave their clothes off by degrees, open the windows of the stable more or less, according to the temperature of the day, till they can be set open entirely, and give such horses as may want it some gentle physic. Brutus's legs, with a great many more, will time with rest, and the simple application of cold wet bandages; but mind, do not turn those cold bandages into heating impediments by letting them get dry and warm from the contact of the limb they are intended to cure. Either let the horse stand in a tub of constantly changed water, or keep the bandages removed so often as to insure the temperature you desire. When the horse seeks his rest for the night, let the bandages be taken off. There are twenty of the stud that will require the severer application of the blister and the iron, with the superficial "charge" over all. In these cases, let two, and occasionally only one leg, be done at a time, according to the severity of the treatment required, in order that the horse, while under the cure of his ailments, may have a leg free from soreness, on which to rest. As to their keep through the summer, such of them as are not

very playful, and inclined to gallop about, may be turned into the meadows where there is plenty of shade and water, in both of which they can stand when it pleases them. Let these horses have their feet well opened, and have tips upon them, and do you, Mr. Head Groom, visit them *at least three times* in the twelve hours, and occasionally take them into the stable in the hottest portion of the day. As for those horses who are either very playful or very vicious, let them be placed in loose paddocks or boxes, each having a little shed to himself, and a small yard, thirty feet square, more or less, littered a foot deep with straw or fern, and let these paddocks be by the side of each other, so that the horses can be aware of company. When the weather is very dry, take the garden-engine, in the cool of the morning and the cool of the evening, and water the litter, so that it may always be cool and damp to the leg. Those whose constitutions require it—both in the meadow and in the box—may have corn with their tares and grass, and there is no harm in a few carrots. Be kind and good to them; and if a helper speaks roughly, sufficiently so to make the horse think he is going to be struck, reprimand him severely; and if he strikes or kicks a horse, discharge him on a moment's warning.

Now for the kennel. Huntsman, let the old hounds have some cooling physic—salts, with a little syrup of buckthorn, and when that has disappeared, on the following day let them have some flour of brimstone in their food. Use less flesh, let the food be thinner, made so by the addition of more water to the pudding, and, with the exception of the bitches and whelps, the shy-feeding puppies, and the old hounds of slight appetite, mix with milk instead of meat. When out of work, in summer weather, it is a sweeter and a more wholesome diet.

Let every hound in the kennel be dressed before he gets his summer coat. Brimstone and train-oil, with a little mercurial soap, the former not made so thick as to cake upon the hair, and the latter rubbed in very sparingly, are the best dressings. It will all come off with the old coat, and clean the skin for a new and blooming one; but remember to get your physic over before you begin to dress, for unless you get the stomach into good order, your external applications are in vain. Keep a lump of brimstone in the water stones, and occasionally sprinkle both in the water and in the food a little brimstone, and vary it with a little nitre. Hang up your whips, walk out, make happy, and talk to your old hounds, nurse your brood bitches and whelps, and amuse, humour, and play with your young hounds, and induce them, by every kindness, attention, and indulgence, to forget the quiet, unrestrained walks of their early days, and the recollection of the farmer's pretty daughters and milkmaids, with whom they used to seek the lowing herd, and hunt the hares that leaped from the grassy furrows. You will find some of your young hounds as much in love with those they leave behind, as the sailor boy is with his first longshore mistress, and until you can induce him to transfer his affection to his new friends, you will teach him nothing. He must learn of his own free will, and *through affection*, or gain no useful knowledge. Other hounds, like other men, are easier to forget their first loves, and soon take up with new ones. Some are of haughty and reserved dispositions, of natures suspicious, and not easy of access; others are of a free, open-hearted, and joyous disposition, ready to make the first advances to new friendships, and seem even to delight in the novelty of their situations. These you will see playing with each other, romping about the kennel, and leaping up on every man who comes near them, their graver companions sitting in moody observation, as if shocked at their untimely levity; while some shy, silky-faced, dark-eyed ladies, who seemed to have been made parlour companions of by the farmer's daughters, shrink into corners, and receive your caresses with a graceful timidity, but, at the same time, as if they thought your kindness was but due. There is little difference between a school for human creatures and a kennel of young hounds, except that in the one instance humanity claims the expectation of an exclusive heaven, while in the other the scarcely less observant spirit is supposed to cease with death. All have their different dispositions, grades of affection, and natural desires, and if left in a savage state of nature, perhaps the human creature would be the *worst* worldly inhabitant of the two. Human ambition and desire of self-aggrandizement is a far greater incentive to crime than is the ambition that stirs the dog; and in other respects, the child and the puppy left in a state of nature have a humiliating resemblance to each other.

I advance these facts to induce ignorant people, termed huntsmen, to forget their whip while they remember the difference of the respective dispositions of the creatures inhabiting the same kennel, and the affection of which they, individually, are capable. *Kindness was never thrown away upon a dog*, however apt man be to forget it; and if the hound be not induced to honour and love, as well as to obey, the ample powers of his mind and body are not brought to use in their full perfection. The puritanical, sickly, and false charge of cruelty, so often brought against the kennel, and all amusements afforded by the use of animals in the present day, is as false as it is ridiculous, and as rare in instance as its practice would be inimical to the interests of the chase.

HIGHLY APPROPRIATE.—Ireland, we understand, at the dictation of Daniel O'Connell, is about to repudiate the shamrock, and instead of it to assume, for a national emblem, the aspen, as typical of eternal agitation.—*Punch*.

## BUS-LOGY!

OR ELEVEN CAUTIONS PRO BONO PUBLICO.

*"What's everybody's business is nobody's business."—Old Saying.*

HAVING come to the conclusion that an omnibus is now a necessary adjunct of every man's business, although the generality of men never trouble their heads about the best mode of making the best use of it, thereby often disparaging their own dignity, and causing great annoyance to their neighbours, we deem that the following hints may be useful for such incautious persons:—

**CAUTION I.**—Whenever you see a couple of busses trying to outscamper each other, never attempt to get into the foremost of them, lest your *entrée* should be expedited by the pole of the one behind. It is a very unpleasant mode of getting in, and may probably damage the lid of your best snuff-box. Besides the risk you run of being poked up to the very farthest end over the knees of your fellow-passengers, thereby getting up the wrath of the lady in the polka pelisse; and then, perhaps, finding yourself dragged furiously out by the hook at the end of the pole insinuating itself under the waistband of your trousers.

**CAUTION II.**—Never mount the steps of a bus until you have got fast hold of it with both hands, because, if you do, it is a rump and dozen to an apple-dumpling that the step moves on from you, leaving you sitting on the pavement with nothing to break the bump but a cushion of cold "shlush," which is a very undignified position, and very apt to excite the laughter of thoughtless lookers on.

**CAUTION III.**—Never get out of a bus without taking especial care to loose the handles the moment you remove your hind foot from the step, otherwise you may get an unexpected pluck backwards, and a gratuitous drag through the mud on the broad of your back as long as you think fit to hold on: which, although it is a cheap mode of transit, is generally a very nasty one, and likely to play old gooseberry with your bottle-green coat. *Note.*—On a very dirty day, last week, a fat, elderly gentleman, anxious to steady himself before he loosed the handles, was jerked out of his perpendicular in this uncomfortable way, and dragged all the way down the hill in Fleet-street, at the imminent risk of being trampled upon by the horses in another bus clattering close behind him. All the help he got from the man on the monkey-board was, "Hold hard, sir! hold hard!" the only consolation he received was an impertinent opinion that the dirt on his coat would all rub out when it was dry.

**CAUTION IV.**—When you get into a bus, never stand showing off your *politesse*, but all sit down quietly in the nearest vacant place. It is a silly practice to be exquisitely genteel when there is no need for such vanity, and it often leads to very comical concussions. For instance, whilst you are conjecturing whether any other lady or gentleman might prefer the place which seems to be vacant, the bus moves forward, and, as a matter of course, you incline backward, giving all the feet behind you an unpleasant impression of the weight of your heels, and eventually you come down across the laps of a couple of ladies not at all prepared to receive you.

**CAUTION V.**—Never enter a bus with your hands in your pockets, inasmuch as it may subject you to the retrograding staggers alluded to in the preceding caution. No gentleman ever attempts it, except he happens to be enveloped in a thing called "a Tweed wrapper," a sort of garment which all decent people decidedly object to, on account of its smelling so inodorously of cabbage-leaf cigars.

**CAUTION VI.**—Never "pack your legs" inside of a bus, unless you have a peculiar penchant for sacrificing your Day and Martin, or find a pleasure in having corns or your gout trampled upon, in which latter case you may, perhaps, be left to your own discretion; for, as they say in Algeria, *Chacun à son goût*.

**CAUTION VII.**—When you seat yourself in a bus, make yourself up as compactly as you can; for, though you yourself may be a mere whippersnapper, the next comer may be a prize man, like Lord Kensington, or Mr. Massive Dawson.

**CAUTION VIII.**—All persons who ride in busses, and are fond of sitting close to the doors, should be particularly careful to keep their fingers out of harm's way; otherwise they may stand a chance of having some of them amputated when they least expect it. For the same reason, and under the same circumstances, ladies who wear boas, and gentlemen who pride themselves on the skirts of a frock-coat, should keep a strict look out at them; otherwise the boas may be shortened some five or six inches, and the skirts receive a triangular fracture by no means to be admired. Conductors cannot always avoid slamming the doors with a bang quite sufficient for the amputation of either boas, fingers, or coat skirts. Indeed, if a conductor happens to have a bad cold, and no voice for shouting "All right!" he gives the driver notice of it by slamming the door with a superfluous bang; and, in the next moment, the careless ladies and gentlemen allowed to find that it's all wrong; the extra vigour of the bang having made the amputatory process the more complete and vexatious.

**CAUTION IX.**—Never, under any circumstances, ease your corns by laying your feet on the cushions, lest you be set down as a fool, a blackguard, or a Yankee. Riding in a bus five miles for sixpence is cheap, certainly; nay, it is dog-cheap; but that is no sufficient reason why puppies should make it nasty.

**CAUTION X.**—Never indulge your vanity by displaying a gay long purse inside a bus, unless you are quite sure that all your fellow-passengers are as honest as yourself. Turning the gold and silver about in search of a sixpence may be a very gratifying process to you, inasmuch as it shows the poorer sort how much better you are off than they; but it is much more prudent to keep the purse quite out of sight, and carry the sixpence in your waistcoat pocket, or inside your glove; but don't carry it in your mouth, as many bus-passengers do, unless you had it well washed before you left home, for sixpences do sometimes pass through filthy paws; and I am sure I should pause before I came to a determination to suck them.

*Max.*—To those ladies who take delight in wearing their watches outside I would recommend vigilance; coupling my advice with the old precautionary couplet:—

She who a watch would wear, this she must do—  
Pocket her watch, and watch her pocket too.

**CAUTION XI.**—Never give a bus-conductor sixpence without looking at it carefully, lest it should turn out to be no such thing, and he become nine and sixpence the richer, without your becoming one bit the wiser.

(Signed)

BENJAMIN PICKEMUP,

Great Gun.

Bus. Con. P.G. C.O.

## A FEW WRINKLES ADDRESSED TO SPORTSMEN ON THE PRESERVATION OF THE HEALTH.

(By a Country Correspondent.)

SPORTSMEN, albeit their pursuits, are generally healthy, yet in some cases are peculiarly liable to certain disorders. Some of these are contracted by cold, heat, and marshy ground; nevertheless, by taking proper precautions, these may be averted. Of these we shall proceed to speak:—

The climate of England not being *fired* to any particular point of heat in summer or cold in winter, renders it imperative that the body should at all times be kept in that state, that a change of temperature cannot act injuriously upon it. The following wrinkles are offered with a view to this subject. Be cautious of an excess, either of liquors or food, which being taken into the digestive organs, are at the least but imperfectly digested, and the undigested excrement that remains in the stomach becomes clotted and proves a serious annoyance along the line of intestines, and produces pain, distension, and a sour or bitter taste in the mouth, with an inclination to puke or to disturb the free circulation of blood in the head, thereby causing the person to feel a sensation of heaviness. In other cases it disturbs the free pulsation of the heart, and does considerable damage to the functions of the lungs and causes a tightness of the chest, accompanied with a difficulty of breathing. The following are to be strictly avoided by all who value their health:—coarse sour food, spoiled vegetables, damaged wheat or corn, badly baked or hot bread, stale beer, unripe or green fruit, and bad cyder. Salt butter is also injurious to the system, for though plain salt is highly salutary, when mixed freely with other substances it is bad.

Food that is rich or too nutritious will produce indigestion as much as an excess; and even more so, whether it be digested or not.

Sportsmen should be particularly careful to have no other than good and wholesome vegetable food, and to have them *well cooked*, neither half raw nor overdone; but the happy medium between both, and if he have broth or soup, it should be neither watery nor wasty, nor greasy and fat. Beef and mutton are the best animal food, because they are the easiest digested, which is the grand point.

Pig meat should be but seldom eaten, and then but sparingly: game of all sorts are very good, if eaten in moderation. The usual accompaniments of the substantials, such as pepper, mustard, vinegar, &c., &c., are all good in moderation, but if used freely, are very injurious. No benefit can be derived from always eating the same kinds of food, and refusing the variety so bounteously offered by nature at the different seasons.

Tea is a drink which but ill accords to help to promote health, being a powerful narcotic, it produces a sort of languidness over the whole system, and if drunk to excess, acts in much the same manner as opium.

The preservation of health depends much upon *clothing*. Clean linen should always be well aired and dried before put on. And if the person should get wet, he should as soon as convenient strip himself and rub his skin briskly with a coarse dry towel till the skin becomes heated, and then put on dry clothes, but on no account must he remain in his damp garments.

Every sportsman must have at some time or other experienced, that the exposure of the body for a long time to the heat of the sun produces a disturbance of the bowels, and results in nausea and aversion to food. The same effects are produced by a very long exposure to the cold—this can only be averted by proper clothing. In summer, light, but sufficient to protect the body from the effects of the sun; and in the winter, good and plentiful clothes (but not so much as to clog the free use of the limbs or give a heaviness to the body) are to be preferred.

June, 1845.

F. B. T.

## ADVERTISEMENTS.

**TO ANGLERS.**—J. CHEEK, of the Golden Perch, 132, Oxford-street, most respectfully submits the following reduced prices for the best articles:—Trout flies 2s. a dozen; four-joint hickory fly rods, 7s. 6d.; best ditto 10s.; ditto with two tops, landing handle, socket, spear, winch fittings, and partition bag, 20s.; six-joint best hickory general rod with various tops for trout, roach, perch, barbel, and jack-fishing, for travelling, 30s.; three-joint hazel rods with whale-bone top, 1s.; three-joint bamboo walking-stick rod, with screw ferrule 3s.; twenty yards taper fly-line, 1s. 6d.; thirty yards patent taper silk and hair fly-line warranted town made, 4s. 6d.; three yards superior fine gut-lines, 9d.; two-inch best multiplying winches, 6s.; fly-cases from 1s.; every other article equally reasonable. Now Publishing, in Weekly Numbers, price 1d., and in Parts, price 6d.

**THE HISTORY OF THE CONSULATE AND EMPIRE OF FRANCE, under Napoleon, by M. THIERS, Author of the "History of the French Revolution," late President of the Council, and Member of the Chamber of Deputies.**

**CONDITIONS.**—The work will be neatly printed in two columns, royal octavo, from a new and beautiful type, and on fine paper.

It will be uniform with "The People's Edition of Thier's History of the French Revolution," forming, together, four handsome volumes.

On the completion of the Work, a general Preface, introductory to the History of Napoleon, with Titles, Index, &c., will be given, thus forming a complete standard classical book of general reference, and interesting perusal.

Of the vast interest connected with the important national events which took place during the consular and imperial rule of Napoleon there can be no question. In undertaking to record the events of this momentous period, M. THIERS, from his high position in the state, had the good fortune to obtain possession of a multiplicity of original and official documents which embrace the minutest details of all the instructions, orders, &c., dictated by Napoleon himself to his Ministers of State, Privy Counsellors, Prefects, Marshals, and others. Of the success of his undertaking, the rapid sale of the three first volumes, which were issued at Paris on the 15th of March, amounting to 16,000 in one day, and the numerous editions which have been published at Brussels, Leipzig, and other places, afford the most splendid testimony.

London:—G. VICKERS, Holywell-street, Strand.

### IMPORTANT TO ALL VENDERS OF CHEAP PUBLICATIONS.

As all clean unsold Copies will be exchanged. With a very liberal allowance to the trade. Lots of Fun for Everybody.

Just Published, No. 5, of

**BELL'S LIFE GALLERY OF COMICALITIES**, containing the greatest fund of Amusement, with Riddles, ever published at the price. Nos. 1 to 4 are now reprinted, and contain upwards of two hundred and fifty splendid Engravings, by Corkerow, Chatfield, Alken, the late Seymour, and other celebrated characters. Only one Penny each. London: Published by W. Cadym, 31, Oxford-street, near Mile-end-gate, and sold by every Bookseller and News-vender in the kingdom.

### ONLY EDITION OF THE ENTIRE WORKS

OF

M. EUGENE SUE.

The MYSTERIES OF PARIS is now complete: without mutilation or abridgement. Price Half-a-crown!!!

ADDRESS.

**I**N submitting the first COMPLETE and UNIFORM EDITION OF THE WORKS OF M. EUGENE SUE, the Publisher, in no invidious spirit, feels anxious to state plainly and briefly the claims which this series has upon the patronage of the Public.

**FIRSTLY, AS TO THE TEXT.**—The Translations are made from the most recent Paris Editions, as revised and corrected by M. Eugene Sue himself. This, upon comparison with any of the previous English versions, will be found of great importance, inasmuch as since the first appearance of his greater works in fragments, in the *feuilletons* of French newspapers, their talented author has nearly re-written them; pruning redundancies, removing obscurities, and bringing more prominently forward the salient points of his well-constructed stories. Hence the early and cheap editions, copied from the French newspapers or Belgian piracies, can hardly be said to be the works they pretend to be; at least they are not those on which M. Eugene Sue has thought fit to rest the perpetuation of his fame.

**SECONDLY, AS TO CHEAPNESS.**—This requires little observation. The present volume of the MYSTERIES OF PARIS, is sold for Half-a-crown; the WANDERING JEW, it is estimated, will be about equal in quantity and price; and these with two or more of the shorter romances of M. EUGENE SUE will be comprised in the first volume, which will be delivered bound, uniform in style to "The People's Edition of Cooper's Novels," issued by the publisher of this work. It may be as well to observe that the only other complete translation, that of Messrs. Chapman and Hall, (the notes by M. EUGENE SUE will be found in no others but this and the one alluded to) is placed by its costly embellishments and voluminous extent beyond the reach of purchasers of limited means.

**AND LASTLY, AS TO ITS MODE OF ISSUE.**—SIXTEEN CLOSELY-PRINTED PAGES will appear weekly, containing more than THRICE the amount of matter of the most compressed of those now in course of publication, PRICE THREEHALF-PENCE, thus combining the minimum of cost with the maximum of rapidity in the completion of the various works, each of which will be complete in itself, without abridgement.

### THE WANDERING JEW,

With numerous Whole-length Portraits of the Characters in the Work, after Gavarni and others, is Now Publishing.

NEW AND INTERESTING WORKS.

**A GUIDE TO THE GAME OF CHESS AND DRAUGHTS;** by the help of which the amateur may become a crack player of those elegant games. (Profusely illustrated by appropriate diagrams, &c.) Price 3d.

"This unique little work is really what it professes to be—a perfectly simple, and, therefore, easily-to-be-followed 'Guide to Chess and Draughts.' As such we heartily commend it to every would-be player of those best of in-door recreations."—LIFE IN LONDON.

Also, as Companions to the above, price Three-pence each.

A DRAUGHT BOARD,  
AND COMPLETE SET OF MEN, AND  
A CHESS BOARD,  
WITH MEN, ETC., COMPLETE.

**THE GRAMMAR OF THE ENGLISH LANGUAGE, TRULY MADE "EASY AND AMUSING,"** by the invention of three hundred moveable parts of speech. By GEORGE MUDIE, formerly editor of the Sun newspaper. Price 1s. 6d.—"We predict that this Grammar will be extensively used in schools and private families."—Weekly Dispatch. "Admirably adapted for private and self-instruction, and we cordially recommend it to the public."—Morning Advertiser.

W. M. Clark's Works (continued.)

### EUGENE SUE'S BEST WORK!

Every admirer of Fiction should read the faithful and exclusive translation (profusely adorned with appropriate illustrations by eminent engravers), price 1s. 6d., of

**THERESE DUNOYER; or, THE MANOR HOUSE OF TREFF-HARTLOG,** a Romantic Tale by EUGENE SUE, author of "The Mysteries of Paris," "The Wandering Jew," &c., &c.—"This is the most original of all the admirable novels of Eugene Sue. The scenes lie principally in the heart of the Parisian metropolis; and all the gay and glittering pursuits of men of eloquence and fashion are graphically described. The dramatic attractions of this novel are as great as its romantic interest. The hand which drew aside the curtain and displayed the wonderful goings-on of Parisian life in the 'Mysteries of Paris,' is constantly exhibited in 'Therese Dunoyer.'"—National.

**SHORT-HAND MADE SHORTER;** or, Stenography Simplified; being a concise Introduction to a complete Knowledge of the Art. By J. CURTIS, editor of the Newgate Calendar, and twenty-four years reporter and short-hand writer at the Old Bailey and other Metropolitan Sessions. Price 6d. "This is the most useful book, and costs only 6d. The title, too, is a happy one, and what is better, an honest one, for the thing promised is realised."—The Times.

In One Volume, neatly bound, price 5s., a new Historical Romance, by a highly popular writer, illustrated with fine Engravings, founded on fact, entitled

**WILL WATCH; A TALE OF THE COAST.** This highly interesting Work is founded on popular facts, and abounds with scenes and incidents of the most thrilling description, portrayed in a bold and masterly style.

### A BOOK FOR THE MILLION!

To be completed in Sixty Numbers at One Penny, or Twelve Monthly Parts at Sixpence each.

A new and elegant Periodical, consisting of sixteen closely-printed pages, double crown, and embellished with several superb Engravings, by Landells and others, entitled,

**TALES OF SHIPWRECKS AND ADVENTURES AT SEA.**—Containing talented sketches of the Sea and Seamen, and truthful Narratives of Shipwrecks, Fires, Mutinies, Famines, and every Danger of this Life of Peril, rendering it the handsomest, largest and best Publication ever offered to the public.

Just published, in One Volume, 8vo., handsomely bound, price 5s., with nearly Seventy Engravings, an entirely New Edition, revised, and nearly re-written, of the popular Romance of

**DICK TURPIN, THE HIGHWAYMAN.** By HENRY D. MILES.

The following SPORTING HANDBOOKS are all uniformly bound in cloth, gilt edges, price 8d., or post free, 1s. each. Embellished with an outline Engraving of a Ground and Players.

**CLARK'S CRICKETERS' HANDBOOK.** Containing the History and Origin of that manly Game,—an account of celebrated Players, and remarkable Matches; instructions to Young Cricketers, and the

### NEW LAWS OF CRICKET.

**WRESTLING AND PEDESTRIANISM,** With full Instructions in Training for Athletic Sports and Exercises; with Engravings.

**MODERN BOXING,** Containing the History and Practice of Pugilism, Illustrated with Numerous Engravings.

**SPORTING SONGS.** Containing upwards of 100 of the most approved Sporting Songs extant.

London:—W. M. CLARK, 17, Warwick-lane, Paternoster-row. Sold by every Bookseller in the kingdom.

London:—Printed for the Proprietors, by W. M. CLARK, at his Steam-Press, 10, Red Lion-court; and published by him at 17, Warwick-lane, Paternoster-row; J. CLEAVE, Shoe-lane, Fleet-street; and all Booksellers in the United Kingdom.

# THE Sportsman's Magazine & LIFE IN LONDON

No. 7. FOR THE WEEK ENDING JULY 5, 1845. THREE HALFPENCE

## THE THAMES GRAND REGATTA.

VIEW OF PUTNEY BRIDGE.

28

ANY years have elapsed since first the proposal of a succession of periodical meetings, or those falling, one grand annual re-union whereat gentlemen as well as watermen should contend, was made to a then apathetic public; and many have been the abortive attempts of spirited gentlemen to effect such a gathering as that which the Regatta of 1845 has witnessed.

A Scullers' Match, for a prize wherry, above or below bridge, given by a parish or some benevolent individual, the annual pair-oar for certain badges or money-prizes, a few apprentices' boat-races, and the lumbering procession of my Lord Mayor in a November fog, comprised the sum total of river spectacles; save and except a few far-between contests, wherein "officers of the guards," Oxonians, Cantabs, or Westminster Lads got up little cutter affairs, which smacked rather of private rivalries than public exhibitions whereto "the world and his wife" were invited to make holiday, and bring with them their little ones to see the sport. But we have improved upon those slow-coach times. Public recreations, and peoples' holidays, have been found to be indispensable to the physical, as well as moral health of the many-headed; and the canters, puritans, and meddling humbugs, who a few years since denounced, prohibited, and suppressed, races, wakes, fairs, and merry meetings, are now at a discount, for the sound of their ravings is heard not beyond the solid walls of their conventicles, or the ventilator of Exeter Hall. Shakspeare says, "what is a gentleman without his recreations?" we would ask what is a people without them? *Non semper arcus tendit Apollo*, which, in English, we take to mean "all work and no play makes Jack a dull boy;" and

hence it is that we greet with pride and gratification, the glorious gatherings of the 24th, 25th, and 26th of June, feeling convinced that the philanthropist, the legislator, and the moralist must (where unwarped by prejudice, unblinded by bigotry, or not demented by "overmuch righteousness") feel a glow of satisfaction at the health-giving recreations of which Putney has just been the cynosure.

But the sport—the sport. Well, don't be in a hurry, we're going there. Ah! here we are at the dumb-lighter and there's the steamer, chartered by the committee.

The weather on Tuesday was glorious as the most ardent well-wisher could hope or desire, for there were no drawback, albeit a few envious showers attempted to mar the glories of the day. At half-past two the steamer chartered by the committee for the especial accommodation of the elite of the spectators on this great auspicious day, got under way. Our voyage was enlivened by the efficient band of Mr. Adams, whose name alone was a guarantee for the admirable musical treat in store for the favoured few, among whom we were happy to recognize several of the shining stars in the literary firmament.

On the voyage we shall not dwell, save to say that it passed too swiftly, like a delightful dream. At the Red House, which, like this paper, is read in all parts, we were saluted with a discharge of cannon, to which we returned a Hibernian echo, in the shape of "God save the Queen," by the full force of the excellent band already deservedly panegyrised.

"Ease her! back her! stop her!" we mentally cried; but the skipper was deaf to our ventriloquial entreaties! "We wish to call on mine host of

[Continued on page 192.]

## A CABINET MINISTER'S FISHING-PLACE.

(From the "Sporting Magazine.")

TOUCHING the last illness of M. Villemain (the French Minister), the press is much occupied about the life of that man of letters because a minister. Every journal nearly has sported its anecdotes about him. Here is one quite new, and as it is in the fishing line, and not the political line, possibly it may suit your book.

M. Villemain is, or was, an indefatigable amateur of line-fishing. Swift, Lafitte, and Couigny were passionately fond of the sport. Tulon, Habaneck, the illustrious Alcide, Tousez, Levassor, Rossini, are all known amateurs of line-fishing.

For more than three years previous to M. Villemain's illness and demise, almost every morning, scarcely had the sun risen, ere M. V. departed, plainly dressed, but armed at all points for bamboozing the finny tribe, to establish himself at an excellent spot under the "Pont des Arts," which he had himself discovered—a deep hole, which the fish were pleased to frequent, and to which he took still further pains to entice them to by throwing into it all sorts of delicacies, such as cooked corn, teasers, and other attractives.

Unfortunately, one fine day, the minister found his spot occupied: he paced about a long time growling at the usurper, and ended by sitting down at another, where he took nothing at all; whilst at his usual stand his happy rival was making superb fishing.

The next day he got up an hour earlier, and off he trotted to the Pont des Arts. The lucky place was already taken, and by the same individual! For eight days he continued to repeat the same efforts of anticipation, but in vain; his place was always occupied!

At length, one morning he arrived before four; the usurper was already installed.—M. Villemain could no longer contain his anger:—"S'blood! this is too much!" exclaimed he: "why you must pass the night here, sir?"

The young fisherman (for he was a young man) replied by putting into his basket a slashing bream\* which he had just hooked! "No, but I come here at the top of the morning as you see."

Villemain, in despair, sat himself down by the side of his rival, and began to question him.

"But, sir, it seems you have nothing to do, since I find you here every morning?"

"And you, sir, do you not come here also?"

The minister was posed for an instant. "I that is another matter; if my occupations did not oblige me to go to bed very late, I would come here much earlier, and I could easily prevent you taking my place—my excellent place, so good that I have been at the trouble of baiting it!"

"Your place! is it your place?" said the youth. "It appears to me, that it is here as it is everywhere else in the world: if they had not taken away my place from me there, I should not have taken your place under the Pont des Arts."—And on saying so he hooked another large bream and put it into his basket.

M. Villemain grew pale and bit his nails with jealousy. "They have deprived you of your place, have they?" said he at length: "come, let us see, young man: tell me all about it; I take an interest in you!"

Mechanically the young man set about to relate his story, but interrupted at every minute by some new take.—"Left the Normal School on being admitted into the University of Paris.....he had already professed two years with credit, when, having fallen into the unpardonable error of disputing with one of his superiors, he was suspended from his functions.....In spite of all his economy, forced to sell his books to live.....he was then reduced to seek, as a means to eke out a scanty existence, the precarious occupation of line-fishing!"

When he had finished, Villemain got up and left him, saying "Adieu!"

At twelve o'clock the young man returned to his home, just as a government messenger had stopped before the door of his humble dwelling, and delivered to him a despatch from the Minister of Public Instruction.....To him?.....Was it indeed for him? Scarcely could he believe his own eyes!

This order contained in substance: "Sir, I am happy to have it in my power to repair a great injustice—you are restored to your place! Unfortunately the classes of Paris are filled up, and I am forced to send you to Versailles, Seine et Oise: but in recompense I have named you for a higher class there than the one you professed in at Paris"....And then followed the order to depart the same day. "The new professor must not sleep another night in Paris!—Seine et Oise."

Pushed on by an unknown protector, the young professor had a rapid advancement; but he was never recalled to Paris! Latterly, in short, named Provisor at the College of P——, he would not repair to his new residence without coming to thank the Minister of Public Instruction. He was introduced, bowed low—rose up—was about to speak, but was struck dumb—his mouth opened with astonishment—he discovered in the minister the fisherman of the Pont des Arts!

M. Villemain advanced towards him smiling, and said with benevolence:—"Well then, do you find your place at P—— a good one?"

\* A French water fish, for which the Seine is noted.

"And yours under the Pont des Arts?" replied the new professor, perfectly recovered from his quandary.

They left each other, cordially shaking hands and promising themselves often to meet again.

Unfortunately for the protégé of M. de Villemain, he has lost much by the death of his patron, unless he can hook another minister. W.

## THE DEVIL IN LONDON.

DAN BEELZEBUB, finding the regions below

Uncommonly straiten'd for mirth,

Cried "Rather than die of ennui, I must go

And see what they're doing on earth."

So he seated himself in an early up train,

And bade them to set him down

In Britain's metropolis:—Satan was fain

To peep at a season in town.

The trip was soon over, a jarvey procured,

And order'd to Limmer's hotel,

A house whose arrangements, for years, had secured

A high reputation in hell.

'Twas the hour when the morn is at issue with night,

Ere Aurora has harnessed her car,

Or the first rosy bounds of the coursers of light

Have conquered the pale Eastern star.

Arrived at the door of the hostel, the Fiend

Pass'd inwards, and sought the saloon—

Where a circle, in conclave profound, was conversed

Of minions who worship the moon.

The devil he waggles his tail with delight,

As courteously smiling he bends,

And vows "he is d—nably pleased at the sight

Of such a collection of friends."

"Ho! ho!" exclaimed Maldistone, "right welcome, Old Jet,

To thine indefeasible roof!

All hail to thee! tutelar maint of our set,—

Come, give us a wag of the hook."

"Strike me lucky!" cried Somers, "he comes like a brick,—

My cigar has this moment gone out—

And here is a genuine Lucifer—Nick,

May I ask for a blaze of your mouth?"

And spake a strange younker, whom mortals call Smith,

"Old boy, how's your stomach for prog?

Shall I order a phosphorous curry forthwith?

Or a tumbler of vitriol grog?"

"Your offer, my son," replied "Bunch," with a bow,

"Is very well done at the price;

But I come from a rather warm climate just now,

And feel more disposed for an ice."

Then rose, like the voice of the thunder, a shout

For hollands, rum, whisky, cogniac,

Port bishop, hock negus, and Guinness's stout,

As each cried aloud for his "whack."

Forthwith in full tide did the regal stream flow,

A flood goodly, copious, and quick,

Whose waves to their end thus instinctively go,—

The bishops, of course, to Old Nick;

The "run" Fulwar Craven selects in a trice,

Jack W—ll—n is sought by the stout,

Gin twist fixes Cotton straightway in its vice,

And "ruin" soon finds Suffolk out.

Paddy Irwin has taken to *parliament* stuff,

To Farintosh, gay Jenny Mac—;

While "Ginger," Jack Villiers, and meek Billy Duff,

Are sticking like trumps to cognac.

So the pleasure the devil enjoyed in this way

Was the reason it so doth befall,

That he visits us yearly, and holds, every May,

His levee in Exeter Hall.

AN INVERTED JOKER.—Matthews's attendant in his last illness intended to give the patient some medicine; but a few moments after it was discovered that the medicine was nothing but ink, which had been talked from the phial by mistake, and his friend exclaimed—"Good heavens, Matthews! I have given you ink." "Never—never mind, my boy—never mind," said Matthews faintly, "I'll swallow a piece of blotting paper." This was the last joke Matthews ever made.

\* The name is linked for which the Arts has been said.

## ORIGIN OF CHESTER RACES.

It is a fact very little known that these races, now so patronised, are the most ancient on record of this country. It has been customary (says a Chester antiquary), time out of mind, on Shrove Tuesday, for the Company of Saddlers of this city to present to the Drapers a wooden Ball, embellished with flowers, and placed on the point of a lance. This ceremony was performed in the presence of the mayor, at the cross in the "Rodhee," or *Roddy*, an open place near the city. "But this year" (31st Henry VIII.), he continues, "the ball was changed into a 'bell of silver, valued at three shillings and sixpence, or more, to be given to him who shall run the best and fastest on horse-back before them on the same day' (i. e., Shrove Tuesday.) These bells were afterwards denominated St. George's Bells; and we are told that, in the last year of James I., John Brereton, innkeeper, mayor of Chester, first caused the horses entered for this race, then called "St. George's Race," to start from the point beyond the new tower, and appointed them to run five times round the Roddy, "and he who won the last course or traine received the bell, of a good value of eight or ten pounds or thereabouts, and to have it for ever, which moneys were collected of the citizens to a sum for that purpose." Here we see the commencement of a regular horse-race, but whether the courses were in immediate succession or at different times is not perfectly clear. We find not, however, the least indication of distance posts, weighing the riders, loading them with weights, and many other niceties that are observed in the present day. The Chester races were instituted merely for amusement; but now such prodigious sums are usually dependent upon the event of a horse-race that these apparently trivial matters have become indispensably necessary. Forty-six years afterwards, according to the same writer, the sheriffs of Chester, "would have no calves-head feast, but put the charge of it into a piece of plate to be run for on that day (Shrove-Tuesday), and the high sheriff borrowed a barbary horse of Sir Thomas Middleton, which won the plate.

## TRAINING OF SHEEP DOGS.

"WHEN riding, it is a common thing to meet a large flock of sheep, guarded by one or two dogs, at the distance of some miles from any house or man. I often wondered how so firm a friendship had been established. The method of education consists in separating the puppy, while very young, from the bitch, and in accustoming it to its future companions. A ewe is held three or four times a-day for the little thing to suck, and a nest of wool is made for it in the sheep pen. At no time is it allowed to associate with other dogs, or with the children of the family. From this education, it has no wish to leave the flock; and just as another dog will defend its master, man, so will these the sheep. It is amusing to observe, when approaching a flock, how the dog immediately advances barking, and the sheep all close in his rear, as if round the oldest ram. These dogs are also easily taught to bring home the flock at a certain hour in the evening. Their most troublesome fault, when young, is their desire of playing with the sheep; for, in their sport, they sometimes gallop their poor subjects most unmercifully. The shepherd dog comes to the house every day for some meat, and immediately it is given him, he skulks away as if ashamed of himself. On these occasions the house dogs are very tyrannical, and the least of them will attack and pursue the stranger. The minute, however, the latter has reached the flock, he turns round and begins to bark, and then all the house dogs take very quickly to their heels. In a similar manner, a whole pack of hungry wild dogs will scarcely ever (I was told by some never) venture to attack a flock guarded even by one of these faithful shepherds. The whole account appears to me a curious instance of the pliability of the affections in the dog race. Cuvier has observed, that all animals that readily enter into domestication consider man as a member of their society, and thus fulfil their instinct of association. In the above case, the shepherd dogs rank the sheep as their fellow brethren; and the wild dogs, though knowing that the individual sheep are not dogs, but are good to eat, yet partly consent to this view, when seeing them in a flock, with a shepherd dog at their head."—*Travels in South America, by Charles Darwin, Esq.*

## HINTS ON COSTUME TO THE GATE-KEEPERS OF ST. JAMES'S PARK.

As nobody has a right to be admitted into St. James's Park in his working dress, we print by (our own) authority, the following directions for the guidance of the gate-keepers.

Brown paper caps are inadmissible in any case, as decidedly proclaiming either the carpenter and joiner, plumber and glazier, carver and gilder, printer, or other wretch who would pollute the atmosphere of St. James's.

Fur caps are questionable, as raising a suspicion of pot-boy, in which case the wearer must be questioned as to whether he is a pot-boy or not, and if he stammers or hesitates, by no means to be let in. Cloth caps also, must be closely scrutinised, and if shabby, excluded, as denoting the errand or news-boy. Tassels and feathers, however, are to frank caps, being badges of youthful gentility. Discretion must be exercised as to the four-and-ninepenny Gossamer.

Shooting-jackets, velveteen or fustian, are to be turned back, unless they manifestly belong to a sportsman; though no sportsman has, strictly speaking, any business in St. James's Park, notwithstanding its wildfowl. If out at elbows, it is probably the working dress of some poor artist or author; and cannot pass.

The blue frock is a clear case of butcher, and must be repelled with indignation; as must also the smock-frock, which proclaims the carter or drayman; but care must be taken not to confound this with the blouse, lest an indignity should be offered to a foreign Prince.

Corduroys are to be rejected, except in the shape of knee shorts, and in combination with top-boots and other attributes of the good old English gentleman.

The gatekeepers should be mindful to survey all parties demanding entrance from top to toe, as Cantabs, Oxonians, and other young gentlemen of fashion, sometimes, for what is termed "a lark," wear hats which might be confounded with dustmen's or waggoners'. The fantail, therefore, is not to exclude, unless accompanied by leather leggings, or black half-gaiters, with worsted stockings and ankle-jacks.

Doubtful cases may occur, in which a working dress may be in the first style of fashion; as in those of members of the "swell mob." In such, with respect to the admissibility of the candidate, it will be best to take the opinion of the policeman.

## THE SONG OF THE ENGINE.

My body is bright, and I'm gay to the sight,

As I fly through the woods and fens,  
Like some gorgeous insect magnified  
By a sixty million lens.

And a train I make, far, far in my wake,  
Which the frightened kine doth scare,  
As it rolls on the breeze, o'er the fields and trees,  
Ere it vanishes into air.

Or wildly bright, in the dead of night,  
When all beside is still,

I know no sleep, but I onwards leap  
On my mission of good or ill.

In tearing haste, over mead and waste,  
I clatter, gasp, and scream;  
And the banks I light with radiance bright  
From my glowing embers' gleam.

I care not a straw for those that I draw—

I care not a straw—not I,  
As to what their intent, or on what they are bent,  
Be it pleasure or misery.

As my rulers' slave I ever behave,  
When they keep within the line;  
But dare they to overtake my strength,  
A fearful revenge is mine.

By tyranny curst, my fetters I burst,  
Their limbs from the trunk I tear;  
And quivering still, they are flung at my will,  
In the scalding and clouded air.

I cease not my song as I hurry along,  
But far make its echoes ring;  
O'er all I tower, and knowing my power,  
I feel I'm a monster king.—*Great Gun.*

## OUR CITY ARTICLE.

In the railway share market there is a tendency to go up, and it is probable that it will be all up with a great many in a week or two. In the foreign market yesterday was settling day, and pawnbroker's scrip was in extensive demand to meet the claims made by the bulls and the bears on the geese and the donkeys. In order to satisfy the public appetite for speculation, a few new lines have been projected, the shares in which require a deposit of only five shillings; and we understand that at several of the larger schools the woman who goes round with the sweet stuff is allowed to take a limited quantity of railway scrip in one corner of her basket, for the accommodation of juvenile jobbers.

Among a variety of other new schemes, we have heard of one which promises to be unusually popular. It is a new South of England Gretna Green Association, to facilitate runaway matches, by establishing a Gretna Green in the immediate vicinity of London. The expense of going so far north will thus be completely obviated, and the elopement will be brought within the reach of the humblest as well as the highest.

It is proposed to start an omnibus in conjunction with the South of England Gretna Green—the fare being one shilling for a happy couple; and if a bridesmaid is taken, she is to be charged extra as luggage. The only objection we can see to the scheme is, the probability of its putting an end to a good deal of the romance that now hangs over a runaway match; but sentiment ought to give way to the advantages of a sixpenny fare; and there is something inspiring in the idea of "Elopement for the Million."

THE SWAN AT CHELSEA,

as we promised—"the rest was lost even to thought. On we steamed; and as there was little chance that the Swan, even with its pride of "oary feet," would prove a match for the paddles of our craft, we left her behind, and consoled ourselves with the thought that we would take revenge on our return, in an exemplary glass of stiff Cognac and a fragrant Havannah, in the full view of the full-blown charms of the buxom barmaid.

Need we say that, "thick as the leaves which strew the vales in Vallambrosa" were the thousand-and-one boats which dotted the face of Father Thames, from the fragile funny to the sluggish skiff? that "all the world and his wife were there," and that the worthy old couple seemed to have brought all their sons and daughters to enjoy the sport? Putney is reached, and now each Cockney bold, though without a sporting license, proceeds to "shoot" that ancient bridge. Venerable, like many other nuisances, as having formed in some sort a barrier to all desecrating steam. Until Monday three weeks, admired by us as the *ultima thule* of half-hour, quarter, or ten-minute steam-omnibuses, that blessed venerable nuisance, like an ugly toad, "yet bore a precious jewel in its head" that almost redeemed its faults and deformities. Hence we venerated it as the protector of such sports as those which, already driven from Westminster by these perpetual water-churners, have sought refuge on the farther side of Putney, thence to be thrust still farther from the "long village" whenever modern improvement shall destroy the present inconvenient structure. But alas! we had dreamed of a retirement, a pleasure-ground, and found it a highway and a fair. At every pier we met with some such barbarous announcement as the following:—"From and after the third of June, 1845, those classical (?) steam-boats 'The Lalla Rookh,' 'Waverley,' and 'Childe Harold,' will start from Chelsea Pier every

for Kew, Hammersmith, &c., &c." Oh, genius of Moore, memories of bulbuls, atargul, oriental dreaminess, and the funniments of Fadladden preserve us—a classical iron steam-boat! Thou, too, great 'Wizard of the North,' (we mean the original one of Abbotford, not he of the Adelphi), and last, not least, the "wayward Childe, on gloomy thoughts intent," what do you think of the poetry of a steam-engine. "A nasty, puffin', bustin', clinking, smoking, whistling, screaming, black-dispensing monster, all 'ile and iron bars," as Mr. Weller described it—is baptized after your sweet-smelling poesies! Well so be it; eventually the regattas will be held at Thames Ditton; yet as steam compensates for the inconvenience, by bringing remote places nearer, perhaps it offers compensation in that way for the desecration it inflicts.

"Well, here we are again," as old Joe and all his imitators, since the year one, have announced their arrival. Let's look about us: Ah! this is a pretty scene, (see page 189,) and there's friend Avis, hard by the old church at Putney. Who knows not Avis's, where aquatics most do congregate, where matches are made, where the race is planned, the match made, and care drowned in the flowing bowl? Never did "the Bells" seem in better tune, and never did our old friend Avis's exhibit a more cheerful face, decked in sunshine, and decorated by a stupendous mast, whence, from two very extensive braces, fluttered gaily a hundred streamers of rainbow hues. Nor was the merriment without this excellent place of entertainment surpassed by the good cheer within; to which each fresh accession of visitors seemed bent on doing justice, while those

THE BELLS TAVERN.

in possession of the seats found the eatables and drinkables so excellent, that one would have thought the "very appetite did grow by what it fed on." A better house whereat to enjoy a first-rate fish dinner, a sandwich lunch, a tea with accompaniments, or any of those creature comforts from sparkling champagne down to sparkling ale, wherein rowers do delight, does not stand on Thames' sedgy banks.

The Star and Garter, too, could boast its fair share of visitors. While, upward wending our way we would wish to note as especially deserving of the smiles of a discerning public, the City Arms, at the foot of the new Suspension-bridge, which have a worthy supporter in host Hetherington; the Red Lion, by Adams, which in its neat accommodations and ditto wines, may put many of its Blue, White, Black or Golden namesakes to the blush; another Red Lion at Chiswick, kept by one William Clery; and "last, not least in our dear love," honest, eccentric Tom Finch, of the Half Moon, where cricketing, shooting, archery, and every healthful recreation may be enjoyed in perfection.

The arrangements were admirable; and when we consider, it is indeed extraordinary that nothing occurred to mar the pleasures of the occasion.

The Committee's yacht was moored a short distance above Putney-bridge; and, in addition to being decorated with flags, bore the prizes, so placed as to be distinctly visible to every one. It also exhibited, for the public information, a black board, on which was inscribed, in white, the

SILVER CHALLENGE CUP FOR SCULLS. (Won by J. B. Bumstead, Esq.)

number of the race next to be contested; and shortly after the conclusion of each race the colours of the winner were run up to the mast head; thus enabling those in its vicinity, and who of course could only see the start, to know also the termination.

The match commencing at flood, the visitors by water were compelled to row up against tide, with a stiff head wind, which proved a considerable source of discomfort to those who had undertaken to be one of four, to pull up a shallop with some nineteen sitters; we saw one bedstead stopped by the rush of the wind and tide through the arch of Vauxhall-bridge for two or three minutes, and by way of making them more comfortable, just through the bridge lay a small steamer on her side, hard and fast aground. When the bridge was passed, being quite low water, the river was all shoals, so gave them the prospect of keeping in the stream against wind and tide, or if they kept in shore or being put aground by the next puff of wind, and once there, under these circumstances, not very easy to get off again; in fact, we suspect they and a good many more found it convenient to stop half way, and wait for the tide to assist them in reaching the scene of action.

And now for the representations of the prizes, and the names of their respective winners.

THE GRAND CHALLENGE CUP. (Won by Cam. University Subscription Rooms.)

THE SILVER CHALLENGE CUP. (Won by Oxford University.)

THE TRADESMEN'S PLATE. (Won by the Lambeth Aquatic Club.)

EIGHT MEDALS (for the First Crew in One Grand Heat.)

## CORRESPONDENTS.

SIMPSON.—Four 2's and a 9 count twenty.

B. B.—A plays a 2, B a queen, C a 7, D a 4, A an ace, B a 3, C a 2, and scores four holes; A plays an ace. How many is he entitled to take, it being a go?—Four holes.

A VICTIM.—Supposing a pawnbroker's duplicate of a watch to be destroyed, or otherwise lost, can he refuse to give it up without the production of such duplicate, provided the party applying can furnish every particular relative to the article? Is there any law upon this point?—You must apply to the pawnbroker, who will give you a printed form to fill up, which you must take to the police-office for that district, and which when signed by the magistrate will be a sufficient authority for the pawnbroker to give up possession.

A CONSTANT READER.—It is only two weeks since we answered the very question you put, and that at some length; see Correspondent's column in No. 5: choose a more fitting signature.

THE RING.—Deaf Burke was beaten by Cousens.

A late Lord Mayor prohibited angling on the Thames on Sundays, and levied a fine of 20s. on the offenders, with forfeiture of rod and line, having also appointed water-bailiffs to carry this into effect. Is there any law to justify this?—There is. The Lord Mayor is Conservator of the Thames, and may issue such an order, however foolish, and even mischievous.

R. EMPSON.—The question is not susceptible of a doubt. If the party who wagers that another cannot shew him a certain thing, refuses to look at it when produced, he loses: this is in contradiction of the spirit of his own wager, and he cannot take advantage of his own wrong doing.

M. L., Leeds.—The cuts are in hand, and will appear in a week or two.

S. SAMPRON.—What horse won the Doncaster St. Leger in the shortest time, and in what year?—Reveller, in 1818, is reported to have done it in three minutes sixteen seconds: but the accuracy of his timing has been very much questioned. It is a well-authenticated fact, the Don John, in 1833, won it in three minutes and seventeen seconds.

A LONDONER.—How many yards is it from the distance post to the winning post on the Derby Course at Epsom; and is a distance longer or shorter according to the length of the course?—A distance is 240 yards, whatever may be the length of the course run.

B. R. S.—Send us the lines: we are happy to receive the contributions of any true lover of sporting, provided they are up to the standard.

C. H. J.—As there were but four starters, and the Emperor of the four was last in the betting, it would be wrong to term him a "favourite." The betting stood 5 to 4 on Faugh and Alice, 5 to 4 against Faugh, 5 to 1 against Cowl, and 8 to 1 against The Emperor.

R. B. S.—Two Correspondents have addressed us upon the same topic. It is an extraordinary thing how easy it is to suggest a fault. The trivial inconvenience of the interruption of illustrated articles, the intervention of two unillustrated pages, seems much to trouble R. B. S. It is a mechanical impossibility to do otherwise, consistently with the decent printing of the wood-cuts. It would be impossible, by a mere verbal description, to explain technically and intelligibly the cause of this, but if R. B. S. will spread out one of the uncut sheets of the *Illustrated London News*, *Pictorial Times*, or this little miscellany, he will, perhaps, get a wrinkle; he will find that all the cuts are on one side of the sheet of paper, and if he can tell us how to put an odd page, and its immediately subsequent even one, on the same side of the paper, we will undertake to get him a pension of £10,000 a year from parliament. Squaring the circle, and the perpetual motion, he may then try his hand at.

## OUR WEEKLY CALENDAR.

AN EPHEMERIS IN JEST AND EARNEST.

SUNDAY June 29th.—SIXTH SUNDAY AFTER TRINITY.—M. Garnerin and Captain Sowden ascended in a balloon from Ranelagh Gardens, Chelsea, in the presence of many thousand spectators. They performed a voyage of fifty miles in three quarters of an hour, alighting near Colchester.—*Daily Advertiser*, June 30th, 1862. This was the most memorable ascent in England, from the time of Lunardi.

MONDAY, 30.—Gentlemen of England against Kent, at Lord's Ground.—Royal Thames Yacht Club Match, for the Fitzhardinge Cup.—Arundel Club Match, from Greenwich to Greenhithe, and back.

TUESDAY, July 1.—East Surrey Races, Peckham.—Oxford Act, and Cambridge Commemoration.—*Battersea*: The Boyne, 1690: the Nile, 1799.—At a Court of Aldermen, Sir Peter Laurie makes some rude remarks on the conduct of the City Police Commissioner, who a few days after favours Sir Peter with a liberal supply of Harvey's sauce, 1844.

Come here, come hither, and mark how swell  
The fruit-buds of the jargonelle,  
On its crispy, leaflet, greening boughs,  
The apricot open its hard fruit throws:  
The delicate peach-tree's branches run  
O'er the warm wall, glad to feel the sun;  
And the cherry proclaims of cloudless weather,  
When its fruits and the blackbirds toy together.  
See the gooseberry bushes their riches show,  
And the currant bunch hangs its leaves below;  
And the damp-loving rasp saith, "I'll win your praise  
With my grateful coolness on harvest days."

WEDNESDAY July 2.—Carlisle Races; Winchester and Ludlow ditto.—Hungerford Market Opened, 1833.

## THE SEASON.

Now Summer is in flower, and Nature's hum  
Is never silent round her bounteous bloom;  
Insects, as small as dust, have never done  
With glitt'ring dance, and reeling in the sun;  
And green wood-fly, and blossom-haunting bee,  
Are never weary of their melody.  
Round field and hedge, flowers in full glory twine,  
Large bind-weed bells, wild hop, and streak'd woodbine,  
That lift athirst their slender throated flowers,  
Agape for dew-falls, and for honey-showers;  
These o'er each bush in sweet disorder run,  
And spread their wild hues to the sultry sun.  
The mottled spider, at eve's leisure, weaves  
His web of silken lace on twigs and leaves,

Which ev'ry morning meet the poet's eye,  
Like fairies' dew-wet dresses hung to dry.  
The wheat swells into ear, and hides below  
The May-month wild flowers and their gaudy show,  
Leaving, a school-boy height, in smugger rest,  
The leveret's seat, and lark, and partridge nest.—*Clare*.

THURSDAY 3.—East Surrey.—Hatcham Park.—Dog days begin.  
FRIDAY 4.—Cambridge Term ends.—New Moon.—To one intimate with the country, and, therefore, fond of rural enjoyment, July offers two very peculiar sources of pleasure. It is the season of hay-making, and of sheep-shearing, both of which operations still retain much of the gaiety of ancient festivals. Shakespeare and Drayton have poetically described the recreations of our ancestors at these rural feasts; and a writer of more recent date, Dyer, has made "The Fleece" the subject of a beautiful and patriotic poem.

Angling.—In July, trout, dace, flounders, eels, bleak, minnows, pike, barbel, gudgeons, and roach, afford good sport. Bream and carp spawn.  
SATURDAY 5.—Oxford Term ends.—Sovereigns first issued from the Bank, 1817.—Festival in honour of Scotland's Bard—tickets, 15s. each.—Lord Eglinton makes a fine speech, full of quotations—it is very cheering to see the great (grate) fall of Burns, but not so gratifying in the dog-days; when the poet himself declared—"lika dog manna has his day." could he have foreseen the 5th of June, 1844.—*Lady Flora Hastings* died, 1838.

## The Sportsman's Magazine.

FOR THE WEEK ENDING, JULY 5.

## PLAIN DIRECTIONS FOR TRAINING.

THE superintendence of those who are about to go through a course of training, for the purpose of invigorating the frame, so as to render it capable of supporting and sustaining an unusual degree of fatigue, and of making efforts to which, in its usual state, it would be found unequal, is generally entrusted to men who are totally ignorant of the animal economy; and whose sole knowledge consists in an acquaintance with the process to which they have themselves been subjected, at some period, and which they deem applicable to every constitution. The object of the following pages is to give a few rules for the attainment of the highest state of physical power, and to point out, at the same time, those cases which require, during the period of training, certain precautions dependant upon their natural or acquired state. It is not, however, the object of the writer to investigate all those diseases which militate against the development of considerable muscular power, as such a scrutiny would necessarily be, to a vast majority of readers both tedious and uninteresting—but rather to point out the means by which a tolerably healthy man may invigorate his constitution generally, and materially increase his physical strength—an object which, whether to be attained for the purpose of promoting the natural functions of the body, with the sole view to enjoy the sweets of robust health, or of performing feats by which money, and a certain degree of fame, are to be obtained, is equally desirable.

From the irregular life which most men lead up to that period when certain monetary symptoms of decaying powers impress themselves so forcibly upon the observation, that they may not pass unheeded, it usually happens, that the greater number of those who go into training—more particularly if inhabitants of large towns—have acquired habits of indolence and debauchery of many kinds, which have both vitiated the natural and healthy secretions of the different organs of the body, and have likewise tended to debilitate the muscular fibre, and to increase the deposition of fat in various parts of the frame. To remedy this improper state, the great requisites to the man who is not labouring under any active form of disease, are, pure air, exercise proportioned to his strength, medicine, and diet.

The greater number of my readers may probably be unaware of the mode by which the atmospheric air, operating upon the blood in its passage through the lungs, produces in it that material change by which animal life is in a great degree supported; but as an explanation of this fact would, perhaps unnecessarily, lengthen this paper, suffice it to say, that the advantages of breathing a pure air are so generally appreciated, if not understood, that it is needless to dwell much upon a subject upon which there cannot be a diversity of opinion. There are two points, however, connected with this portion of our treatise, to which it may be necessary to direct attention. The first is that, although the constituent parts and proportions of atmospheric air are found to be everywhere the same, their influence upon the human frame seems to be considerably modified by soil and situation. A wet marshy

country is certainly not nearly so healthy as a dry soil, at a moderate elevation. The exhilaration of spirits, and the freedom of respiration that are experienced in the latter, are far greater than in the former situation; although here and there the reverse may be found to be the case in peculiar constitutions, particularly if afflicted with asthma, or some other form of pulmonary disease. The second point is, that it is not sufficient that pure air be only breathed when at exercise abroad, it should likewise be respired within doors as much as possible; and thus, confined rooms, a bedroom without a chimney, or a house surrounded by, or in the immediate neighbourhood of, stagnant water, should be avoided as a residence.

Having thus summarily treated the all-important items of air and situation, we shall proceed to deal similarly with the topic of medicine; because, unless a man be perfect master of that branch of knowledge, he should never attempt to make use of any but the simplest medicaments, but avail himself at once of the assistance of some surgeon of eminence, upon whose skill he can rely, and in whose knowledge of his constitution he can place confidence. The only medicines, therefore, which a trainer should venture to meddle with, are such as will gently assist the removal of too great a quantity of adipose matter; and the principal of these are such as operate upon the bowels and the skin. Before a person, unaccustomed to fatigue, becomes capable of enduring so much exertion as will make him to perspire freely (supposing him to be too fat), it may be as well to subject him to the influence of such medicines as will produce this effect in a moderate degree, and they may at the same time be safely and efficaciously combined with mild purgatives. For this purpose let him take for three nights consecutively, from eight to ten grains of compound rhubarb pill, with two of blue pill, and two of powdered ipecacuanha, and let the dose be repeated if necessary. These medicines are mild in their operation, and the doses ordered cannot do harm, even in ignorant hands.

When more active purgatives are required, as in the case of men, for instance, of a very plethoric habit, or who are subject to determination of blood to the head, saline aperients, as the sulphates of potash or soda, or Epsom salts, may occasionally be used; but these medicines, in full doses, and many others, as castor oil, jalap, and scammony, whose principal operation is confined to the mucous membrane lining the bowels, are by no means to be frequently repeated, as their effects are too debilitating, and they are too often productive of serious mischief, to be safe remedies in the hands of the uninitiated in the mysteries of medical science.

It is generally considered by ignorant persons, that the chief requisite for making a man strong and muscular is to give him plenty of food of the most nutritious kind: these people never stopping to consider for a moment, and, indeed, being incapable of judging whether the stomach is capable of digesting the aliment it is made to receive. Thus, a man taken out of London for the purpose of being trained for some match, and whose excesses of various kinds, have materially disordered the natural powers of the stomach and bowels, is made, all at once, to swallow daily a large portion of barely-cooked animal food, which, the enfeebled state of the stomach rendering it incapable of digesting, becomes in a short time decomposed, and gives rise to great flatulence, uneasiness, and distension, accompanied by an extremely acid secretion from the stomach, which occasionally rises into the mouth, and by a general feeling of languor and weariness. The action of the heart is, in these instances, frequently deranged; now it beats slowly and feebly, with perhaps, an occasional intermission, and on any trifling exertion being used, palpitations and flutters, producing what the common people familiarly term "a sinking at the stomach." The undigested food passing into the bowels becomes, to them, a fruitful source of irritation; diarrhoea and costiveness succeed each other by turns; food is still crammed in; and the end of this repletion so far from being an accession of strength, is an absolute attack of illness, or, at the least, such a degree of debility as cannot fail to point out the impropriety of the trainer's system.

In all such cases, the motto of the trainer should be "*festina lente*." If he cannot have the advice of a good surgeon, let him, at least, be guided by the feelings of the man placed under his care; and where the above symptoms are manifest, let the mildest species of food be given, in small quantities, until good air, moderate exercise, and regular hours, shall so far have improved the tone of the stomach as to make it feel a craving for a heartier species of aliment. Even when this feeling has been produced, the old adage—"fair and softly go far in a day," must still be borne in mind; for at this period one ample meal may undo at once the care and attention bestowed for a considerable time. Where no very extraordinary symptoms of great irritation of the stomach are apparent, as much flatulence, nausea, or vomiting, &c., some tonic medicine may be given for a time with great propriety, and generally with considerable benefit. All these medicines, however, being so many stimulants to the stomach, must be used carefully, and of a strength proportioned to the state of that organ. About half an ounce of quassia chips, infused in a quart of boiling water, and taken to the extent of a wine glassful three times a day—an hour before each meal—is a light and pleasing tonic, and rarely disagrees with the stomach, especially when care has been previously taken to empty the bowels, a precaution which should never be omitted prior to the exhibition of these medicines. As the tone of the stomach improves, thirty or forty drops of dilute sulphuric acid, and two

tea-spoonful of syrup of ginger may be added to each dose of the infusion of quassia. Regimen, regular hours of exercise, feeding, and repose, with or without the above simple medicaments, as the case may require, and limiting the quantity and quality of the food according to the state of the stomach and bowels, will, in a very short time, put the frame of any man, provided he have no absolute disease, into a state fit for the performance of those active exertions which are necessary to develop his muscular powers; but without proper attention, in the first instance, to the state of the digestive organs, nourishing diet of every description will not only be thrown away, but is absolutely hurtful and productive of the very opposite results to those intended to be produced.

What has been written on the article of solid food is equally applicable to fluids. No drink of a stimulating nature should be allowed, so long as the stomach is weak and irritable; and even after it has been restored to a strong and healthy state, the more direct stimulants, as wine and spirits, are to be carefully avoided, in any large quantity. It may happen that the constitution of a man subjected to very severe exercise may require a small allowance of these liquids for the purpose of keeping up his stamina, and there may exist no very cogent reason for denying him a couple of glasses of old wine, or as many table-spoonfuls of old Cognac brandy, in a tumbler of cold water, with his dinner; but, generally speaking, they may be omitted without detriment, although they are, probably, in many cases, preferable to the large draughts of beer which many men are in the habit of swallowing, and which, in the end, make them purry and thick-winded. Whatever beer is allowed should be old, free from acidity, and not particularly strong. Hot fluids, except when given for the purpose of inducing perspiration, are generally productive of mischief. Very hot tea or coffee will, if taken for any great length of time, eventually weaken the powers of the stomach, which is the mainspring of strength, and should therefore be excluded from the diet of a person in training, although, taken in moderation, and of a moderate degree of warmth, they possibly promote digestion.

When plenty of time is allowed to get a man into proper health by careful training, and where he is not compelled by agreement to reduce himself to a certain weight, it is totally unnecessary and extremely injudicious to subject him, as most trainers do, to repeated and violent fits of perspiration, by first making him walk or run a considerable distance, enveloped in sundry coats and flannel jackets, and then placing him between two feather beds, and giving him a large quantity of some hot and stimulating fluid, as ale, cyder, or white wine, whey, containing spices, or other aromatic substances. Such extreme measures, tending, as they do in most cases, to give a certain shock to nature, are only admissible where but a short time is allowed for training, and much corpulence is to be speedily reduced, and cannot even then be serviceable if carried to any severe extent, as the advantage gained in the first instance by the reduction of fat is probably balanced by the weakening process adopted for its diminution. Jockeys who are occasionally compelled to sweat off several pounds in a few days for the purpose of riding a certain weight, are sometimes so reduced in strength as to be barely capable of going through the exertion of riding a two-mile race, especially if the pace be good, and the horse pull pretty strong. Thus it is no very uncommon thing to see these men take the lead, when their orders are to ride a waiting race, and towards the end of the course to be more beaten than the animal they ride. This, however, is not their fault, but their misfortune, as no person can possibly be subjected to such treatment as will reduce his weight twelve or more pounds in a few days, by means of violent perspirations, and the action of drastic purgatives; without materially diminishing, at the same time, the power of the body, and, perhaps, the vigour of the constitution; and jockeys are, therefore, frequently an instance of the impropriety of this severe discipline. To a moderate extent, this plan of treatment is, nevertheless, applicable to those men who are of a gross habit of body, or whose constitution betrays a manifest disposition to an accumulation of fat.

(To be continued in our next).

**AN ANTI-BOURBON POODLE.**—The Duke of Devonshire brought a poodle dog from Paris in 1814, which growled when *Vive le Roi* was cried out to him. Lord George Cavendish, desiring to amuse a party by exhibiting this peculiarity, accosted the dog so roughly that he put his nose scratched. Tierney said it was the first Cavendish blood spilt for royalty.

**OLD FASHIONED GILDING THE BEST.**—The proprietor of one of our modern busses, having furnished himself with an entire new bus of a very costly description, much covered with large gold letters, and otherwise ornamented with rich gilt work, took it into his head to send it for the inspection of a neighbour of his, a retired and wealthy old coach-master, who, crippled by age and the gout, came hobbling forth to view the new vehicle in question; when he explained to the coachman, "Give my compliments to your master, and tell him, in my time we used to put the gold in our pockets, but now a days they seem to put it on the outside."

**DRURY-LANE.**—Drury-lane owes its name to Sir William Drury, who was a commander in the Irish wars. In his house the unfortunate Earl of Essex, the favourite of Elizabeth, frequently held council with his friends relating to the rash enterprise which caused his death.

## A TRIP TO HAMPTON RACES,

BY MILES'S BOY.

HAMPTON RACE-COURSE.

AIL HAMPTON, paradise of the dwellers in Cockaigne ; battle ground, in days of old, of burly boxers, but on the occasion which now calls on our pen the "tented field" of turf competitors. Are we going to a fair, or to the races, was our first thought, as on Wednesday, we donned our "zephyr" for this holyday excursion ? It was a hard

question, and as we did not know how to answer, and if we did, *cui bono?* we left it alone. Moulsey is certainly apart from all other meetings—it stands alone in its glory : three fourths of its visitants most assuredly know no more of the races when they come back than when they went, and "Where ignorance is bliss, 'Tis folly to be wise."

HAMPTON COURT PALACE.

But it rained—will anybody go?—thought we. Of course they will; is there a dweller within the clang of the "Bell of Bow" who has the ability and the means, who feels it not to be a duty to himself to see the Derby run for, and to go to Hampton? And then the various modes of getting there—all so cheap, and several so pleasant: by railroad and stream—by four-in-hand, omnibus, gig, cart, or van, and then the voyage by steam. But this, however, we must reserve, lest we should trespass on another trip, which we shall shortly write and illustrate, of an Angling tour up the "Queen of Rivers."

But we are digressing. So here we go per coach, labelled and directed, and trusting to keep "this side up." The drive to Hampton is most delightful, whichever route may be preferred; and the journey by railway, though short, is equally sweet—passing through a beautiful line of country to Esher or Ditton Marsh, from whence you have a short drive of about two miles and a half to the Hurst or Course. Proceeding by coach from town, the road lies through Hammersmith, Brentford, Isleworth, Twickenham (celebrated for the villa of Pope), through the delightful avenue of Bushy Park, then by

of which we here present the reader with a view. And here Miles's Boy must linger for a few paragraphs: for as this is but a holiday excursion, whereof "racing" is the excuse, he must not leave unnoticed this delightful spot.

The public gardens are separated by an iron fence from what is called the Home Park; and the walks in the Gardens, Wilderness, and Palace, are about three miles in extent. The Palace itself occupies about eight acres of ground. The great eastern front of the building

is of brick, of a bright red hue, but the numerous decorations are of stone. Four fluted three-quarter columns, of the Corinthian order, sustain an angular pediment, on which are sculptured, in bas-relief, the triumphs of Hercules over Envy. We are now at the entrance by the east front, which at once opens upon the public gardens, and from which you have a view of the Home Park, and its avenues of elm and lime trees, reaching in a straight line to the banks of the Thames and Kingston, with a lake or canal of water in the centre, nearly three-quarters of a mile in length.

By way of a promenade along this front of the Palace there is a broad gravel walk, leading down on the right to the banks of the Thames, and on the left to a gate, called the Flower-pot-gate, which opens on the Kingston-road. At the right-hand corner of the east front, there is a door which opens into the private garden, where there are two greenhouses, with a few rare plants, the remains of Queen Mary's botanical collection, and some large orange trees, many of them in full bearing; but the greatest curiosity here is the large vine, certainly the largest vine in Europe, if not in the world. The house is seventy-two feet long, and the breadth of the rafters thirty. The large vine is above one hundred and ten feet long; at three feet from the ground the stem is twenty-seven inches in circumference.

At Hampton, too, is the villa known as Garrick's, wherein resided the British Roscius. It was formerly known as "Hampton House," and is separated from the Thames by a public road, but when seen from the bank of the river, the road is completely hidden by the high bushes which rise to the windows of the first story. The lawn in front of the

GARRICK'S VILLA.

house, which reaches to the Thames, is accessible by a path beneath the road which joins it to the grounds on the other side. The principal object of interest in this small portion of the grounds is the Temple of Shakspeare, which Garrick erected close to the borders of the river. It is an octagonal brick building, covered with stucco, and having a domed top, and a portico with an ascent of several steps. It was erected expressly to contain Raoult's statue of Shakspeare, which is now placed in the entrance-hall of the British Museum; it having become national property on the death of Mrs. Garrick, to whom it was bequeathed by her husband, with a desire that it should at her death go to the Museum. It was executed by the sculptor at the request and expense of Garrick, to express his sense of the respect and veneration he ever felt for the great poet, whose works had contributed to his fame and fortune.

But really Miles's Boy is dealing too heavily in topography and history, he will therefore "pull up" at the Ferry, and take a sight at the "majesty of the people."

Is not this a merry scene, reader, this same ferry? A fairy fleet of boats, filled with yet fairer company, are in continual passage o'er the silver waters of Father Thames. But stay, let us pull up opposite the Ferry, at friend Powell's, the Bell, long the favourite resort of the disciples of Isaac Walton, for it merits mention, as well for the claim it has on the notice of the antiquarian, as for the merit due to its present management. This hostel is reported to have been the occasional place of resort and entertainment of the nobles and gentry forming a portion of the princely establishment of the Lord Cardinal Wolsey, and, at a later period, to have been equally patronised by the Stuarts, one of whom, residing at Oatlands (now the seat of the Lord Francis Egerton), was in the habit of stopping with his retainers on the road, to take re-

freshment at the Bell, at that time the sole hostel in Hampton. It is recorded, also, that a banquet was here given to "London's great architect," Sir Christopher Wren, on the occasion of his coming from town to superintend the structure of the tower of Hampton Church, which he had designed. The old church, like the great architect of whose genius it was the offspring, has passed away. Not so the Bell Tavern, which still erects its head, and opens wide its doors for the entertainment of visitors to Hampton. And, were we to omit a passing word in due tribute to the excellence of the fare, and to the attention which, as a total stranger, we, in common with others, experienced, we should neither acquit ourselves justly towards the respectable landlord and his pretty and amiable wife, nor to the public.

"Will you ever get to the course?" exclaims an irritable reader.—"Why that's the very last thing Miles's Boy cared about when he set out."—"Indeed!"

"—Yes, even so." The road there and back is the best part of the excursion; though the few, considering Sir James Graham's proscription of roulette, E. O., the pea and the thimble had, we feared, given a dose to Hampton gathering, which nought could counteract.

Gladly were we undeceived; the Hurst resembled a fair, rather than a race-course. This, thought we, is as it should be. Messrs. Tumble-up, Walk-in, Just-going-to-begin, and Co. had an Olympic Temple, a wax work and mechanical exhibition, conjuring booth, &c. Then, as in our boyhood's Bartlemy Fair days, there were ups-and-downs, a fearful pastime which we thought had been prohibited, roundabouts, knock-'em-downs, skewer-the-garter, ring-the-bull, and other pastimes pleasant exceedingly; whilst in the bye lanes the supposed-to-be-extinct thimble-riggers did a little on the sly. Careless, the matchless restaurant;

(JEM BELCHER.)

## THE HISTORY OF BRITISH BOXING, FROM FIG AND BROUGHTON TO THE PRESENT TIME. PERIOD IV. 1798—1820.

FROM THE APPEARANCE OF JEM BELCHER, TO THE LAST BATTLE OF CRIEB.

**REFERENCE** to that excellent compilation, *FISTIANA*, will furnish the reader with the result, the number of rounds, the duration, and the amount fought for, of every regular battle contested in the P.R. during the present century, a chronological list of the battles during the modern period at which we have now arrived, would be an utter waste of space. We shall therefore briefly state those leading opponents and professors of the fistic art between the years 1798 and 1820, whose deeds are of sufficient note to demand for them detailed memoirs.

JEM BELCHER	1798—1809.
TOM BELCHER	1804—1813.
HENRY PEARCE	1803—1805.
JOHN GULLEY	1805—1808.
DUTCH SAM	1801—1814.
NOSWORTHY	1808—1815.
SCROGGINS	1803—1820.
CRIBB	1805—1820.

To these we shall append short notices of some of the lesser pugilists, with notices of their deeds.

### CHAPTER I.

JAMES BELCHER, CHAMPION OF ENGLAND.

Of all the fistic heroes to whom Bristol has given birth, the name of Jem Belcher deserves precedence. He came of a good fighting stock, being descended by the mother's side from the renowned Slack, who was the grandsire of the subject of the present memoir.

Upon his first appearance as a pugilist, he was with justice considered a phenomenon in the art. Though graceful and finely proportioned, there were none of those muscular exaggerations in his form when stripped (and still less when attired) which go, in the popular notion, to make up a Hercules. Jem was more of the sculptor's Apollo than the gladiator; yet at twenty years of age he baffled and defeated the heroes of the old school, both with and without the gloves. His method appeared so peculiarly his own, that it looked like the result of intuition, and some

of the "ould un's" could hardly credit the fact of his prowess until they had experienced in their own persons the efficiency of his attack and guard.

BELCHER was born at Bristol, in St. James's Churchyard, on the 15th of April, 1781. He there for some years followed the occupation of a butcher; and early signalled himself by pugilistic feats at Lansdown Fair.

The first recorded fight of Belcher was with Britton, a pugilist of some notoriety, who afterwards contended with Dutch Sam; the contest took place near Bristol, on the 6th of March, 1798; it was a sharp and severe contest in which Belcher, to the utter surprise of the spectators, the boy of seventeen, disposed of his antagonist in thirty-three minutes, Britton being beaten to a stand-still.

Our hero now came up to town, where his reputation accompanied him, and being introduced to old BILL WARR, who then kept a house in Covent Garden, the "ould un" had a mind to judge personally of the merits of the young aspirant for pugilistic fame, and accordingly put on the gloves with him for a little "breathing" in his (Warr's) own dining-room. The veteran, who in his best days was no Belcher, was so astounded at Jem's quickness in hitting and recovering guard, that he puffed out, as he reeled against one of his tables, impelled thither by a *Belcherian* tip, "That 'ill do. This youngster can go in with any man in the kingdom!" Jem quietly observed, during the discussion after dinner, "I could have done better, sir, but I was afraid I might hit you too hard, and that you would be offended." "Oh!" cried the undaunted veteran, "I was never afraid of a crack, my boy, and am not now; we'll have a round, and you may do your best." So saying, they instantly set-to, when Jem, almost at the request of his host, quietly hit him down several times, despite of the "old un's" attempts at stopping or countering. Warr was fully satisfied of Belcher's talents, they sat down sociably, and Bill offered to back the young Bristolian against anything on the pugilistic list.

Tom Jones (of Paddington) whose career we gave last week, was selected as the *trial-horse* of the new competitor in the race for fame and its more substantial rewards. The battle took place on Wormwood Scrubbs, near Paddington, on the 12th of April, 1799, for twenty-five

guineas aside. The peculiar features of Belcher's science were well displayed; and although Jones contended for victory with desperate determination, unflinching courage, and no small amount of skill and readiness, he was doomed to "pale his ineffective fires" before the rising luminary of Belcher's fame. Thirty-three minutes of courageous and determined fighting placed the future champion's star in the ascendant.

Jack Bartholomew, a pugilist, whose victories over the gluttonous Firby, (known as the "Young Ruffian,") Tom Owen, and others, had placed him high in the estimation of "the Fancy," was now picked out as a customer very likely to try the mettle of Belcher. Bartholomew was in high favour among the ring-goers, his weight between twelve and thirteen stone, his qualifications considerable, and his game of the first order. The stakes in the first instance were small, being but £20 a side, owing to the affair arising out of a longing desire on the part of Bartholomew, to try his skill with the Bristol "Phenomenon," he himself feeling no apprehension as to the result. He accordingly challenged Jem for this sum, offering to "fight him for love," rather than lose the opportunity of a "shy." The mill came off, almost extemporaneously, Aug. 15, 1799, at George's Row, on the Uxbridge-road, and was so severely and evenly contested (Belcher was declared to be out of condition), that neither could be declared the conqueror. Towards the end of the fight Bartholomew was so completely exhausted that he fainted away, and could not come to time; and Jem so much done up, that it was with difficulty he was got up to the scratch. In fact, both men were out of time. Bartholomew, in the interval, recovering a little from his weakness, insisted upon renewing the combat, when the ring was again made; but he staggered about without command of himself, and appeared literally stupid. His game was so good, but his state so pitiable, that Cullington feeling for his bravery, exclaimed, "For heaven's sake, Jem, don't hit him!" upon which Belcher merely pushed him down; in fact, he was himself so exhausted as to be unable to make an effectual hit. The umpires pronounced it a drawn battle; and the stakes, which were held by Bill Gibbons's brother, were drawn the same night at Cullington's.

As Bartholomew possessed pluck of the first order, it was not to be supposed the matter would rest here, accordingly the world pugilistic, was soon on the *qui vive* for another match, which was arranged for 300 guineas; this was fought upon a stage on Finchley Common, on Thursday, May 15, 1800.

The combatants mounted the stage at a little after 1 o'clock, and little time was lost in preliminaries. Bartholomew had determined that sparring should avail Belcher but little, and ding-dong rushes were the game he had resolved on. Belcher, even in the early rounds of the fight, exhibited the tactics, afterwards conspicuous in some of Cribbs' battles of "milling on the retreat"; but Bartholomew would not be denied, and seconded by his great strength and weight, he got in, planted upon Belcher, and hit him clean down with such violence, as to induce his over-sanguine friends to start off an express, per pigeon, to London, with the intelligence of their man's victory. They were, however, very premature, for Jem taught by experience, did not give Bartholomew a chance of thus stealing a march on him; after pinking Bartholomew once or twice, he warded off his lunge, and catching him cleverly, threw him so dreadful a cross-but-took that he was never entirely himself again during the fight. The odds now changed. Yet Bartholomew bravely contended, disputing every round with unyielding firmness, till the close of the seventeenth round, and the expiration of 20 minutes, when Belcher felled him with so terrific a body blow, that all was *U-P*. The contest, considering the shortness of its duration, was considered the most desperate which had been witnessed for many years, and the loser was severely punished. It is erroneously stated in Boxiana (page 129, vol. i.) that Belcher and Bartholomew fought again; but no date or place is mentioned, nor did any such battle ever come off.

Andrew Gamble, the "Irish Champion," was now backed by several influential amateurs, to enter the lists with Belcher. Accordingly a match was made for one hundred guineas, to be decided on Wimbledon-common, on Monday, December 22, 1800. And on that day vehicles of all descriptions, and crowds of pedestrians flocked to witness this combat.

Belcher entered the ring about twelve o'clock, accompanied by his second, Joe Ward, with Bill Gibbons as his bottle-holder, and Tom Tring as an assistant. Mendoza was second to Gamble; his bottle-holder Coady, and old Elisher Crabbe as deputy.

Notwithstanding Gamble had beat Noah James the Cheshire Champion, a pugilist who had been successful in seventeen pitched battles, and whose game was said to be superior to any man in the kingdom, still the bets from the first making of the match were 7 to 5 in favour of Belcher; and Bill Warr, before the combatants stripped, offered twenty-five guineas to twenty. On stripping, Gamble appeared much the heavier man, and his friends and countrymen sported 3 to 2 on him; but that was by no means the opinion of the London cognoscenti. A few minutes before one the fight commenced:—

ROUND 1. After some sparring, Gamble made play, but was prettily parried by Belcher, who, with unequalled celerity, planted in return three severe facers: they soon closed, and Belcher, being well aware of the superiority of his opponent's strength, dropped. [The Paddies, in their eagerness to support their countryman, here offered five to four.]

2. Belcher, full of spirit, advanced towards Gamble, who retreated. Jem

over his right eye, as not only to close it immediately, but knock him down with uncommon violence. [Two to one on Belcher.]

3. Gamble again retreated, but put in several severe blows in the body of his antagonist with some cleverness. Belcher, by a sharp hit, made the claret fly copiously; but Gamble, notwithstanding, threw Belcher with considerable violence, and fell upon him cross-ways. [The odds rose to four to one upon Jem.]

4. Belcher, full of coolness and self-possession, showed first-rate science. His blows were well directed, and severe, particularly one in the neck, which brought Gamble down. [Ten to one Belcher was the winner.]

5th and last round. Gamble received two such blows that struck him all of a heap—one in the mark, that nearly deprived him of breath; and the other on the side, which instantly swelled considerably. Gamble, completely exhausted, gave in.

It is reported that not less than twenty thousand pounds changed hands on this occasion. The Irish were full of murmurings at Gamble's conduct, who was beaten in five rounds, and in the short space of nine minutes! Gamble fought very badly; from his former experience much was expected, but he appeared alarmed at his opponent's quickness. Belcher treated his knowledge of the art with the utmost contempt.

While Belcher was witnessing a battle, between Elias, a Jew, and one Jones, which took place upon Wimbledon-common, on Monday, July 13, 1801, a man of the name of Burke, a butcher, who had behaved himself improperly in the outer ring, called out for Belcher, the Champion. Upon Jem's mildly asking him what he wanted, Burke dealt him a severe blow in return for his civility. A dreadful set-to instantly commenced—in which Burke displayed so much bottom and strength, that the spectators scarcely knew what to think about the termination of the contest. The combat lasted nineteen minutes, and although the result was, that Burke was beaten; an opinion, however, became prevalent, that had not Belcher possessed a thorough knowledge of the science, there was a great probability of his falling a sacrifice to this outrageous knight of the cleaver.

Burke having shown so much game under such evident disadvantages, Lord Camelford determined to back him for a second combat in a more regular manner, for one hundred guineas. He was accordingly put out to nurse; a teacher appointed to initiate him into the mysteries of the science; and it was reported of Burke that he was a promising child—took his food regularly, minded what his master said to him, and, for the short time that he had taken to study, great improvement was visible. Burke ultimately turned out one of the most troublesome customers, and the hardest to be disposed of, that ever entered the lists with Belcher.

Some time having been lost by the interruption of magistrates, a stage was erected at Hurley-bottom, a few miles distant from Maidenhead, on November 25, 1801. Joe Ward and a Bristol lad performed the usual offices for Belcher; Harry Lee attended as Burke's second, and Rhodes as his bottle-holder. The odds at the beginning of the fight were nearly two to one upon Belcher.

ROUND 1. Burke gave some signs of improvement from his tuition—several blows were exchanged, Burke gave Belcher a terrible blow under his right eye, that made him reel. They closed, and fell.

2, 3, 4. Blows were the leading features in these rounds. Art was not much resorted to by either of the combatants.

5. Burke had his nose laid open by a severe hit from Belcher, and was ultimately felled. [Ten to one on Jem—no takers.]

6. Burke seemed inclined to keep his distance, but Belcher put in a blow upon his forehead; the blood now flowed so copiously from his head, that his second found it a difficult task to keep him clean.

7, 8, and 9. The former two were of little consequence; but in the latter Belcher was thrown with considerable violence.

10. Milling was the signal, and this round displayed a fine specimen of their talents for hammering. The best round in the fight.

16. Burke completely done up—yet too much pride to confess he was beat, went down; and his second declared that the fight was over.

Since the days of Johnson and Ben, it was the opinion of the amateurs, so desperate a battle had not taken place; twenty-five minutes of slaughtering hard fighting. Burke was heavier than Belcher, and greatly superior in point of stature; Jem appeared little the worse for the conflict, declaring that he had scarcely felt a blow in the fight; and, in the gaiety of the moment, challenged Mendoza to fight in less than a month, three hundred guineas against two hundred guineas: but Dan was not to be had, and observed, he had done with pugilism.

Burke was not yet satisfied; and another trial of skill was granted, Captain Fletcher backing him; and Fletcher Reid, Esq., on the part of Belcher, for fourteen hundred and fifty guineas a-side, which were made good. The combatants appeared upon the stage, which was erected at a village called Grewelthorpe, about nineteen miles from Middleham, in Yorkshire. A dispute taking place about Burke's second, Belcher offered to fight him a few rounds for love; but as Burke would neither fight for love nor money, the consequence was, that the fancy were disappointed. Jem received fifty pounds for his trouble from Mr. Reid, who also allowed him five pounds for travelling expenses.

Burke endeavoured to justify himself through the medium of the *Oracle* newspaper, in a long letter to the editor, which is not worth transcribing.

(To be continued in our next)

THE BELL, AT HAMPTON.

Lawrence, of Hampton; the ponderous Baron Nicholson, of the Garrick; and many minor venders of the good things requisite for the refreshment of the inward man, set forth their tempting fare. Tumblers and fortune-tellers were as plenty as blackberries, ballad-bawlers sang all sorts of tunes, in all sorts of keys. The gentleman with one leg jumped over the stick as per last, and three professors of gymnastics set up establishments for the exhibition of the art of self-defence; the first boasted of Kendrick, the black; George Sinclair, the Liverpool Slasher, and a gentleman unknown to us, but we believe not to fame, denominated Young Jones the Slaughtering Butcher. Luke Rogers conducted the ceremonies at the second establishment, and Philips, brother, as we heard, to Brighton Bill, the third. Thus an effort was made to counteract the dullness attendant upon Sir James Graham's gambling abolition measure—donkeys and ponies for young ladies fond of equestrian exercise—Tom Thumb carriages drawn by goats, for juveniles—gingerbread nuts, cakes, lollipops, whips, drums, rattles, and all other toys were there in profusion.

During the progress of the races, which we do verily believe half the company present never looked at at all, punts and wherries covered the silvery stream. One large barge was turned into a *caravansery*, and, by the aid of half-shutters, tables were formed from seat to seat in the boats, and covered with all the edibles of the season. A vast number of vehicles lined the Hampton side of the river, and between each heat and race, boats were in requisition to carry hungry and thirsty visitors over the water to the inns, at which their horses baited and they feasted. The idea of going to the races to *fish* appears a little absurd, but with many rod and line appeared indispensable; and then "they could see the middle of the course from the river!" The little islands that adorn the stream from Kew upwards were peopled; and in all parts whoever the commissariats might be, the victualling department had certainly been well attended to. Snow-feathered swans gave the river a lake-like look, and as they glided past the villa of the British Roebuck, fancy called up Johnson, Burke, Mansfield, Foote, Schomberg, Gainsborough, Reynolds, Louthborough, Goldsmith, Sterne, and the piquantly pretty Violetta, who had so often sported on its sward, or paid their devotions to the bard of nature in its temple. To turn from this reverie to the turf caused a revulsion of feeling at least startling. There Tom Spring, Will Jones, Young Sambo, and other pugilistic personages, suggested the slaughtering scenes of twenty years ago, when Moulsey was the Waterloo of the P.R. Oh, president of the Daffy Club, Bill Gibbons, Caleb Baldwin, Scroggins, and Cabbage, whither have ye fled! Alas! each of you are like Richardson's phenomenon. The strong man has wrestled with a stronger.

And here we would call the attention of the humanity mongers to the children, almost infants, who are taught to beg, tumble, sing, walk on stilts, &c.; they are almost invariably the victims of profligate and assumed parents. What is to become of these unfortunates in after life; can

it be expected but that the boys will turn thieves, whilst the fate of the girls is certain. It would be a boon to these poor innocents to take them into custody. These are considerations below the notice of the Home Secretary, but not beneath the care of any one who stops to cast an eye of pity on a barefooted boy, who might live to become a useful and happy man, or a vice-trained girl, whom the Creator meant should be hereafter a virtuous woman, a wife, and a mother.

"Just a going to begin!"—the bell, (very like a muffin-bell) rang out, dogs, of course, ran up and down the course, bawled at by everybody and caught by nobody—trancheons were thrown, which hit everything but what they were aimed at—intrepid young gentlemen darted forward from the off to the near side of the course and were compelled to "try back" by the troops of Scotland-yard. It is a singular fact that we never saw one of these boobies that annoy people by attempting to cross that could run; they are to a man members of the slow coach company. And then the fun began. Let *Times* and *Herald*, *Chronicle* and *Post*, *Bell's Life*, the *Era* and the *Sunday Times*, sing and say the doings of the terrible "high-bred cattle," who on Moulsey's Plain strove in fleet rivalry. They, stamped with the permission of her Majesty's Commissioners; have right—and good cause so to do; for us, we pass the "correct lists," "the names, weights, and colours of the riders," and the number from the winning chair, to look about us.

"Please sir, could you tell me who that genelman in the red coat is, as rides up and down every where, where they won't let no one else go?"

"Not to know him, argues yourself unknown,"

thought we, but why quote Milton to the muffin-maker—"That's the indefatigable," replied we.

"What a queer name to go to bed with," said the Mile-ender. Gentle, or ungente reader, we were actually asked this question on Moulsey's Plain, by a London bred biped, as

THE PEERLESS PARSONS (See following page)

flashed by, "blazing like a meteor," here, there, and every where was the "Clerk of the Course." Sir Boyle Roche's bird, which was in two places at once, was completely "distanced," for, to the best of our belief, the "Indefatigable" was frequently in half-a-dozen. Indeed, Hampton Races were in *extremis*, not only because Graham had scuttled the galleon which yearly arrived from London, freighted with fine gold, for the payment of hire for the ground; but because of the severe blow inflicted last year by the uproar, disorder, and violence which took place thereat. Some of our readers, perhaps, may not be aware of the amount thus added to the race fund; we, therefore, give them an estimate, founded on the receipts in 1843. Previous to the establishment of the Races, the Lord of the Manor would gladly have let the barren waste of Moulsey at a rent of £50 per annum; yet, since that period, up to the time of Sir James Graham's crusade against the play booths, the receipt averaged from £1000 to £1200 a-year from the letting of booths alone, to say nothing of

THE INDEFATIGABLE PARSONS.

the sum charged for allowing vehicles and equestrians to come within the limits of the Hurst. In 1843, we noticed thirteen gambling-booths on one side of the course, not one of which, as we understood, paid a less rent than £50 for the three days; this alone would give £650. Beyond these, on the same side of the course, but in the open air, were ten or twelve tables for *un-deux-cinq*, and other games, for the privilege of which the proprietors paid a proportionate rent, amounting, we should say, to another £100 at least. On the opposite side of the course, immediately facing the refreshment booths, were from twenty to thirty tables of divers kinds, worked by the *nobblers*, *speelers*, and other most industrious artists, all of whom contributed handsomely to the revenue of the lord of the soil. The contribution of a guinea was also levied on each and every thimble table, and these amounted to some fifty or sixty—and to the total of this gaming rental was to be added the like imposition on the long line of refreshment booths that extend from the Ferry to the Judges' Stand. The receipts for admission on the several betting-stands amounted, also, to a very large sum, so that our calculation may be taken in its amount to be considerably within the annual sum actually realised out of the course. All this revenue was cut away at "one fell swoop," and Hampton Races seemed doomed to extinction from sheer exhaustion of funds, when up rose the "Indefatigable Parsons," and, albeit the press had hot-pressed him, jockeys had ridden him down, and trainers had railed against him vehemently, he swore by his renewed energies that neither his "Pet" nor he should be beaten easily. The racing reputation of "The Hurst" should shine more brilliantly than ever, and his scarlet coat be the pledge which he would redeem with accumulating honour. And the "Indefatigable" realised his "scheme," too. He went on the broad gauge, and arrived very satisfactorily at the terminus. The neighbourhood came forth liberally with subscriptions, and a good store of ammunition was especially provided by the officers of the 4th Light Dragoons. The money added to the different stakes induced numerous entries to be made, and the sport that was produced was, both in quantity and quality, of a very gratifying description. A de-

tachment of the Hampton police hovered about the Hurst to prevent thimble-rigging and other illegal games, whilst a strong party of the A division of the metropolitan force, under the command of Inspector Partridge, did excellent service in "keeping the course," and preventing the rash from rushing into danger. Not an accident, but what the *coachmaker* could easily repair, occurred throughout the meeting. Several complaints were made about the toll that was exacted for the admission of vehicles to the ground, but the "Indefatigable" remedied them as soon as they were brought under his notice. In short, a better conducted meeting Hampton never boasted. And now for "home, dear home."

Those who had taken return tickets made their way to Kingston station, but the mass went *via* Esher. The road presented a scene like the Derby retreat—save and except that the proportion of the fairer sex was as two to one compared to Epsom. Buxom landladies, who you could swear kept the Golden Lion, or the Jolly Butchers; young ladies in their teens; recently rendered brides, and ladies of all ages in hopes shortly to become such, made the vehicles one blaze of beauty. Of that portion of the sex "who love the moon," but who are not strict adherents of Diana, there was more than an average supply. Father Mathew, despite the handsome subscriptions he has received, would have wept to behold the roystering males as they "pitched into" the remnants of fluids contained in big-bellied bottles and gigantic jars. "What's the use of carrying anything home with us!" was a universal exclamation. How some of the van-ites "made" the metropolis must remain to be told by some future historian. At Nine-elms there was the usual rush to get out, a sort of echo of the morning crush to get in. Thursday on the whole was delightful; and, altogether, great was the sense of enjoyment expressed by all who visited Hampton Races for this present year 1845; which, thanks to the "Indefatigable," the weather, the "creature comforts" of Careless, and the arrangements of the stewards, went off with unprecedented *colât*.

## COFFEE-HOUSES.

BY A PERIPATETIC.

A COFFEE-HOUSE is *par excellence*, the resort of the middling classes of the London world. It is to them what the clubs are to the aristocracy, or the tap of a public-house and the bar of a gin-shop to the lower classes of the community. It may be worthy of note, too, that each of these particular resorts of the three great classes of London life presents a peculiarity of feature typical of its frequenters. Look for example, at the club-house, magnificent in its outward aspect, proudly pre-eminent in its external appearance, redolent of architecture, decoration, and upholstery; the coffee-house, quiet and staid outwardly, but replete with comfort and convenience inwardly; and then the difference which exists between this latter place of public entertainment and what is familiarly known as a gin-palace. The one glittering with light and splendour, with its handsome swing-doors, squabbed with marble, whereon may be distinguished huge letters, or Brobdignag words, directing the way you should go to the retail or to the bottle-department. Within, the same gaudy splendour everywhere meets the eye. Handsomely-polished mahogany counters, variegated here and there with marble, fantastically ornamented bottles, mirror-like pumps, green casks with enticing gold labels, such, for instance, as "Old Tom," "Bang-up Cream of the Valley," "Real Knock-me-down," &c., &c., and last, though not least, the showily-dressed damsels, whose personal charms are not the lowest in the series of attractions, all contribute to the fascination which enthral the visiter. Turn to the coffee-house, and lo! the contrast. A plain portal, with its small plate of ground glass, or a wire blind extending half way up the window, on which are only inscribed the words "Coffee-room" comfortably boxes, sufficient to contain yourself and one or two friends; the lamps, with globe glasses, which shed a soft and subdued light on all around; these are charms whose attraction is not deteriorated when the "cup that cheers, but not intoxicates," is brought by a pretty attendant Hebe, whose glittering eye and quiet smile is more than a remuneration for the penny which you add to your reckoning for her attention to your wants. Reader, have we enlisted your sympathies in the behalf of the coffee-house? if so, pray you follow us in the perambulations which we purpose making throughout those which stud the streets of London.

It may be imagined, that the regular frequenters of coffee-houses are bachelors. The married man, generally speaking, needs not repair thither for his evening's quiet; his comfort is always provided for, and he requires no out-door attraction. He, happy wight, when the toils of the day are over, has but to repair to his cheerful home. No care is on his mind, for he knows that nothing will disturb his tranquillity. His spouse meets him with open arms; his children clamber on his knees

"The envied kiss to share,"

and with many infantile endearments, such for example, as making a pin cushion of his calf, stuffing paper into his coat pocket, or filling his snuff-box with orange-pips, exhibit their affection for their paternal relative. But, alas! such joys as these the poor bachelor cannot hope to taste; and therefore, while he is doomed to remain in a state of single blessedness, he seeks in the precincts of a coffee-room, that comfort which is denied to him at home. But, although the married man does not usually hang up his hat there in the evening, he, nevertheless, is frequently to be found there during the day, when engaged in business. Men of all grades, while fulfilling the duties of their respective stations, seek the coffee-room for the refreshment which exercise and employment render necessary for the recruiting of exhausted nature.

It is generally stated, we believe, with every degree of truth, that the first coffee-house established in London, was the so-called Don Saltero's coffee-house, in Cheyne-walk, Chelsea. There is a house called by this name at present, which we believe to be the identical spot. This Don Saltero, whose real name was Salter—a hybrid, half-barber, half-antiquary, full of cunning, having attracted great numbers to his house by the curiosities, antiquarian and otherwise, which he was in the habit of selling—attempted to increase his income by introducing the sale of ready-made coffee. In one of the early numbers of the "Tatler," will be found a characteristic sketch of the man, his curiosities, his fiddle-playing, and other characteristics.

Coffee-houses continued to increase in the eighteenth century, but they were scarcely like our modern coffee-houses, more nearly resembling taverns. At all events, they were beyond the reach of the humbler classes. About forty years ago, when coffee was temporarily enormously dear, a beverage called saloop was vended, both in houses and street-stalls; it was an infusion of sassafras, served hot, with milk and sugar, in the same manner as coffee, at a penny a cup. This, however, has now wholly given way to the beverage which is connected with so many social features at the present day—coffee.

Of coffee-house statistics we may briefly speak; twenty-five years ago there were not more than ten or twelve coffee-houses in the metropolis; but now they may be reckoned at sixteen or seventeen hundred at the least; and it is stated, on good authority, that the yearly average increase is one hundred. They are of all sizes and all prices, from those whose price is sixpence to those where a penny suffices for a cup. Nor are they

confined to the mere sale of coffee only, the hungry perambulator may obtain anything they can wish, cold beef, ham, eggs, bacon—nay, even joints, vegetables, &c., at certain hours, thus merging the cook's into the coffee-shop. At a coffee-house kept by Mr. Humphreys, about 300lbs. of cold ham and meat is consumed in a week. All these houses are furnished with newspapers, periodicals, and even the higher classes of reviews; at some of those devoted to the lower classes of the community there are eight or nine newspapers taken every morning.

**A DOG'S RECOGNITION THROUGH SCENT.**—A gentleman possessed a favourite spaniel, which for a long time was in the practice of accompanying him in all his walks, and became his attached companion. This gentleman had occasion to leave home, and was absent for more than a twelvemonth, during which time he had never seen the dog. On his return along with a friend, while yet at a little distance from the house, they perceived the spaniel lying beside the gate. The gentleman thought this would be a good opportunity of testing his favourite's memory, and he accordingly arranged with his companion, (who was quite unknown to the dog,) that they should both walk up to the animal, and express no signs of recognition. As they approached nearer, the dog started up, and gazed at them attentively, but he discovered no signs of recognition, even at their near approach. At last he came up to the stranger, put his nose close to his clothes, and smelt him, without any signs of emotion; he then did the same to his old master, but no sooner had he smelt him than recognition instantly took place; he leaped up to his face repeatedly, and showed symptoms of the most extravagant joy. He followed him into the house, and watched his every movement, and could by no means be diverted from his person.

**FOUL AIR IN WELLS AND CESSPOOLS.**—The following is worth everybody's knowing. Mr. Green, of Sudbury, has suggested a method of purifying wells, &c., from the foul air which so often accumulates in them when long closed, and has not unfrequently been destructive of life. The plan is simply to throw into the well a quantity of unslaked lime, which, as soon as it comes in contact with the water, throws up a column of vapour, driving before it all the deleterious gases, and rendering it perfectly safe for the workmen to descend immediately.

**CASTING OUT DEVILS.**—A French journal states that the Curé of Ministrol de Caldes, in Catalonia, in exorcising a woman possessed by a legion of devils, succeeded lately in forcing out of her the trifling number of 7,999! Unfortunately, the last devil of all, more cunning than his comrades, was able to resist all the attacks of the Curé, who always recommenced his operations every *fete* day. The ecclesiastical authorities at last put an end to his diabolical capers.

**CURIOUS WAGER.**—A few days ago a postman laid a wager that he would go blindfolded from the Ecole Militaire to the General Post Office in the rue Jean Jacques Rousseau. He started at four in the morning, crossed the river in a boat, which he found himself, without calling for the aid of a boatman, and, on his way, stopped at a wine-shop in the rue Froimanteau, where he was known, and called for a glass of wine. He was followed by his backers and others who had betted against him, and reached the Post-office in triumph at ten o'clock.—*Paris paper.*

**AN AMBIGUOUS NOTE.**—Mr. O'Kelly presents compliments to Mr. S., sends by the bearer two puppies; one for Mrs. O'Donnel—the other for Miss O'Callaghan; they are both b—hs.

**STURGEON CAUGHT IN THE RIVER LEA.**—On Wednesday a gentleman named Parkes, residing in Little Knight Rider-street, Doctors' Commons, whilst fishing in a branch of the River Lea, near the Temple Mills, in the Hackney-marshes, observed a fish of considerable size lying in a quiescent state in rather shallow water. He procured a small harpoon from the proprietor of the Temple Mills Tavern, with which he succeeded in striking it near its tail. With assistance he got it to the bank, when it proved to be a fine young sturgeon, of the weight of sixteen pounds and a half. It is a singular fact that, during the past month, no fewer than four other fish of the same species have been caught near the same spot.

**KEYS AND WARDS.**—Some time since there was fixed to the gates of Lincoln's Inn-square, the following hand-bill:—"Lost, in the Court of Chancery, a bunch of keys," &c. The Lord Chancellor shrewdly remarked, *en passant*, that "no doubt they belonged to the wards."

**THE WINNERS OF THE DERBY, OAKS, AND ASCOT CUP.**—Mr. John Moore, of West-street, Upper St. Martin's-lane, has placed in the hands of his engraver the original paintings of that eminent artist, Abraham Cooper, R.A., of the victors in the two great contests at Epsom, for the purpose of being engraved in the first style of art previous to publication. The likenesses of both "The Merry Monarch" and "Refraction" are extremely faithful, the former being taken in his stable, and the latter, mounted by Harry Bell, and eager for the fray. The nature of the two paintings, the one descriptive of the loose box, and the other open scenery, varies as essentially as does the massive strength of the son of Slane, from the more airy properties of the daughter of Glaucus, fitting them equally to be companions, yet counterparts of the two great sporting events of the south. "The Emperor" is a re-publication of the animal peculiarly illustrious by strange coincidence, taken after his last year's triumph at Ascot, under the express permission of Lord Albemarle, by W. Shayer, jun., and engraved by Charles Hunt, in his best style.

No. 8. FOR THE WEEK ENDING JULY 12, 1845. THREE HALFPENCE.

## THAMES ANGLING.

THE THAMES NEAR TEDDINGTON LOCK.

**W**HAT angler will acknowledge that another pleasure — another sport, can exceed his own? Not a single true one, we will venture to answer. And thus it is with every sport in the varied round of recreation and health-giving pursuits. Yet it is not the sport alone which draws us with magnetic influence and fixes us “like patience in a punt” on the stilly stream, or keeps us spell-bound by the river side. No, we have yet a brighter source of true enjoyment in the pure air and tranquil rural scenes which wait upon our wanderings. What so beneficial to a mind worn with the many cares of study or close application to a worldly calling, as the relaxation in which we revel when we quit the noise and bustle of the crowded town to feast upon the scent-laden breeze?

Angling is a pastime which has been much and frequently vilified and ridiculed. I use the past tense advisedly: for since so many men, good and great, rich and mighty, not only in worldly, but also in mental lore, have appeared as its advocates, it has long since ceased to be considered a mean or despicable art. Some few have ventured to pronounce it a childish amusement: but I consider that the love of it derives not its existence from juvenile habit alone; for though it mostly “grows with our growth and strengthens with our strength,”—and though the old adage “once a chub-hole always a chub-hole,” may fairly be read “once an angler always an angler”—oftentimes it will win a tyro of ripened years, or be adopted as the recreation of old age. I need notice no more striking instance of this than the conversation of Sir H. Davy, who handled a fly-rod, at all events, for the first time when he was President of the Royal Society; although he did so, under the preceptorship of one who might, perhaps, remember the use of thread and a bent pin in childhood, my late esteemed friend Sir Anthony Carlisle. The bare

mention of such a name, is surely enough at once to deaden the barb of derision.

Some writers have expressed surprise at the enthusiasm of anglers, seeing that the produce of the sport seldom appears to counterbalance the general disappointment and dullness. But surely they have not traced the subject up to its source. The sportsman's real object is not, in general, to acquire a quantity of game; else he might purchase it at less coin and with less trouble in the public markets: but it is, that he may enjoy the treasures of nature and art. The game is but the means of his excitement.

The quantum of success by no means constitutes the test of pleasure in any field-sport; else how insipid would be fox-hunting! But on the average we fishermen catch per head, compared with the expenditure of coin upon tackle, as much as any other field-sport produces under like comparison.

Dr. Johnson has the discredit of having defined angling to be “a stick and a string, with a worm at one end and a fool at the other:” this is a poor illogical sarcasm. The doctor knew nothing of the skill called for in the rare art. I know many followers of the craft who by their skill would have landed “the great bear” himself, with a gut-line not thicker than a single thread from his “three-ribbed hose,” and a genuine O'Shaughnessey bend, with as much ease as the doctor would have hoisted a minnow with Chinese twist as thick as whipcord, and a No. 5 hook, from out the tiny rivulet. I doubt not but that the science of the fool would beat all the doctor's learning in this respect.

Again as to the folly of fishing—if science be the standard which should direct our choice, look at the names of those who have from age to age enrolled themselves as its supporters, and the disciples of Walton

will then appear as the sands of the sea, compared with the admirers of Nimrod. Field-sports are but "an employment for idle time which is then not idly spent;" and I know no reason why the question of superiority among them should ever have been mooted. But without seeking to give offence to any, I might fairly venture to assert that there are, and have been, more thinking men among anglers than any other class of sportsmen, and in my humble judgment there is likewise more to think about. Let no one in his ignorance say that there is folly in fishing; but rather take my word for it that there is a science in the economy of fish, the depths of which cannot be sounded by a lead-line as long as the days of Methuselah.

But I must rein up, and, leaving the general, descend to the particular. We here give the reader a sketch or two on the banks of the silver Thames: how to catch the finny tribes that rove therein is a subject fitted rather for that department of this paper entitled "The Fisher's Creel" than this article. Sure we are, however, that "The Honest Angler" will thank us for the two little pictures (see pages 203 and 205) we here present to him of familiar scenes. To many they will suggest ideas of sport with the "graceful rod," to others reminiscences of "rare days," when with single hair or trusty gut they drew the silvery prey from the waters and consigned him to the laden creel.

And here we would throw out a hint to "Brethren of the Angle" generally. The paper in which these lines appear is the first attempt to establish a medium of communication for facts, theories, opinions, and information, relating to Angling, and he who contributes to our columns, his experiences, or his local knowledge, extends the repute of his favourite sport, and serves his brother Piscators—a word to the wise is enough. But to return to the Thames. No one who has fished that queen of streams but will, we think, agree with us that for many years it was and still is most absurdly and unjustly slighted by the scribbling portion of brethren of the angle. Those who can revel among northern lakes, or beside the pleasant rivers which run through the valleys of North Wales, would lead others to forget that health, amusement, and enjoyment, are to be found within a morning's drive of their homes in the metropolis. Philosophy teaches us to seize the lesser advantage when the greater is beyond our reach. There are many who dearly love the gentle craft, to whom a long absence from the leading occupations of life is difficult or impossible. We city men have, upon our own most glorious river, all which the most eager and devoted angler can desire—sport in plenty, if he be not over-fastidious. Let his basket weigh a hundred weight, we can show him where he can fill it from sunrise to sunset, and may tell him, that, be weather fair or foul, and though the "wind bloweth where it listeth," he is certain not to be altogether disappointed. Or if his notions be more ambitious, and his aim be to exhibit skill, we may tell him where trout, as fine as ever strained the sinews and gladdened the heart of the angler, are in the keeping of the king of rivers; that gigantic chub, which inhabit the nooks, skirt his banks; and that pike, such as "Holy Dee" never held, are fattening upon his wealth; to say nothing of enormous barbel, that will give him half an hour's "play" between the strike and the landing-net.

But if the Thames affords rare and true sport to the angler, how vastly does it surpass all other rivers in those sources of enjoyment which equally influence, exhilarate, and delight the votary of the craft! His "idle time is never idly spent." Upon the breast or by the side of the "most loved of all the ocean's sons" we revel among luxuries of which Nature is nowhere more lavish. Walk where we will, scenery gentle, joyous, and beautiful, greets the eye and gladdens the heart; at every turn we hear the ripple of some one of the thousand streams that pay tribute to the river king—streams

"To whose falls  
Melodious birds sing madrigals."

To the "Thames Angling Protection Society," the public owes an uncanceled debt of gratitude. For several years past by their exertions in checking unfair fishing, staking the deeps, and preserving the fry from depredators, they have been rapidly improving the river.

Upon the banks of the Thames the noblest of the British worthies have lived, flourished, and died. Philosophers, statesmen, poets, historians, painters, dramatists, novelists, travellers, politicians, brave soldiers, and gallant sailors, have given a deep interest to almost every house, lane, and tree along its sides. Fancy may hear "a chorus of old poets" from many a sequestered nook; women celebrated for beauty or made immortal by virtue, may seem to move again along its mossy slopes, and imagination picture the pomp and glory of the olden time,

"When kings row'd upon its waves."

Scarcely can we stand upon a spot which is not hallowed ground; or contemplate an object unassociated with some triumph of the mind. Thus the angler, while enjoying his sport, is revelling with nature or with memory—the present or the past—

"The attentive mind,  
By this harmonious action on her powers,  
Becomes herself harmonious."

But space warneth us to conclude: which we will do by informing the reader of a little scheme which we have in store for him. The great

picture newspapers, have been of late giving away prints of the rows of houses, &c., on the river side, which they call PANORAMAS of [the Thames," &c., &c., although we, for the life of us can, make nothing of them but views of London taken from a boat. Now we propose to give you, reader, at four or five instalments, "THE ANGLER'S MAP OF THE THAMES," exhibiting all the best fishing stations and deeps. This will be a work of some extent, expense, and labour—may we therefore ask the recommendation of every Angler, as it is only by an increased circulation that this outlay can be met.

## THE FISHER'S CREEL.

HAVING already given some space to a subject akin to fishing, we must of necessity be brief in our notice of the fish whose picture we give on the opposite page; the same restriction compels the postponement until next week of several flies, the drawings of which now lie before us.

ISAAC WALTON declares the perch to be "a very good and a very bold biting fish"—with the latter part of his assertion we agree, as to the former we dissent therefrom; with the remark, *de gustibus*, &c. It is gregarious in its habits, frequenting slow-running weedy rivers and canals, and is often found in ponds. Its favourite haunts are hollow banks and deep holes, between weeds or stumps of trees; and it spawns in April or May, according to the temperature of the season.

These fish have been found to bite best in the latter part of the spring; but they may be taken all the year round. The best time for angling for them are in hot and bright weather, from sunrise till six o'clock in the morning; and in the evening, from six till sunset. If the day be cool and cloudy, with a ruffling south wind, they will bite all day. From the beginning of May till the end of June is the high season for perch fishing, but they are taken till the end of September.

Your bait-worms should be either well scoured brandlings, red dung-hill worms, or those found in rotten tan; your hook, No. 4, 5, or 6, being well whipped to a strong silk worm-gut, with a shot or two on it. Put the point of the hook in at the head of the worm, and out again a little lower than the middle, and draw it above the shank of the hook upon the gut; then take a smaller one, beginning the same way, and bring the head up to the middle of the shank only; then draw the first worm down to the head of the latter, so that the tails may hang one above the other, keeping the point of the hook well covered. This is the most enticing method that can be adopted in worm-fishing. Use a small cork float, to keep the bait about a foot from the bottom, or sometimes above mid-water.

The largest fish are taken with the minnow, hooked with a good hold through the back fin, or better through the upper lip; for this fish, owing to the formation of his mouth, cannot take a bait crosswise as the pike will. For this mode of fishing a large cork float is used, and the line must be leaded about nine inches from the bottom, otherwise the minnow will rise to the top. And now, as we began with a quotation from the "Father of Angling," we will end with one, not only as germane to the matter in hand, but also because the curious in these matters, who may not have his immortal book at hand, may amuse themselves with "pure English undefiled," from the pen of one of its best masters.

"He (the perch) spawns but once a-year; and is, by physicians, held very nutritive; yet, by many, to be hard of digestion. 'They abound more in the river Po, and in England,' says Rondeletius, 'than other parts; and have in their brain a stone, which is, in foreign parts, sold by apothecaries, being there noted to be very medicinal against the stone in the reins.'"

"These be a part of the commendations which some philosophical brains have bestowed upon the fresh water perch; yet they commend the sea perch, which is known by having but one fin on his back (of which they say we English see but a few) to be a much better fish."

"The perch grows slowly, yet will grow, as I have been credibly informed, to be almost two feet long; for an honest informer told me, such a one was not long since taken by Sir Abraham Williams, a gentleman of worth, and a brother of the 'angle, that yet lives, and I wish he may; this was a deep-bodied fish, and doubtless durst have devoured a pike of half his own length. For I have told you, he is a bold fish; such a one as, but for extreme hunger, the pike will not devour. For to affright the pike, and save himself, the perch will set up his fins, much like as a turkey cock will sometimes set up his tail."

"But, my scholar, the perch is not only valiant to defend himself, but he is, as I said, a bold biting fish; yet he will not bite at all seasons of the year; he is very abstemious in winter, yet will bite then in the midst of the day, if it be warm; and note, that all fish bite best about the midst of a warm day in winter. And he hath been observed by some, not usually to bite till the mulberry tree buds; that is to say, till extreme frosts be past the spring; for, when the mulberry tree blossoms, many

\* This fancy must have originated in resemblances, by which the yellow bark of barberry was prescribed for jaundice, and the roots of the little celandine for piles.—EDITOR.

HAMPTON COURT, FROM THE THAMES.

gardeners observe their forward fruit to be past the danger of frost; and some have made the like observations of the perch's biting.

"But bite the perch will, and that very boldly. And, as one has wittily observ'd, if there be twenty or forty in a hole, they may be at one standing, all caught, one after another; they being, as he says, like the wicked of the world, not afraid, though their fellows and companions perish in their sight. And you may observe, that they are not like the solitary pike, but love to accompany one another, and march together in troops."

THE PERCH.

**CURIOUS TRAVELLER'S STORY.**—The following serio-comic incident is stated by the *Sud* of Marseilles to have occurred, a short time since, in the diligence which runs between Marseilles and Toulon:—"When the

diligence had arrived near Capalette, a traveller in the coupé, being alarmed by piercing cries from the interior, stopped the carriage, and, with the conductor, went to ascertain the cause. They found a young female in the greatest distress, complaining of acute pains in the lower part of her person, as if she was stung, or rather punctured with lancets, or other fine-pointed instruments. While they were endeavouring to persuade her to permit a search for the cause of her pains, but which her delicacy could not permit, a stout, elderly gentleman, in another corner of the coach, began to feel the same disagreeable sensations on the calves of his legs; and not being so nice as the lady, he at once proceeded, with assistance, to an examination. On uncovering his limbs, six enormous leeches were found suspended to his skin, and gorging themselves with his blood. On searching further, it was discovered that an indiscreet fellow-traveller had brought into the diligence a bottle of these insatiate blood-suckers so loosely covered, that they had got out, and following their natural instinct, fastened upon soft places when they could find them, but contenting themselves with coarser matter when they could meet with none more tender. The young female was taken into the nearest house, and, being assisted by one of her own sex, between fifteen and twenty of the vagrant leeches were found to have made their way up her clothes, and fastened upon her. Being in a high state of nervous excitement, she was carried back to Marseilles, where her physician prescribed the application of sixty more leeches to calm her."

**EATING EXTRAORDINARY.**—We have rarely heard of a gormandizing feat to surpass that which was accomplished by a voracious ratcatcher, named David Smith, residing at Billingham, near Sleaford, on Saturday week. It appears that this unlicensed victualler, in the presence of several persons at the Coach and Horses Inn, Billingham, swallowed, in the space of half an hour, 30 hen eggs poached in a pint and a half of vinegar, half a pound of butter, and 40 ounces of bread, and washed all down with six pints of ale. After which he offered to back himself to eat 10 more eggs, drink two quarts more of ale, and eat a pound of beef-steaks in five minutes. After this the gastronomic deeds of Dando, the oyster vampire, sink into insignificance, and are swallowed up by the more astounding stomachic feats of Smith the ratcatcher.

**THE COUNTRY FIDDLER.**—A rustic Paganini was so fond of accompanying his performance on the violin *con spirito*, that it frequently brought him into many scrapes, as well as distress. A gentleman meeting him one day, looking very *doloroso*, said, "Why, Jack, what ails you, isn't your fiddle in tune?" "No, Zur," replied Jack, it be in pawn!"

## CORRESPONDENTS.

**ROBERT WELSBY.**—The royal dukedoms are hereditary, and Prince George, if he should live and have no higher title, will succeed his father like any other person who is the son of a peer. The creation is to the duke, and the heirs male of his body.

**EBBESHAM.**—The Tipton Slasher's name is Bill Perry, and he derives part of his nickname from the place of his birth, or general residence: he is thirteen stone in weight, stands almost 6-ft., if not quite, but his knock-knee takes from his height. He is rather a square than a well-made man. "An ugly customer" if you like, but must not be talked of in the same day with Belcher, Spring, Cribb, or even Painter, Shelton, Oliver, or Cannon, in their best days. The fact is we have "fallen upon evil days" as regards good "big men." This is not owing to any physical degeneracy, however, as our correspondent would suppose, but because, by the persevering efforts of the canters, the luke-warm, the timid, and the "sky-blue" (we mean the milk-and-water) part of society have set their faces against the ring. Hence its professors are of an inferior grade, and the personal quarrels of the lower orders find their issue in the deadly knife or some other cowardly weapon, while the middle classes betake themselves to the pistol.

**S. G. EMPSON.**—Young Dutch Sam's last fight with Ned Neale came off at Burnstead in Essex, on the 18th of January, 1831. Again we say that the "History of Boxing" will include every modern fight of any note or worthy of preservation.

**R. SEWELL,** Manchester. We have it upon record that Ireland jumped twenty-one feet on level ground and back again. Tom Spring was never beaten but once.

**JACK RANDALL** fought and won FIFTEEN prize-battles: these are all that are authentically recorded; and a man very properly loses, (though, doubtless, Randall fought many before he became celebrated), if he bets that pugilist won "FORTY," and then says "he can prove by an old person he can bring, that he fought more than that number." His recorded public prize fights must be taken to be meant, when a man says "I will bet you that Randall won more than forty battles." His "proof" by an "old person" is an old wife's tale—he has lost the wager.

**S. B. C.**—A "Pony" is 254.

**R. N.**—You will observe that we did not "stand pledged to give the public" more than they paid for. We are obliged to our "Constant Subscribers," and hold them in grateful remembrance, but in the literary as well as the commercial word two pennyworth cannot be sold for three-half-pence.

**INQUISITIVE.**—You don't imagine for a moment that we would put in NEWS if we could; if we did so we should be a newspaper, and abandon amusing reading for the instant topic of the day. We must then have every copy stamped and raise our price to 5d. or 6d.

**QUOITS.**—EDWARD.—A. and B. are playing at quoits: A. throws a quoit which reaches the hob without being a ringer. B. throws a quoit which is a ringer but does not touch the hob. Which scores A. or B.? B.;—the London players measure from hob to iron. Why don't you send us the promised article on "Nurr and Spell?"

**"DOUBTFUL."**—The Mr. Crommellin referred to in the Melody colt affair, is the same person who, in conjunction with Mr. Ives, was charged with being mixed up in the Ratan affair.

\*. The SECOND PART of "THE SPORTSMAN'S MAGAZINE," for July, 'containing FORTY-THREE engravings, and upwards of fifty pages letter-press, in an embellished wrapper' may be had of all booksellers, price sevenpence. ALL the numbers of the SPORTSMAN'S MAGAZINE are now in print, and procurable. We shall shortly, so soon as the arrangements are completed, publish a STAMPED EDITION, to forward by post. Price 2½d.

## OUR WEEKLY CALENDAR.

AN EPHEMERIS IN JEST AND EARNEST.

**SUNDAY, July 6th.**—Old Midsummer Day. Samuel Whitbread died, 1815.

**MONDAY, 7th.**—Grand Cricket Match—the GENTLEMEN, *versus* the PLAYERS, at Lord's Ground. The "Running Rein" case decided in the Exchequer, 1844; a case of "Age before Honesty."—The Derby twice run in that memorable year: on the Epsom Course the Judge placed them, 1, Running Rein; 2, Orlando; 3, Ionian. At the Westminster Course, which every one declares a very trying one, the Judge altered the numbers, and made them; 1, Orlando; 2, Ionian; and Running Rein, not placed.

**THE SEASON.**—The year having attained its height, as well as the day its greatest length, in the preceding month, all things seem hastening to maturity, in order to complete the object of their creation ere the winter arrive. But even now we miss many of the enlivening and cheering appearances of the earlier months: the incubation of birds having been completed, many of the merry minstrels of the grove cease to warble their sweet strains, and a brown or russet hue clothes the fields of waving grain, instead of the fresh and tender green of May. There exist, however, on every hand, appearances and changes, sufficient both to delight the eye and gladden the heart and mind of man.

**TUESDAY, 8th.**—NEWMARKET JULY MEETING. Jersey Races—Worcester ditto. A sloth arrives at the Surrey Zoological Gardens, 1844, which a learned anatomist declares has four *insides*. We should think that it must be a kindred species to the "Old Hackney Coach," which used to crawl about in a very sloth-like manner, and was "licensed to carry four *insides*," this we take to be a curious scientific coincidence.

**WEDNESDAY, 9th.**—Lancaster Races and Fire Insurances expire.

**THURSDAY, 10th.**—ERITH REGATTA. Swansea Races. Row between the waterman of the RIVAL FIRMS at the bottom of Essex Street, and interference of the lawyers; these FIRMS ought to be named after Lords Campbell and Brougham, there's a striking resemblance.

**FRIDAY, 11th.**—MACCLESFIELD FAIR.—Mansfield Races: Jack Cade killed in Kent, 1450; Alibaud gillotined in Paris for firing at Louis Philippe, 1836.—All the Paupers in Dumnonway Union ordered to have their hair cut, by the board of guardians, 1844; nothing surprising in that, its only the way of the world, when a poor devil's down—cut him.

**SATURDAY, 12th.**—Houdon Horse Fair. Singular Delusion: A lady at Margate puts a shilling into the "Wheel of Fortune," and expects to get a better prize than a twopenny cake of Brown Windsor Soap, for her investment!

## The Sportsman's Magazine.

FOR THE WEEK ENDING JULY 12, 1845.

## PLAIN DIRECTIONS FOR TRAINING.

(Concluded from page 195.)

**EXCLUSIVE** of exercise, which shall presently be noticed, there are two points most necessary to be attended to in training a man for any severe trial of strength, and these are—the observance of early hours and regular habits. The trainer should, in the summer, make his disciple rise, at the latest, about five in the morning; and in the winter, soon after it is light. After getting out of bed, as soon as the body has had time to cool in a slight degree, he should step into a large pan, by the side of which should be placed a pail of cold water and a large sponge, and having performed his ablutions from head to foot, without being so long about them as to feel a sensation of chilliness, the body and limbs should be well rubbed, first with a coarse towel, and afterwards with flesh-brush. This is better than bathing, which in many, indeed in most constitutions, is apt to induce a subsequent feeling of lassitude, particularly if the bath be indulged in for more than a minute or two. Being dressed, with a flannel or merino waistcoat next the skin, both for the purpose of absorbing perspiration and keeping up an equable heat on the surface of the body, he should immediately go into the open air, if the weather be fine, and take a brisk walk before breakfast, due care being taken, however, to proportion it to his strength, and never to make it so long as to produce fatigue. During the walk, an occasional run may be indulged in, up hill if possible, that the lungs may receive their quantum of exercise, and be rendered capable of seconding the efforts of the body, for, to a great extent, wind is strength. A man who, on first going into training, cannot run fifty yards at the top of his speed—not because he feels fatigued, but because his lungs are unaccustomed to exertion, and the unusual efforts required of them produce a corresponding increased action of the heart, which is unable to rid itself of sufficient quickness and energy of the blood which circulates through it—will very soon, by active and regular exercise, so improve the tone and condition of these organs, as to be able to run for a considerable distance, and at length only be obliged to stop from a want of power in his legs, rather than from want of wind. The heart is a muscular body of great strength, whose exertions are not elicited in any very active exercises in nearly so great a degree as are those of the muscles by whose more immediate agency any feat of strength is performed, and the acts of inspiration and expiration are likewise effected by the means of those muscles which alternately expand and diminish the capacity of the chest.

On returning from his walk at about seven o'clock, provided he be not fatigued, which should not be the case, he may have his breakfast, after having changed his flannel waistcoat and linen, and undergone the ceremony of a good rubbing with a dry cloth. The breakfast should at first consist of such light articles of food as will not overload the stomach if it be in any degree irritable (of which state the symptoms have been detailed), and may subsequently be made principally of dry, stale bread, and broiled meat, according as the digestive organs appear, from their craving, to desire a hearty and nourishing description of food. A moderate quantity of tea or coffee, whichever appears to agree best with the stomach, and neither too hot nor too strong, may be allowed at this meal; either is preferable to the beer which some trainers are in the habit of giving. After breakfast, as after every other meal, a certain degree of repose and quiet is necessary, in order that the digestive organs may not be disturbed in the exercise of their all-important functions. And here it may be as well to remark that no greater quantity of food should ever be allowed at any meal than will produce a commencement of that feeling of satisfaction which, if carried beyond this point, subsequently becomes one of repletion and distress. The man who goes on eating and drinking until nature cries "enough!" will, ten minutes after, discover that his stomach has a labour instead of a pleasing duty to perform; and, moreover, his readiness for exertion will by no means return so speedily as after having partaken of a moderate, though not a scanty, meal.

As soon after breakfast as is compatible with a feeling of comfort, active exercises, according to the strength of the body, are again to be resorted to. Among the best of these are gymnastics, quoits, fencing, boxing with the gloves, rowing, putting the stone, hockey, cricket, &c., &c., varying each of these by turns, so as to produce a feeling of amusement, while activity of body is increased. As often as may be, the person in training should take up a pair of dumbbells, and exercise his arms in every direction. This work not only increases the vigour of the muscles of the arm, but likewise those of the chest and abdomen, and brings the lungs into considerable play. It should, therefore, be resorted to many times during the day, and the weight of the dumb bells should be increased, as condition and strength improve. A crust of stale bread and butter, or a very well baked biscuit, may be taken about eleven o'clock

for lunch, with a glass of sherry, after which, a second walk, combined with an occasional run, should be taken before dinner, the exercise being gradually increased, both in pace and distance, as the bodily powers advance more and more towards their maximum of strength.

The dinner, about two o'clock, should principally consist, if the stomach be in a healthy state, of broiled meat, not too much done, stale bread, and but very little vegetables. No green food of any description, whether cabbage, cauliflower, peas, or other esculent of a like nature, should ever be allowed. All these articles of diet are liable to produce flatulence and disturbance of the stomach, and should, therefore, be strictly prohibited—a dry mealy potato being the only vegetable permitted to be eaten, and that not in great quantity. At dinner a moderate quantity of sound, mild, old beer, or some weak and cold brandy and water, whichever agrees best with the stomach, may be taken. Some men will do very well with water alone; but if beer, or any other stimulant, be allowed, it should certainly be neither too strong, nor given in great quantity. As this is the principal meal in the day, a couple of hours should be allowed for repose after it; not, however, in the recumbent posture, where it can be avoided; for the man who dozes by day, both muddles his head, and sleeps ill at night. Moderation, in point of quantity, having been observed at dinner, active exercise may be resumed about four o'clock; and cricket, and other active and amusing games, which lead to exertion, without appearing a duty, should be freely intermingled with those exercises more necessary to ensure success in that object for which training is endured.

A light supper may be taken about seven o'clock, and to bed at nine, which will allow of eight hours for sleep, in the summer, a period quite long enough for any man in health, and who wishes to remain so. In winter, the hours of food, exercise, and repose, must be so altered as to allow a similar portion of time to be dedicated to each.

When the weather is so bad that exercise out of doors cannot be taken, sparring, fencing, the dumbbells, &c., must be freely resorted to; and when both in-door and out-door exercises can be indulged in, it is a good plan, during the hours of relaxation, to employ the person in training in some mechanical pursuit; as, for instance, carpenter's work, of which most men are fond, and which, as well as occasioning some little demand upon the bodily strength, affords, in some degree, a pleasing employment for the mind.

This point of affording occupation to the mental as well as bodily powers is one of very considerable importance, although unattended to by the majority of trainers, who do not understand the nature of the connexion between nervous energy and muscular power. Without the influence of the nerves, however, the muscles would be totally inert, and incapable of motion. Look at the paralytic man, who drags his leg after him, an encumbrance instead of a help to locomotion. Is the seat of the disease, however, in the affected leg, or are the muscles in fault? Surely not; the origin of his lameness is probably in the head, where the principal nerve supplying his leg has its origin; and this, being in a state of disease, betrays its condition by its effects upon the muscles. Thus it must be manifest that a healthy state of the whole nervous system is absolutely necessary to the perfect development of muscular energy. Few people, however, either understand, or stop to consider that this intimate bond of union between nervous and muscular power is to be otherwise kept up than by the constant exercise of those parts from which the more immediate efforts of strength are required.

During the hours of active exercise, a pleasing companion is an admirable adjunct to labour, and no less desirable at those periods than during the time dedicated to relaxation therefrom. Where a man is deprived, occasionally, of the company of those in whose society he takes pleasure and feels himself at home, few substitutes will be found so agreeable as the companionship of dogs. There are not many men who do not experience a pleasurable sensation in being accompanied in their excursions by some of these "friends of the human race," and their gambols and sporting qualifications lead to many an enlivening run, which would otherwise be omitted, or give rise to a feeling of interest which, without them, would be wanting.

It should always be remembered, that the man whose stamina and condition have, by a successful plan of training, been rendered as perfect as possible, is liable, from any of the usual causes, to attacks of illness of an inflammatory character. In him are not perceived the slow, insidious approaches of lingering disease—the general ill-health and smothered symptoms of disease manifested by the mechanic, or ill-fed labouring man; on the contrary, if attacked by any malady, it will generally be of a grave character, and marked by the usual symptoms of great fever, and considerable inflammation. Thus, a predisposition to pulmonary or abdominal complaints, which, under other circumstances, would have assumed, probably, a chronic character, is hurried, in the man who has been brought to a state of considerable vigour, into absolute inflammation of the lungs or bowels. The man, too, who is subject to attacks of rheumatism, which have usually been confined to mere aching pains, finds that he is now to have that malady ushered in by great febrile excitement, and racking tortures. For the cure of all inflammatory diseases, depletion must be carried to an extent that will at once do away with all the benefits of a long system of judicious training; and therefore is it, that, during this process, extreme care should ever be taken to

avoid all those causes which are known to be the excitants to indisposition or disease:—wet clothes—draughts of cold air—suddenly-checked perspiration—drinking cold fluids, while the body is heated, and many other familiar causes of disease, are to be carefully shunned, as exposing a man, when almost in the arms of victory, to shame and defeat.

It is almost unnecessary to add, that while in training a man should constantly be weighed, in order to see whether he gains or loses flesh under the system pursued; and that the necessary measures may be adopted for bringing him to that which he may be bound, by his agreement, not to exceed. When the performance of a match on horseback is the object for which a person goes into training, of course a considerable portion of his exercise should consist of riding; all other means of increasing the bodily powers, and the health of the system generally, being likewise studiously attended to.

The foregoing advice, even if followed with somewhat less strictness than is absolutely necessary to enable a man to perform any extraordinary feats of strength, will, nevertheless, be found materially to benefit the worst constitutions; but he who wishes to subject himself to an invigorating course of life, probably totally different from that he has been in the habit of leading for years, should never trust to his own resolution to avoid what, although agreeable, may be unfitted for him, and to do and partake of only such things as will tend to improve his manly plight; but should, if possible, place himself under the guidance of some Mentor, whose fiat shall be as absolute as that of Sancho Panza's physician, in the isle of Barataria.

#### A FEW WRINKLES ON SPORTSMEN'S WEARING APPAREL.

Having in my last communication set forth a few wrinkles in the preservation of health, and appended thereto a few words on clothing, I shall now proceed with a general description of the clothing, suited to sportsmen.

The best way is to begin at the top and proceed downwards and acting upon this I shall begin with

##### THE HAT.

The person who aims at a sportsman's title should never be so effeminate as to wear those things designated as "*Chapeaux Français*," "*Paris Naps*," and the multiplicity of names given by hat-makers to puff off their goods; yet, as it is rather better to be right off dead than to be out of the fashion it will not do to wear the corinthian tiles of the days of the fourth George.

The best hats to wear are, for a simple reason, beaver; they will stand more knocking about, and will regain their shape after a *quest*. They should neither have a too broad brim nor a too small one: large ones spoil the sight upwards, and small ones admit the sun's scorching rays to the head.

##### THE COAT

is the next point of consideration, and of these he can choose to his own will and liking, so that they be not too heavy. As to colours, the best is that of a middling brown, rather approximating to the colour of bark.

##### THE VEST

can be of any pattern or colour that the wearer chooses; but double-breasted ones are the best.

##### THE TROUSERS

should be rather of the same colour as the coat, and they should not fit so tight as to impede the free use of the legs nor so loose as to hang baggy.

##### GAITERS.

These are a mere matter of choice but they are very useful in going over marshy grounds, and should always be worn on these occasions. But they should be waterproof, if not, they are worse than none at all. Particular care should be taken that they are lined, and this should be either with chamois leather or basil, though they may be done with wash-leather.

##### BOOTS

should be of a stout but soft leather, and those that lace or hook up in front are preferable.

##### UNDER GARMENTS

may be left altogether to the choice of the wearer.  
July 1845.

**14 FAULTS [ON BOTH SIDES].**—Members in England, and Deputies in France are always comparing the natives of the two countries, and their complaints are so much alike, that from their catalogue of faults, it would seem to be, as far as the number of efficient ships is concerned, literally six on one side and half a dozen on the other. Let us hope this is so far true that it will be a long time before there is known to be any real difference between them!—*Punch*.

**A COAT WITH A MAN IN IT.**—A French gentleman, travelling in his cabriolet from Paris to Calais, was accosted by a man walking along the road, who begged the favour of him to put his great-coat, which he found very heavy, into his carriage. "With all my heart," said the gentleman, "but, if we should not be travelling to the same place, how will you get your coat?" "Monsieur," answered the man with great gravity, "I shall be in it."

## ARCHERY.

THE Grand Gathering of the Archers at York on Wednesday and Thursday, the 25th and 26th of June, calls on us, as chroniclers of the Sports of the British people to draw a taught string on the subject of what was for centuries our national weapon.

Doubtless many of the readers of "the Sportsman's Magazine" are not archers, and to them principally do we address ourselves. If by a few wrinkles on the art Toxophilitic, we can enlist a few who have not yet given to this elegant and graceful branch of gymnastics the attention it deserves, well, indeed, will our labour be repaid.

To trace the History of the Bow would be to narrate the history of many wars, and to dive into antiquarian research unfitted for these light light columns, we shall therefore pass to the *practice* of the art, leaving for a future article the interesting anecdotes and the research more fitted for leisure reading.

In the next number of this paper we will give a History of Archery in England, which, we doubt not, will amuse and instruct many, and, we trust, weary none; in the present we will merely indulge in a description of the manner of handling the bow, the archers' implements, and the practical detail of the Bowman's craft.

But even here we find the subject too extensive for a single article, and must postpone the Implements of Archery to another paper, confining ourselves rather to the *use* of the Bow, than a detailed account of it. We shall accordingly proceed to the "*Five Points of Archery*," namely—"Standing," "Nocking," "Drawing," "Holding," and "Loosing."

## STANDING.

In the first point of archery, the footing and attitude of the archer are to be considered; and therefore, says old Roger Ascham, "it requires such attention as shall be both pleasing to the eye of the beholder, and advantageous to the shooter; setting his countenance and all parts of his body in such a position, that both all his strength may be employed to advantage and his shot made and managed to other men's pleasure and delight."

It is perhaps impossible to give a written description of the proper manner of holding the body while shooting in the common way. It is less difficult, however, to point out the particular attitudes to be avoided. Hence, Ascham, and all succeeding writers on the practice of archery, direct us rather what we should not do, than any precise position which we are to study.

"One foot must not stand too far from the other, lest the shooter stoop too much, which is unbecoming; nor yet too near the other, lest he should stand too upright; for so a man shall neither use his strength well, nor yet stand steadfastly. The mean betwixt both must be kept; a thing more pleasant to behold when it is done, than to be taught how it should be done."

Enumerating the faults of archers, continues the quaint old Toxophile:—

"Faults in archers do exceed the number of archers, which come with use of shooting without teaching. All the discommodities which ill custome hath grafted in archers can neither be quickly pulled out, nor yet soone reckoned of one, there be so many. Some shooteth his head forwarde, as though he would byte the mark: another stareteth with his eyes, as though they would fly out; another winketh with one eye, and looketh with the other; some make a face with writhing their mouth and countenance so, as though they were doinge you wotte what; another blerith out his tongue, another byteth his lippes; another holdeth his necke awrye. In drawing some set a compass, as though he would turn about and blesse\* all the field; another maketh such a wrestling with his gere, as though he were able to shoot no more as long as he live; another draweth softely to the middes, and by and bye it is gone, you cannot know howe; another draweth his shaft bowe at the breast, as though he would shoote at a roving marke, and by and bye he lifteth his arm up pricke-height; another maketh a wryching with his back, as though a man pinched him behinde; another coureth downe, and layeth out his buttockes, as though he should shoote at arrowes; another setteth forward his left legge, and draweth back with heade and shoulders, as though he pulled at a rope, or else were afraid of the marke. Another, I saw, which at every shoote, after the loose, lifted up his right legge so far that he was ever in jeopardy of faulging; some stampe forwarde, and some leap forwarde. Now, afterwarde, when the shafte is gone, some will geve two or three strydes forwarde, dauncinge and hoppinge after his shafte as long as it flyeth, as though he were a madman; some, which feare to be too farre gone, runne backwarde, as it were to pull his shafte backe; another runneth forwarde when he feareth to be short, heavinge after his armes, as though he would help his shafte to flye; another wrythes, or runneth asyde, to pull in his shafte straight; one lifteth up his heele, and so holdeth his foot still so long as his shafte flyeth. Now, imagine an archer that is cleane without all these faults, and I am sure every man would be delighted to see him shoote."

Our representation of the proper attitude of an archer, at the moment previous to loosing his arrow from the string, will doubtless

convey more instruction in a few minutes, than could be comprehended from a written description in as many hours.

In "*Nicoll's London Artillery*," the position of an archer is thus described:—

"Setting his left leg somewhat forth before,  
His arrow with his right hand nocking sure,  
Not stooping, nor yet standing straight upright;  
Then, with his left hand little 'bove his right,  
Stretching his arm out, with an easy strength,  
To draw an arrow of a yard in length."

Proceeding to the second point, *nocking*, we quote our author again:

"To nock well," says Ascham, "is the easiest point of all; and therein is no art, but only constant attention to nock truly, not setting the shaft either too high or too low, but exactly straight across the bow. Instant nocking makes a man lose his length; and besides, if the shaft hand is high and the bow hand low, or the contrary, both the bow is in danger of breaking, and the shaft, if it is small, will start; if great, it will hobble. You must always nock the cock-feather upwards; and be sure the string does not slip out of the nock, for then all is in danger of breaking."

That part of the bow-string which is to receive the nock of the arrow, is usually whipped.

Care should be taken that it fill the nock of the shaft so tightly as to prevent the arrow from moving, but not so tightly as to render it liable to burst the nock. In nocking, the arrow should be carried under the string until the pile pass about an inch on the exterior of the left side of the bow. When fixed, the arrow should rest between the bow and the first joint of the fore-finger, pressing against the bow, the finger being somewhat raised, in order to make a sort of groove for the arrow to lie in.

The second point being thus accomplished, we proceed to the third, and important point, of *Drawing*.

In this movement, it should be borne in mind that method will effect what force cannot. "Let an archer," says Moseley, "who in shooting has learnt to draw the arrow to the eye or ear, draw it to his breast, and he will find that the bow he in the former case could draw with ease, will in the latter appear infinitely stronger." The Honourable Daines Barrington, who was the author of a tract on archery, in the seventh volume

\* This alludes to the actions of the Romish priests in public benedictions.—Ed.

of the *Archæologia*, relates, that, several years ago, there was a man named Topham, who exhibited most surprising feats of strength, and who happened to be at a public-house at Islington, to which the Finsbury archers resorted after their exercise. Topham considered the long-bow as a plaything fit for a child; upon which, one of the archers laid him a bowl of punch that he could not draw the arrow two-thirds of its length. Topham accepted the bet with the greatest confidence of winning; but, bringing the arrow to his breast instead of his ear, he was greatly mortified by paying the wager, after many fruitless efforts.

In spite of the comparative inefficiency, as illustrated in the above anecdote, of the mode of drawing to the breast instead of the ear, it appears that the former was the universal practice in ancient times, and that it actually continued to be so for ages. It was deemed a great improvement in the art of archery when the Roman auxiliaries were first taught to draw the bow to the ear. Thus Procopius, describing the archers in the Roman army, says, "they ride with ease, and shoot their arrows in every direction, to the right, to the left, behind, or in the front, while in full speed and as they draw the bow-string to the right ear, they drive their arrows with such rapidity, that it is certain death to him on whom they fall; nor can the stoutest shield or helmet resist the violence of the stroke."

It is observable, however, that on all the medals and basso-relievs which have descended to us from the ancients, the figures are represented as drawing the hand to the breast; and that Cupid, an archer of no mean estimation, is also invariably pictured in the same attitude.

But, to return to our instructions. Archers differ in opinion as to the best mode of drawing. Some extend the bow-arm completely before they begin to draw. The latter is the easier method; but Ascham, observing on it, says, that, in his time, some, and those very good archers, drew their arrows within about two inches of the pile, then paused for a moment and corrected their aim, and afterwards drew home and loosed. This method he terms a fault or shift, insisting that the drawing and loosing should be but one continued action throughout; notwithstanding which, many of the best archers of modern times have approved of, and practised, this very fault or shift, if such it be, and others draw their arrows within two inches of the pile, and then draw and re-draw within that compass (as though playing with and humouring the bow) until they loose.

The mode of drawing as at present practised is as follows:—Standing perfectly upright, with the left foot about ten inches in advance of the right the archer gradually presses his bow downwards with his left hand, while he draws the string towards him with his right. Then raising the bow to an elevation proportioned to the distance of the mark, he completes the drawing of his arrow, keeping his bow-arm firmly fixed on the bow, until the release of the arrow, which, as will be seen in treating of the loosing point, should be simultaneous with the completion of the drawing.

Whether for a short or distant length, the rule of archery is, that the arrow should be *drawn home*. From what Ascham observes on this point, it should seem, that, in his time, the archers drew very near to the head or pile of the arrow. As however, in so doing, the shaft is very apt to be "set in the bow," as it is termed, many archers, from the revival of archery towards the close of the last century to the present period, have established a practice of never drawing their arrows beyond the point where the pile joins to the wood; that is, not beyond the wood of the arrow.

In Latimer's Sermon, we have hinted as to the mode of drawing, which is here worthy of recital:—

"In my tyme, my poore father was as diligent to teach us to shute, as to learne any other thyng. He taught me howe to drawe, howe to laye my bodye in my bowe, and not to drawe wyth strength of armes, as other nacions do, but with strength of bodye."

By *laying the body in the bow*, is meant the inclination of the head and chest a little forward; but the archer must bend as little as possible from the waist, and must beware of inclining to his left side.

The steady flight of an arrow is greatly influenced by the string being drawn evenly. The bow-string, it should be observed, is very apt to be twisted, if not carefully drawn; hence a young archer often finds the arrow turn from his bow, and fall from the string, during the operation of drawing. This may be attributed to some twist in the string.

In target-shooting, the position of the arrow, when drawn, should be somewhat under the ear of the shooter (see the first cut); but in more distant shots, as the bow must be more elevated, the drawing-hand must be more depressed, and the nock of the arrow is consequently brought down towards the right breast.

Ascham's fourth point, *holding*, is applied by him to the manner of holding the string when the bow is drawn up. In this sense, he says, "holding must not be long, for it puts a bow in danger of breaking, and also spoils the shoot; it must occupy so little time, that it may be perceived better in the mind when it is done, than seen with the eye when doing."

As to the position of holding the bow, the *perpendicular* position is the most common, especially for shooting straight, and for distant marks; though several good archers hold their bows rather obliquely.

"Loosing," which is the fifth and last point, "must be performed much in the same manner as holding—so quick and hard, that it be without any twitches; so soft and gentle that the shaft fly not as if it was sent from a bow-case. The mean betwixt both, which is perfect loosing, is not so hard to be followed in shooting as it is to be described in teaching."

For clean loosing, you must be careful of not hitting any thing about you (i. e. about your person), and remember to hold your hand always the same height on your bow, that you may keep the length truly."

To loose well is the most difficult point in shooting; but, as good shooting depends greatly upon the loose, it is a branch of the art which must be studied, and practised with attention and care. The material points to be attended to in performing this movement, are, holding the bow-arm very firmly at the moment of loosing, making as it were a vice (upon which the steady flight of the arrow much depends); bringing the elbow of the drawing-arm round, and loosing while drawing, without making any pause immediately before the loose. For *loosing* we have chosen a lady figure, hoping that the fair archeresses of England may always, as they deserve, hit the right mark of a faithful heart.

But after all that can be written on the art of archery, there is much more to be acquired by practice than to be learned by theory. There

are many arts, says Mr. Roberts, in his *British Bowman*, "in which men are so aided by a complication of mechanical powers, that the engine, and not the man, may be said to accomplish the end." This is not the case with the bow, an instrument of most simple construction, which therefore depends for its operation and effect entirely upon the attention and skill of those who use it. "Perhaps," he adds, "no exercise whatever requires more attention, if we would attain high perfection in it. Like the art of music, which can produce many who can perform exceedingly well upon an instrument, yet but few Orpheuses; so, archery can boast of many good shooters, though but few Robin Hoods."

In the next number we trust to improve the interest of this article by a general description of the bow, the method of stringing it, and delineations of the various articles of an archer's outfit, with a description of their several uses.

(To be continued in our next.)

## THE HISTORY OF BRITISH BOXING, FROM FIG AND BROUGHTON TO THE PRESENT TIME.

PERIOD IV. 1798—1820.

### CHAPTER I.—(Continued.)

JAMES BELCHER, CHAMPION OF ENGLAND.

**E**T Camberwell fair, these heroes met a short time after the hoax in Yorkshire. Burke was rather lousy, and told the the swells round him how he would serve out Belcher, if he was present. Belcher was nearer than he imagined, overheard this bouncing of Burke, and invited him to another taste; which the latter readily accepted, and on the bowling-green, at the Golden Lion, they set-to. Burke commenced so furiously, that he attacked Belcher before he was undressed; but Jem, on being prepared for the fray, put in his blows so hard and fast, that Burke had one of his front teeth knocked out, and was neatly floored into the bargain. Belcher was somewhat indispensed, and Burke, now coming a little more to his recollection—their friends interfered—and they mutually agreed to postpone the fight till the next day. They met according to appointment (August 20, 1802); and in a field behind St. George's Chapel, near Tyburn turnpike, a most extensive ring was prepared. Though the circumstance was so sudden, and kept very private, yet the spectators were immense. A purse of thirty guineas was subscribed for the winner, and five for the loser. Joe Ward seconded Belcher, and Bill Gibbons was his bottle-holder; Burke had Tom Owen for a second, and Yokel, a Jew, as bottle-holder. Burke expressed a wish that three-quarters of a minute might be allowed instead of half, which was resisted.

**ROUND 1.** Burke, determined to avail himself of his uncommon strength, ran in upon Belcher, endeavouring to throw him, but failed in the attempt. Belcher, taking advantage of his mistake, soon had him down. Several blows exchanged, but no blood.

2. Burke, still upon the same suit, received a throttler for his attempt, that made the claret fly. They closed, and Burke found his way to the ground.

3. Burke, full of spirit, ran in and put home a fierce blow on the right cheek-bone with his left hand, and another between the shoulder and breast, which was of no effect. They closed; Burke was down.

4. Burke, still game, rushed upon his opponent, but, missing his blow, fell. [Some murmurs, and calling out, "Burke's at his old tricks;" but he soon showed the charge was false.]

5. Burke, with the most determined resolution, ran in, and, catching Belcher by the hams, doubled him up, and gave him a cross-buttock. The spectators were in fear that Belcher was senseless, as he pitched upon his head with great violence. ["Foul, foul," was shouted; but Belcher rose with uncommon gaiety, and cried, "No, no—never mind!"]

6. The best round in the fight. As usual, Burke ran in full of spirit, [and heavy blows were exchanged. Belcher put in several severe hits on the head, neck, and throat. They closed, and considerable skill was manifested on both sides in wrestling; but they fell without decided advantage.]

7. Burke on the decline; his strength leaving him, but his spirits good. A close, and Burke thrown.

8. Burke wished now to convince the spectators that he was not destitute of science, and fought upon the defensive; but Belcher smiled at this attempt, gave him several severe blows, and ultimately had Burke upon the ground.

9. Twenty to one on Jem, who was as sprightly as if he had not been fighting—laughing and talking to his antagonist, but not forgetting to put in severe hits. Burke down again.

10. Burke, full of pluck, set-to with great spirit, and close fighting ensued, Belcher, losing no time, cut Burke under the left eye; under the right; and another blow so dreadful in its effects between the throat and chin, as to hoist Burke off his feet, and he came down head-foremost. Belcher also fell from the force of his own blow. While both on the ground, Burke squirted some blood out of his mouth over Belcher: Jem threatened that in the next round he should have it for such conduct; but Burke declared it was accidental.

11. Burke's face was frightful; he was evidently a beaten man. Still, he stood up; few blows were exchanged; they closed, and Burke was thrown; when Jem, very honourably, fell upon his hands, with an intent not to hurt Burke any more by falling upon him, although the practice is not unusual even at the present day, and deemed consistent with fair fighting.

12. Burke's weakness was now too manifest to be disguised; his second could scarcely get him from his knee.

13. Burke came again, but Belcher did as he pleased with him, closed and threw him: Burke, convinced there was no chance, wished to give in; but his seconds persuaded him to proceed.

14. Burke was "game," but it was useless and only rendered his situation worse; he was knocked about helplessly, and not the least shadow of success remained for him. Belcher closed, and Burke was thrown upon his face; he could not come in time, and gave in.

Thus was this *desperate* customer disposed of at last. His punishment was severe; while, on the contrary, Belcher was without a visible mark of the contest, except a bruise on the cheek. Belcher's rapidity of action in this battle excited universal attention and astonishment; and his judgment was as admirable as his execution was prompt and effective. Burke was too strong for him, and he never closed but when necessity compelled. Belcher walked round the field several times after the fight, displaying feats of agility.

The sporting world was now satisfied of Jem's superiority; and the whole of the immense bets depending upon the Yorkshire contest were announced to be decided by the above battle.

Notwithstanding Burke suffered so severely in this battle, his recovery and strength surprised every one. Three days after, at a pugilistic dinner, given by Mr. Fletcher Reid, at the One Tun public-house, St. James's-market—where Burke dined, shook hands with Belcher, and acknowledged Jem the best man—a match was made for one hundred yards for the best runner, to be decided immediately. Burke, to the astonishment of all present, beat Jack Ward (son to the veteran) by five yards.

JACK FEARBY, better known by the appellation of the *Young Ruffian*, who had acquired great fame from his defeat of Symonds, was now matched with Belcher for one hundred guineas. The contest was to have been decided at Newmarket; but the magistrates interfering, they travelled out of the county, and halted at a spot of ground about half a mile beyond Linton, and fifteen from Newmarket, and made a ring. It was agreed that the winner should have ninety guineas, and the loser ten. On Tuesday, April 12, 1803, at a quarter past nine, all preliminaries being arranged, the men walked to the scratch, threw themselves into attitude, and began

#### THE FIGHT.

1.—Great anxiety prevailed for the first blow—sparring took place for some seconds, when Fearby put in a blow at Belcher's head, which Jem parried, and returned right and left; but little mischief done: the men closed, and Belcher fell underneath. [Offers to take two to one that Fearby would win—Betters shy.]

2.—Fearby received a severe blow in the mouth, and the blood issued copiously. Jem followed it up by a desperate right-handed hit upon the Ruffian's side, that brought him down. [Three to one on Belcher.]

3.—Much science displayed on both sides—blows reciprocally given and stopped—when Belcher, fighting half-armed, and following up his adversary close, the Ruffian, finding his assailant armed at all points, declined the rally and fell.

4.—A good bustling round, and several severe blows exchanged. They closed, Belcher fell upon his knee, and in that situation received a blow from Fearby. ["Foul! foul!" echoed from all sides; but though Belcher wished the point to be decided, he declared he had no desire to take advantage of the circumstance.]

A constable followed by a clerical magistrate now made their appearance; but the clamour was so great that the exhortations of the reverend divine could not be heard, and

Round 5 commenced.—Fearby seemed rather shy of his opponent; his eye now appeared black, and he spit out some blood—Belcher smiled and beckoned the Ruffian to come forward. Fearby made a blow, but it was too slow, and Belcher avoided it by bobbing his head aside: in aiming a desperate blow at Fearby's ribs, Belcher fell. The Ruffian appeared distressed.

6.—The best round in the fight—Belcher full of life and gaiety, Fearby dull, cautious and slow. At length the Ruffian, irritated by Belcher's stinging prope

made several blows at his antagonist, but they were thrown away. Belcher taunted him, and with the most apparent ease put in a severe hit upon the stomach, and, in closing gave Fearby a violent cross-buttock.

7.—Milling on both sides. [Ten to one on Belcher.]

8.—Fearby rallied with determined spirit, and made a hit at Belcher, which he parried with great neatness, and, in return, cut the Ruffian's lip severely. Fearby, still game, gave Jem a sharp touch, but did not fetch the claret. [Odds reduced to five to one.]

9.—Belcher, full of gaiety, without ceremony, put in a desperate hit over his adversary's right eye, and with all the coolness imaginable, threw himself in a defensive posture, and sarcastically said, "How do you like that, Johnny?" This was too much for Fearby's philosophy, he plunged in, endeavouring to answer the question by a severe blow, but overreached himself in so doing, and fell. Belcher smiled, and pointed at him as he lay on the ground.

11.—Belcher now seemed determined to put on the polish; he followed Fearby round the ring with both hands equally at his service, hitting his man and getting away from his returns with the greatest ease; after putting in several blows, which the Ruffian in vain tried to stop, Belcher finished the round by hitting him a flush blow on the head which felled him. Fearby, it seems, was glutton enough to be willing to come again, but his friends forced him to resign the contest.

The amateurs were much disappointed in not witnessing that excellent display of science which was expected. Fearby had no chance whatever; he appeared like a different man—his former excellence seemed frightened away. The battle lasted twenty minutes.

Belcher now rested on his laurels for upwards of two years, with a general admission of his title of Champion; but towards the close of 1805, a brother Bristolian, the celebrated Hean Pearce, known as the Game Chicken, who had also disposed of the pretensions of Bourke (besides conquering Spree, Carte, and John Gully) challenged the belt of supremacy. It must here be noticed that in the interim Belcher had met with a serious accident. On the 24th July, 1803, while playing at rackets in St. Martin's Street, Leicester Square, he had the misfortune to lose his eye. This calamity seems to have affected him seriously: his spirits declined, and at times he was much depressed at this disablement. Soon after this partial accident he became landlord of "The Jolly Brewers," in Wardour Street, Soho; but to return to his battle with Pearce. Here Jem was for the first time doomed to defeat; but as we purpose to detail the fights under the memoirs of the respective winners, and as the deeds of Pearce will occupy the second chapter of this division, we shall here waive further notice: merely observing that the loss of his battle with Pearce produced a strong effect upon his mind, and his temper theretofore good became irritable; the loss of his eye being a continual topic of regret; nevertheless, in his last battle with Cribb he not only went thirty pounds of the battle money, but actually deposited his watch against some money staked upon the field of battle.

It was warmly, if not perhaps ill-naturedly expressed, by one of the most scientific pugilists of the day, in giving his opinion respecting the battle between the Game Chicken and Belcher, "That had Jem been in possession of four eyes, he was never able to beat Pearce." Here it was, for the first time in his life, that his judgment proved defective as a pugilist; and, in acting from the envious impulse of the moment, Jem Belcher only portrayed the infirmities of human nature, and the want of stability in man. His character was established, and never did any pugilist's fame stand upon a broader basis; he had retired into private life, respected by his friends, and supported and admired by the Fancy in general, who were no strangers to his integrity and private worth:—there he should have remained, where his days might have glided happily along, without regret, and his life, in all probability, been lengthened but his rest was unhappily disturbed, and poor Jem, like the greatest part of mankind, had not the *fortitude to refuse a challenge*.

In constitution Belcher had materially declined, independent of the loss of an eye, and the serious effects which his frame sustained from that afflicting accident had endangered the safety of his life. Upwards of two years had elapsed in retirement, when Belcher came forward to meet an opponent more formidable than any one he had hitherto encountered who possessed, in a superior degree, every requisite to constitute a first-rate pugilist, and who likewise had improved under his tuition, and might be called a Chicken of his own rearing. Belcher, unfortunately, could not be persuaded of the difficulties he would have to encounter from the loss of an eye, and that the chance of success was against him, till it was too late to retrieve the error. But how did he fight? How he did fight will be long remembered by those who witnessed the *grievous*, yet truly honourable combat; a combat in which more unaffected courage was never seen, nor where humanity was more conspicuously displayed and gratefully applauded. *Animosity* appeared to have no resting-place, and it was proud *honour* only struggling for victory. Belcher fought in his accustomed style, and planted his favourite hits with his usual adroitness; but he lost his distance, and became an easy victim to his own incredulity. In the course of the fight, [as Jem afterwards acknowledged, his sight became so defective, from the hits which he received over his good eye (the peculiar object of his antagonist's aim), that the blows he gave his adversary were merely accidental. His judgment of distance was certainly impaired, yet he endeavoured to make up the deficiency of sight by a display of courage and gaiety, astonishing and unequalled. The skill upon both sides claimed universal respect; although the spectators could not but perceive a deficiency in

Belcher's defensive tactics from the severe punishment which his head and face sustained. His courage, however, never forsook him and, in surrendering his laurels, he transferred them unsullied.

After the fight Belcher declared to a friend, "that his sorrow was more occasioned from the recollection of the severe loss of a particular friend, who, in fact, had sported a large sum of money upon his winning, and who had been one of his most staunch backers and supporters through life, than as to any particular consideration respecting himself." Notwithstanding the excellence evinced by the Chicken in science, wind, strength, and game, we may yet be allowed the supposition, that had this contest taken place when Jem Belcher possessed his eye-sight in full perfection, its termination might have been very doubtful.

Respecting Belcher's two battles with Cribb, when the circumstances of the case are duly appreciated; when it is recollected that his spirits must have been somewhat damped by previous defeat; and that his powers were known to be on the decay previous to his fight with the Chicken, it must be allowed that his heroism and science shone resplendent.

In the first fight with Cribb, as may be traced, Jem's superiority in tactics was manifest. The former was severely punished; and not until Belcher had received a most violent hit over his good eye, and sprained his right hand, did Cribb appear to have an opening for a lead. In the seventeenth round, the odds were *two to one* on Belcher, and in the eighteenth, *five to one*, when Cribb was so much beaten, that considerable doubts were entertained whether he would be able to come again; and even at the conclusion of the battle, Cribb was in a very exhausted state. Until Belcher lost his distance, from his confused sight, victory appeared to hover over him.

In the last battle that Belcher fought, his courage was principally displayed, and he by no means proved an easy conquest to Cribb. Since the loss of his eye, it was the positive wish of his best friends that he should fight no more, but he was not to be deterred, obstinately neglected good advice, and would not believe in the decline of his physical powers. In this last battle, his disadvantages were great. His opponent had made rapid improvement in science, was in full vigour, and a glutton that was not be satisfied in a common way; yet still Jem gave specimens of his former skill; but they were rather showy than effective, for the strength had departed; his hands, too, failed him, and for several of the latter rounds he endeavoured fruitlessly to prolong the contest without the *indispensible* weapons to bring it to a successful issue. Youth, weight, courage, and no mean amount of skill, were too much for Belcher to oppose.

Belcher's style of fighting was rapid, elegant, and decisive; indeed, it might almost be called intuitive. The quickness of his hits was unparalleled; they were felt rather than seen; and in breaking ground, plunging in, and resuming the defensive while in the backward spring, he was unrivalled. His style, like that of the Great Masters in every line, was truly original; the spectator was struck with its neatness and elegance—his opponent confused and terrified by its effects; while his gravity, coolness, and readiness, utterly disconcerted the fighting-men with whom he was often opposed in mimic as well as actual combat. Add to this, that a braver boxer never pulled off a shirt, and we need hardly wonder at his eminent success, until an accident deprived him of one of the most valuable organs of man's complex frame.

In his social hours, Jem was good-natured in the extreme, and modest and unassuming to a degree almost bordering upon bashfulness. In the character of a publican, no man entertained a better sense of propriety and decorum; and the stranger, in casually mixing with the *Fancy* in his house, never felt any danger of being offended or molested. It would be well if as much could be said of all sporting publicans.

Belcher departed this life on Tuesday, July 30th, 1811, at the sign of the Coach and Horses in Frith-street, Soho, in the thirty-first year of his age, and, on the following Sunday, was interred in the burial ground of Marylebone. The concourse of people to witness the funeral was immense; and a more general sympathy has rarely been witnessed. The proximate cause of his death was a family complaint, having its origin in an enlargement of the liver. The following inscription may be yet read upon his tombstone:—

IN MEMORY OF  
JAMES BELCHER,  
Late of St. Anne's Parish, Soho,  
who died  
The 30th of July, 1811,  
AGED 30.  
Universally regretted by all who knew him.

A NEW SYSTEM OF ROBBERY.—A singular and adroit robbery is said to have been committed a short time ago in one of the alleys of the Champs Elysees. The long fringe of the white shawl of a young and pretty woman, evidently of the order of the *Lorettes*, caught in the button of a gentleman, who, from his dress and manner, was a genuine *Lion*. The fair dame, in releasing her shawl from its hold, amused her captive with a thousand amiable apologies, and then tripped off with light and airy step till lost under the trees. The next minute the gentlemen wished to consult his watch, but, alas for him, it had disappeared with the lady.

ROGER KYNASTON, ESQ.

SECRETARY OF THE MARYLEBONE CLUB.

Our esteemed contributor NED RUB, is, we are sorry to say, labouring under a temporary indisposition; hence the portrait of the respected Secretary, who last week struggled so gallantly in defeat, appears without its promised article. Our cricketing friends will find their queries answered, and, we trust, "THE HINTS" of NED RUB rubbed off the score of our obligations next week.

## PARLIAMENTARY DEBATES.

Our fathers fought to publish the debates,  
And thought in that to gain a bit of freedom;  
But now their sons have lost it to the states,  
By making them a deal too long to read 'em!

**LONGEVITY OF HORSES.**—In recording various instances of longevity in animals, Mr. Blaine (the author of Blaine's Encyclopedia) mentions that a gentleman with whom he was intimately acquainted had three horses that died at the respective ages of 31, 37, and 39. Mr. Gully speaks of a horse that received a ball in his neck at the battle of Culloden in 1713, and which was extricated at his death in 1758, thus proving him to be above 43 years old; and Mr. Perceval gives an account of a barge-horse (a towing-horse on a canal) that died in his 62nd year.

## MR. SPINKS'S LAST APPEARANCE UPON THE TURF.

**R.** THOMAS SPINKS was a wood engraver, and earned a tidy weekly sum. He fancied himself a bit of a sporting character, for he read "The Bell's Life," and "the Era," (which he called the "Hearer,") and by dint of spelling them attentively could retail at the tavern he frequented, the guesses, surmises, and opinions of "Pegasus" and "Vates;" he subscribed to four or five Derby Sweeps, and pretended to "make up a book" on the Derby and Oaks: indeed he boasted of his general good fortune or rather his excellent judgment in those matters. In short, by dint of talking, he argued himself into a belief that he did know something, and that he was a sort of oracle, seeing that no one in the society he mixed with knew a bit about turf affairs; hence he always had it all his own way.

Now, it so happened, as no doubt the reader is aware, that the morning of the last past Derby day, "turned out unkinning wet," as Mr. S. elegantly expressed it, and as he looked out of the window he gave vent to a hearty malediction on all such weather. He having over night been very industrious in taking the folds out of a pair of snow white ducks, and polishing his French leather boots. But it could not be helped, therefore he was under the necessity of making the best of a bad job. Eventually the weather brightened up a bit, and he came out and proceeded to the livery stables, where he had hired "an horse," and after tipping the groom a "tanner" for helping him into the pig-skin, he proceeded towards the Elephant and Castle, on his steed.

Now, Mr. Tommy had taken lessons in riding in a very curious manner, which for the edification of our readers we will describe.

He had bribed a drayman to let him ride on his horse by the temptation of half a bull, and sundry pots of heavy; and as there was no saddle, and but an imperfect bridle, he had been under the necessity of holding on by the crupper; but the Rosinante he now bestrode never having been accustomed to this mode, he did not feel exactly authorised in resorting to such mode of making sure of his seat, and as a natural consequence he was all abroad, and had the utmost difficulty in keeping on. He stuck, therefore, to the "mane" chance, grasping with one hand the horse's mane, who not approving this style of horsemanship, shied and sent Master Tommy, in double quick time, over his head, and he alighted on that part of his person generally described as the seat of honour. There were no bones broke; and as the horse was not inclined for a "bolt," he stood stock still, steadily gazing at his prostrate master for the time being. Sammy soon got up from his uncomfortable position, and again mounted his prad, amidst the jeers of a lot of urchins, who kept questioning him very anxiously as to the state in which he left his maternal relative, and whether she had sold her mangle; indeed, one went so far as to give him a piece of advice about "getting inside," together with an assurance that he would find it much easier than riding outside his nag.

Our hero returned no answer to these taunts, with the exception of calling them "A pack of imperant young blagguards."

As he had gained knowledge by experience, Tommy this time handled his steed in a less primeval manner, and proceeded comfortably till he came to the Downs, where he left his *hoss* in charge of a man, who, with a pitchfork stuck end up in the ground, a halter and a truss of straw, stated his establishment to be "good stabling." With him Tom Spinks left his charger, with the assurance of a couple of bob if he minded him well. He then perambulated the course; presently the bell rang, and all was eager anticipation.

Merry Monarch was the winner, and in a moment all Tom's hopes were dashed to the ground. He was a heavy loser, having no less than ten pounds invested upon IDAS!

Sorrowful and woeful was his countenance as he retired from the scene to examine his book, and bitter imprecations did he launch against his unlucky stars, that he did not "hedge" as "he was half a mind to do over night;" and after finding that he had not one bet to fall back upon, Tom proceeded to the place where he had left his horse in charge of the man.

His horse and the fellow had bolted—the man with the horse, or the horse with the man, no one could tell which. Horrid visions of suicide flitted before his mind, but calmer reflection came to his aid, and, in a state of mind indescribable by goose-quill, Tom proceeded to the London Road. There he arrived late at night, wet and cold, splashed with mud and mire. So to him ended the DERBY DAY!

We have it from confidential sources that Mr. Thomas Spinks has made no book for the LEGER.

**GLASS HOUSES.**—The newspapers contain an account of an importation of a thick description of window-glass intended for roofing. This kind of residence, however, will never do for Mr. Robuck, and such members as are in the habit of throwing stone.—*Punch*.

**ASK ANY COMMITTEE MAN.**—Did you ever know a Railway from a place no one knows were to a place no one ever heard of before, with brancher everywhere, of which the gradients were not easy, the cuttings few, the tunnelling next to nothing, and the traffic immens?—*Punch*.

## CORRESPONDENCE.

## ON BREEDING HORSES.

SIR,—The English racehorse is an animal of which all classes of our countrymen are justly proud; but at the same time it may be doubted whether the great and numerous prizes now offered to speed, without much regard to stoutness, do not produce results injurious to the country; and I wish to call the attention of your readers (who comprise most of the sporting public) to the present state of our horses. The Arabian blood, by its mixture with ours, has long since attained to a wonderful degree of perfection; and racing having been at an early period enrolled among our national amusements, the attention of the most wealthy among us has been directed to race horses, and to the breeding of them with the utmost possible speed. Formerly horses had to run four miles at high weights, now it is a course of a mile and a half, with light weights, to try to approximate to the speed of steam. One attempt has been made to stem the torrent by the race instituted some years ago by the Duke of Portland, but it was against the fashion, and it was given up; and if any one objects that such a race is more cruel and more distressing to horses than a short one, I say he can know but little of racing, for horses differ much more in stoutness than in speed; and as you lengthen the course you do away with the keenness of the contest, which is what causes the distress, and this in fact is the very reason why the B. C. is unpopular. A leggy animal with a long stride is worth more now than he was in the days of our fathers; this, I say, is entirely wrong and mischievous. Then, as to another point—no regard is paid to sound and lasting legs and feet for mares or stallions; these points would be carefully looked to for a riding horse, but when it comes to breeding a more valuable animal, the breeder says, "Oh, the colt will come out well at two years old, and win me a few good stakes, and that will do; never mind his legs." Then, again, what carelessness there is as to size and power, especially to the dam; on these points, stoutness, soundness, and power, I say, most wonderful indifference is daily shown, as any man will see who looks through thorough-bred studs, in nine cases out of ten. Let him go to Tattersall's, and almost all the thorough-breds he sees sold will be long, thin-legged colts (most of them chestnuts), with slight and upright pasterns, and small round fetlocks. What on earth are they good for? A Welsh pony would kill three or four of them in a coster-monger's cart. Then we expect to sell our thorough-breds to foreigners, but they will not buy small lame cats—they buy nothing but the very best sort we have. In short, whether for use at home, or as merchandise to go abroad, we ought to be more particular in the shape, size, and soundness of sires and dams of horses, than the short horn breeders are as to their cattle: whereas most of us, on the contrary, trust to blood, and think of little else. I have addressed you before on this subject, but I do so again because I think it one of great and national importance, and because I see the evil growing daily. There would be much less expense, and much less disappointment, if one colt was bred from a sire and dam of true form and soundness, than if six were bred at random with the hope of one turning up a trump. Again, it is not near so easy now as it used to be to buy a good, strong, young hunter; and steam is in some measure the cause of this; for an old-fashioned, compact, active, coaching mare, when her work was over, bred a good hunter by a lengthy thorough-bred horse; now, the demand for the machiner is nearly gone, and the animal is very scarce. In the want, then, of this middle class, from which to recruit the patrician blood of our Sultans, &c., we have an additional motive to be careful about strength and size in the latter. I have been bitten by thorough-breds when younger, but I think differently of them now. For though a large and powerful thorough bred is the finest form of a horse, bring me them at random, and I will engage three out of four will be irredeemable rips. I am, &c.

Q. IN THE CORNER.

## A RACING RETROSPECT.

July 3, 1845.

SIR—As the two events in the racing world, known as the Derby and Ascot, may be said to be now matter of history, I trust I shall not be held a trespasser on the "great stamped," if I venture upon a "little go" of my own in your journal; and, it may be, that in my lucubrations I shall give a wrinkle or two to the learned in these matters. The Merry Monarch was the winner of the Derby, and thereupon I pride myself so far, that I said "Daddy Forth would go and do it." If those who read your journal, No. 2, and the "Bell's Life" of the 25th of May, had happened to note the signs of the times, their luck would have been great indeed. In that week's "Bell's Life" you will, or rather may, observe, not under "Pegasus," but in the sporting column of the 2nd page, a passage in italics—"So many are dying to be on him (Merry Monarch) that we think he must be the horse." Speaking from experience, I recommend the general writer in "Bell's Life," before "Pegasus." I think he has better information. I hold it, however, under all circumstances, to have been a badly-run and unsatisfactory race. Old England looked as bad as could be before the start. Libel was doctored, and no mistake; the parties who did it overshot the mark, for the horse instead of being stupid and lethargic, was mad; and what is next-door to it, perfectly wild. He never got up the hill, and (after running a mile in one minute and fifty seconds

at Chester) actually followed, at Epsom, such rips as Young Eclipse and Co. Idas, as I stated in a letter to you on the 5th of May, had no "absolute certainty" of winning. Idas has had Evenus as a trial horse; now as the latter can only run a mile, Idas has learned his lesson, and beyond a mile is out of his latitude. Tattenham Corner gave him his quietus.

Poor Idas, alas! no further could go,

But stuck in the mud like Billy Barlow!

I believe Mentor, Annandale, Weatherbit and Kedger, on their merits, to be each and every one of them as good, if not better horses than the Merry Monarch for speed. The settling day passed off harmlessly; there were no defaulters and therefore no complaints. 'Very good,' as the phrase goes; but, I venture to say, that for attempted fraud, trickery, and buying off, no Derby of late years was so bad as the one just gone by: it beat Running Rein's year hollow. Though I did not in my opening propose to speak of the Oaks, I will just observe, that it was with much surprise I found men betting hard and fast against Refraction; they did so on the score of her running at Newmarket just before, where Lyons (a third rater) beat herself and Prologue; but, in that race she waited, as did Prologue, and in a subsequent match run before the Derby day, Prologue beat Lyons hollow. No man, not a professed turfite, should venture on these matters without reading, I was going to say spelling, some established sporting paper over and over again.

As to Ascot there were two mistakes. The New Stakes Sting (in the next Derby) ought to and might have won; he was just going in when Lord Lonsdale's came with a rush and beat him. Lord Lonsdale's is not in the next Derby; and those who do not remember Sting may smart for it. For the Imperial or Emperor's Cup poor old Alice was beaten (three cheers for Alice notwithstanding), and so was Faugh-a-Ballagh: in beating the mare he beat himself, and the Emperor won it. As regards Fog (as he is familiarly called) he is too high in his gallop to please me for two miles and a half; he is not in my opinion, however, as some say, an impostor, although I admit his winning at Doncaster last year was a slovenly performance, and his race for the Cesarewitch at Newmarket afterwards, though rewarded by the prize, was favourable to him in many respects. Had the betting gone on, with the willingness to back him at Ascot of one or two that I know of, their ruin must have been inevitable.

For the present I bid adieu. I noticed in your journal a wish expressed that every subscriber would recommend it to another. I have done so to four or five, and I hope to see it widely circulated. In this you know I am perfectly disinterested, as I have no part in it, and that my thanks are due for the consideration you give me in deeming my communications worthy of insertion.

SOOTHSAYER.

## SALMON FISHING IN IRELAND.

Lismore, co. Waterford, June 1845.

SIR,—The Blackwater Salmon Fishery is, without exception, one of the finest in the world. The salmon which are caught there are invariably larger than either Scotch or English. Shooting salmon is a sport which is much practised here. The Duke of Devonshire is very partial to it, and he has got one stuffed and preserved in Lismore castle, that he caught with *Dog and Gun*, it weighs over thirty-six pounds. The salmon are so plentiful in this river that at the proper seasons they are sold at from one penny to threepence per pound. The Blackwater Head at Lismore is a beautiful and retired place, and commands an extensive view of the surrounding country. Lismore Castle (the seat of the Duke of Devonshire) is a splendid building, and possesses several curiosities, among which are subterranean passages, &c. It is supposed that it was a stronghold of the Danes. St. Patrick's Well is well worth seeing, and the superstitious peasantry hold it in great reverence for the cure of all diseases. The place altogether affords a fund of amusement to the antiquary or the angler.

F. B. T.

## THE SONG OF THE SILENT MEMBER.

Yes, we must leave the rural scene,  
The sports which still invite,  
To loil upon the benches green  
Beneath the strong Bude-light.  
And as we watch the dull debate  
Kept up on either side,  
We'll calmly in our places wait  
Till wanted to divide.

If one of us awake has kept,  
He'll the debate explain  
To those who through it may have slept,  
And let them sleep again.  
We'll rouse them up when the reply  
Comes from the other side;  
For then the time is drawing nigh  
When we must all divide.

## ADVERTISEMENTS.

**CIGARS and CHEROOTS, Foreign and British.**—Messrs. THOSWILL and Co. Commission Merchants and Importers of Cigars and Cheroots, beg to inform Dealers and others that they will at all times find on Sale, at their extensive warehouse, one of the largest and best selected Stocks in London, of the above articles, the quality of which will be guaranteed at the following prices: Cheroots, 6s.; Ambrosial, 7s.; Mexicanos, 7s. 6d.; Cuba Cigars, 7s.; Yara Cubas, 9s. 6d.; Havana, 7s. 6d.; Regalia, 8s. 6d.; Principes, 9s. 6d.; Trebuca, 9s. 6d.; Cabanas, 9s. 6d.; Silvas, 9s. 6d. per lb.; and every other kind equally low. A great variety of Genuine Old Foreign Cigars of choice quality, 17s. 6d. 19s. 6d., and 21s. per lb. 21, Budge-row, Watling-street, Chesham, London.

Now Publishing, in Weekly Numbers, price 1d., and in Parts, price 6d.

**THE HISTORY OF THE CONSULATE AND EMPIRE OF FRANCE, under Napoleon, by M. THIERS, Author of the "History of the French Revolution, late President of the Council, and Member of the Chamber of Deputies.**

CONDITIONS.—The work will be neatly printed in two volumes, royal octavo, from a new and beautiful type, and on fine paper.

It will be uniform with "The People's Edition of Thiers' History of the French Revolution," forming, together, four handsome volumes.

On the completion of the Work, a general Preface, introductory to the History of Napoleon, with Titles, Index, &c., will be given, thus forming a complete standard classical book of general reference, and interesting perusal.

Of the vast interest connected with the important national events which took place during the consular and imperial rule of Napoleon there can be no question. In undertaking to record the events of this momentous period, M. THIERS, from his high position in the state, had the good fortune to obtain possession of a multiplicity of original and official documents which embrace the minutest details of all the instructions, orders, &c., dictated by Napoleon himself to his Ministers of State, Priory Counsellors, Prefects, Marshals, and others. Of the success of his undertaking, the rapid sale of the three first volumes, which were issued at Paris on the 15th of March, amounting to 16,000 in one day, and the numerous editions which have been published at Brussels, Leipzig, and other places, affords the most splendid testimony.

London: G. VICKERS, Holywell-street, Strand.

Fourteenth Edition of the "SILENT FRIEND" on Human Frailty, with coloured engravings. Just Published, price 2s. 6d. Free by Post (in a sealed envelope), 3s. 6d., a new and important edition of

**THE SILENT FRIEND; a Medical Work** on the infirmities of the Generative System in both sexes; and on the loss of the reproductive powers, with means of restoration. The baneful effects of solitary indulgence, neglected Gonorrhoea, Gleet, Stricture, Secondary Symptoms, &c., are fully pointed out. Illustrated by Engravings; followed by observations on Marriage, with plain directions for the removal of certain disqualifications. By R. and L. PERRY, & Co., Consulting Surgeons, London. Published by the Authors, and may be had at their Residence, 19, BERNERS STREET, OXFORD STREET.

Sold by Strange, Paternoster-row; Hannay & Co., 63, Oxford-street; Gordon, 146, Leadenhall-street; Purkiss, Compton-street, Soho, and all Booksellers.

OPINIONS OF THE PRESS.

"We regard the work before us, 'THE SILENT FRIEND,' as a work embracing most clear and practical views of a series of complaints hitherto little understood, and passed over by the majority of the Medical profession, for what reasons we are at a loss to know. We must however confess that a perusal of this work has left such a favourable impression on our minds, that we only recommend, but cordially wish, every one who is the victim of past folly, or suffering from indigestion, to profit by the advice contained in its pages."—*Age and Argus.*

"The Authors of the SILENT FRIEND seem to be thor-

roughly conversant with the treatment of a class of complaints, which are, we fear, too prevalent in the present day. The perspicuous style in which this book is written, and the valuable hints it conveys to those who are apprehensive of entering the marriage state, cannot fail to recommend it to a careful perusal."—*Era.*

"This work should be read by all who value health and wish to enjoy life, for the truisms contained therein defy all doubt."—*Farmers' Journal.*

The CORDIAL BALM OF SYRIACUM is exclusively directed to the cure of nervous and sexual debility, obstinate gleet, irregularity, weakness, impotency, barrenness, loss of appetite, indigestion, consumptive habits, and debilities arising from venereal excesses, &c. In bottles, price 11s., or the quantity of four in one bottle for 35s., by which 11s. are saved. The Five-pound cases may be had as usual.

The CONCENTRATED DETERSIVE ESSENCE. An anti-syphilitic remedy for searching out and purifying the blood from venereal contamination, scurvy, blotches on the head, face, and body, ulcerations, and those painful affections arising from improper treatment or the effects of mercury, removing eruptions of the skin, Secondary Symptoms.

PERRY'S PURIFYING SPECIFIC PILLS, price 2s. 9d., 4s. 6d. and 11s. per box, are the most effectual remedy for Gonorrhoea, Gleet, Strictures, Inflammation, Irritation of the Bladder, &c., without hindrance to business.

Consultation-fee, if by letter, £1. A minute detail of cases is necessary. Messrs. Perry are in daily attendance, for Consultation, at their residence, 19, Berners Street, Oxford Street, London, from 11 till 9, and 5 till 8. On Sundays, from 10 till 12. One personal visit only is necessary to effect a permanent cure.

### THE EARL OF ALDBOROUGH CURED BY HOLLOWAY'S PILLS.

The Earl of Aldborough cured of a Liver and Stomach Complaint.

Extract of a Letter from the Earl of Aldborough, dated Villa Messina, Leghorn, 21st Feb. 1845.  
To Professor HOLLOWAY.

SIR—Various circumstances prevented the possibility of my thanking you before this time, for your politeness in sending me your Pills as you did. I now take this opportunity of sending you an order for the amount, and, at the same time, to add that your Pills have effected a cure of a disorder in my liver and stomach, which all the most eminent of the Faculty at home, and all over the Continent, had not been able to effect; nay, not even the waters of Carlsbad and Marienbad. I wish to have another Box and a Pot of Ointment, in case any of my family should ever require either.

Your most obliged and obedient servant,

(Signed) ALDBOROUGH.

A Wonderful Cure of Dropsy of Five Years' standing.  
Copy of a Letter from Mr. Thomas Taylor, Chemist, Stockton, Durham, 17th April, 1845.

To Professor HOLLOWAY.

SIR—I think it my duty to inform you that Mrs. Clough, wife of Mr. John Clough, a respectable farmer of Acklam, within four miles of this place, had been suffering from Dropsy for five years, and had had the best medical advice without receiving any relief. Hearing of your Pills and Ointment, she used them with such surprising benefit, that, in fact, she has now given them up, being so well and quite able to attend to her household duties as formerly, which she never expected to do again. I had almost forgotten to state that she was given up by the Faculty as incurable. When she used to get up in the morning, it was impossible to discover a feature in her face, being in such a fearful state. This cure is entirely by the use of your medicines.

I am, Sir, yours, &c., &c.

(Signed) THOMAS TAYLOR.

This wonderful medicine can be recommended with the greatest confidence for any of the following diseases:

Ague	Inflammation
Asthma	Jaundice
Bilious complaints	Liver complaints
Blotches on the Skin	Lumbago
Bowel complaints	Piles
Colic	Rheumatism
Constipation of bowels	Retention of urine
Consumption	Sore throats
Debility	Scrofula, or King's evil
Dropsy	Stone and gravel
Dysentery	Secondary symptoms
Erysipelas	Tic-douloureux
Female irregularities	Tumours
Fevers of all kinds	Ulcers
Fits	Veneral affections
Gout	Worms of all kinds
Head-ache	Weakness from whatever causes, &c., &c.
Indigestion	

These truly invaluable Pills can be obtained at the establishment of Professor HOLLOWAY, near Temple Bar, Lo and at most respectable Venders of Medicines throughout London.

THE CIVILISED WORLD, at the following prices:—1s. 1ld. 2s. 9d., 4s. 6d., 11s., 22s., and 35s. each Box. There is a considerable saving by taking the larger sizes.

N.B.—Directions for the Guidance of Patients in every Disorder are affixed to each Box.

THE TRULY WONDERFUL CURES OF ASTHMA AND CONSUMPTION, COUGHS, AND COLDS, Which are everywhere performed by

**DR. LOCOCK'S PULMONIC WAFERS,** have long established them as the most certain, perfect, and speedy remedy in existence for all disorders of the breath and lungs.

The following testimonials will be read with interest:—From Mr. J. S. Weir, Chemist, 1, Lowgate, Hull.

"April 3, 1845.—Gentlemen,—The following unsolicited testimony in favour of your inestimable medicine has just been received; this case, however, is only one among many which constantly pass under my notice.

"Yours respectfully, JOS. S. WEIR.  
ANOTHER CURE OF A FOURTEEN YEARS' ASTHMATIC COUGH.

Read the following extract of a letter just received from Mr. Edward Preston, coal-merchant, Paragon-street, Hull, dated April 6, 1845.

"Sir,—Grateful for the relief my wife has experienced by the use of Locock's Pulmonic Wafers, from a distressing asthmatic cough, with which she was afflicted for the last fourteen years, I feel a great desire that her surprising cure should be made known, for the benefit of those suffering as she did.—Yours, &c., EDWARD PRESTON."

ANOTHER EXTRAORDINARY CURE.  
From Mr. J. Waterhouse, surgeon, &c. Broad-street, Halifax April 1, 1845.

"Gentlemen,—I can conscientiously bear testimony of the good effects of Dr. Locock's Wafers, as very many after a trial have called upon me to express their satisfaction and gratitude. The following case is but a sample of many others in which the medicine has surprised the patient by its rapidity in working a wonderful cure.

"A female residing in the neighbourhood of Halifax had long been subject to a confirmed asthmatic cough, when her husband applied to me. He said he was persuaded she could not live many days, as from cough and want of rest she was so much enfeebled; and the use of medicine, in which she had preserved for many months, had given her no relief. The very first dose of the Wafers wrought a surprising change; they soothed her cough, and gave her a comfortable and refreshing sleep; and by persevering in their use, her strength has returned, and without the aid of any other medicine, the patient, who had been a long and apparently hopeless sufferer, is now fully restored to health.

"This case I can vouch for, and can satisfy any inquiries by reference to the parties. Yours, &c.

J. WATERHOUSE."

The particulars of many hundred Cures may be had from every agent throughout the Kingdom and on the Continent.

DR. LOCOCK'S WAFERS give instant relief, and a rapid cure of asthma, consumption, coughs, colds and all disorders of the breath and lungs, &c. &c.

TO SINGERS AND PUBLIC SPEAKERS they are invaluable as in a few hours they remove all hoarseness, and increase the power and flexibility of the voice. They have a most pleasant taste.—Price 1s. 1ld., 2s. 9d., and 11s. per box.

AGENTS.—DA SILVA and Co., 1, Bride-lane, Fleet-street, London.

CAUTION.—To protect the public for spurious imitations Her Majesty's Honourable Commissioners have caused to be printed on the stamp outside each box, the words "Dr. Locock's Wafers," in white letters on a red ground, without which none are genuine. Sold by all Medicine Venders.

**FRENCH PRINTS** just received from Paris,

of the richest and most voluptuous description, beautifully coloured, in sets of 12, at 1, 2, and 3 guineas per set. A few new single prints, 5s. to 21s. each. Also may be had, La Lanterne Magique, 20 coloured plates, 30s. Amours of a Lady's Maid, 30s., plates. New Flash Songster, 5s., plates. Swell's New Guide to all the fun in London, ladies, &c., 2s. 6d., plates. Seduction Unveiled, 2s. 6d., plates. Amours of the Earl of Rochester, 8s., plates. Marriage, 2s. 6d., plates. Amours of Betty Ireland, 7s., coloured plates. Annals of the Earl of the White House, 1s., 2 plates. Philosophy of Pleasure, 9s., coloured plates. Hints to Young Married People, 2s. 6d., plates. Cause of Consumption, 1s., plates. How to Raise Love, 2 vols., capital coloured plates, £3 2s. Female Husband, 1s. coloured plate. Venus Schoolmistress, large coloured plates (curious), £2 2s. Amours and Poems of the Earl of Rochester, coloured plates, 8s. Love on the Sly, rich coloured plates, 27s. 6d. 40 New Flash Song Books, 11s. each, all different. New Figures to Undress, 2s. 6d. each.

P.S. ANOTHER PRIME LOT HAS JUST ARRIVED, entire Novelties, DIRECT FROM PARIS, ranging in price from 2s. to £1. 1s. each. Observe the Address,—John Wilson, 86, Wardour-street, Oxford-street. Letters, with remittances, attended to. Catalogues gratis.—Observe, these are the right sort—not trash.

**PARISIAN NOVELTIES** every week at T.

WARD'S REPOSITORY, 103, Strand.—Amongst others, the Beauty of Woman, six excellent plates 3s. 6d.; Tail Pieces, eight racy plates 3s. 6d.; Les Perles, four plates 1s. 6d.; Figures to Undress at 3s. 6d. each, four new; Venus's Looking glass, the gem of the season, 3s., &c.; specimen plates at 1s., 2s., 3s., and 5s. each.—Catalogues sent, gratis, on receipt of stamps.

Sold wholesale by W. M. CLARK, Warwick-lane; CLEAVE, Shoe-lane; VICKERS, Holywell-street; STRANGE, Paternoster-row; and PURKISS, Compton-street.—Printed for the Proprietors, at the OFFICE of JOHN WORTHAM, 313, Strand.

## HISTORY OF BRITISH BOXING, FROM FIG AND BROUGHTON TO THE PRESENT TIME.

PERIOD IV. 1798—1820.

FROM THE APPEARANCE OF JEM BELCHER TO THE LAST BATTLE OF CRIBB.

### CHAPTER II.

HEN. (OR HENRY) PEARCE, THE GAME CHICKEN, CHAMPION OF ENGLAND.

**H**E shall not here dilate on the fistic capabilities of Pearce, feeling convinced that a simple record of his deeds in the roped ring, will far outweigh pompous panegyric or fulsome laudation. Pearce was another of the scientific sons of boxing Bristol, and among the many ring recruits which that ancient city furnished to the metropolitan arena, he cannot fail ever to hold a proud distinguished place.

The year of his birth was 1777, and from the flattering opinions of some of the cognoscenti, who had admired his tactics in some provincial combats, and also in glove-exhibitions, Pearce was induced, in the year 1803, to find his way to London, where he exhibited his skill at a well-known crib in St. Martin's-street. Now it so happened that the young Bristol aspirant, here met with Burke, the antagonist of Belcher, and who, since Jem's partial retirement into private life (well would it have been had he adhered to that resolution), had taken many airs upon himself, talking largely of assuming the Championship. Belcher, as might be expected, after trying Pearce's qualifications, readily backed his townsman, and the

result was, that after some bickering, an encounter took place under somewhat singular and novel circumstances. The Chicken's pugilistic fame at Bristol, added to some freely expressed opinions of his friends, seem to have awakened the ire of Burke; and during a day's sport in the old English manner, in the vicinity of Shooter's Hill, these two rivals met, not under the most favourable impression towards each other. Some amateurs, on their return to town in the evening, fell into converse on the respective merits of the gluttonous butcher and his young rival, whereon Burke expressed his anxious desire for an immediate appeal to arms. The challenge was communicated to the Chicken, who rose with alacrity from his bed, (he then lodged in Wardour-street, Soho,) and everything was quickly got ready. A well-lighted room was selected, and notice sent round to some leading patrons, that a trial of skill was to take place between the new Bristol youth and the celebrated glutton Burke. Numbers soon assembled, and between the hours of eleven and twelve the battle commenced. Burke's inferiority was soon manifest. His slow and round method of fighting failed in doing any execution when opposed to the straight rapid hits of his active adversary, and his pluck only enabled him to receive uncommon punishment. The Chicken, lost no time in displaying the graces of the science, yet put in his blows so sharply that, Burke soon exhibited signs of weakness. During a

desperate contest of twenty minutes, in which fifteen rounds of tremendous milling took place, Burke evinced great courage, and endeavoured in the latter round, to fight defensively, and parry the blows of the Chicken, but the latter followed him up so straight-forward, that it was impossible for Burke to resist the consequences; and he was twice flogged by the Chicken, so decidedly that he lay stupified. The two blows were allowed, by all present, to have been the most tremendously effective they had ever witnessed. Burke was dreadfully milled, yet had the candour to acknowledge that he had never before met with such a rapid antagonist. It is a proof of Burke's game, if not of his judgment, that he flattered himself a chance was still left. One hundred pounds was staked, and it was agreed that the winner should have ninety pounds and the loser ten; and on Wimbledon-common, Monday, January 23, 1804, a ring was formed, and the battle came off. Burke was seconded by Owen, and Paddington Jones was his bottle-holder. Pearce had for his second Bill Gibbons, and Caleb Baldwin as bottle-holder. On stripping, in point of appearance Burke appeared the taller and heavier man, yet the odds were considerably in favour of the Chicken.

1.—Caution displayed on both sides. Pearce, aware of the impropriety of exposing himself too openly to superior strength—and Burke's recollection of his former milling teaching him not to be too precipitate, after some feints and dodges they closed before any blows were exchanged, and both fell. [Two to one on the Chicken.]

2.—Burke upon his mettle, game to the back-bone,—showed he was not to be disposed of easily, and fought into a rally like a hero; but the Chicken, awake to his intent, milled on the retreat, and at length put in a stopper on Burke's forehead, that made him reel again, when the Chicken caught him staggering, and threw him.

3.—Burke, although bleeding profusely, stood up well to his man, and a good display of hits was made on both sides. Burke thrown.

4, 5.—Ditto repeated, the exchanges in favour of the Chicken.

6.—Pearce put in a blow, which Burke returned so well as to bring down Pearce on his knee. [Bravo, Burke!]

7 to 11.—Burke exceedingly shy of his opponent, always waiting for his antagonist to break ground—and suffering much from the repetition of his blows. From this to

15.—The Chicken so much the favourite, that the odds were four to one upon him. It was manifest that Burke was not a match for his man: his style of fighting was considerably inferior to that of his opponent's, and he began to appear much distressed; he was occasionally trying to affect the scientific style of his opponent, but at a still greater disadvantage than his own natural mode of fighting. The severe blows he received from the Chicken made him unruly and intemperate, and he was becoming fast an easy conquest to the

20.—Burke's passion was now exhausting his strength—his nose bleeding considerably—and, irritated in mind that no chance offered of proving successful, he ran in furiously upon his opponent. His intemperance rendered him a complete object for punishment, and the Chicken milled him in every direction. [Twenty to one the winner is named; and even bets that Burke don't come again.]

21.—Passion uppermost; Burke desperate in the extreme, and by running in headlong, missed putting in a hit, and fell; Pearce smiling at his want of prudence, and holding up both his hands in triumph.

22.—A good rally, but Burke received a most tremendous floorer.

24 and last.—Burke, still insensible to propriety, and determined to get at his man, received a severe milling, when he gave it in.

Burke, as usual, displayed uncommon resolution, and, notwithstanding the persuasion of his friends, obstinately contested the battle for several rounds, when there was not the slightest shadow of a chance. He was compelled at last, after an hour and seventeen minutes, reluctantly to acknowledge that he was done. His aspect was truly woeful. The Chicken was as gay the last round as when he entered the ring, and challenged Bitton on the spot for two hundred guineas.

Elias Spray, the coppersmith, who had distinguished himself as a pugilist in Bristol, now entered the lists with the Chicken. Spray had a good character, and a considerable display of science was expected by the amateurs. The day appointed for the meeting to take place was on Monday, March 11, 1805, at Hampton Court, but, fearing something like an interruption, they agreed to cross the water, and decide the contest upon Molesworth Meadow. Considerable confusion took place in procuring boats to convey the numerous followers across the river, where several not only experienced a good ducking, but some narrowly escaped drowning, in their eagerness to reach the destined spot. At length, every thing being completed, Pearce, attended by Maddox and Hall, as his second and bottle-holder, entered the ring (twenty feet square), and threw up his hat in defiance. Spray soon made his appearance, followed by Wood as his second, and Mountain as bottle-holder. The betters were on the alert, and offered seven to four on Pearce; and even bets were sported that the contest did not continue twenty-five minutes; and also that the Chicken was not vanquished in thirty.

1.—Several faints took place, but Spray not minding his distance, hit short; when the Chicken, taking advantage of his mistake, put in a severe blow, and Spray found his way to his mother earth.

2.—Several good hits exchanged—Spray caught the Chicken a severe blow upon his breast. Pearce rallied, and in the event, Spray received a knock-down blow. [Nine to four upon the Chicken.]

3.—A good round, Spray full of courage, and stood up heroically. The men closed, and both fell.

4.—Spray too hasty, and out of distance again; his blows thrown away.

The Chicken caught Spray neatly on the frontispiece, seized him cleverly and threw him a clean cross-buttock.

5.—Spray distressed; the Chicken light as a lark, and cool as a philosopher, eyeing his man, and manœuvring with all the graces of the science, at length having judged his distance, he seized an opening, went in and knocked the Coppersmith down, and smiled at his weakness.

6.—Both well engaged, and several good blows passed. Spray put in a desperate bit upon the Chicken's stomach; but the Chicken smiled, and threw his man very neatly.

7.—The Chicken was considerably affected by Spray's stomacher, made a hit, but failed in the attempt. [The odds fell a little.]

8 to 11.—Nothing material occurred in the last four rounds; the Chicken had the advantage, but was thought to be fighting for time, to recover the effects of the blow in round 6.

12.—Spray went in with spirit, and put in some severe blows, but his distance was incorrect; however, he brought the Chicken down by a terrible hit on the nose. [Immense applause.]

13.—The Chicken gay, although distilling the ruby fluid from his nasal organ in streams. Spray, much distressed, fell in making a hit.

14.—Pearce, full of game, put in so severe a blow upon his antagonist's jaw, that fears were entertained he had broken it; Spray fell in consequence of its severity. [Ten to one on Pearce.]

15.—Spray stood up to his man boldly, but received a floorer from the Chicken.

16.—Courage displayed on both sides; Spray put in some well directed hits; but in closing, Pearce gave him a cross-buttock.

17.—Spray on the decline, attempted to rally, but received a most desperate blow upon his temple that nearly deprived him of his recollection, and which spoilt him for the remainder of the fight. The ensuing five rounds upon the part of Spray were little better than mere exhibitions of animal courage.

23.—All in favour of the Chicken. Twenty to one, but no takers.

24.—Spray again showed himself, but his efforts to turn the tide were futile. The Chicken smiled at his attempts; yet the Coppersmith showed considerable skill, and continued the battle to

27.—Hardly to be called fighting. Spray was down as soon as he appeared.

28.—Spray could scarcely stand, yet could not bring himself to say no; he put up his hands and endeavoured to face his opponent. It was all up: the Chicken hit him as he liked, and finally knocked him off his legs.

29 and last.—Spray stood up, but only to exhibit the spectacle of a game man struggling against fate; Pearce put in a thrust rather than a blow, and poor Spray was persuaded to give in.

The contest lasted thirty-five minutes, and at its termination, the Chicken full of gaiety, jumped over the ropes,—and accepted of a challenge from Carte, a Birmingham pugilist, of some notoriety, for fifty guineas. The stakes were instantly made good, and they agreed to fight within six weeks. The Chicken lay on the ground for a few minutes, and then started for town, full of spirits.

On Saturday, the 27th of April, 1805, the day appointed for Carte to enter the lists with the Chicken, the parties met at Shepperton-common, near Chertsey, in Surrey. The superiority of the Chicken was so manifest, that Carte had not the least chance whatever, although six feet three and a half inches in height; and it would be a waste of time and paper to give the rounds in detail. Suffice it to observe, that after a contest of thirty-five minutes, in which twenty-five rounds took place, Carte, from his ignorance of the art, received a most terrible milling; while, on the contrary, the science of the Chicken so protected him from the attacks of his adversary, that he scarcely had a mark visible.

But the pugilistic rivals with whom Pearce had hitherto contended were mere novices compared with the antagonist now picked out for him. JOHN GULLY, now so well known at Tattersall's and the higher sporting circles, was so great a favourite with several of the gentlemen patrons of pugilism, that it was agreed he should be at once matched against the CHICKEN. Under the auspices of Mr. Fletcher Reid, Gully was sent into training at Virginia-water, about two miles beyond Egham. It appears that Gully was scarcely known in the metropolis, having never appeared or distinguished himself as a pugilist, but that he was excited to a trial of skill from a casual friendly sparring match with the Chicken, in which he planted some severe hits, from which circumstance, his ambition prompted him to think that he could beat Pearce.

THE LEARNED ELEPHANT.—“That's a werry knowing hanimal of yours,” said a cockney gentleman to the keeper of an elephant. “Verry,” was the cool rejoinder. “He performs strange tricks and hanties, does he?” inquired the cockney, eyeing the animal through his glass. “Surprisin’!” retorted the keeper. “We’ve learned him to put money in that box you see away up there. Try him with a dollar.” (The cockney handed the elephant a dollar; and sure enough, he took it in his trunk, and placed it in a box high out of reach.) “Well, that is verry hextraordinary—hastonishing, truly!” said the green one, opening his eyes. “Now let’s see him take it out, and and it back.” “We never learns him that trick,” retorted the keeper, with a roguish leer, and then turned away to stir up the monkeys and punch the hyenas.

SPLENDID LOOK OUT FOR BACCHANALIANS.—A New York paper says that a man in the morning, after being drunk over night, feels as though he had the rheumatism in every hair of his head.

FLAT.—That a stupid fellow is a “flat” is positive; that a sheet of paper is “flatter” is comparative; and that a court parasite is a “flatterer” is superlative.—*Lavater Junior.*

## THE QUAIL.

**ALTHOUGH** a rare bird in England, the Quail is possessed of sufficient interest to deserve a few words and a figure. The breed in this country, and from the delicacy of their flesh, their boldness, and beauty, deserve more attention than they receive from those who are anxious to get up "a head of game." The female makes its nest on the ground, like the partridge, and lays to the number of six or seven eggs, of a greyish colour, speckled with brown. The young birds follow the mother so soon as hatched, but do not remain long together; or if kept together, they are so obstinate and pugnacious that they will fight till one or the other is destroyed. From this contentious disposition they were much employed by the Greeks and Romans to fight after the fashion of our modern game-cocks. And we are told that Augustus punished a prefect of Egypt with death for bringing to his table a quail which was very celebrated for the number of victories it had gained! The Chinese at the present day are much addicted to the fighting of quails, and in some parts of Italy the practice also prevails. In China it appears to be a very fashionable recreation, and large sums of money are betted on the events of a contest, wherein numerous quails are engaged, somewhat after the fashion of our Welsh mains. The mode of conducting these battles, which are often the exciting topic of a village, is to pit two highly-fed quails against each other, and then throw a few grains of seed between them: the birds rush upon each other with the utmost fury, striking with their bills and heels until one of them yields.

The quail is a migratory bird, and according to Daniel, traverse in immense flocks the Mediterranean from Italy to the shores of Africa, and returning again in the spring, frequently alight on the islands of the Archipelago, which they almost cover with their numbers, and so abundant are they on Capri, that the principal revenues of the bishop and some convents arise from the number of these birds they send to Naples.

Quails are the most undaunted of the tribe to which they belong, and perform their migratory journeyings with fearless bravery. As they are courageous, so they are equally quarrelsome, especially during the pairing season, when their contentions often terminate in mutual destruction. This disposition, from which arose the Greek adage, "As quarrelsome as quails in a cage," induced the ancients to fight them with each other, after the manner of game-cocks; the conqueror enjoying quite as much celebrity as the winning horse of the Derby.

Clouds of quails alight in spring along the coast of Provence, especially in the lands which border on the sea. Here they are sometimes found so exhausted, that for a few of the first days they may be caught with the hand. In some parts of the south of Russia they abound so greatly at the time of their migration, that they are caught in thousands, and sent in casks to Moscow and St. Petersburg. So unerring is their instinctive knowledge of the precise time for migration, that they retain it even though reared and kept in bondage. A very singular proof of this is recorded by the Rev. Mr. Daniel, in his *Rural Sports*, in some young quails which, having been bred in cages from the earliest period of their lives, had never enjoyed, and therefore could not feel, the loss of liberty. "For four successive years," says he, "they were observed to be restless, and to flutter with unusual agitations regularly in September and April; and this uneasiness lasted for thirty days at each time. The birds passed the whole night in these fruitless struggles; and always on the following day appeared dejected and stupid."

They are very scantily scattered over Britain, and are imported from France in great quantities for the table. They are conveyed in square boxes, which contain about a hundred; the box is divided into five or six

compartments, one above another, just high enough to admit the quails to stand upright. Were they allowed a greater height than this, they would soon kill themselves; and even with this precaution, the feathers are generally beaten off the crown of their heads. These boxes have wires in front, and each partition is furnished with a small trough for food. They are forwarded in this manner without difficulty to great distances.

The author of *Letters from the Campagna Felice*, relates the following anecdote, which illustrates how incredibly abundant quails are on the Mediterranean coast:—"During the time that the Capitani Bey blockaded the harbour of Alexandria with his Turkish squadron, one of the Greek sailors of his ship had caught two or three quails which had perched on the rigging. The Mussulman rewarded him generously; and desirous of varying the hard fare which a blockading squadron has occasionally to sustain, by a more ample supply of such a delicate rarity, promised a piastre for every bird that should be brought him. In a few days the rigging, sails, and yards were covered with flocks of quails; great numbers were caught, of course, and every one was brought into the cabin, as the price was liberally fixed. To escape the dilemma of either ruining his purse or breaking his promise, the bey resorted to the alternative of standing out to sea, as by removing from the coast he got rid of the visits of these expensive strangers." Such prodigious numbers appear on the western coasts of the kingdom of Naples, that a hundred thousand have been caught in one day within the space of three or four miles.

## AN ADVENTURE WITH A KANGAROO.

"I remember well one day, on the M—e river, a place where you can see kangaroos of almost every description in droves, I have often counted twenty, thirty, forty, and once seventy, in one mob or drove, I was going home from one of my sheep stations, mounted on a blood mare, accompanied by my servant on foot, without any intention of hunting, but followed by my favourite kangaroo dog, one of the best I ever had, a brindle, just the stamp of a first-rate deer hound. My other attendant was Dan, a native of the 'Emerald Isle' who had passed most part of his life in Liverpool. He was about six feet in height, and very muscular. We had proceeded for some time when Dan suddenly stood still. 'What is it,' said I, 'Blacks?' He returned no answer to my question, but put his finger to his lip as a signal for silence. I pulled the mare up, and waited a few seconds, breathless, just in the same manner one feels in England on the first of September, when the dogs make their first point, and you're not exactly certain what it may be. 'Don't you see him? an old man as red as a brick,' said Dan, pointing down towards the river. I passed my eye carefully along the thick forest and there they were, 'the beauties,' a lot of them, hopping and playing, feeding and rolling over in the long grass, by the side of a big box-tree, the old man towering above them.—'Boomer,' said I, in a low voice to my dog, 'Boomer, come along, old boy,' and dashing the spurs into the mare's sides, away we go over a fallen tree, ride a hundred yards while they look and turn, hop a step or two, and look again; one, two, three, four, five, six, seven. 'Hold 'em, Boomer, hold 'em!' 'Twas enough: he was off, and was close, to them before they were aware of it. They hopped a few steps, then turned again to make sure, and then bounded away like race-horses, the ground trembling like a course. Boomer singled out 'the old man,' an enormous fellow at least six feet and a half high; he could not run far—old ones never can. Boomer turned him in about five hundred yards, when he made towards the river, down hill; in a few more yards Boomer caught him by the tip of the tail, held on for a few seconds, then let go, and seized him by the thickest part of his tail, close to the rump, gripped there hard till he got his wind; he then sprang at the old 'un's throat which he missed, but caught the fore-arm, where, however, he only hung long enough to bring the creature to bay, for it was very strong and full of fight. The object of the kangaroo was to strike the dog with his formidable hind legs, the claw of which, six inches long, and as hard as ivory, would have ripped him clean up; but old Boomer was as knowing as he, and danced around him like a 'light weight' fighting a clumsy yokel. Master Kangy, sitting erect upon his haunches, his knowing head cocked a little upon one side, his fore paws hanging down before, after the fashion of some demure young lady in a quadrille, followed every evolution of the dog, bounding up, and striking at him right and left, his legs coming to the ground with a heavy dead thump, like the kick of a horse. The scene was so comical and exciting, the pair so evenly matched—Kangy unable to get away, and Boomer never getting a chance to rush in—that I sat on the mare ready to burst my sides with laughing, without trying to interfere.

"Just then, as Boomer again caught the 'old man' by the shoulder, up came Dan out of breath from running.—'Ah! you ugly devil, you'll be after killing the master's dog. Sure master, said he, turning to me, 'you're not a going to let that big devil murder the dog; oh, and I'll be after settling of yer!' so saying he picked up a big stick, and brought it with such a thrack on Kangy's head that it broke short in the middle. However, it did not seem to hurt the beast, and as Dan was stooping to pick up another stick, the dog let go his hold, having lost his wind. Master Kangy missed Boomer, and seeing Dan in the way, he caught hold of him in his fore-arms, and hopped away towards the river. 'Oh—!

oh, mother of mercy!" screamed Dan; 'I'll be kilt intirely; ooh! save me—save me! Masther avourneen, save me!' It was a truly laughable sight to see Dan, with his long hair, black beard, and white smock frock, being carried away in the kangaroo's arms like a Broddignag baby. 'Arrah, by Jasus, bad cess to ye's, ye two-legged divil of h—ll! oh, by de powers that this should ever come to my father's son, and the masther standing on the mare laughing at me—sure an' I'll be kilt intirely!' The 'old man,' without heeding his roaring, went hop, hop, hop, till he jumped into the water with him; it was about five feet deep; there he tried to push Dan's head under the water. Dan resisted as much as he was able. But Kangy had his arms down, held him as in a vice, and ducked him two or three times, until I began to think that matters were going rather too far; so I sprang off the mare, ran into the water, drew my hunting knife, and plunged it into Kangy's shoulder, just under the blade—a start, a gush of blood, and all was over. We dragged our mighty gime to the water's edge, and cut off his tail, which measured exactly a fathom; he could not have weighed less than three hundred pounds. \* \* \* Dan was never so handy at going near 'old men kangaroos again.'—*Life and Sports in the Wild Bush of Australia.*

### THE GOOD OLD DAYS OF COACHING IN CONTRAST WITH THOSE OF THE RAIL.

PETER.—"A chair! my lord, a chair! rather say a coach—I know you prefer a coach; it is much better to ride in a comfortable steady coach than to be jolted about by a couple of drunken chairmen. Odds-bobs, how do I hate those confounded chairs."—OLD PLAY.

With precisely the same contempt with which Peter held a chair, do we hold those popular nuisances—railways. Instead of the natty well-appointed "drag," with its quartette of thoroughbreds, and the jolly good-humoured rosy-cheeked "coachey," with an enormous nosegay stuck in his left button hole, and a fragrant havannah in his gills, and the possession of at least the hearts of half a dozen of the waiting maids belonging to the respective inns along the roads. What have we? A snorting iron-limbed monster, whizzing, screaming, and whistling—throwing out clouds of smoke, dirt, and ashes.

With all our vaunted advances in the arts and sciences, it is perfectly clear that we were a happier and more contented people half a century since; but we have long since left our hold of the substance, and are now in hot pursuit after the shadow. Far be it from me to attempt to run down that acquisition of knowledge to which we have advanced. It is true that a great social improvement has been attained, for in even running after a shadow we may stumble over a great good—sometimes a great evil. But we are moralising; it is not our intention to moralise, but will at once to the pith of our discourse.

We must carry the reader back a quarter of a century, and lay the scene at the Swan with Two Necks, in Lad-lane; the time half-past-six A.M. precisely.

All is bustle, everybody is busy; trunks, portmanteaus, and baskets of game are brought out and packed on the top and in the "boot." Pretty rosy-cheeked chamber maids are bringing out handboxes and light articles of all descriptions, and receive "tip" for their pains. "Boots," in a state of perspiration, is lugging about leviathan boxes, and packages of no less ample proportions. Presently the horses are brought out and the harnessing begins, and soon everything is declared to be ready for the start.

In the meantime the coachman has been taking "summat short" as he expressed it, and ogling the barmaid over the counter. Presently the guard comes in and intimates to coachey that "all's right," and after finishing a glass between them, and bidding good bye to the barmaid, they go out. A blast of the horn is the signal for starting; the horses prick up their ears, a "kuk-kuk" from coachey, and off they go.

How widely different is this scene to that at a railway station. There all is order: not the least excitement prevails; everything is done methodically, and by certain prescribed rules. There is no running about of passengers—no opportunity for young gentlemen to show their gallantry in helping one of the fair sex up the ladder. By the way, how many matches (not in the sporting acceptance of the word) have been brought about in this manner. Everything seems to be done upon scientific principles. People look like automata, unable to act or stir till they are wound up. At the last bell, off starts the train like a comet with an unusually long tail.

The contrast must be vividly impressed on the mind of any person who has beheld the starting of a stage coach of five-and-twenty years since, and one of the smoky monsters of the present day.

Stage coaches, certainly, had their discomforts as well as comforts; but this was nothing but what might be looked for; we must always take the bitter with the sweet. An old stage-coachman, long off the road, observed the other day, that "If you did chance to be overturned in a stage, you generally found yourself seated comfortably in a dry ditch, though you might accidentally come upon a bed of nettles; but if you were overturned in one of those d—d things, ten chances to one but what you will find one half of yourself half-way to the clouds, with the other half of your body smashed amongst the carriages."

July 7th, 1845.

F. B. THOMPSON.

### CORRESPONDENTS.

R. W.—Libel was somewhere about last in the Derby; Alarm was certainly in before him. M. B. C.—You'll find the lines (which allude to the late Duke of York,) in a poem of Robert Burns, the Caledonian Bard:

"Than you, right reverend Osnabrug,  
None fits the lawn sleeve sweeter."

means the Duke of York, who was *Bishop of Osnaburg*, and a very pretty bishop, too. "Young royal Tarry Brooks" in the same poetical squib, is our King; "but the frigate 'well rigged for Venus' barker," was a young lady of Portsmouth (we think), certainly not Dora Jordan, the wife in heart (and in the eye of heaven,) of the Duke of Clarence.

B. WILSDEN, MANCHESTER.—Certainly. It is surprising every sporting reader seems determined to assume that every department but his favourite one is hardly worth notice. We wish we could see a little more cosmopolitan spirit among sporting men: the lack of it has led to the extinction of several branches of popular sports, and the crippling of many others. By decrying a recreation you have no mind to, you strengthen the hands of those who would put both your favourite pursuits, and the one you sneer at, in the same category, and denounce and suppress them both as equally sinful and disgraceful, though both are popular, nay more, blameless sports.

ENQUIRER.—Drury-lane theatre was last destroyed by fire, on Feb. 24th, 1809. That was the second time of its conflagration.

"EDWARD N."—As you ask our private opinion, we do not think the horse, although in the betting, has a shadow of chance for the Leger.—The public betting is not a safe criterion: observe, we say this subject to explanation of the "bookmaking" influences which work the averages. Sell the horse; sell him—he'll not be worth twopence long before the day. "Oh, No!"—You're a facetious fellow, no doubt. Try your hand at it, and you'll find it out. "CAVEAT EMPTOR."—We'll give you another article or two of the sort, as the others pleased you so much.

"R. JESSOP."—We do not know. Your second query is a legal one, of some obscurity and doubt. We suspect that you could not get a direct answer from a professional man; why then, consult us!—we do not pretend to be lawyers.

E. L. B.—You have no legal remedy. Two cases (within this fortnight) have been added to the list of precedents. Look at the daily papers.

M. R.—SHEFFIELD.—You have won the wager. It was S's fault that you were momentarily deprived of the means of showing your correctness, by a trick. He (S.) took a childish advantage and ought to pay.

S. T.—LIVERPOOL.—We never received your first letter. How did you address it? The question is perille; there have been tortoiseshell Tom Cats, though they are certainly scarce. We have seen more than one ourselves; and could find one in a few minutes in our own neighbourhood. It is an authenticated fact, that where a female cat had hurt her tail by an accident, that she brought forth one or more tailless kittens in each of her subsequent broods. We shall not try to account for this, but we know its truth.

ROBERT WESTON.—You may refuse them. Who told you postage stamps were a legal tender? Your "friend the lawyer," was hoaxing you: summon for the debt, (if you have a fair case) the offer of the stamps is not payment.

"SANDY SANDERSON."—Not over 'cute we think. The stone of meat by custom, is 8 lbs. at Smithfield and Newgate market. You cannot demand fourteen; these things are regulated by general usage.

L. B. N., BIRMINGHAM.—Dog Billy.—The Great Britain Steamer is the property of a company. You must take American statements with a liberal allowance; she is by far the largest steamer ever launched.

"SIBERT."—This is not the season. We will give all the breeds of sporting dogs, faithfully engraved, as well as articles relating to the gun, when August and September come.

REMINGTON.—Gunpowder is composed of very light charcoal, sulphur, and saltpetre.

You can buy it cheaper and better than you can make it.

"R. ENDERBY."—Strictly speaking, *fettors* mean chains for the feet.

"PUO."—There are sixteen battles in the P. R. against the name of Ned Stockman, in FIFTIANA. That is the authority. Unless you can show an omission of any recorded fight in the P. R. from a contemporary paper or magazine: *assertion* is not proof.

"SEE-TO-IT."—WOLVERHAMPTON.—Bill Perry (the Tipton Fisher) beat Tomner, who was called the Gorse champion, in Nov. 1837. It is nearly ten years since his first public fight. He beat Tass Parker the second fight, the first was interrupted.

CRICKET.—T. EVANS.—Severe illness is the only cause of the omission. The subject will be resumed in the forthcoming number.

T. UPTON, HIGHGATE.—Yes, at Hornsey, on Thursday last, when the Highgate gentleman won: The return not yet fixed.

ROBERT.—Both the *Era* and *Monday Times* are in error. The match between Kent and England (Gentlemen) was drawn at the request of the former on the third day (Wednesday).

H. A. BLONDILL.—But for unavoidable circumstances, NED REW would have gladly availed himself of your invite, and hopes for an early opportunity of seeing you.

TYROL.—Yes, you can try the Euston Club, or the Islington Clarence, both playing on the Brecknock Arms ground, Camden Town. Apply to H. Bromley.

D. E. N.—Not out, the ball being dead.

NEMO.—Procure Denison's Cricketer's Companion for 1845.

P. T.—Not out, certainly. It is easy for a practised eye to detect a bound, or bam, ball, as it is generally termed. It rises in a very peculiar manner when struck on to the ground.

T. T. L.—Out: you had no right to go off your ground, unless your bat (in hand) was over the crease.

TOM.—Twenty-seven inches out of the ground; and eight inches in extreme width.

### OUR WEEKLY CALENDAR.

AN EPHEMERIS IN JEST AND EARNEST.

SUNDAY, July 13th.—EIGHT SUNDAY AFTER TRINITY.—Captain Barclay completed his task of walking 1000 miles in 1000 hours, 1810.

MONDAY, 14th.—Grand Cricket Match, Kent versus All England, at Lord's Ground.—Bastille at Paris destroyed, 1793.

TUESDAY, 15th.—St. Swithin's Day.—Tenbury Races.—Guildford Races.—The Season.—The insect tribes are now extremely numerous; the cheerful hum of the grasshopper enlivens the fields; and the beetle, buzzing through the air, breaks the silence of evening. The annoyances produced by many insects are so incessant as to lessen the pleasure of a twilight walk, though we may console ourselves by reflecting that they are not so troublesome and dangerous as those of tropical countries. The domestic animals seem to suffer from their bites more than human beings. These wounds of insects are sometimes made to obtain nourishment, at other times to deposit their ova; but most insects for this purpose resort to the plants or to the earth. The cool and grateful shade of trees is now too inviting to be neglected, and amid the woods we may meet with some of the most beautiful wild-flowers which this country produces, as well as many which furnish indications of the weather, which no one should neglect, if they desire to escape those sudden showers, of the approach of which we have no other intimation. The scarlet pimpernel, or *anagallis arvensis*, has received the name of "the poor man's weather-glass. The observation of this, and other plants, the opening and closing of which are regulated by the degrees of light, is at once interesting and instructive.

### AN INVITATION

Haste out of doors—from the pastoral mount  
The isles of ocean thine eye may count—  
From coast to coast, and from town to town,  
You can see the white sails gleaming down,  
Like monstrous water-birds, which fling  
The golden light from each snowy wing;

And the chinnied steam-boattossing high  
 Its volum'd smoke to the waste of sky;  
 While you note, in foam, on the yellow beach,  
 The tiny billows, each chasing each,  
 Then melting like cloudlets in the sky,  
 Or time in the sea of eternity!

WEDNESDAY, 16th.—Liverpool Races.—Match of the Royal Thames Yacht Club.—Stamford Races.

THURSDAY, 17th.—Camelford Fair.—Things to be remembered in July. Assessed taxes and poor-rates due on the 6th April, must be paid on or before the 20th, by all electors of cities or boroughs, or they will be disqualified for voting; which is also the last day for sending in claims for voting in counties.—St. Overseers to make out lists of county and borough electors.

FRIDAY, 18th.—Overton and Huntingdon Fairs.

SATURDAY, 19th.—Cricket Match at Harrow, M. C. C. against Harrovians. Arrival of the Spanish Armada on the coast of England, 1588.

#### TIDE TABLE FOR THE WEEK.

High water at London Bridge.

	noon.	aft.		noon.	aft.
Sunday, July 13th	7 26	7 55	Thursday, 17th	8 36	1 3
Monday, 14th	8 26	9 1	Friday, 18th	1 33	1 55
Tuesday, 15th	9 37	10 12	Saturday, 19th	2 26	2 51
Wednesday, 16th	10 49	11 27			

Office, 42, Holywell-street, Strand, where all communications to the Editor must be addressed.

## The Sportsman's Magazine.

FOR THE WEEK ENDING JULY 19, 1845.

### OTTER HUNTING.

THE wild habits of the Otter are but little known to men who are merely naturalists, as may be easily seen by turning to what are called standard authors on the subject of British quadrupeds; we shall not therefore confine ourselves to a mere zoologist's description of this "fish-like" animal, but proceed to the chase, incidentally noticing the peculiarities which offer themselves to the sportsman's notice, and leaving the animal itself until the description which we purpose giving next week with the engraved portrait of this fourfooted piscatorial prig.

Friend and brother—for sportsman I presume thou art—didst ever go a-hunting the otter on the banks of some fair river? If not, the sooner thou art entered at this noble sport, the better thou wilt be pleased; thy health will be profited, thy senses gratified, and thou wilt connect both ends of thy fox-hunting season with a most agreeable link. Accompany me in my rambles, and I will let thee into a secret of happiness, that wealth cannot purchase for its votaries.

Otter-hunting, though so charming a divertissement, is, nevertheless, an artificial sport to hounds; and I infer so from reasons which I will at once state. Any hound will run deer, and he becomes, as far as his powers admit, up to his work during the first season. A foxhound is most brilliant during his second season; and a harrier takes to his business almost instinctively. Not so with the otter-hound, whatever his breed; he requires a long apprenticeship (after his entry, which is very often tedious and protracted) to give him a notion of the animal's habits; and it is generally the fourth or fifth season with him ere he attain to anything like excellence in his vocation. Again, no pack of otter-hounds, however perfect in their work, if unassisted and left entirely to themselves, shall kill an old otter found on a fair, deep stream. In this sport, especially, man's hand and eye are indispensable to the hound. Thus, I infer, that no hounds would naturally take to drawing for an otter as they would for other game; that an otter in his element (if I may be allowed to call it so) is more than a match for hounds, and that, consequently, to them the sport is an artificial one. Notwithstanding, the deer excepted, no animal leaves a sweeter scent to hounds than the otter. Often have I seen the trail hunted among the dank weeds of a shady brook, where the sun had no power, forty-eight hours after the animal had been fishing there, when two or three tender-nosed old hounds spoke upon it, and the rest, though equally free on a fresh trail, could not be made to own it; at the same time knowing and not doubting their character, the seal has doubly convinced me of the authenticity of these hounds that threw their tongues. This fact may sound as "legendary" to the uninitiated, and I may probably be referred to that very credulous man, Judas Apella, for belief; but every old otter-hunter will know that what I have stated is the case.

An otter will occasionally land to go a-frogging amongst small gutters in watered meadows, particularly in the hay season; or he will cross over from one stream to another at a considerable distance. Clap hounds upon it, and they will run it "like mad" to and fro, and enjoy it the tenth time of asking as much as they did the first, when it was fresh and unfoiled. And it is not the tying hound that will do this, as may perhaps be conjectured—all hounds do it; even the flashy, go-a-head fox-hound, if he be cognizant of the scent, will career

like a steam-engine over the beaten track, and each time will throw up at the water terminus, all life and action, as though he expected a view of the animal itself. Still the sport, as I said before, is artificial to hounds; and though the scent be dear to them, why so is that of a red-herring, turpentine, or anisod, though I detest their taste in the last cases.

But as this, our present article, is but a preliminary to the description and picture of the next number, we will tail it by a spirited description of an otter hunt in the year of grace, 1845, from the pen of a writer in the "Sporting Review;" who hath chosen the legendary title of "GELERT," as his literary appellation.

"Now huntsman, bring  
 Thy eager pack, and trail him to his couch;  
 Hark, the loud peal begins! how greedily  
 They stuff the fishy stream, that to each blade,  
 Rank scolding clings!"  
 H. SOMERVILLE.

"On Thursday, the 1st of May, 1845, the 'P.M.P.', a pack of otter hounds, met by appointment, at Saltstone-bridge, on the river Bow, at ten o'clock. The day looked everything that was amiable, bright, warm, and beautiful; the wind, however, though soft, might have blown a trifle more gently, for in the event of a find, the bubble of the beast would have been scarcely discernible on the rippled surface of the waters. The hounds, ten couples, seemed by their bearing as though they belonged to the Plantagenet blood—bold, muscular, and noble; the terriers as though they had been bred by Canning's "Knife Grinder"—torn, ragged, and up to a row. Happiness and contentment sat on the brow of every member of the hunt, and the whole *ménage* looked very much like business. A council of war was then held on the bridge, as to the advisability of drawing up stream or down; after some deliberation the ups had it, and accordingly the hounds' noses were set in that direction. By a few of the most sanguine of the party the decision was soon held to be a bad one, inasmuch as mid-day was at hand, the great Grist-mills had been passed, and as yet no hound had touched upon a trail; but scarcely had their objections been urged, and a downward course almost determined upon, when a few of the old hounds were observed to feather more freely upon the bank, and "Nestor" plunging into the stream, threw his tongue with so much energy and action, that all doubt and discussion ceased at once; his namesake's eloquence (the Grecian hight Nestor) never had half the effect upon the feelings of his followers. Several hounds then spoke simultaneously, and away they went up stream, carrying a merry trail, "at a good old hunting pace." From certain indications already alluded to, it was conjectured that we had commenced at the right end of the trail; and from the hounds landing frequently, cutting off the angles of the river, dropping into the deep pools, and avoiding the strong currents, it was pretty evident that the otter had been working up against stream. Somerville's well-known and practical description would apply especially to this part of the chase—

"Now on firm land they range, then in the flood  
 They plunge tumultuous, or through reedy pools  
 Rastling they work their way; no holt escapes  
 Their curious search."

Two or three miles of the river had been traversed in this manner, when "Baronet" came to a mark in a hover formed by an old oak tree. "That sounds solid," was the general observation, as the hound's peculiar earnestness carried conviction to all, that the game was at hand. "Solid and sure," was Ned Fullbert's reply, as he caught a terrier by the tail, and quietly dropped him through the hollow of the tree. "Now, look below, gentlemen; Fox is aboard him; and if he don't bolt in a second or two, I'm deceived; so look below, for he'll slip by you like a conger." War to the knife was at once heard at the roots of the tree, and a chain of small bubbles rising to the surface, told all that the otter had bolted. The hounds now settled upon him down stream, and for an hour or more worked him incessantly. "His life a't worth a farden," says Ned; "tis too hot to hold him." The otter now landed, unseen by any one, while the hounds flashed away down stream on the scent of the water for several hundred yards. Here they threw up for a time; but, at the sound of the horn, again heading back, they hit off his line with an avidity that seemed to say his very minutes were numbered. However, it was not so, for by the aid of a small copse through which he ran, he managed to reach the hover from which he was first bolted. Great was Ned's grief at this occurrence, for he knew the punishment that awaited his "fire-side friends," as he always called the terriers, and he predicted the very bones of their head would be cracked ere the otter could be made to quit his strong holt a second time. "Halloo-in-loo," said he, as a couple of them got in. "I'll warrant me they'll do their duty." Every hound pricked his ear, and every man seemed a statue of attention; it was a strange contrast to the scurry and excitement that had just prevailed. A rattling, rumbling noise was quickly heard, and the chain of bubbles again shot up, glistening like so many pearls, and announcing at once the evacuation of the fortress. The otter was now fairly beaten, he vented more frequently, and was "gazed" without intermission. "*Pavdum caput extulit undis*," old Beeswing grabs at him, then Rattler, then all, "*stant littore puppes*." "Well done, good hounds, well done." Worry, worry, worry; you can't 'tear him eat him,' lads, who-whoop." Ned took the otter by the tail with his left hand, and with the whip in his right he

OTTER HUNTING.

kept off the hounds that were baying in a circle around him, while he screeched at the top of his voice "Who-whoop."

It is of the greatest advantage that hounds should have blood as early as may be in the season, especially young hounds; because if they have not yet entered, a first impression of what they are to pursue is sure to have a future if not an immediate good effect. When short of blood, even old hounds that understand their work will become slack, and draw carelessly and with indifference. This is always regarded as a great misery; but I would not go quite so far as Daniel, who says of fox hunting that "the whole art is to keep hounds well in blood, therefore every advantage of the fox is taken." When there are many unentered hounds, an early hour is preferable for meeting, as in the morning a fresh scent is afforded, which is likely to make them draw more readily than a staler scent. Every encouragement should be given to induce them to stoop; and though they commence by marking small vermin, it may be regarded as a prelude to better things; and they should in no wise be rated before they are cognizant of that game which it is intended they should follow. Too many hounds are very objectionable for this sport, as in general they only serve to foil the water and add to the confusion when the otter is found, while upon a trail they are more apt from jealousy to get ahead, without using that steadiness and caution which is so essential for discovering an animal that conceals itself so effectually as the otter. The size of your pack, however, ought to be regarded by the size of your rivers: if they be broad, you cannot well manage with less than twelve or fifteen couple; but if they be chiefly brooks and small streams, eight couple would be ample. In the former case an otter when found does not adhere to the line of one bank of the river, but is constantly crossing as he is marked and dislodged on either side; to cope with him under these circumstances, it is necessary to have your pack divided and working both banks at the same time, or there would be no end to your day's sport, if indeed you did not lose him, which would be highly probable. When it comes to be a matter of swimming against diving, the wild beast has greatly the advantage, and without the spear would never be taken, unless the above method be resorted to. Upon small streams the case is different: there all your power, however short it be, is concentrated and brought into action at the same time, and your hounds cross and recross with as much or even more facility than the otter himself.

"Having decanted thus much of my stock, my friends will excuse me, I am sure, if I reserve some small quantity in bottle for future use. In the meantime I will promise them, at no very distant date, a biographical sketch of Ned Fullbert, who for forty years has had no common intercourse with our various beasts of venerie, and can supply yarns upon the subject as long as 'the great sea-snake.'"

THE OTTER'S portrait in our next.

## THE FISHER'S CREEL.

THE LAKE TROUT.

At the request of a correspondent we this week proceed to give a few particulars, such as we could gather, of the variety of the salmon-tribe, called the Lake Trout, together with a few wrinkles as to the method pursued in taking him.

That the lake trout is a distinct species from the common trout, has been shown by Sir Wm. Jardine. It is found in Loch Awe, Loch Laggan, Loch Ard, Ullswater, in Scotland, and Loch Neagh, in Ireland; and it is probable that the trout caught in the Swiss lakes is a different fish from the common trout.

It is called by naturalists *salmo ferox*, and well does it deserve the name, for it is the most powerful of fresh water fishes, exceeding the salmon in actual strength, though not in activity. The most general size caught by trolling, (for the mode of which see our paper on that subject a few weeks back) ranges from three to fifteen pounds; beyond that weight they are not of common occurrence. If hooked on tackle of moderate strength

they afford excellent sport; but the general method of fishing for them is almost as well adapted for catching sharks as trout; the angler being apparently more anxious to have it in his power to state that he had caught a fish of such a size, than to enjoy the pleasure of the sport itself. However, to the credit of both parties, it may be stated, that the very strongest tackle is sometimes snapped in two by its first tremendous springs. The ordinary method of fishing for this kind of trout, is with a powerful rod, from a boat rowing at the rate of from three to four miles an hour; the lure a common trout from three to ten inches in length, baited upon six or eight salmon hooks, tied back to back upon strong gimp, assisted by two swivels, and the wheel-line strong whip-cord. Yet for all this, in the first impetuous efforts of the fish to regain its liberty, it is frequently carried away for ever into the crystal depths of Loch Awe.

When in their highest health and condition, and indeed the whole of the time in which they are not employed in the operation of spawning, these fish will scarcely ever rise at a fly. At these periods they appear to be almost entirely piscivorous; so that, with the exception of night lines, baited also with trout, trolling is the only advisable mode of angling for them. The young, however, rise very freely at ordinary lake-trout flies, and are generally caught in this way, from one to one and a half pound weight. They occur abundantly near the outlet of the lake.

About the middle of August, and during the three following months, the parent fish retire, for the purpose of spawning, to the deep banks of the lake in the neighbourhood of the gorge, and into the gorge of the lake itself, where it empties its immense waters, forming the river Awe. They are said to remain engaged in this operation for two or three months, and at this time their instinctive tendencies are so far changed that they will rise eagerly at large and gaudily dressed salmon-flies, and may be either angled for from the banks, or trolled with a cross line, where the outlet of the lake is narrow.

The flavour of this great lacustrine species is coarse and indifferent. The colour of the fish is orange-yellow, not the rich salmon colour of a fine common trout in good season. The stomach is very capacious, and on dissection (differing singularly in this respect from the salmon whose stomach is invariably empty,) is almost always found gorged with fish.

It has been supposed, that by feeding on three or four sorts of shell fish, the common trout has its stomach altered from a soft and membranous, to a hard and fibrous texture, inaccurately said to be similar to a fowl's gizzard. These trouts, which are called gillaroo, are found in Loch Melvin, near Ballyshannon, and Loch Con, near Ballina, in Ireland, and differ little from the common trout, except in being of a bright golden yellow on the belly and fins, with more red spots on the sides, and somewhat broader and thicker in form.

The following remarks of Sir H. Davy show that the common opinion respecting the origin of this difference is, at least, very doubtful. Speaking of Loch Melvin, he says, "the common trouts of this lake have stomachs like other trouts, which never, as far as my experience has gone, contain shell-fish; but of the gillaroo trout, I have caught, with a fly, some not longer than my finger, which have had as perfect a hard stomach as the larger ones, with the coats as thick in proportion, and the same shells within; so that this animal is at least now a distinct species, and is a sort of link between the trout and char, which has a stomach of the same kind with the gillaroo, but not quite so thick, and which feeds at the bottom in the same way. I have often looked in the lakes abroad for a gillaroo trout, and never found one."

The high flavour and red colour for which the trout, taken in Lochleven, are found, are supposed to proceed from the food by which they are supported in the loch; it being a general rule, that while the flesh of trout is white in clear and limpid waters, the same sort when found where rivers pass slowly through a tract of foul or meadow ground, have more or less redness in their colour. A considerable part of Lochleven is spongy at bottom, and from it arise aquatic plants in great abundance; in many parts, towards the beginning of Autumn, its waters are covered with these flowers. But the circumstance to which the redness of Lochleven trout is chiefly ascribed, is the vast quantity of small red shell-fish, with which their stomachs are often filled. They generally lie in deep water, and will not rise to any hook however baited with fly or other object. Other sorts of river trout are found in Lochleven, which, after living a little time in the loch, and growing towards a pound in weight, grow red in flesh.

Thus much of lake trout, and now for the flies for July, which we postponed last week.

#### FLIES FOR JULY.

The water being in general clearer this month, the flyfisher requires proportionately more skill; hence mature anglers often meet with poor sport. The greater abundance of insect food also renders the fish shy of biting, and sport becomes scarce, except with a very fine line, and in windy or showery weather. We shall therefore append but a brace of flies.

1.—The red spinner, a well-known fly this month, and may be made either larger or smaller. The large sort has the body dubbed with seals' fur, dyed red, mixed with brown bears' hair, whipped with gold twist; the wings from a starling's feather; the hackle from a red game-cock. The hook No. 7. The small sort has the body dubbed with yellow fur from a spaniel's ear, whipped with gold twist; the wings and hackle as in the large sort. The hooks No. 8 and No. 9 are used.

The red spinner: *a*, natural beetle on the wing; *b*, artificial fly.

Besides the various species of small gnats and ant flies, the spider fly is mentioned in books of angling, though it is much too large, except in dark water or windy weather, or on rough currents. The body is dubbed with bears' hair or fox-cub down, whipped with yellowish or reddish silk; the wings from a partridge or landrail's feather. The hook No. 6 is used.

Spider fly, or daddy long-legs: *a*, natural fly; *b*, artificial fly.

The other flies for this month are the barn-fly, the owl-fly, the flesh-fly, the peacock-fly, the green-grasshopper, the wasp, the badger, the July dun, and the shell-fly. The Welshman's button, we shall figure among the flies for August.

#### WHITE BAIT.

"Who has been to Blackwall, and has not had a white bait dinner? In fact, they have become assimilated to each other so far that, Blackwall and white bait, and white bait and Blackwall, are at one and the same time mentioned—they cannot be separated.

White bait are of the Herring family, and about the end of March or early in April, begin to make their appearance in the Thames, and as Mr. Yarrell says, "are then very small, apparently but just changed from the albuminous state of very young fry."

During the months of June, July, and August, immense quantities are consumed by visitors at the different taverns at Greenwich and Blackwall. From the fact of their generally being caught in the Thames, it does not follow that they are not to be taken at other places. But as Mr. Yarrell observes, "It is rather to the want of a particular mode of fishing, by which so small a fish can be taken so near to the surface, than to any absence of the fish itself."

To be eaten in the greatest possible perfection they should be taken from the river and be put into the fryingpan almost immediately, and from thence to the table without the least delay; for after being caught, in a few hours (especially when the weather is warm) they lose their brilliancy, and the water becomes turbid; the fish will then have lost their elasticity, and become quite flaccid. The only method of cooking them, is by frying, which should only be done in sufficient fat for them to float in. When that has arrived at the greatest temperature it is capable of obtaining, (which may easily be known by sprinkling a little water on the fat, from the fingers, when it will produce a quick sharp crackling noise), a handful is taken out gently, so as not to bruise the fish, and after draining a little through the fingers, they are to be sprinkled on some flour spread on a cloth, and are thrown backwards and forwards in the cloth to cover them with the flour. Then throw them from the cloth into a cane or wicker corn-sieve, and sift the loose flour from them; put them from the sieve into the fat; fry them for a minute or two, but they must not be browned; take them out with a slice, put them into a colander to drain; toss them up, sprinkle them with salt, and serve in heap, on a hot plate with brown bread and butter, and half a lemon.

## COMBAT BETWEEN THE AFRICAN LION AND WILD BOAR.

(Extract from a Letter from a French Gentleman, some years a Resident in Algeria.)

"In one of the early expeditions into the province of Constantine, a very distinguished officer of the army of Africa (brother of one of our most famous sportsmen) was posted in ambush with his company at the mouth of a small river bordering the camp of Bream. It was one of those nights, so calm and serene, peculiar to meridional climates, when the slightest sound reaches the ear—so much so, that you perceive even the ticking of your watch, and when you might read and write with as much facility at midnight as you could in London at noonday. Every soldier was on the strictest watch. All at once a rustling in the leaves, which was quickly followed by the noise of some heavy body falling into the water, attracted general attention. It was a wild boar of enormous size, who was rapidly flying from danger, and had sought safety by precipitating himself into the river. A fresh rustling of the foliage and high grass announced that the poor beast was pursued by some terrible animal. In fact, a majestic and enormous-sized lion had, with prodigious bounds, approached close to where we were posted. Arriving on the bank of the river, he perceived his prey, took a spring, and with one leap pounced upon it. A short combat ensued, in which the boar stood no chance. The lion fastened his tusks in the boar's gorge, the current was streaming with gore, and the boar soon ceased to exist; the lion then left his prey, returning tranquilly to the shore, as if he had only been revenging himself of some former grudge. Our soldiers with their muskets to their shoulders, witnessed all that passed, and wished nothing better than to have interfered in favour of the feeblest in this too unequal contest; but the prudence of their chief opposed itself to it; a fusillade at that hour of the night and at an outpost could not have failed giving the alarm to the Arabs.

"The boar of Algeria, less strong although equally well armed by nature as those of France and Germany, is of a character infinitely less savage. But this want of fierceness does not approach tameness: when on the defensive they will kill or disable men and dogs the same as those in Europe. But when charged by the animal, there is more danger to the hunter in Africa than elsewhere, for in Africa there are no trunks of trees to afford shelter, you are reduced to the defensive, and the only chance you have is either the swiftness of your horse or lodging a bullet in the animal's forehead.

"Wild boar hunting still exists in Algeria, although from the war and other circumstances the animals are getting scarcer. This animating sport is conducted in a way which recalls to mind the bull fights of Seville. The hunter, with the assistance of the picador, amuses himself with planting a certain number of small lances, with little coloured flags attached to one end of them, into the animal's throat. The Arab horseman, who is the first of horsemen in the whole world, displays an admirable tact address in this species of sport. The Arab cavalier hunts everything and takes everything on horseback, except the gazelle. The Scheiks and noble families alone had formerly the privilege of hunting the boar with large dun-coloured hounds, who readily attacked and pinned it. This species of dog is still very much prized, is scarce, and highly valuable in Africa."

**PICTURE OF THE BEAUFORT HUNT.**—We have been very much pleased by an inspection of a large and very clever sporting-picture, painted by Messrs. William and Henry Barraud, representing his Grace the Duke of Beaufort, at the meet of the Beaufort-hunt, on the lawn at Badminton. The grouping of the human figures—of whom there are forty-five introduced into the picture, with the dogs and horses—has been managed with great skill. There is neither formality nor confusion in the composition, and every portion of the work has been finished with extraordinary care and knowledge of effect. The scene is admirably portrayed in all its details; in the centre of the principal group on the left of the picture, is the noble master of the hunt, on horseback. The likeness is an excellent one—somewhat younger and more erect, perhaps, than the original, but still a capital likeness. The Duke of Cambridge, who stands near, with the Duchess of Beaufort leaning on his arm, is an unmistakable portrait of the royal duke. Count Esterhazy, in the extreme left of the picture, and Lord Alfred Paget, who stands in front of him, resting his arm carelessly upon his horse's shoulder, are both striking likenesses; so are those of Lord Adolphus Fitzclarence, the Earl of Jersey, John Shelley, Esq., Count Kinskey, and Francis Dovell, Esq. In the right-hand group with huntsmen and dogs, the portraits of the Earl of Chesterfield and Lord Shelburne will be instantly recognised by all who know their personal appearance. There are several other figures which we have been told are exceedingly like the individuals represented, but with whose features we are not sufficiently acquainted to speak with certainty of the fidelity of their portraits.

LORD FALKNER, the author of the play called *The Marriage Night*, was chosen very young to sit in Parliament; and, when he was first elected, some of the members opposed his admission, urging that he had not *sown* all his wild oats. "Then," replied he, "it will be the best way to *sow* them in the house, where there are so many geese to pick them up."

A MEDICAL student was asked the other day, what business he followed. He answered by saying that he was an *apprentice to the doctor business*, and had been taking lessons in *Botany* for some time past. He can now analyze an onion, a toadstool, a brickbat, a bustle, or any other exotic you have a mind to produce.

A SPORTING INCUMBRANCE.—At an early hour the other morning, two or three blades, who spent their daily lives amongst thread and tape, sallied out with a gun into the suburbs, with the sportsman-like intention of making havoc amongst a few harmless tame rabbits. Nimrod, a bold fellow, was the first to cock his dreadful tube in the face of an innocent doe. Crack went the gun, and away flew the rabbit past his feet, our hero exclaiming in bitter disappointment. "Dang it, if I hadn't had the gun, I could have killed it."

"Oh, Nanny, will thou gang wi' me?" as the man said when he stole the goat.

## SPORTS IN THE SOUTH OF FRANCE.

At this particular season of the year, when so many persons are annually attracted to the vicinity of the Pyrenees by the charms of wild romantic scenery, the pure mountain air, and for the benefit of the baths and mineral waters, it will be an acceptable piece of information, and useful to sportsmen visiting for the first time this locality, as well as interesting to the general reader, to learn some details of a new and invigorating species of sport (hitherto but little known in this country), and which may be enjoyed in the greatest perfection in the quarter we are about to name—the sport we allude to is chamois hunting.

Pau forms the principal rendezvous for British and other foreign visitors frequenting the baths and springs called Les Baux; there are two towns, one termed Les Baux Chaudes, and the other Les Baux Bonnes. They are about four kilometres, or two miles and a half apart from each other. The mountains around the valley abound with *izards* (chamois), which are sometimes met with in flocks of forty or fifty. The *chasse aux izards* is a favourite amusement with the visitors at the baths, under the guidance of experienced huntsmen, of whom there is no lack. The huntsmen most frequented by the chamois in this district are the Pies d'Ardizet, de Gaze, and de Ségui. At Les Baux Bonnes (to which our observations are principally confined) there are twenty hotels, or first-rate lodging-houses. The village is cradled in the lap of the mountain, precipices rising all round the houses, the rock having been blasted to make room for some of them. Above towers the majestic Pic de Gers, the grand feature in all the views of this neighbourhood; while in the east rises the serrated ridge of the Col de Torte. Bordering the Val de Gabas, above Les Baux Chaudes, with its luxuriant forests and its noble Pic de Midi, the grandest mountain in this district, abundance of game of various descriptions is to be found.

Bears, though less common, are often killed. A recent tourist writes—"Whilst at the Baux Bonnes, we were roused by several musket-shots discharged close to the baths, and on running out to ascertain the cause, were met by a curious procession. A young ass dressed up in the skin of a bear, which had just been killed on the mountains, led in by the successful huntsmen. Their tall athletic forms, dressed all in brown, from the *berret* to their stockings, armed with their guns and woodman's axes, had a picturesque appearance. The poor ass was sadly impeded in walking, by the bear's paws, which dangled about his hoofs, and by the bear's head piece, which compressed most uncomfortably his long ears. The bear had slain the night before ten sheep and had eaten two; he fell pierced with bullets, one entering precisely the centre of the forehead."

The following interesting information and details are penned by a distinguished foreign sportsman:—

"There is for every lover of sport a certain *prestige*, an indefinable pleasure in this noble chase (chamois hunting), at the summit of the peaks; the few obstacles to be surmounted pleases the imagination and the *amour propre*. Besides, on your return you are sure to have some pleasing episode in your adventures to relate to your less ardent sporting friends, whose pleasures are confined to the shooting of quail, rabbits, partridges, pheasants, hares, and occasionally a deer. Likewise in the chase of the chamois you often fall in with by chance a white partridge, a heathcock, a vulture, or an eagle, which require a good shot, and are not to be met with every day. Without too much fatigue, you will here find excellent sport; for on horseback you can ascend the mountains nearly to the spot to which your guides or scouts will bring down the game. Your party should consist of three or four: not less, to be able to stop the passages, but not more than six persons, otherwise you would lessen the sports by being too close to each other. You should apply previously to one of the guides named Esterle, Charbonnier, or Titon. You must not accept the terms they offer to strangers and novices; they will ask five francs for each scout, besides finding them with provisions. It is very embarrassing to find a stock of victuals and drink for such a caravan, particularly in these regions, where the mountain air gives every one a devilish appetite. At your hotel, whichever it may be (for I speak without prejudice), all that is extra, or you may require to take with you, is

charged double for. You should take with you no more than is absolutely necessary. This agreement of five francs per man produces the worst of consequences. Your guides will have no interest in your sport, whether it be good or bad, and it gives them less spirit to exertion and the use of their limbs. To interest them in your success, adopt a plan which I have often done. Say to one of the guides I have named, 'Here is a party of four sportsmen. We want six men. We shall not feed them; you shall receive five francs for each shot fired, and twenty francs for each chamois killed. No shot, nothing killed—no pay.' If you should have bad sport, you will have nothing to regret but the loss of time, and will not have to pay for a pleasure you have not enjoyed. The guides, who prefer a certainty to an uncertainty, will higgie at these terms, and will be unwilling to accept them. But, believe me, if you wish to enjoy the sport, and have something to fire at, hold out. This does not always succeed. If the guides of Les Eaux Bonnes, who are cunning fellows, are reluctant, threaten them to go to the Eaux Chaudes. Competition destroys the despotism of monopoly; and, with a little firmness on your part, they will comply with your wishes; and it is, at the same time, only justice. If you are courageous, and are not afraid of fatigue—if, moreover, you prefer going alone—if you do not care for the company of four or five jolly companions like yourself, do not go to the expense I have named. It is necessary you should have some guides or scouts; (*rébateurs* they are here called). If you prefer to sport *tele-à-tete*, apply to the guide Lanusse d'Aas. I speak from experience, having tried him. I left Bonnes at two o'clock in the morning. I had no other companion than Lanusse, who carried in his knapsack some bread, a cold fowl, and a pint of wine. Arrived at the post of the Salon, on the Ger, we engaged unexpectedly, as *rébateurs* or scouts, three or four shepherds, who were delighted with the thoughts of getting a twenty sous piece (tenpence) each. I killed on that day two fine chamois. But in sport, as with a good dinner, I prefer to have some one to partake of it with me, and am not egotist enough to wish to have all the fun to myself. In every case consult Lanusse d'Aas: he will give you valuable information. From experience, I would recommend, in shooting the chamois, to use nothing but good-sized buck shot. The animal's skin is thick. A good gun will easily carry thirteen or fourteen, which is a full charge."

We may add, that the season opens in June, and lasts till October. August and September are considered the best months. A diligence runs daily from Pau to the Eaux, performing the journey thither in six hours, and back in four. The waters are considered good for complaints of the lungs and chest, and very efficacious in the early stage of consumption. Their reputation is of long standing.

## ARCHERY.

(Continued from page 210.)

As we closed our last paper with a promise to illustrate the practice of Archery, we shall resume the subject by a description of the implements, and the method of handling them, accompanied by such observations, on ancient and present usages, as may prove interesting or useful.—And first, of

### THE IMPLEMENTS OF ARCHERY.

#### THE BOW.

Moseley, who wrote his Essay on Archery in 1792, says, "the modern bows used in England are made of several kinds of wood. Yew has been by far the longest in use, but it is not so much esteemed at present as some other kinds. The foreign woods imported into this country for the purpose of dyeing and cabinet-work, are some of them preferable for the making of bows, such as fustic, rosewood, &c.; and there is a kind which bears the name of cocoa-tree, which answers pretty well for making strong bows."

The revival of archery since the days of Ascham has introduced to the bowyer several sorts of foreign woods, which, says Roberts, have been found to make bows that rival, and even excel, those of the long-famed yew. Mr. Hastings, author of "The British Archer," remarking on this, says, "This may be true in a certain degree, particularly when applied to the novel and excellent invention and late improvement of the *backed-bow*; but most of these woods are of too brittle a nature to be manufactured into self-bows (or those made of a single piece of wood). The long-famed yew, (he adds), can never yield its natural superiority; and foreign yew, (as he contends,) free from knots or pins, still stands unrivalled. A yew bow is lighter in hand than any other, and the wood itself possesses a toughness and quickness of cast; a combination of good qualities not easily to be surpassed."

Among the foreign woods now used by bowyers, the dark ruby, a native of the East, is most prized. The tulip-wood, cocoa-wood, acacia, purple-wood, rosewood, laburnum, and lancewood, judiciously backed, all form excellent bows.

Modern bows are of two kinds; the former and more simple is made of one entire piece of wood; and the latter, which is infinitely more

durable and costly, is constructed of two pieces—a body part, generally of elastic, often of brittle wood, and a thin strip of ash, elm, or hickory, which is firmly fixed on the back of the other. This back not only prevents the body from splitting, but at the same time renders the bow much stronger, and more difficult to draw.\*

Our ancient archers besmeared the centre of their bows with wax, in order to fix it firmly in the hand; but in the middle of the modern bow there is a binding to enable the shooter to hold the instrument steadily. This binding is termed the *handle* of the bow; and is composed of shag, or worsted lace, answering the double purpose of a firm grasp and an ornament. Each extremity of the bow is provided with a horn with a notch in them respectively (termed by archers the *nocks*), for the purpose of securely stringing the instrument. The lower limb of the bow, it should be observed, has always the shorter nock; the upper horn being not only longer than it, but usually more curved and ornamented.

Ascham has omitted to inform us what was the proper standard length of the bow. The statute of 5 Edward IV. chap. 4, enacted, "that every Englishman, and Irishmen that dwell with Englishmen, and speak English, that be betwixt sixteen and sixty in age, shall have an English bow of his own length, and one *fist-meale* at the least between the necks;† with twelve shafts of the length of three quarters of the standard."

In the present state of archery, when the length of the arrow does not often exceed twenty-nine inches, we seldom use bows longer than five feet ten inches; more frequently those which are an inch, and generally, those which are two inches shorter. But, circumstances considered, five feet nine inches seems to be a very fit length for a bow, when the arrow is not shorter than twenty-seven, or longer than twenty-nine, or, at the most, thirty inches. It is, indeed, said that a bow of five feet eight inches (or two inches shorter if the bow will stand,) will cast an arrow of the length of twenty-seven inches, further than a longer bow will cast the same or a longer arrow.‡

As a good bow is an expensive article to the archer, and when adapted to his strength and practice, is generally highly prized by him, its preservation must naturally be deemed deserving of some attention. With this view it is recommended that it be deposited, after using, in an oil-cloth lined with baize, in order to protect it from wet or moisture: that it be always kept in a temperate atmosphere; and that it be rubbed about once a year with linseed oil. As to unstringing a bow after every shoot, (which appears to be much the fashion,) such precaution is wholly unnecessary; as it must be a bad bow indeed which will not remain strung for two or three hours without injury. Care should of course be taken that it be unstrung immediately after the shooting has concluded; and some archers observe the additional precaution of rubbing it with flannel previously to packing it in their case.

It has been matter of common remark that a yew-tree is generally found in old churchyards. Many good writers have affirmed that this hardy and long-lived evergreen was planted in those sacred and secure places, for the purpose of furnishing materials for bows. There does not, however, appear to have ever been any legislative order for their being so propagated, and the quantity which could by such means have been produced, must have been insignificantly small when military archery was in existence; added to which, English yew is so very full of knots, and consequently so liable to break, that not only our forefathers but modern archers have found it but ill adapted to their purpose, and, consequently, obtained their bow-staves from the continent. English yew was certainly used for the bows of boys, and other weak shooters; but even in Elizabeth's reign, it was settled by statute, that when a bow of English yew sold for two shillings, one of foreign yew might be sold for six and eightpence. It is also worthy of remark, that, by the statute of the 35th of Edward I., the planting of yew-trees in churchyards would seem to have been, in part at least, "to defend the church from the force of the wind."§

#### OF THE BOW-STRING, AND STRINGING THE BOW.

The safety of the bow itself depends in a great measure on the firmness of the string. The universal concussion and jar which the practice of the bow-string causes in the bow, never fails either to shatter it to pieces at the moment, or to raise splinters, which, getting more and more deep into the wood, as the bow is used, at length entirely spoil and ruin the instrument. Those bows which, as it is termed, "follow the string," that is, which bend a little inwards, are less liable to injury from the breaking of a string, than those which are in a straight position, or which bend backwards.

The bow-strings mentioned by ancient writers seem to have been made from leather, or thongs cut from the fresh hides of bulls and other animals. They were also anciently composed from the sinews of beasts; especially of such as were remarkable for their strength or activity, as, bulls, lions, stags, &c.; and even from those particular parts of each animal in which their respective strength was supposed to lie; from bulls,

\* Bows have been made, consisting of three, four, and sometimes five pieces; but it would appear that none are better than those formed of two.

† Sometimes in old manuscript spells 'nicks,' and 'fist-mole' called handful.

‡ Roberts.

§ Brady's "Clavis Calendaria."

STRINGING THE BOW.

the sinews about the back and shoulders; from stags, those of the legs. Catgut, prepared from the intestines of animals, has been made serviceable for the same purpose, and continues to be so used in Eastern countries. Hair from the tails of horses was also formerly used for the same purpose, and is spoken of both by Homer and Ovid. And even human hair from the heads of women has, on pressing emergencies, been formed into bow-strings.

The material, however, of which strings are now made in England, is hemp, of which the Italian answers the best; and this substance possesses many advantages over all other sorts. Catgut is too much under the influence of heat and moisture to prove at all times of a proper tension. Hemp and flax have not this inconvenient and disadvantageous quality belonging to them.

Ascham says but little of the bow-string, leaving it to archers themselves to determine whether it should be made of good hemp, as he says it was in his time; or of flax, or of silk. Mr. Roberts,\* reasoning upon this, observes:

"It cannot be collected, either from record or tradition, that any other than hempen strings have been used for English bows. Indeed, silk was not brought into England in any quantity till the sixteenth century; yet a very old ballad (which mentions English archers), has the following line:

"Theyr stringes of silke full sure."

ADAM BELL, &c. part ii. 1, 126. *Percy's Reliq. of Anc. Eng. Poetry.*

"If silk was used, the string must either consist of a number of threads bound at intervals, (as those used with the Turkish, Persian, and Tartar bows, in which case it would be too thick for the neck of our arrows; (or of raw silk twisted, which probably would answer for this purpose if the fibres were long enough, and the elastic quality of silk could be diminished. The Italian hemp is observed to make the best strings, being stronger in texture, and having longer and finer threads than most other kinds.

"The string is made of the longest threads of the hemp, twisted very tight; and afterwards, as Sir John Smith notices, rubbed with a kind of water-glue, to preserve it from wet. The eye, (which is that part of the string that occupies the upper horn of the bow,) is first made, and is somewhat the thickest part; the other end is generally without an eye, (though strings have lately been made with two eyes, which answer well enough,) and, when put on the lower horn, is made into a twisted knot or noose, termed, and much used by those employed in moving timber, a *timber hitch*; as, the tighter it is drawn, the more securely it holds.—(See fig 6.)

"Bow-strings are always *whipped* (that is, wrapped) at the *nocking*

\* English Bowman, 1790.

point, and a little above and below it, generally the breadth of the fingers used in drawing, with fine twine or silk, first waxed. This whipping answers two purposes; that of filling the nock of the arrow, (which should always sit rather tight on the string,) and saving the string from wearing at that place. Some archers also whip the eye and noose of the string, and a little below each, adding a slight covering of gum, or glue, to the whipping, for the latter purpose; and in whipping are careful, when the string is sufficiently stretched, (for most new strings will give a little,) to whip the precise point on which the arrow should lie, (which is called the *nocking point*), with *white*, and, on each side, with *coloured* silk or thread, that they may always nock exactly. Catgut and silver-wire have, by some modern archers, been tried for this purpose; but, being harder than twine or silk, they have been found often to *burst* the nock of the arrow, when that goes on tight; and catgut, unless first moistened, is difficult to whip on the string."

The nocking part of the string should be waxed before it is whipped, that the whipping may hold the better; and afterwards, the whole string should be waxed, and also now and then rubbed with bee's-wax, or white wax, (though the former is most generally used,) to prevent its collecting moisture and untwisting: the latter inconvenience is remedied by retwisting the string at the bottom end.

After the string is put on, and so stretched that it does not want altering, the eye and noose, if not whipped, may be slightly rubbed with moistened Indian glue, which will prevent their fraying: and the eye of the string may be fastened to the upper horn, by means of twine or silk, carried through a hole in the latter, which will prevent the string from coming off continually at the lower horn, and thereby untwisting. Fair glove-leather, or any kind of tape or binding, wrapped round the eye of the string, will preserve it from being cut by the nock of the horn.

An old phrase says, "It is good to have two strings to your bow;" and it appears to have originated from an ancient custom. A passage in Ascham teaches us it was practised in his day; and there is reason to think it had much earlier existence. "In warre," says he, "if a stringe breake, the man is lost, and is no man, for his weapon is gone; and although he have two strings put on at once, yet he shall have small leisure and less room to bend his bowe; therefore, God send us good stringers, both for warre and peace!" A law of Charlemagne, made in the year 813, seems likewise to express the custom of using bows with two strings: this is further confirmed by the figure of an archer, represented on a curious antique ring, in the possession of Sir James Pringle. This ring was found in 1791, upon the field of the famous battle of Bannockburn, fought five hundred years ago. The bow with two strings had one of them drawn up with the arrow, while the other remained unemployed. Ascham mentions that they formerly made use of two strings in England; the large thick string, and a sort much smaller. "The one," says he, "is safe for the bow, but does not shoot strong; while the other is infinitely preferable in long distances, but at the same time does not direct the arrow so true, and is sooner broken."

In attempting to give the young archer directions as to the proper mode of stringing the bow, it may be necessary to premise that the *flat* part of the bow is the back, and the *round* part the *belly*, or the part that is bent inward; and that any endeavour to bend it the reverse way will, too probably, snap the instrument asunder.

The method of stringing the bow, as clearly as it can be described in writing, is as follows. The handle, or part round which the binding is affixed, must be firmly grasped with the right hand, taking care that the string be not twisted, and that the back of the bow be towards the body of the stringer, the wrist of whose right hand should be close against his hip. The lower limb of the bow, which, as before mentioned, may be readily distinguished from the upper from having a shorter horn, should

be placed on the ground against the inside of the right foot, to prevent the bow from slipping. The left leg, the knee of which should be kept quite straight, should be about three quarters of a yard apart from the right, and rather in advance of it. That part of the left hand which is close to the wrist, should then be allowed to rest on the upper limb of the bow, letting the thumb lightly embrace the outer part, and the first joint of the fore-finger the inner part, of the eye or loop of the string. The bow should then be simultaneously pulled back with the right hand, and pressed downwards with the left, the eye of the string being slid firmly up, reaches the nock, into which it should be carefully and securely fixed. During this operation, great care should be taken to keep the three unemployed fingers of the left hand clear of the string, to avoid the danger of a severe pinch. The cut (fig. 1), which we have given of the proper position of the hand when stringing the bow, will show the reader distinctly the precise manner in which each of the fingers should be held.

Nothing is more liable to cause the fracture of a bow than a bad string. "When the string begins to wear," says Ascham, "trust it not, but away with it; for it is an yll-saved halfpenny that costs a man a crowne. Many a good bowe has been broken through the failure of a stringe." It may be recommended, therefore, to the young archer, that he even exceed the advice conveyed in the old proverb, "to have two strings to his bow." It is advisable that he supply himself with several; and as good strings are now to be purchased for one shilling each, he can have little excuse if he neglect this counsel.

The thickness of the string must of course depend upon the power of the bow for which it is designed; and the only rule that can be laid down on this head is, that the string should be of sufficient consistency to insure the safety of the bow, which will frequently fly on the failure of a string. A backed bow will generally require a much thicker string than a self-bow.

A thick string, it should be observed, has the advantage over a thin one in a greater certainty of shot, but the thin one will cast the arrow further.

As to the formation of the noose for the lower horn, in cases where the string is not made with a loop at each end, the reader, by reference to (fig. 6. in the cut,) will readily acquaint himself with the mode of making the noose.

#### Of Unstringing the Bow.

The position of the archer and his bow, when he wishes to unstring, is the same as that described as preparatory to stringing. The handle of the bow being grasped firmly with the right hand, the left wrist should be placed so close to the top of the upper horn, that the fore-finger may with ease reach round the eye of the string. The fore-finger and thumb of the left hand should be kept close against the eye of the string, at the back of the bow, to await its loosening. The bow being then, as in stringing, pulled up sharply by its handle with the right hand, and its upper limb pressed down at the same time with the wrist of the left, the string will become loose, and the process of unstringing be completed.

#### THE ARROW.

The figure of the arrow has undergone, but slight variation from time immemorial. Indeed, the head or the feathers of an arrow, are the only parts which can be varied materially.

The substances, however, from which arrows have been fabricated, have differed in all countries. That they were frequently made of reeds, may be inferred from the fact that the Latin word *arundo* signifies both a reed and an arrow. We are, moreover, informed by Pliny, that reeds were in great request for the purpose, as well as that "the *calamus*, (another species of reed, and which also signifies an arrow,) had overcome half the nations in the world in battle." The tree called *corvus*, the palm-tree, and the fir-tree, or deal, were formerly used for the manufacture of arrows.

The natives of India, and the inhabitants of Guiana, use cane.

Ascham enumerates fifteen kinds of wood of which arrows were made in his time, viz.: "Brazil, Turkie-wood, Fustick, Sugarcheste, Hard-beame, Byrche, Ashe, Oake, Servistree, Alder, Blackthorne, Beche, Elder, Aspe, Salow." Of these he tells us Aspe and Ashe were preferred to the rest; the one for target-shooting, the other for war.

A simple stick, without any other alteration than pointing, was perhaps the first kind of arrow used by mankind. The hard wood found in some climates was well calculated for this purpose, as it was capable of retaining its point, though forced with violence against the firmest bodies. But the use of stones appears to be one of the first inventions, with respect to pointing, and there are many curious circumstances relating to this practice. The class of these substances principally made use of in all nations, was the siliceous; as common flint, jasper, agate, &c.

There are the best reasons for imagining that these arrow-heads were in use from the highest antiquity, as there is scarcely any country in which they have not been found buried in the earth. They are not uncommon in Scotland, England, and Ireland; and America produces them in all its parts.

Horn and bone were also anciently used for the pointing of arrows. This, however, must, it is presumed, have been before the knowledge of

metals; after which metallic weapons were no doubt fabricated and introduced in battle. Copper and brass, which are supposed to have been the metals first discovered, are those which were first used. Arrows and javelins were formerly headed with brass or copper, in the time of Homer, as appears from many passages in the *Iliad*. (See books 4 and 13.)

The soldiers of Greece and Rome had their spears, javelins, and arrows, pointed with brass.

Latterly, iron has been in general use for the pointing of arrows.

The figure of the arrow-head has been very similar in all countries; at least, those made for the purpose of war. They are sometimes barbed, sometimes plain and long, and often flat.

The common shooting arrows in England, as they are not designed to inflict death, are not very sharply pointed. The sides of the shaft converge to an obtuse point, at the distance of an inch.

"Stales," as the bodies of arrows without feathers or heads are termed, are made of six different kinds of wood; four light kinds, namely, *deal*, *aspe*, *abele*, a kind of poplar wood from Flanders; and two heavy, namely, *lime*, and *Jamaica lance-wood*. Yellow or red deal, (with the turpentine in it) makes a good arrow, but it is apt to wear and splinter. *Aspe* being lighter, is more used. The *abele* so nearly resembles the *aspe*, that there can scarcely be said to be any perceptible difference between them; the *aspe*, however, is the stiffer, and the *abele*, the more *spongy* wood. *Lime* is an excellent wood for arrows; but unless highly dried, it is too heavy for many bows for target-shooting; but forms a good roving-arrow; as also does *lance-wood*, which, being even heavier than *lime*, is indeed seldom used for any other kind of shooting.

The shape of arrows should be perfectly round, but tapering slightly in point of thickness from the shoulder, (or close to the pile,) to the nock.

For a representation of the arrow, for the purpose of rendering the titles of its subdivisions familiar to the uninitiated, see cut, fig. 2: 1, here represents the nock; 2, the feather; 3, the 'stale' or shaft; 4, the pile or head.

The pile of the arrow, says Roberts, should be precisely of such a weight as will cause the arrow itself to balance on the finger, at a distance of about one third, or rather more, from the pile to the nock.

As to the weight of an arrow, it should seem that one weighing from twenty to twenty-four dwts., and made of yew, was anciently considered by archers the best that could be made. The weight, however, is now proportioned to the distance to be shot; the greater the distance, the lighter the arrow, and *vice versa*. An arrow of the weight of four shillings sterling, is generally recommended for a length of 100 to 150 yards, and upwards; and one of five or six shillings weight, for a shorter distance. It was formerly usual to mark the weights between the feathers, by imprinting on the arrow as many short transverse lines as it weighed shillings; a practice still adopted by many modern arrowmiths.

The length of arrows varies of course according to the power of the bow for which they are designed. Those used in England and Scotland from time immemorial have been twenty-seven inches in length, including the pile; but it is now the practice to make men's arrows, for a full-sized bow, twenty-seven inches in length, exclusive of the pile.

The nock of an arrow, usually composed of horn let into the wood, (to prevent the string from splitting the shaft,) must of course be of such a size as to admit the string with convenience.

Arrows are commonly furnished with three feathers, which assist both the steadiness and velocity of their flight. These are usually plucked from the wing of an eagle, turkey, or a goose; most commonly, in this country, from the latter bird; and the second, third, and fourth feathers of the wing are preferred. Two out of the three feathers are commonly white: these are plucked from the gander; but the third, which is brown, or grey, is taken from the goose." The latter is always placed uppermost, by which means the archer's eye is readily directed to the proper position in which his arrow should be strung.

The feathers of the turkey are not only of a much stronger texture than those of the goose, but they are less affected by heat or moisture, both unquestionable advantages. Goose-feathers, however, may, it is said, be made equal to any others by being washed with a preparation, (as a solution of gum copal in spirits of turpentine,) which not only renders them impenetrable by moisture or wet, but will not in any degree impede the shaft, or damage the feather.

The head or pile of an arrow, intended for the pastime of archery, is now invariably constructed either of thin steel, or very hard iron, and should be about three quarters of an inch in length. In ancient times, different species of combustible materials were attached to the heads of arrows, and shot from long-bows; and even subsequently to the invention of gunpowder, this practice was continued. According to Neale, who lived in the reign of Charles I., and of whom we have before spoken, an archer might shoot an ounce of fire-works from an arrow; twelve score yards. Among the stores at Berwick and Newhaven, in the reign of Edward VI., "arrows with wild-fire," as well as "arrows with fire-works," are enumerated.

To be continued in our next.

"In the choice of a feather, fletchers prefer those which are dropped to those which are plucked."—*Roberts's English Bowman*.

## ADVERTISEMENTS.

**BEST VELVET HATS, 13s.**—Gentlemen desirous of obtaining a good, cheap and serviceable hat at 13s. to 18s., will find a most extensive assortment to suit contour, at **PERRIN & S.** Cecil House, 85, Strand, and 251, Regent-street. Also, the best Beaver Hats that can be made at 21s.; light, ventilating Velvet, Silk, and Beaver Hats at 8s. 6d. to 21s.; best Livery Hats at 10s.; Gossamer Hats, Youth's and Gentlemen's Hats and Caps of every description at the lowest remunerating prices.

Fourteenth Edition of the "SILENT FRIEND" on Human Frailty, with coloured engravings. Just Published, price 2s. 6d. Free by Post (in a sealed envelope), 3s. 6d., a new and important edition of

**THE SILENT FRIEND; a Medical Work** on the infirmities of the Generative System in both sexes; and on the loss of the reproductive powers, with means of restoration. The beneficial effects of solitary indulgence, neglected Gonorrhoea, Gleet, Stricture, Secondary Symptoms, &c., are fully pointed out. Illustrated by Engravings; followed by observations on Marriage, with plain directions for the removal of certain disqualifications. By R. and L. PERRY, & Co., Consulting Surgeons, London. Published by the Authors, and may be had at their Residence, 19, BERNERS STREET, OXFORD STREET. Sold by Strange, Paternoster-row; Hannay & Co., 63, Oxford-street; Gordon, 146, Leadenhall-street; Purkiss, Compton-street, Soho, and all Booksellers.

**OPINIONS OF THE PRESS.**  
"We regard the work before us, 'THE SILENT FRIEND,' as a work embracing most clear and practical views of a series of complaints hitherto little understood, and passed over by the majority of the Medical profession, for what reasons we are at a loss to know. We must however confess that a perusal of this work has left such a favourable impression on our minds, that we only recommend, but cordially wish, every one who is the victim of past folly, or suffering from indiscretion, to profit by the advice contained in its pages."—*Age and Argus.*

"The Authors of the SILENT FRIEND seem to be thoroughly conversant with the treatment of a class of complaints, which are, we fear, too prevalent in the present day. The perspicuous style in which this book is written, and the valuable hints it conveys to those who are apprehensive of entering the marriage state, cannot fail to recommend it to a careful perusal."—*Era.*

"This work should be read by all who value health and wish to enjoy life, for the truths contained therein defy all doubt."—*Farmer's Journal.*

The **CORDIAL BALM OF SYRIACUM** is exclusively directed to the cure of nervous and sexual debility, obstinate gleet, irregularity, weakness, impotency, barrenness, loss of appetite, indigestion, consumptive habits, and debilities arising from venereal excesses, &c. In bottles, price 11s., or the quantity of four in one bottle for 35s., by which 11s. are saved. The Five-pound cases may be had as usual.

The **CONCENTRATED DETERSIVE ESSENCE.** An anti-syphilitic remedy for searching out and purifying the blood from venereal contamination, scurvy, blotches on the head, face, and body, ulcerations, and those painful affections arising from improper treatment or the effects of mercury, removing eruptions of the skin, Secondary Symptoms.

**PERRY'S PRESCRIPTIVE SPECIFIC PILLS**, price 2s. 9d., 4s. 6d. and 11s. per box, are the most effectual remedy for Gonorrhoea, Gleet, Strictures, Inflammation, Irritation of the Bladder, &c., without hindrance to business.

Consultation-fee, if by letter, £1. A minute detail of cases is necessary.

Messrs. Perry are in daily attendance, for Consultation, at their residence, 19, Berners Street, Oxford Street, London, from 11 till 9, and 5 till 8. On Sundays, from 10 till 12. One personal visit only is necessary to effect a permanent cure.

**THE TRULY WONDERFUL CURES OF ASTHMA AND CONSUMPTION, COUGHS, COLDS, &c.,** Which are every where performed by

**DR. LOCOCK'S PULMONIC WAFERS**, have long established them as the most certain, perfect, and speedy remedy in existence for all disorders of the breath and lungs.

*Cures of Pulmonary Consumption in Newcastle-upon-Tyne.*

Gentlemen,—I can speak of your Wafers, myself, with the greatest confidence, having recommended them in many cases of *Pulmonary Consumption*, and they have always afforded relief when every thing else has failed; and the patients having been cured with medicine, are delighted to meet with so efficient a remedy having such an agreeable taste, &c.  
(Signed) **JNO. MASON**, Surgeon.  
13, Mosley-street, Newcastle.

Another extraordinary Cure of *Confirmed Asthma*. Mrs. Gordon, of Flooker-a-brook, Chester, had long been given up as incurable, and was for many weeks confined to bed in the last stage of an asthma; she could not sleep for her difficult breathing, cough, &c. The **FIRST TWO WAFERS** she took relieved her cough, an hour after which she had a comfortable sleep, and in twelve days was able to walk out. Mrs. Gordon will be happy to reply to all inquiries. March 26, 1845.

*Remarkable Case of Improvement of the Voice.*  
From the celebrated Infant *Thalia*.  
Jan. 15, 1845.

Sir,—My little girl, known as the Infant *Thalia*, suffered lately very severely from a cough, and relaxed uvula, so much so that she could not fulfil her professional duties. Various remedies were tried without success, until a friend recommended your *Pulmonic Wafers*; their beneficial effect was instantly apparent, and a cure speedily effected. The continued use of them I find materially improves the tone

and power of the voice. I could not let this very effectual cure pass over without informing you of it, in the hope that you might make it known for the benefit of others similarly suffering. I shall be happy to answer any inquiries.  
S. SMITH.

49, Great Queen-street, London.  
The particulars of many hundred Cures may be had from every agent throughout the Kingdom and on the Continent.

Dr. LOCOCK'S WAFERS give instant relief, and a rapid cure of asthmas, consumptions, coughs, colds, and all disorders of the breath and lungs.

To SINGERS and PUBLIC SPEAKERS they are invaluable, as in a few hours they remove all hoarseness, and increase the power and flexibility of the voice. They have a most pleasant taste.

Price 1s. 1½d., 2s. 9d., and 11s. per box: or sent free by post for 1s. 3d., 3s., or 11s. 6d., by DA SILVA & CO., 1, Bridge-lane, Fleet-street, London. Sold by all medicine venders.

Just Published, the **SIXTEENTH EDITION**, illustrated with cases and Full-length Engravings, price 3s. 6d., in a Sealed Envelope, and sent Free to any part of the Kingdom, on the receipt of a Post Office order for 3s. 6d.

**THE SECRET COMPANION. A MEDICAL WORK ON NERVOUS DEBILITY and the concealed cause of the decline of PHYSICAL STRENGTH and the loss of MENTAL CAPACITY**, with remarks on the effects of SOLITARY INDULGENCE, neglected GONORRHOEA, SYPHILIS, SECONDARY SYMPTOMS, &c., and Mode of Treatment: followed by observations on MARRIAGE, with proper Directions for the removal of all Disqualifications. Illustrated with Engravings, shewing the evils arising from the use of Mercury, and its influence on the body. By R. J. BRODIE and Co., Consulting Surgeons, 27, Montague-street, Russell square, London.

Published by the authors, and sold by Sherwood, Gilbert, and Piper, Paternoster-row; Noble, 114, Chancery-lane; Purkiss, Compton-street, Soho; Hannay, 63, Oxford-street; Barth, 4, Bridge-street, Covent-garden; Gordon, 146, Leadenhall-street, London; and by all Booksellers in town and country.

**OPINION OF THE PRESS.**
